This course will cover current topics in Neuroscience using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Neuroscience research. Completion of this course is essential for students who are interested in pursuing a career in Neuroscience research. Offered as BIOL 4421 or PSYC 4421. Credit will be granted only once. Junior standing recommended. Prerequisite: C or better in BIOL 3322 or PSYC 3322.

BIOL 4440. LABORATORY METHODS IN BACTERIAL PATHOGENESIS. 4 Hours.
This course is intended to expose students to research techniques for studying bacterial pathogens. Students will use molecular and classical techniques to isolate, identify, and characterize bacteria and their response to stimuli. Techniques will range from polymerase chain reaction (PCR), gene sequencing, sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE) and Immunofluorescence Microscopy. Prerequisites: BIOL 3312, BIOL 3444, BIOL 4317, or permission of instructor.

BIOL 4441. ADVANCED MICROBIOLOGY LAB. 4 Hours.
An overview of advanced microbiology techniques used in microbial genetics and physiology. It will allow students not only to gain an advanced and applicable perspective of techniques used in microbiology, but also to learn current state-of-the-art molecular techniques for genetic manipulation and physiological characterization of microorganisms. Included are molecular, physiological, and biochemical methods as well as metagenomics approaches and basic analysis of sequencing data for studying microbiomes. Enrollment requirements: BIOL 1441, General Microbiology (BIOL 2444), and Microbial Genetics (BIOL 3304). Prerequisite: BIOL 1441, BIOL 2444, BIOL 3304.

BIOL 4459. BIOARCHAEOLOGY. 4 Hours.
The study of human remains in archaeological contexts in order to reconstruct individual identity, life history, and past population characteristics. No formal prerequisites, but familiarity with the human skeleton is helpful. Lab component is required. Offered as BIOL 4459 and ANTH 4459; credit will be granted only in one department.

BIOL 4460. ZOOARCHAEOLOGY. 4 Hours.
The study of faunal remains from archaeological contexts to understand past human economic strategies and ecological circumstances. Topics include skeletal and taxonomic identification, taphonomic processes, mortality profiles, biometric analyses, and human behavioral ecology. Lab component is required. Offered as BIOL 4460 and ANTH 4460; credit will be granted only once.

BIOL 5101. SPECIAL TOPICS IN BIOLOGY. 1 Hour.
Seminar on significant biological research. May be repeated for credit. Prerequisite: consent of the instructor.

BIOL 5102. PROFESSIONAL DEVELOPMENT. 1 Hour.
This course will provide senior graduate students with important information regarding various aspects of their professional development including job searching, interviewing, stress and time management, and professional ethics.

BIOL 5193. RESEARCH IN BIOLOGY. 1 Hour.
Conference course in which the student undertakes intensive investigation of topics under the supervision of a staff member. Prerequisite: consent of the instructor. Graded P/F/R.

BIOL 5291. INDIVIDUAL PROBLEMS IN BIOLOGY. 2 Hours.
Individual research projects supervised by a faculty member. Prerequisite: consent of the instructor.

BIOL 5293. RESEARCH. 2 Hours.

BIOL 5301. LABORATORY ROTATION. 3 Hours.
This course is an elective designed to enable students to choose a major advisor and laboratory. Rotations among two or three faculty laboratories will familiarize students with faculty research interests, sharpen individual research skills, and expose students to different study systems, instruments, and research methods. May only be taken once for credit by MS students; may be repeated for credit once by Ph.D. students.

BIOL 5302. MICROBIAL GENETICS. 3 Hours.
Consideration of the nature, expression and regulation of the genetic processes in micro-organisms.

BIOL 5303. MICROBIOMES: HEALTH AND THE ENVIRONMENT. 3 Hours.
The development, interactions, and change of polymicrobial communities in both humans and the environment with implications in health, nutrition, disease, research, ecology and agriculture.

BIOL 5304. VIROLOGY. 3 Hours.
The nature, reproduction and host-cell interactions of viruses and animals. Emphasizes molecular aspects of viral replication and the molecular basis of pathogenesis. Prerequisite: consent of the instructor.

BIOL 5307. NEUROBIOLOGY. 3 Hours.
General principles of the function, structure, and organization of the nervous system. Topics include the gross and microscopic anatomy of nervous tissues; physical and chemical basis for action potentials and synaptic transmission; sensory and motor pathways of transduction; molecular, cellular, and systems study of learning and memory; development; and a study of neural diseases and disorders.

BIOL 5309. IMMUNOLOGY. 3 Hours.
This course is designed to acquaint students with the cellular processes involved in the generation of an immune response. It will provide students with detailed knowledge of the cells and organs of the immune system, their organization and diversity and their specialized functions at different anatomical locations. The importance of immune cell receptors and cytokines in cellular interactions and co-ordination of immunological mechanisms is also emphasized.

BIOL 5310. SELECTED TOPICS IN BIOLOGY. 3 Hours.
Topics may vary depending on the needs and interests of the students. May be repeated for credit. Prerequisite: consent of the student's thesis committee and the current course instructor.

BIOL 5311. EVOLUTION. 3 Hours.
Study of the origin of living systems and the mechanism of their evolution.

BIOL 5312. ADVANCED GENETICS. 3 Hours.
Mechanisms of transmission and function of genetic material. Covers fundamental concepts in transmission genetics including: genotype/phenotype relationships; inheritance; linkage; genome organization; and gene expression. Experimental and quantitative approaches to genetic analyses are emphasized. Prerequisite: consent of the instructor.

BIOL 5314. BIOMETRY. 3 Hours.
An examination of statistical methods and procedures in relation to the design of biological experiments and the analysis of their results. Prerequisite: consent of the instructor.

BIOL 5315. COMMUNITY ECOLOGY. 3 Hours.
An investigation of the effects of interspecific interactions on the distribution and abundance of organisms. Prerequisite: consent of the instructor.

BIOL 5317. BACTERIAL PATHOGENESIS. 3 Hours.
Host-pathogen relationships in microbial diseases. Topics include bacterium-host interactions, pathogens and pathogenic factors: techniques in pathogenesis research: molecular mechanisms of pathogenesis by major bacterial pathogens; antimicrobial compounds and resistance to antibiotics; and discussion of human genomics and susceptibility to infections.

BIOL 5319. HUMAN GENETICS. 3 Hours.
This course will enable students to comprehend the basic principles of genetics applied to human inheritance and disease, to interpret the research strategies aimed to identify and study the genes responsible for diverse functions and traits, as well as to assess the consequences of the genetic technologies in our society.

BIOL 5321. ADVANCED PROBLEM SOLVING IN BIOLOGY. 3 Hours.
This course will focus on crucial techniques needed to solve application-based questions in biology. Students will develop and practice reading comprehension, problem solving, critical thinking, and reasoning skills while deepening their understanding of core biological concepts, including cell and molecular biology; biochemistry; anatomy and physiology; and behavior. The goal of this course is to improve students' critical reasoning skills to prepare them for problem-based exams. BIOL 3442 is recommended. Prerequisite: BIOL 1442, BIOL 3301, BIOL 3315.

BIOL 5325. PLANT ECOLOGY. 3 Hours.
An introduction to plant ecology including physiological, population, community and ecosystem ecology.

BIOL 5335. ESSENTIALS OF GENOMICS. 3 Hours.
An integrative approach to genome science, combining elements of genetics, statistics and bioinformatics. Current technologies used in genomics analysis will be presented.

BIOL 5336. MOLECULAR EVOLUTION. 3 Hours.
An exploration of how genes and genomes evolve at the molecular level. The presentation uses the theoretical framework provided by population genetics to analyze molecular biology data.

BIOL 5340. BIOINFORMATICS. 3 Hours.
This course is an applied introduction to bioinformatics and computational genomics. The course is geared toward the student with a biology background and limited programming experience. The course provides an entrance to commonly used programming/scripting languages and an introduction to numerous aspects of modern genomic data analyses (e.g. identification of coding and regulatory features in novel sequences, expression analysis, and comparative/phylogenetic analyses).

BIOL 5341. HISTOLOGY. 3 Hours.
Histology is a branch of biological science concerned with structure and function of the organism on a cellular level. The objective in this class is to provide students with the skills and knowledge needed to identify and describe tissues and organs in the microscopic images based on the characteristic morphologies of cells and arrangement of tissues. Students will learn about basic histological techniques used in slide preparation, four basic tissue types and types of tissue, followed by the survey of microscopic images of all organ systems.

BIOL 5342. DEVELOPMENTAL BIOLOGY IN HEALTH AND DISEASE. 3 Hours.
An introduction to fundamental developmental events that form complex organisms with an emphasis on human health and disease.

BIOL 5349. COOPERATIVE PROGRAM IN BIOLOGY. 3 Hours.
The purpose of this course is to allow students to earn credit for relevant field work in the areas of biology and microbiology. Students must apply for the program and be cleared for registration during the semester prior to enrollment.

BIOL 5350. CONSERVATION BIOLOGY. 3 Hours.
Theory and practice of conservation biology, with emphasis on applications of modern quantitative and molecular genetic techniques to preservation of organisms and habitats. Includes: identification and prioritization of units for protection; conservation genetics; preserve design; public policy; and current case studies. Prerequisites: BIOL 3315 or equivalent or consent of the instructor.

BIOL 5351. ENVIRONMENTAL MICROBIOLOGY. 3 Hours.
Principles, methodology, and practical applications of environmental microbiology. Topics include: habitat and community approaches to environmental microbiology; measures of microbial populations and activities; interactions among microbial communities; role of microorganisms in the origin of mineral resources and pollution and energy flow through microbial communities. Prerequisite: BIOL 3444 or equivalent or consent of the instructor.

BIOL 5353. FUNDAMENTAL MEDICAL MYCOLOGY. 3 Hours.
Medical mycology deals with those infections in humans, and animals resulting from pathogenic fungi. As a separate discipline, the concepts, methods, diagnosis, and treatment of fungal diseases of humans are specific. Fundamental Medical Mycology balances clinical and laboratory knowledge to provide students with in-depth coverage of the most common fungal diseases and its etiologic agents from both the laboratory and clinical perspective.

BIOL 5354. LIMNOLOGY. 3 Hours.
The study of biotic and abiotic components of inland waters. Prerequisite: consent of the instructor.

BIOL 5355. TOXICOLOGY. 3 Hours.
An introduction to the general principles of toxicology with an emphasis on certain classes of toxic agents, their sources and toxic effects, as well as their environmental fates. Pollution of various media (air, water and soil) and the differences between them will be discussed.

BIOL 5359. MEDICAL MOLECULAR BIOLOGY. 3 Hours.
This course is an introduction to modern molecular biology and human diseases. This course will use medical diseases, class projects, and problem sets to explore and learn modern molecular biology. The molecular mechanisms and underpinnings for several human diseases will be covered. Topics may include, gene regulation, the dynamic genome and how to rewrite it, modern cloning schemes, synthetic biology, and drug design.

BIOL 5366. ADVANCED ORGANISMAL PHYSIOLOGY. 3 Hours.
In this course, the fundamentals of the structure (anatomy) and function (physiology) of "higher" plants and animals are discussed. Cellular, tissue, organ, and organismal levels will be the focus. General topics will include energy acquisition, distribution of nutrients, fluid transport, gas exchange, defense, sensing and responding to the environment, and reproduction. An understanding of basic biological concepts is expected.

BIOL 5370. THESIS RESEARCH IN CELL BIOLOGY. 3 Hours.
Faculty supervised thesis research.

BIOL 5371. THESIS RESEARCH IN ECOLOGY AND EVOLUTION. 3 Hours.
Faculty supervised thesis research.

BIOL 5372. THESIS RESEARCH IN BIOINFORMATICS. 3 Hours.
Faculty supervised thesis research.

BIOL 5373. THESIS RESEARCH IN MICROBIOLOGY. 3 Hours.
Faculty supervised thesis research.

BIOL 5374. THESIS RESEARCH IN GENETICS AND GENOMICS. 3 Hours.
Faculty supervised thesis research.

BIOL 5391. INDIVIDUAL PROBLEMS IN BIOLOGY. 3 Hours.
Individual research projects supervised by a faculty member. Prerequisite: consent of the instructor.

BIOL 5392. MASTER'S NON-THESIS CAPSTONE. 3 Hours.
The Master of Science in Biology Non-Thesis (MSNT) capstone course creates opportunities for students to integrate, reflect on, and apply what they have learned in their coursework. Students also practice professional competencies including communication, teamwork, critical thinking, research, problem-solving, and analytical thinking. This course satisfies the capstone requirement for the MS in Biology (non-thesis) degree.

BIOL 5393. RESEARCH IN BIOLOGY. 3 Hours.
Conference course in which the student undertakes intensive investigation of topics under the supervision of a staff member. Prerequisite: consent of the instructor. Graded P/F/R.

BIOL 5398. THESIS. 3 Hours.
Graded R/F only. Prerequisite: consent of faculty.

BIOL 5420. GENETICS METHODS LAB. 4 Hours.
This course combines computational and experimental approaches to study genome composition, evolution, and disease. Students will learn contemporary laboratory techniques while exploring transposable elements as tools for genetic analysis. Topics include genetic variation, Mendelian genetics, gene regulation, and gene-directed therapy.

BIOL 5421. METHODS IN MOLECULAR MICROBIOLOGY. 4 Hours.
This course will provide an overview of different techniques used during manipulation of microorganisms. It will allow students to gain a historical perspective of techniques used in microbiology (Winogradsky column, Koch solid agar plating) as well as learn state of the art molecular characterization of microorganisms and their genetic manipulation. This course introduces current biochemical, physiological and molecular biology methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

BIOL 5440. LABORATORY METHODS IN BACTERIAL PATHOGENESIS. 4 Hours.
This course is intended to expose students to research techniques for studying bacterial pathogens. Students will use molecular and classical techniques to isolate, identify and characterize bacteria and their response to stimuli. Techniques will range from PCR, Gene Sequencing, SDS_PAGE and Immunofluorescence Microscopy. Prerequisite: BIOL 3312, BIOL 3444, BIOL 4317.

BIOL 5493. RESEARCH. 4 Hours.

BIOL 5593. RESEARCH. 5 Hours.

BIOL 5693. RESEARCH IN BIOLOGY. 6 Hours.
Conference course in which the student undertakes intensive investigation of topics under the supervision of a staff member. Prerequisite: consent of the instructor. Graded P/F/R.

BIOL 5698. THESIS. 6 Hours.
Graded P/F/R. Prerequisite: consent of faculty.

BIOL 5998. THESIS. 9 Hours.
Graded P/F/R. Prerequisite: consent of faculty.

BIOL 6101. GRADUATE DEVELOPMENT. 1 Hour.
An introduction to graduate school for incoming students. Students will learn basic science communication skills (oral presentation, abstract writing etc.), an overview of university infrastructure, and an introduction to grant management.

BIOL 6102. RESPONSIBLE CONDUCT IN RESEARCH. 1 Hour.
An overview of bioethics and responsible conduct in research according to standards set by the National Institutes of Health and the National Science Foundation. This includes establishing conflicts of interest, mentor and trainee proper practices, data acquisition and management, and proper practices as an author when publishing.

BIOL 6103. CAREER DEVELOPMENT. 1 Hour.
Students will learn valuable skills when applying for academic and non-academic jobs. This includes CV preparation, interview skills, presenting a job seminar, and resources for searching jobs.

BIOL 6191. ADVANCED RESEARCH. 1 Hour.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6291. ADVANCED RESEARCH. 2 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6301. ESSENTIAL TOPICS IN GENOMICS. 3 Hours.
This course will explore diverse aspects of genome biology, including the evolutionary principles that influence how genomes change through time, genome structure, and genome function. Emphasis will be given on how genome technology influences the way we do modern biology and how genomics influences the world around us.

BIOL 6302. MICROBIOLOGY, MOLECULAR AND CELLULAR BIOLOGY. 3 Hours.
Using model microorganisms, this course will investigate their (1)Physiology, biochemistry, and genetics, (2)The hosts innate and adaptive immune responses, (3)The molecular basis for virulence and pathogenesis and (4)The ecological and economic impact of microbial pathogens including epidemics and pandemics.

BIOL 6303. ECOLOGICAL AND EVOLUTIONARY ANALYSIS. 3 Hours.
Analysis-based/applied course with instruction on advanced statistical approaches. Topics to be covered include Poisson and Binomial Error Distribution, mixed effect models, phylogenetic comparative methods, structural equation modeling, power analysis, Bayesian analysis, study/sampling design, and generating publication-ready figures.

BIOL 6310. SELECTED TOPICS IN BIOLOGY FOR PhD STUDENTS. 3 Hours.
Topics may vary depending on the needs and interests of the students. May be repeated for credit. This course is specific to students in the PhD program.

BIOL 6391. ADVANCED RESEARCH. 3 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6399. DISSERTATION. 3 Hours.
BIOL 6399 and BIOL 6699 graded R/F only; BIOL 6999 graded P/F/R. Prerequisite: admission to candidacy for the degree Doctor of Philosophy in Quantitative Biology.

BIOL 6491. ADVANCED RESEARCH. 4 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6591. ADVANCED RESEARCH. 5 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6691. ADVANCED RESEARCH. 6 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6699. DISSERTATION. 6 Hours.
BIOL 6399 and BIOL 6699 graded R/F only; BIOL 6999 graded P/F/R. Prerequisite: admission to candidacy for the degree Doctor of Philosophy in Quantitative Biology.

BIOL 6999. DISSERTATION. 9 Hours.
BIOL 6399 and BIOL 6699 graded R/F only; BIOL 6999 graded P/F/R. Prerequisite: admission to candidacy for the degree Doctor of Philosophy in Quantitative Biology.

BIOL 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

Doctor of Philosophy in Quantitative Biology (BS Entry)

About This Program

Doctor of Philosophy in Quantitative Biology is designed to train students to apply sophisticated quantitative techniques to solving basic and applied problems in biology. Students will attain substantially greater quantitative skills than in traditional doctoral programs in the biological sciences, providing them with a competitive advantage in business, industry, government, and academia.

Competencies

1. Upon completion, students will be able to synthesize and explain, in written and oral forms, complex concepts and theories in the field of biology as presented in primary literature.
2. Upon completion, students will be able to analyze biological data and interpret the results for presentation in written and oral formats.
3. Upon completion, students will be able to effectively communicate their research with others in their field of study through publication and presentation.
4. Upon completion, students will be able to plan and implement the investigative procedures, formulate hypotheses, collect, analyze and interpret data, and draw conclusions from their research and write a publication-quality article, necessary to obtain a doctoral degree.

Admissions Criteria

HOW TO APPLY

Read the general instructions for applying to the graduate program and download the checklists available on the Office of Admissions webpage (https://www.uta.edu/admissions/apply/graduate/). International applicants have specific requirements, and a separate admissions checklist (https://www.uta.edu/admissions/apply/international-graduate/). Additionally, the Department requests that applicants complete a questionnaire (https://common.forms.uta.edu/view.php?id=2034157).

A BS in Biology or related field is required for admission. Some course requirements may be waived for students who have earned an MS in Biology or related field. Students are accepted into our PhD program as either direct admit or rotation students.

DIRECT ADMIT

To qualify as a direct admit, an applicant must secure the support of a faculty member before applying, mention their faculty support in their letter of intent, and ask that their faculty member reach out to the chair of the admissions committee (see the Department of Biology (https://www.uta.edu/

academics/schools-colleges/science/departments/biology/graduate-programs/phd-program/) website for details and contact information). To secure the support of a faculty member before applying, begin by visiting our Biology faculty page (https://www.uta.edu/academics/schools-colleges/science/departments/biology/faculty-research/), review the research focuses of the labs, and contact individual faculty members to discuss your research interests. Explain how your interests align with their lab and inquire if they would consider having you join their lab as a new PhD student.

ROTATION PROGRAM

Applicants would choose this option if they are unsure which area of research interests them. Please indicate your interest in the rotation program in your letter of intent. Applicants admitted into the program will perform three rotations in three separate labs. At the end of the rotation period, applicants are placed in a home lab under the guidance of a Rotation Program Committee. Applicants will select their rotation labs only after being admitted into the PhD program. Please note that applications to the rotation program are only considered for the Fall semester. For more information about the rotation program, please contact the chair of the Rotation Program Committee (see the Department of Biology (https://www.uta.edu/academics/schools-colleges/science/departments/biology/graduate-programs/phd-program/) website for details and contact information).

ADMISSION CRITERIA

Decisions are based on consideration of all the information listed below and are not based on any single criterion alone.

1. A Bachelor's degree in Biology or a Bachelor's degree in some other discipline with at least 12 hours of advanced level coursework (junior or senior level courses) in Biology.
2. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the Graduate School. Applicants overall GPA in the Sciences and within Biology are also considered.
3. Favorable letters of recommendation from at least three individuals able to assess the applicant's potential for success in graduate school.
4. Letter of Intent (see below)
5. Department Questionnaire (see below)
6. International students whose home country's native language is not English must provide a score on the Test of Spoken English (TSE) of at least 45, a minimum score of 23 on the Speaking portion of the TOEFL iBT exam or a minimum score of 7 on the Speaking portion of the IELTS exam.

DENIAL OF ADMISSION

A candidate may be denied admission if they have less than satisfactory performance on a majority of the admission criteria listed above.

FELLOWSHIPS AND SCHOLARSHIPS

Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the Fall semester, must have a GPA of 3.0 in their last 60 undergraduate credit hours plus any graduate credit hours as calculated by the Graduate School, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain their fellowships.

Curriculum

Foundations		
BIOL 6101	GRADUATE DEVELOPMENT	1
BIOL 6102	RESPONSIBLE CONDUCT IN RESEARCH	1
BIOL 6103	CAREER DEVELOPMENT	1
Select 3 from the following:		9
BIOL 6301	ESSENTIAL TOPICS IN GENOMICS	
BIOL 6302	MICROBIOLOGY, MOLECULAR AND CELLULAR BIOLOGY	
BIOL 6303	ECOLOGICAL AND EVOLUTIONARY ANALYSIS	
BIOL 5340	BIOINFORMATICS	
BIOL 5314	BIOMETRY	
Complete at least 30 hours from the following:		30
BIOL 5301	LABORATORY ROTATION	
BIOL 6391	ADVANCED RESEARCH	
BIOL 6691	ADVANCED RESEARCH	
BIOL 6999	DISSERTATION	
BIOL 7399	DOCTORAL DEGREE COMPLETION	
Total Hours		**42**

Program Completion

The Doctor of Philosophy in Quantitative Biology requires distinguished attainment both in scholarship and in research. In addition to meeting the minimum requirements of a planned course of study, the ultimate basis for conferring the degree must be the demonstrated ability to do independent and creative work and the exhibition of a profound grasp of the subject matter within the field.

Each student will make three research presentations that are open to the entire department. These may include the proposal defense, a research progress report, and the dissertation defense.

Department of Biology Advising (https://www.uta.edu/academics/schools-colleges/science/departments/biology/advising/)

Master of Science in Biology (Online, No Thesis)

About This Program

The Master of Science in Biology program is designed to prepare students to pursue careers in research, science education, industry, and government. The non-thesis, online option is intended to meet the needs of students looking to advance in private and government sectors, teaching, or those seeking additional preparation for professional or health science programs.

Competencies

1. Upon completion, students will be able to synthesize and explain, in written and oral forms, complex concepts and theories in the field of biology as presented in primary literature.
2. Upon completion, students will be able to analyze biological data and interpret the results for presentation in written and oral formats.
3. Upon completion, students will be able to explain the structure and function of cells and organisms and how environment affects organismal development and physiology.
4. Upon completion, students will be able to explain the skills and knowledge acquired during the degree and apply these to future employment or educational goals through a capstone course.

Admissions Criteria

HOW TO APPLY

Read the general instructions for applying to the graduate program and download the checklists available on the Office of Admissions webpage. Submit the application and your official transcripts through the UTA Office of Admissions.

Questions can be addressed to askbiology@uta.edu.

ADMISSION CRITERIA

1. A bachelor's degree in biology or a bachelor's degree in a related discipline with at least 12 hours of advanced level coursework (junior or senior level courses) in biology.
2. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the Graduate School. Applicants' GPA in the Sciences will also be considered.
3. International students whose home country’s native language is not English must provide a score on the Test of Spoken English (TSE) of at least 45, a minimum score of 23 on the Speaking portion of the TOEFL iBT exam, or a minimum score of 7 on the Speaking portion of the IELTS exam.
4. OPTIONAL: GRE. Students may submit GRE scores, although they are not a requirement for admission.

Department of Biology Advising (https://www.uta.edu/academics/schools-colleges/science/departments/biology/advising/)

Master of Science in Biology (Thesis)

About This Program

The Master of Science in Biology thesis option is intended to prepare students for careers in research, government agency, and industry. Students conduct research leading to a thesis in one of the five concentrations: Cell Biology, Genetics and Genomics, Ecology and Evolution, Bioinformatics, or Microbiology.

Competencies

1. Upon completion, students will be able to synthesize and explain, in written and oral forms, complex concepts and theories in the field of biology as presented in primary literature.
2. Upon completion, students will be able to analyze biological data and interpret the results for presentation in written and oral formats.
3. Upon completion, students will be able to effectively communicate their research with others in their field of study through publication and presentation.

4. Upon completion, students will be able to plan and implement the investigative procedures, formulate hypotheses, collect, analyze and interpret data, and draw conclusions from their research.

BIOL 5353	FUNDAMENTAL MEDICAL MYCOLOGY	
BIOL 5354	LIMNOLOGY	
BIOL 5355	TOXICOLOGY	
BIOL 5359	MEDICAL MOLECULAR BIOLOGY	
BIOL 5366	ADVANCED ORGANISMAL PHYSIOLOGY	
Thesis		
Select one from the following:		3
BIOL 5370	THESIS RESEARCH IN CELL BIOLOGY	
BIOL 5371	THESIS RESEARCH IN ECOLOGY AND EVOLUTION	
BIOL 5372	THESIS RESEARCH IN BIOINFORMATICS	
BIOL 5373	THESIS RESEARCH IN MICROBIOLOGY	
BIOL 5374	THESIS RESEARCH IN GENETICS AND GENOMICS	
BIOL 5698	THESIS	6
Total Hours		**30**

Subject to written approval by the Graduate Advisor and within the limitations stated in the General Graduate School Regulations, a MS student may take up to nine hours of coursework from courses listed under Biology at the 3000 or 4000 levels. Coursework may be taken in other areas to support the student's program subject to graduate advisor approval.

Department of Biology Undergraduate Policies

APPLYING FOR MAJOR STATUS IN BIOLOGY

The applicant for status as a biology major must complete at least 11 hours of majors biology coursework at UTA with a minimum 2.25 GPA and have an overall GPA of 2.25 or higher.

MAINTAINING MAJOR STATUS

- Students who are accepted as majors in biology, microbiology, or medical technology must thereafter maintain a GPA of 2.25 or better in all courses and in biology courses. Any student whose GPA falls below 2.25 in either of these categories will be returned to undeclared status at the end of the semester in which the deficiency occurs.
- Students who fall into academic difficulty will be required to meet with their Advisor and/or Academic Dean in order to discuss academic consequences and their future status in the College of Science. Please refer to the College of Science section of the catalog, "Academic Policies for College of Science Majors".
- Students who have lost status as a major must have departmental permission to enroll in any junior or senior course in biology at UT Arlington.
- Students in the medical technology program should have a 2.8 GPA or higher after completing three years of course work to be competitive when applying for the final year of training in medical technology.

GENERAL INFORMATION

- In order to receive a B.A. degree in Biology or a B.S. degree in Biology or Microbiology from UT Arlington, transfer students must complete a minimum of 18 hours of junior or senior level courses (12 of the 18 hours in Biology) at UT Arlington. Transfer students who are approved for admission to the medical technology program must complete at least 13 hours of junior or senior level courses in biology at UT Arlington to qualify for a B.S. Degree in Medical Technology from UT Arlington.
- No student working toward a B.A. degree in Biology or a B.S. degree in Biology, Medical Technology or Microbiology may take any biology course on a Pass/Fail basis.
- Students are not allowed to receive credit for biology courses at the sophomore level or above by special examination.
- Exceptions to the core course prerequisites for advanced courses will be made only for specialized degree programs such as Medical Technology, Nursing, and Physical Education, and for selected non-majors with special needs.

UNIV 1101 & UNIV 1131

All transfer students are required to enroll in a 1 hour career preparation course, UNIV 1101. All entering freshmen are required to enroll in a 1 hour college adjustment course, UNIV 1131.

COMPUTER AND ORAL COMMUNICATION COMPETENCY REQUIREMENT

The University requirement of competency in computer proficiency is satisfied by completion of the BIOL 1441 or BIOL 1442 labs. Oral communication competency can be demonstrated by completion of COMS 1301, COMS 2302, or an approved substitute.

TEACHER CERTIFICATION

A student interested in earning a degree with a major in biology with secondary teacher certification, should refer to the “Bachelor of Science Degree in Biology – Life Science Pathway” and the “Bachelor of Arts Degree in Biology – Composite Science Pathway” degree plans for teacher certification requirements and for biology courses recommended for each teaching field option.

Bachelor of Arts in Biology

About This Program

The Bachelor of Arts Degree in Biology is suitable for career preparation in a number of biological career fields and for students who desire teaching certification with a teaching field in biology or composite science. Students choosing this program are required to consult with the Department of Biology's undergraduate advisor to develop an acceptable degree plan. Students seeking teaching certification with a teaching field in biology or composite science are required to consult with the Department of Biology certification advisor in order to develop an acceptable teaching certification degree program

Competencies

1. Upon completion, students will be able to describe the types of evidence that support the conclusion that evolution explains the diversity of life on Earth and reveal evolutionary relationships amongst groups of organisms.
2. Upon completion, students will be able to explain how the structure and function of cells affects their ability to survive, reproduce, and carry out specific functions in multicellular organisms including how genetic information is stored and passed from one generation to the next.
3. Upon completion, students will be able to describe and demonstrate the scientific methods of observation, experimentation, hypothesis formulation, and hypothesis testing.
4. Upon completion, students will be able to apply quantitative skills such as estimation, graphing data, statistical analyses, and analysis of large datasets.

Curriculum

Bachelor of Arts in Biology (Composite Science Teacher Certification)

About This Program

The Bachelor of Arts Degree in Biology with Composite Science Teacher Certification pathway is suitable for career preparation in a number of biological career fields and for students who desire secondary teaching certification in composite science.

Competencies

1. Upon completion, students will gain a broad background in science covering a wide range of fields.
2. Upon completion, students will gain the knowledge and skills that will prepare them to teach all secondary science subjects.
3. Upon completion, students will gain certification to teach science at the secondary level in Texas.

Curriculum

This program is suitable preparation for students who desire secondary teacher certification in composite science. Interested students should meet with the UTeach advisor.

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas:		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I

Bachelor of Science in Biology

About This Program

The Bachelor of Science in Biology is intended for students studying basic aspects of the biological sciences and prepares students for careers in a variety of the Biological Sciences including Health Professions, Genomics, Forensics, Ecology/Environmental Studies, and other areas.

Competencies

1. Upon completion, students will be able to explain the types of evidence that support the conclusion that evolution explains the diversity of life on Earth and reveal evolutionary relationships amongst groups of organisms.
2. Upon completion, students will be able to explain how the structure and function of cells affects their ability to survive, reproduce, and carry out specific functions in multicellular organisms including how genetic information is stored and passed from one generation to the next.
3. Upon completion, students will be able to describe and demonstrate the scientific methods of observation, experimentation, hypothesis formulation, and hypothesis testing.

4. Upon completion, students will be able to apply quantitative skills such as estimation, graphing data, statistical analyses, and analysis of large datasets.
5. Upon completion, students will be able to apply foundational concepts of general and organic chemistry and apply these concepts to biological systems.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas:		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
ENGL 1302	RHETORIC AND COMPOSITION II

Bachelor of Science in Biology (Life Science Teacher Certification)

About This Program

The Bachelor of Science in Biology with Life Science Teacher Certification prepares students to earn a secondary teacher certification in biology. Interested students should meet with the UTeach advisor.

Competencies

1. Upon completion, students will gain a broad background in science covering a wide range of fields.
2. Upon completion, students will complete prerequisites for professional school while also preparing to teach secondary life science.
3. Upon completion, students will gain certification to teach science at the secondary level in Texas.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas:

Bachelor of Science in Biology (Pre-Clinical)

About This Program

The Bachelor of Science in Biology pre-clinical track is intended for students who are interested in applying to a graduate level health professions program such as medical, dental, pharmacy, physician assistant, optometry, physical therapy, occupational therapy, and veterinary programs.

Competencies

1. Upon completion, students will be able to explain the types of evidence that support the conclusion that evolution explains the diversity of life on Earth and reveal evolutionary relationships amongst groups of organisms.
2. Upon completion, students will be able to explain how the structure and function of cells affects their ability to survive, reproduce, and carry out specific functions in multicellular organisms including how genetic information is stored and passed from one generation to the next.
3. Upon completion, students will be able to describe and demonstrate the scientific methods of observation, experimentation, hypothesis formulation, and hypothesis testing.
4. Upon completion, students will be able to apply quantitative skills such as estimation, graphing data, statistical analyses, and analysis of large datasets.
5. Upon completion, students will be able to apply foundational concepts of general and organic chemistry and apply these concepts to biological systems.

Curriculum

Bachelor of Science in Medical Laboratory Science

About This Program

The Bachelor of Science in Medical Laboratory Science combines course work with 12 to 16 months of clinical laboratory training in a NAACLS accredited medical laboratory science program. This degree prepares students for careers as medical laboratory scientists in medical laboratories, clinics, hospitals, and industry.

Competencies

1. Explain and apply fundamental biological science concepts including structure and function of cells and organisms, scientific reasoning, and data collection and analysis.
2. Determine the appropriate laboratory tests and procedures and successfully perform and interpret clinical laboratory tests.
3. Apply safety and governmental regulations and standards to the clinical laboratory setting.
4. Communicate effectively, orally and in writing, at a level sufficient to serve the needs of patients, the public, and members of the healthcare team as it relates to clinical laboratory tests, analysis, and results.

Curriculum

A student who completes the special degree plan given below plus 12 - 16 months of clinical laboratory training in an accredited medical laboratory science program may receive the Bachelor of Science in Medical Laboratory Science, which will be conferred by The University of Texas at Arlington. Graduates may become certified in medical laboratory science by passing the examination of the Board of Registry of the American Society of Clinical Pathologists (ASCP).

Foundations		
General Core Requirements (p. 46)		42
Students must complete certain courses within specific core areas.		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
ENGL 1302	RHETORIC AND COMPOSITION II	
For Mathematics select:		
MATH 1302	COLLEGE ALGEBRA	
MATH 1308	ELEMENTARY STATISTICAL ANALYSIS	

For Life & Physical Science select:		
PHYS 1442	GENERAL COLLEGE PHYSICS II	
PHYS 1441	GENERAL COLLEGE PHYSICS I	
For US History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Program Foundations		
Additional lab hours in required core courses.		2
CHEM 1441	GENERAL CHEMISTRY I	4
CHEM 1442	GENERAL CHEMISTRY II	4
CHEM 2181	ORGANIC CHEMISTRY I LABORATORY	1
CHEM 2321	ORGANIC CHEMISTRY I	3
CHEM 2182	ORGANIC CHEMISTRY II LABORATORY	1
CHEM 2322	ORGANIC CHEMISTRY II	3
CHEM 4311	BIOCHEMISTRY I	3
Select one of the following in oral communication:		3
COMS 2302	PROFESSIONAL AND TECHNICAL COMMUNICATION FOR SCIENCE AND ENGINEERING	
COMS 1301	FUNDAMENTALS OF PUBLIC SPEAKING	
Or other approved communication course		
Elective credit from any discipline		1
Medical Technology Specialization		
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	4
BIOL 1442	BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	4
BIOL 2444	GENERAL MICROBIOLOGY	4
BIOL 3446	HUMAN ANATOMY	4
BIOL 3442	HUMAN PHYSIOLOGY	4
BIOL 3312	IMMUNOLOGY	3
BIOL 3315	GENETICS	3
BIOL 4317	BACTERIAL PATHOGENESIS	3
BIOL 4312	INTRODUCTION TO VIROLOGY	3
Select 4 hours of 3000/4000-level Biology with the advice of the undergraduate advisor		4
Complete off-site at least 17 hours of MLS credit		17
Total Hours		**120**

Required coursework will total 103 hours of which 16 must be 3000/4000 level. In addition, students will complete in their senior year a twelve- to sixteen-month Medical Laboratory Science program which has been certified by the National Accrediting Agency for Clinical Laboratory Sciences (NAACLS).

Advising Resources

Bachelor of Science in Microbiology

About This Program

The Bachelor of Science in Microbiology is recommended to those students desiring to become professional microbiologists or biology teachers in secondary schools, and to those intending to continue their education through entrance into professional schools of medicine or dentistry.

Competencies

1. Upon completion, students will be able to explain the microbiological evidence demonstrating that evolution drives the diversity of life on Earth and reveals phylogenetic relationships among groups of microorganisms.
2. Upon completion, students will be able to explain how the structure and function of prokaryotic cells affects their ability to survive, reproduce, and perform specific functions in microorganisms including how genetic information is stored and passed from one generation to the next.
3. Upon completion, students will be able to describe and demonstrate the scientific methods of observation, experimentation, hypothesis formulation, and hypothesis testing.
4. Upon completion, students will be able to apply quantitative skills such as estimation, graphing data, statistical analyses, and analysis of large datasets.
5. Upon completion, students will be able to apply foundational concepts of general and organic chemistry to analyze biochemical processes in microbiological systems.

Curriculum

The Bachelor of Science in Microbiology is recommended to those desiring to become professional microbiologists or biology teachers.

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas:

Bachelor Science in Biology to Master of Science in Biology Fast Track

About This Program

Bachelor of Science in Biology to Master of Science in Biology Fast Track will enable outstanding senior undergraduate Biology students to satisfy degree requirements leading to a master's degree in Biology while completing their undergraduate studies.

Undergraduate Biology students will apply when they are within 30 hours of completing their bachelor's degrees. They must have completed at least 30 hours at UTA, achieving a GPA of at least 3.3 in those courses, have an overall GPA of 3.3 or better in all department courses, and have a GPA of at least 3.3 in all biology courses taken at UTA. Additionally, they must have completed 13 hours of specified undergraduate fast track foundation courses at UTA with a minimum GPA of 3.5 in these courses. If one of these courses is transferred from another school it will not be included, and an equivalent course determined by the undergraduate advisor will be used as a fast track foundation course.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Biology BS (p. 1555)
Biology MS (p. 1548)

Admissions Criteria

For admission to the fast track program undergraduates should:

- be within 30 hours of graduation
- have completed 30 hours at UTA
- have earned a GPA of at least 3.3 overall and in Biology
- have completed the following courses with GPA of at least 3.0:
  - BIOL 2300 BIOSTATISTICS
  - BIOL 3315 GENETICS
  - BIOL 3301 CELL PHYSIOLOGY
- have completed BIOL 2444 GENERAL MICROBIOLOGY with a 4.0.

BIOL students pursuing the fast track will be allowed to take BIOL 5309**,** BIOL 5304,and BIOL 5314 in place of advanced undergraduate biology electives.

Minor in Biology

About This Program

A minor in biology requires a minimum of 18 credit hours of approved biology classes that would be applicable toward a major in Biology.

Competencies

1. Upon completion, students will be able to explain the types of evidence that support the conclusion that evolution explains the diversity of life on Earth and reveal evolutionary relationships amongst groups of organisms.
2. Upon completion, students will be able to explain how the structure and function of cells affects their ability to survive, reproduce, and carry out specific functions in multicellular organisms including how genetic information is stored and passed from one generation to the next.
3. Upon completion, students will be able to describe and demonstrate the scientific methods of observation, experimentation, hypothesis formulation, and hypothesis testing.

Curriculum

A minor in biology will consist of a minimum of 18 credit hours of approved biology classes that would be applicable toward a major in Biology.

Foundations		
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	4
BIOL 1442	BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	4
Select one four hour BIOL course approved by advisor.		4
Select two 3000/4000 level BIOL courses approved by advisor.		6
Total Hours		**18**

A 2.0 Biology Grade Point Average must be maintained to earn the minor. Transfer students must complete at least nine hours toward the minor at UT Arlington, and six of the nine hours must be 3000 or 4000 level.

Advising Resources

Biology department advising is available for transfer students, prospective students, and first time in college students after meeting transition criteria.

Chemistry and Biochemistry

Department Overview

The Department of Chemistry and Biochemistry at the University of Texas at Arlington is a well-recognized and highly respected chemistry and biochemistry program with an emphasis on innovative education and world-class research programs. These programs are led by highly esteemed faculty, staff, and conducted in top-notch facilities which equip students for careers in industry, research, or academia. We have many specialized undergraduate degree programs that offer an excellent foundation in chemistry and biochemistry, and our graduate programs provide advanced training in a collaborative research environment which has the Carnegie Classification's highest rating: R1 Doctoral Universities – Very high research activity. Research and education go hand-in-hand, and all students are encouraged to become active in research early in their academic careers.

MISSION

The mission of the Department of Chemistry and Biochemistry is to provide a strong teaching, research, and service program that is recognized nationally and internationally by the science community, educate and train students to be productive in their professions, have an appreciation for science and its value to society, and to be independent research leaders.

VISION

We strive to be a world-class chemistry and biochemistry department which is recognized for its excellence in education, research, innovations, and public service.

COURSES

CHEM 1101. SUCCESS IN CHEMISTRY AND BIOCHEMISTRY. 1 Hour.
A first-year experience course for new students and new transfer students interested in a career in chemistry. Provides the necessary foundation for success in a college environment while balancing personal and work obligations. Orients students to life on campus, demonstrates how to leverage campus resources to achieve career and academic goals, and emphasizes engagement outside the classroom through collaborative and co-curricular opportunities. This course is reserved exclusively for students planning to major in chemistry or biochemistry who are in their first semester at UTA. Fulfills the University requirement for either UNIV 1101 or UNIV 1131.

CHEM 1181. GENERAL CHEMISTRY I LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES. 1 Hour.
General, analytical, and synthetic chemistry concepts will be reinforced through problem- and inquiry-based laboratory activities. The Advanced Chemical Technologies track for majors will introduce research and scientific methods in the context of instructor and student-selected research problems. Hand-on experience in the laboratory will be supplemented with mini-lectures, modules, and web resources to increase student readiness for scientific discovery. Students will also learn about contemporary challenges and advances in chemistry and biochemistry. If a student withdraws from CHEM 1181, the student must also withdraw from CHEM 1341. Prerequisite: Concurrent enrollment in CHEM 1341.

CHEM 1182. GENERAL CHEMISTRY II LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES. 1 Hour.
General, analytical, and synthetic chemistry concepts will be reinforced through problem- and inquiry-based laboratory activities. Research and scientific methods will be reinforced through the investigation of student-selected research problems and modules on scientific communication. Increased exposure to state-of-the-art analytical techniques and instruments, as well as synthetic methods will culminate in the preparation of a proposal related to the synthesis of new materials and the analysis of their structure and function. If a student withdraws from CHEM 1182, the student must also withdraw from CHEM 1342. Prerequisite: (CHEM 1341 with a grade of C or better) and (CHEM 1181 with a grade of C or better) and (concurrent enrollment in CHEM 1342).

CHEM 1185. CHEMISTRY FOR ENGINEERS LABORATORY. 1 Hour.
This course is intended to provide laboratory credit in chemistry for engineering-majors who transfer into UT-Arlington with credit in Chemistry for Engineers lecture only. Students may register for this course only with specific approval of a Chemistry advisor. Prerequisite: 3 hours of Chemistry for Engineers lecture. Credit cannot be earned for both CHEM 1465 and CHEM 1185.

CHEM 1188. GENERAL CHEMISTRY I LABORATORY. 1 Hour.
This course is intended to provide laboratory credit in freshman chemistry for students who transfer into UT-Arlington with credit in General Chemistry I lecture only. Experiments include: measurement and scientific equipment use, physical properties, separations, synthesis, qualitative analysis, spectroscopy. Students may register for this course only with specific approval of a Chemistry advisor. Prerequisite: 3 hours of General Chemistry I lecture. Credit cannot be earned for both CHEM 1441 and CHEM 1188.

CHEM 1189. GENERAL CHEMISTRY II LABORATORY. 1 Hour.
This course is intended to provide laboratory credit in freshman chemistry for students who transfer into UT-Arlington with credit for General Chemistry lecture only. Experiments include: thermodynamics, electrochemistry, synthesis, quantitative analysis, spectroscopy, stoichiometry, and acid-base chemistry. Students may register for this course only with specific approval of a Chemistry advisor. Prerequisite: CHEM 1188 and 6 hours of General Chemistry II lecture. Credit cannot be earned for both CHEM 1442 and CHEM 1189.

CHEM 1341. GENERAL CHEMISTRY I. 3 Hours.
This course covers the fundamentals of atomic structure, chemical bonding, the periodic table, nomenclature, kinetic theory, gas laws, chemical equations, and solutions. Only chemistry majors in the Advanced Chemical Technologies program may take this course. When combined with CHEM 1181, this course will satisfy completion of CHEM 1441 for Chemistry, Biochemistry, and Biological Chemistry majors. Prerequisite: (MATH 1302 or MATH 1303 or MATH 1322 or MATH 1323 or MATH 1402 or MATH 1421 or MATH 1426 or ALEKS =/> 61) and (concurrent enrollment in CHEM 1181). ACT program only.

CHEM 1342. GENERAL CHEMISTRY II. 3 Hours.
This course covers study of advanced atomic structure and bonding concepts, acid-base theory, kinetics and equilibria, thermodynamics, electrochemistry, and the chemistry of some elements. Only chemistry majors in the Advanced Chemical Technologies program may take this course. When combined with CHEM 1182, this course will satisfy completion of CHEM 1442 for Chemistry, Biochemistry, and Biological Chemistry majors. Prerequisite: (CHEM 1341 or CHEM 1441 with a grade of C or better) and (CHEM 1181 with a grade of C or better) and (concurrent enrollment in CHEM 1182). ACT program only.

CHEM 1345. CHEMISTRY IN THE WORLD AROUND US. 3 Hours. (TCCN = CHEM 1305)
This course looks at current issues in society and uses chemical principles to understand them. Topics include sustainability, air pollution, the ozone layer, global climate change, fuels, and water. CHEM 1345/1346 cannot be used to fulfill the CHEM 1441/1442/1451/1465 requirement in any degree program.

CHEM 1346. SEX, DRUGS, AND ARTIFICIAL INTELLIGENCE. 3 Hours. (TCCN = CHEM 1307)
The goal of this course is for students to appreciate chemistry in the world around us. This will be accomplished by teaching chemistry concepts in the context of current topics of general interest, including artificial intelligence, polymers/plastics, forensics, psychedelics, and pharmaceutical science. CHEM 1346 cannot be used to fulfill CHEM 1441/1442/1451/1465 requirements in any degree program.

CHEM 1400. INTRODUCTORY CHEMICAL PRINCIPLES. 4 Hours.
Provides a background in fundamental chemical mathematics, in writing and understanding chemical formulas and equations, and in the application of scientific laws to the behavior of matter. Students will learn problem solving skills necessary in general chemistry I by hands-on and interactive approach. This course is designed for the student with little or no previous chemical training who intends to take the CHEM 1441/CHEM 1442 sequence or CHEM 1465 at a later date. CHEM 1400 cannot replace CHEM 1441/CHEM 1442/CHEM 1451/CHEM 1465. Prerequisite: (MATH 1302, MATH 1402, or equivalent) or ALEKS score =/> 61.

CHEM 1441. GENERAL CHEMISTRY I. 4 Hours. (TCCN = CHEM 1411)
The lecture covers the fundamentals of atomic structure, chemical bonding, the periodic table, nomenclature, kinetic theory, gas laws, chemical equations, and solutions. The laboratory introduces the scientific method, experiment design, data collection and analysis, as well as illustrates fundamental principles presented in the lecture. Students who have not had high school chemistry are advised to take an introductory chemistry course first. Prerequisite: MATH 1302 or MATH 1303 or MATH 1322 or MATH 1323 or MATH 1402 or MATH 1421 or MATH 1426 or ALEKS =/> 61 or Student Group CHEM 1441.

CHEM 1442. GENERAL CHEMISTRY II. 4 Hours. (TCCN = CHEM 1412)
Study of advanced atomic structure and bonding concepts, acid-base theory, kinetics and equilibria, thermodynamics, electrochemistry, the chemistry of some elements. The laboratory focuses on experimental design, data collection and analyses as well as chemical syntheses to illustrate fundamental principles presented in the lecture. Prerequisite: CHEM 1441 or equivalent with a grade of C or better or (CHEM 1341 with a grade C or better) or Student Group CHEM 1442.

CHEM 1451. CHEMISTRY FOR HEALTH SCIENCES. 4 Hours. (TCCN = CHEM 1406)
Survey of general, organic, and biochemistry with emphasis on applications to the human body. Measurement, atomic theory and structure, bonding, quantitative relationships in chemical reactions, gases, solutions, electrolytes, organic functional groups and nomenclature, organic reactions, carbohydrates, lipids, proteins, enzymes, metabolism, and nucleic acids. CHEM 1451 cannot count for major credit toward a degree in chemistry. Prerequisite: MATH 1301 or MATH 1302 or MATH 1303 or MATH 1315 or MATH 1316 or MATH 1322 or MATH 1323 or MATH 1324 or MATH 1421 or MATH 1426 or equivalent.

CHEM 1465. CHEMISTRY FOR ENGINEERS. 4 Hours. (TCCN = CHEM 1409)
An introduction to important concepts and principles of chemistry with emphasis on areas considered most relevant in an engineering context. Topics include chemical stoichiometry, bonding, chemical thermodynamics, equilibria, electrochemistry, and kinetics. Engineering students may substitute the eight hour sequence CHEM 1441 and CHEM 1442 for this class, but not either CHEM 1441 or CHEM 1442 alone. Students who complete CHEM 1465 and subsequently change majors to curricula that require both CHEM 1441 and CHEM 1442 may substitute CHEM 1465 for CHEM 1441. Prerequisite: C or better in MATH 1322 or C or better in MATH 1323 or C or better in MATH 1324 or C or better in MATH 1421 (or concurrent enrollment) or MATH 1426 (or concurrent enrollment) or HONR-SC 1426 (or concurrent enrollment) or MATH 2425 (or concurrent enrollment) or HONR-SC 2425 (or concurrent enrollment) or Student Group CHEM 1465.

CHEM 2101. CHEMICAL INFORMATICS I. 1 Hour.
Developing quantitative understanding in chemistry relies heavily on models, from very crude and simple ideas to complex theoretical frameworks. This class aims to introduce students into models and modeling chemical phenomena that develop understanding of chemical processes. Working with observations and data, we develop the art of developing qualitative relations and explore their limitations. The class is delivered as a practical tour with hands-on practice. Good number skills, basic knowledge of coding and handling of computers is required. Prerequisite: (CHEM 1442 with a grade of C or better) and (MATH 1426 with a grade of C or better or Concurrent enrollment in MATH 1426 or Instructor's permission).

CHEM 2180. RESEARCH IN CHEMISTRY. 1 Hour.
Research for undergraduate students supervised by faculty of the department. May be repeated. Graded pass/fail only. Prerequisite: written permission of the instructor. Students may take a maximum of 12 hours credit on a pass/fail basis.

CHEM 2181. ORGANIC CHEMISTRY I LABORATORY. 1 Hour. (TCCN = CHEM 2123)
Experiments which illustrate laboratory techniques, theoretical concepts, and synthesis. Prerequisite: CHEM 1442 with a grade of C or better or ((CHEM 1342 with a grade C or better) and (CHEM 1343 with a grade C or better)) or Student Group CHEM 2181. Corequisite: CHEM 2321. If student withdraws from CHEM 2321 prior to midsemester date, student must also withdraw from CHEM 2181.

CHEM 2182. ORGANIC CHEMISTRY II LABORATORY. 1 Hour. (TCCN = CHEM 2125)
Experiments which will include syntheses, characterization of unknown substances, and use of the chemical literature. Prerequisite: (CHEM 2181 with a grade of C or better) and (CHEM 2321 with a grade of C or better). Corequisite: CHEM 2322. If student withdraws from CHEM 2322 prior to the midsemester date, student must also withdraw from CHEM 2182.

CHEM 2283. SYNTHESIS AND ANALYSIS LABORATORY I. 2 Hours.
Students will perform experiments that build mastery in standard laboratory techniques and illustrate theoretical concepts related to organic synthesis and quantitative analysis methods. Students will continue to develop their mastery of analysis through an introduction to the acquisition and statistical analysis of quantitative and qualitative data, acquired in the context of a series of guided inquiry design and synthesis projects. Syntheses may involve small molecules, polymers, and materials designed to perform specific functions. Students will continue to develop their communication and group work skills by sharing independent data and critical feedback with peers. Additionally, laboratory exercises will involve basic titrimetric, spectrophotometric, and chromatographic methods. Prerequisite: CHEM 1442/CHEM 1342 and CHEM 1182 or equivalent with a grade of C or better. Corequisite: Concurrent enrollment or previous credit in CHEM 2321 and CHEM 2335. Students must remain enrolled in at least one of CHEM 2321 and CHEM 2335 beyond the mid-semester date to remain enrolled in CHEM 2283.

CHEM 2284. SYNTHESIS AND ANALYSIS LABORATORY II. 2 Hours.
Experiments will include syntheses and analysis, characterization of unknown substances, and use of the chemical literature. A focus will be placed on advancing the use of modern chemical technologies for both synthetic and analytical work in a guided inquiry format. Prerequisite: CHEM 2283 and CHEM 2321 with a grade of C or better. Corequisite: CHEM 2322.

CHEM 2285. QUANTITATIVE CHEMISTRY LABORATORY. 2 Hours.
An introduction to computers for the acquisition and statistical analysis of data. Laboratory exercises involving basic titrimetric, spectrophotometric and chromatographic methods. Prerequisite: CHEM 1442 or equivalent with a grade of C or better, and concurrent enrollment/previous credit in CHEM 2335.

CHEM 2321. ORGANIC CHEMISTRY I. 3 Hours. (TCCN = CHEM 2323)
The fundamentals of molecular structure, stereochemistry, and the reactions of aliphatic hydrocarbons. Electronic theory, synthetic methods, and mechanisms. Prerequisite: CHEM 1442 with a grade of C or better or ((CHEM 1342 with a grade C or better) and (CHEM 1182 with a grade C or better)) or Student Group CHEM 2321.

CHEM 2322. ORGANIC CHEMISTRY II. 3 Hours. (TCCN = CHEM 2325)
Organic spectroscopic analysis. The chemistry of aromatic hydrocarbons, alcohols and ethers, aldehydes, ketones, carboxylic acids and derivatives, amines, amino acid, carbohydrates, and other functional groups. Mechanisms and synthesis. Prerequisite: CHEM 2321 with a grade of C or better.

CHEM 2335. QUANTITATIVE CHEMISTRY. 3 Hours.
Basic methods of error analysis, simple and advanced methods for the solution of complex equilibria, fundamentals of titrimetric, spectrophotometric and chromatographic instrumental analysis. Prerequisite: (CHEM 1442 or CHEM 1342 or equivalent) and (MATH 1324 or MATH 1325 or MATH 1421 or MATH 1426 or equivalent or higher) and (CHEM 2285 or CHEM 2283 concurrent enrollment or previous credit).

CHEM 2380. UNDERGRADUATE RESEARCH. 3 Hours.
Research in chemistry supervised by a faculty member of the department. May be repeated. Graded pass/fail only. Prerequisite: written permission of the instructor. Students may take a maximum of 12 hours credit on a pass/fail basis.

CHEM 3101. CHEMICAL INFORMATICS II. 1 Hour.
This course provides a succinct overview of the emerging discipline of Chemical Informatics at the intersection of chemistry, computational science, and information science. Efficient and reliable analysis of chemical analytical data is a great challenge due to the increase in data size, variety and velocity. Attention in this class is drawn to specific opportunities afforded by this new field in accelerating discovery and understanding of cause and effect. The class is delivered as a practical tour with hands-on practice. Good number skills, basic knowledge of coding and handling of computers is required. Prerequisite: (CHEM 2101 with a grade C or better) or (Instructor's permission).

CHEM 3131. CHEMISTRY COMMUNITY SERVICE LEARNING. 1 Hour.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisites: Permission of the Instructor.

CHEM 3175. BIOPHYSICAL CHEMISTRY LABORATORY. 1 Hour.
Introduction to the physical experimental techniques used in quantitative biochemical practice. Prerequisite: CHEM 3315 or concurrent enrollment.

CHEM 3181. PHYSICAL CHEMISTRY I LABORATORY. 1 Hour.
The physical and thermodynamic properties of substances, experimentally determined. Prerequisite: (Grade of C or better in ((CHEM 2284 or CHEM 2285) and CHEM 2335)) and (Grade of C or better in CHEM 3321 or concurrent enrollment).

CHEM 3182. PHYSICAL CHEMISTRY II LABORATORY. 1 Hour.
Experiments in kinetics, equilibria, spectroscopy, and electrochemistry. Modern instrumental techniques. Prerequisite: (Grade C or better in ((CHEM 2284 or CHEM 2285) and CHEM 2335)) and (Grade C or better in CHEM 3322 or concurrent enrollment).

CHEM 3231. CHEMISTRY/BIOCHEMISTRY COMMUNITY SERVICE LEARNING. 2 Hours.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisites: Permission of the Instructor.

CHEM 3307. INTRODUCTION TO POLYMER CHEMISTRY. 3 Hours.
The chemistry and technology of polymeric systems. The chemistry of natural systems such as proteins as well as the synthesis of fibers, films, plastics, and elastomers. Discussion of the characterization of polymers by modern techniques using instrumental analysis is followed by a summary of end-use and processing techniques. Prerequisite: CHEM 2322 with a grade of C or better or permission of instructor.

CHEM 3315. INTRODUCTION TO BIOPHYSICAL CHEMISTRY. 3 Hours.
A basic course introducing the physical principles that govern biological systems and processes, and the methods used for their investigation. Topics include solution thermodynamics, biomolecular interactions, enzyme kinetics, transport processes (diffusion, sedimentation, electrophoresis, viscous flow), and the applications of spectroscopic methods (absorption, emission and scattering of radiation, and the utilization of polarized light). Prerequisite: A grade of C or better in each of the following: CHEM 2335, MATH 2425, and 8 hours of college level physics.

CHEM 3317. INORGANIC CHEMISTRY. 3 Hours.
An overview of descriptive main group chemistry, solid state structures and the energetics of ionic, metallic, and covalent solids, acid-base chemistry and the coordination chemistry of the transition metals. The course is intended to explore and describe the role of inorganic chemistry in other natural sciences with an emphasis on the biological and geological sciences. Important compounds and reactions in industrial chemistry are also covered. Intended for both chemistry and non-chemistry majors. Prerequisite: Grade of C or better in CHEM 2322 or concurrent enrollment.

CHEM 3321. PHYSICAL CHEMISTRY I. 3 Hours.
Thermodynamics, gases, First and Second Law, pure substances, mixtures and solutions, equilibrium; Statistical Thermodynamics; Kinetics, rates, mechanisms, transitions state theory. In this class you will learn to understand the basic principles of Chemistry as the Science of Transformation and Change. We emphasize conceptual understanding and will become skilled in a quantitative description of the phenomena we study. The goal is that at the end of the course every student can outline the basic principles of Thermodynamics, has a sound understanding of ideal and approximate systems, and can apply the tools to engage in self-driven investigations. Prerequisites: CHEM 2335, MATH 2326, both with a grade of C or better and PHYS 1443 and PHYS 1444. MATH 3318 concurrent enrollment recommended.

CHEM 3322. PHYSICAL CHEMISTRY II. 3 Hours.
Quantum theory, introduction, principles. Schrödinger Equation, wavefunction; particle in a box, uncertainty; postulates of quantum mechanics; hydrogen atom, orbitals, structure of multi-electron atoms, atomic spectra and selection rules; molecular structure of diatomic molecules; introduction to molecular spectroscopy; materials and structure: lattices, diffraction methods, properties of solids. In this class you will learn to understand the principles of Quantum Chemistry and how it applies to atoms, molecules, and solids. We emphasize conceptual understanding and will become skilled in quantitative descriptions. The goal is that at the end of the course every student can outline the basic principles of Quantum Chemistry, both qualitatively and quantitatively. Students will obtain a sound understanding of probability, wavefunctions, orbitals, and spectroscopy, and can apply the learned concepts and tools to engage in self-driven investigations. This course is designated as the capstone course. Prerequisite: CHEM 2335, MATH 2326, both with a grade of C or better and PHYS 1443 and PHYS 1444. MATH 3318 concurrent enrollment recommended.

CHEM 3331. CHEMISTRY/BIOCHEMISTRY COMMUNITY SERVICE LEARNING. 3 Hours.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisites: Permission of the Instructor.

CHEM 4080. UNDERGRADUATE RESEARCH. 0 Hours.
Research problems on an individual basis, conducted on a selected topic under the direction of a member of the chemistry and biochemistry faculty. May be repeated. This is a non-credit course and cannot be used to meet degree requirements. Prerequisite: Permission of the instructor.

CHEM 4101. SEMINAR IN CHEMISTRY. 1 Hour.
Oral and written communication of chemical information. Seminars will be presented by students on topics from the current chemical literature. A term paper is required. The use of the library for researching the chemical literature will be emphasized. May be repeated for a total of two semester hours of credit. Students must be within 12 credits hours from the degree completion. Departmental permission required.

CHEM 4180. UNDERGRADUATE RESEARCH. 1 Hour.
Research under the direction of a member of the department. No more than six hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: Written permission of the instructor and a minimum grade point average of 2.5.

CHEM 4181. COMPUTATIONAL CHEMISTRY LABORATORY. 1 Hour.
Molecular modeling. Application of various computational techniques to chemical problems, including determination of molecular geometry, conformational analysis, and molecular energetics. Prerequisite: CHEM 3321 or CHEM 3322 with a grade C or better.

CHEM 4191. READINGS IN CHEMISTRY. 1 Hour.
May be repeated for a maximum of six hours credit. Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper. Prerequisite: permission of department chair. Graded pass/fail only.

CHEM 4203. COMPUTATIONAL CHEMISTRY. 2 Hours.
A course emphasizing molecular quantum mechanics. Topics include the basic postulates of quantum mechanics, many electron wave functions, the variation method, and molecular orbital theory at various levels of approximation (Hueckel, Extended Hueckel, semi-empirical, ab initio, etc.). Related methods, such as force-field approaches and molecular dynamics, will be discussed. Prerequisite: CHEM 3322, with a grade of "C" or better.

CHEM 4242. LABORATORY TECHNIQUES IN BIOCHEMISTRY. 2 Hours.
Designed to introduce the student to biochemical laboratory methods; a practical approach to the properties of carbohydrates, proteins, enzymes, and nucleotides. Prerequisite: CHEM 4311, with a grade of "C" or better.

CHEM 4280. UNDERGRADUATE RESEARCH. 2 Hours.
Research under the direction of a member of the department. No more than six hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: Written permission of the instructor and a minimum grade point average of 2.5.

CHEM 4291. READINGS IN CHEMISTRY. 2 Hours.
May be repeated for a maximum of six hours credit. Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper. Prerequisite: permission of department chair. Graded pass/fail only.

CHEM 4311. BIOCHEMISTRY I. 3 Hours.
The chemistry of the sugars, amino acids, proteins, and nucleic acids, followed by an introduction to enzyme chemistry. The major metabolic pathways of the cell, glycolysis, TCA cycle, and pentose phosphate pathway. Auditing of this class is NOT permitted. Prerequisite: CHEM 2322, with a grade of "C" or better.

CHEM 4312. BIOCHEMISTRY II. 3 Hours.
A continuation of CHEM 4311. The breakdown and biosynthesis of fats and the synthesis of carbohydrates, including photosynthesis. Metabolic utilization of proteins and amino acids together with an introduction to protein synthesis. Prerequisite: CHEM 4311, with a grade of "C" or better, or equivalent.

CHEM 4313. METABOLISM AND REGULATION. 3 Hours.
Selected topics in advanced metabolism including biosynthesis of phospholipids, steroids, porphyrins and related molecules, and prostaglandins. Membranes and transport phenomena, regulation of glycogen and glucose metabolism in muscle and lipid metabolism in adipose tissue. Prerequisite: (Concurrent Enrollment to CHEM 4312) or (CHEM 4312 with a grade of C or better).

CHEM 4314. ENZYMOLOGY. 3 Hours.
A comprehensive study of enzymes including structures, reaction mechanisms, regulation, and kinetics. Prerequisite: CHEM 4311 with a grade of C or better.

CHEM 4316. BIOCHEMICAL GENETICS. 3 Hours.
Aspects of the biochemistry of gene expression in prokaryotic and eukaryotic organisms and its regulation, together with genetic manipulations and the methodology of recombinant DNA technology. Prerequisite: (Concurrent enrollment in CHEM 4312) or (CHEM 4312 with a grade of C or better).

CHEM 4318. INORGANIC CHEMISTRY. 3 Hours.
An overview of the chemistry of the transition metals. Topics include symmetry and applications, bonding models, magnetism, synthesis of metal complexes, modern characterization techniques including IR, NMR, and electronic spectroscopy, organometallic compounds, reaction mechanisms, catalysis, and bioinorganic chemistry. Prerequisite: CHEM 2322 with a grade of C or better.

CHEM 4342. SOLID STATE AND MATERIALS CHEMISTRY. 3 Hours.
Chemical synthesis, structure characterization, and properties of solid-state materials. Principles of solid-state synthesis, classical equilibrium approaches, diffusion, and chemical transport, non-equilibrium, and deposition methods; high temperature and high-pressure synthesis; basic characterization techniques using X-rays, electrons, and neutrons; basic structure types and symmetry; optical, electrical, and magnetic properties; examples will relate to materials used for energy harvesting, sensors, catalysis, and other applications. Prerequisite: Grade of C or better in CHEM 3317.

CHEM 4343. RESEARCH METHODS - UTEACH. 3 Hours.
The purpose of this course is to present UTeach students with the tools scientists use to solve scientific problems. These tools enable scientists to develop new knowledge and insights, the most important of which are eventually presented in textbooks and taught in more conventional science classes. These tools include: design of experiments to answer scientific questions; use of statistics to interpret experimental results and deal with sampling errors; mathematical modeling of scientific phenomena; finding and reading articles in the current scientific literature; applying scientific arguments in matters of social importance; writing scientific papers; reviewing scientific papers; oral presentation of scientific work; use of probes and computers to gather and analyze data; ethical treatment of human subjects; laboratory safety. Research Methods is primarily a laboratory course, and most of these topics are developed in connection with four independent inquiries UTeach students design and carry out. Written inquiries will be evaluated as examples of scientific writing. Prerequisite: SCIE 1201 or SCIE 1334 or concurrent enrollment; junior or senior standing.

CHEM 4346. ADVANCED SYNTHETIC METHODS. 3 Hours.
Methods and techniques for the synthesis and characterization of organic, inorganic, and organometallic compounds. Prerequisite: Grade of C or better in CHEM 2182, CHEM 2322, and CHEM 3317 or CHEM 4318.

CHEM 4380. UNDERGRADUATE RESEARCH. 3 Hours.
Research under the direction of a member of the department. No more than six hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: Written permission of the instructor and a minimum grade point average of 2.5.

CHEM 4381. HONORS RESEARCH. 3 Hours.
Research in chemistry under the direction of a member of the department, resulting in a written honors thesis. No more than 6 hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: CHEM 2322, CHEM 2182, and admission to the University Honors College.

CHEM 4385. INSTRUCTIONAL TECHNIQUES IN CHEMISTRY. 3 Hours.
Students participate in undergraduate laboratory instruction or recitation sessions under the supervision of a faculty member. No more than 6 hours of CHEM 4385 may be taken for a letter grade. Enrollment by departmental permission only.

CHEM 4387. UNIVERSITY-INDUSTRY CHEMISTRY COOPERATIVE. 3 Hours.
By special arrangement only. Cooperative study assignment doing chemical research in a local industrial chemical laboratory. Enrollment by departmental permission only. Graded pass/fail only.

CHEM 4391. READINGS IN CHEMISTRY. 3 Hours.
May be repeated for a maximum of six hours credit. Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper. Prerequisite: permission of department chair. Graded pass/fail only.

CHEM 4392. ADVANCED TOPICS IN CHEMISTRY. 3 Hours.
Topics arranged on an individual basis. May be repeated for credit as the topic varies. Prerequisite: permission of instructor.

CHEM 4461. INSTRUMENTAL ANALYSIS. 4 Hours.
The principles involved in the operation of modern analytical instruments and the laboratory use of such instruments. Students must be within 30 hours of completing their bachelor degrees. Prerequisite: Grades of C or better in (CHEM 2284 or CHEM 2285) and CHEM 2335.

CHEM 5011. SEMINAR IN CHEMISTRY. 0 Hours.
Students will present a talk, prepare a poster, and engage in scientific writing and communication. Includes learning how to prepare, present, and defend an oral presentation. May not be counted for credit toward the degree requirements.

CHEM 5168. QUANTUM CHEMISTRY LABORATORY. 1 Hour.
Molecular modeling. Application of various computational techniques to chemical problems, including determination of molecular geometry, conformational analysis, and molecular energetics. Prerequisite: concurrent enrollment in CHEM 5262.

CHEM 5191. READINGS IN CHEMISTRY. 1 Hour.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5192. RESEARCH IN CHEMISTRY. 1 Hour.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5262. COMPUTATIONAL CHEMISTRY. 2 Hours.
Molecular quantum mechanics. Fundamental principles of quantum mechanics, with a special emphasis on molecular electronic structure theory. Topics covered include molecular mechanics, semi-empirical and ab initio molecular orbital theory, density functional theory, calculation of thermodynamic properties and molecular dynamics. Prerequisite: CHEM 5301 or permission of instructor. concurrent enrollment in CHEM 5168 required.

CHEM 5291. READINGS IN CHEMISTRY. 2 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5292. RESEARCH IN CHEMISTRY. 2 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5300. SELECTED TOPICS IN ADVANCED CHEMISTRY. 3 Hours.
The area may vary (typically analytical, applied, biological, colloid, environmental, inorganic, organic, physical, polymer, materials, theoretical, etc.) and will be announced in advance. More than one area may be covered simultaneously, in parallel courses offered under different section numbers. May be repeated for credit when area or topics vary. Prerequisite: permission of instructor.

CHEM 5321. INTRODUCTION TO ANALYTICAL CHEMISTRY. 3 Hours.
This course provides a broad overview of instrumental techniques, quantitative analysis, and chemical equilibria. It is designed to give a conceptual understanding of the theory, design, use, as well as limits and advantages of modern analytical instrumentation such as spectroscopy, chromatography, and mass spectrometry. Additionally, students will learn the statistics necessary for characterization of instrumental methods and analysis of sample populations and how to perform these analyses using spreadsheet based calculators such as Microsoft Excel. Students will be required to demonstrate proficiency in analytical skills by completing homework assignments (approximately 1 every 2 weeks) and through an open computer portion of their exams. Exams also feature a closed computer, short answer section that tests their grasp of the analytical concepts. Students are also required to submit a term paper and deliver a power point presentation on an analytical topic of their choice outside those covered during the course.

CHEM 5324. ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY. 3 Hours.
This course covers modern aspects of atomic and molecular mass spectrometry, as well as spectrochemical analysis. Upon completion of this course, the student will be able to: describe the basic setup and operation of mass spectrometric and spectroscopic instrumentation; interpret spectra from various instruments as a means for qualitative and quantitative analysis; apply basic knowledge of mass spectrometry and spectroscopy for practical problem solving; relate the use of mass spectrometry and spectroscopy to his or her own research interests; and compile, present, and explain modern techniques for analytical research. Written and oral presentations, as well as traditional classroom examinations, homework, and quizzes will be used to assess student performance. Prerequisite: CHEM 4461 or equivalent; or permission of instructor.

CHEM 5325. SEPARATION SCIENCE. 3 Hours.
A comprehensive examination of most areas involving the separation of molecules and ions. Theoretical, practical and historical aspects of: distillation, sublimation, liquid-liquid extraction, sold phase extraction, chromatography, electrophoresis, field flow fractionation, membrane/barrier processes, and crystallization will be considered. Students taking this course must have a good basic background in organic chemistry and physical chemistry.

CHEM 5326. ANALYTICAL CHEMISTRY - CONCEPTS AND IMPLEMENTATION. 3 Hours.
This course familiarizes students with basic electronic design in analytical instrumentation. Familiarization with active and passive components, operational amplifiers, timers, logic gates, and designing analytical instrumentation based on such components, especially in Wet Chemistry. The course covers ionic equilibria and acid-base equilibria and solving complex problems by iterative numerical methods and nonlinear curve fitting using programming in BASIC and MS Excel SolverTM. The course covers present day applications of wet chemical analysis, specific methods and instrumentation, practical aspects of automated liquid phase analytical methods including component availability and cost. A design problem, chosen by lottery, will be given to each student early in the semester. The newly acquired knowledge of chemistry and electronics will be used to design a new instrument and present it. Prerequisite: CHEM 4461 or equivalent undergraduate instrumental analysis course.

CHEM 5327. ANALYTICAL ELECTROCHEMISTRY. 3 Hours.
This course covers modern aspects of electroanalytical chemistry. Upon completion of this course, the student will be able to: understand the concepts of redox potentials and their role in electron transfer, the thermodynamic aspects of electrochemical cells, mass transport in electrochemical systems, and the principles underlying various electroanalytical techniques such as potentiometry, amperometry, coulometry and voltammetry. The instrumental aspects of these techniques will also be addressed, including specialized approaches such as spectroelectrochemistry. The student will be able to relate the use of these analytical techniques to his or her own research needs and interests. Written and oral examinations, as well as traditional classroom examinations, will be used to assess student performance. Prerequisite: CHEM 4461 or equivalent; or permission of instructor.

CHEM 5328. ANALYTICAL SPECTROSCOPY. 3 Hours.
This course covers many of the methods of spectrochemical analysis used in the analytical laboratory. At the end of this course, students should be able to: explain the fundamental theory of many spectroscopy methods, including atomic spectroscopy, molecular spectroscopy, UV/Vis spectroscopy, molecular luminescence, and infrared spectrometry, among others; describe basic instrumental components; apply basic statistics (e.g., measurement errors, and calibration methods) for data analysis; and understand the fundamental use and applications of spectroscopy methods for basic research and laboratory measurements. Student performance will be evaluated based on homework assignments, exams, quizzes, and presentations. Prerequisite: CHEM 4461 or equivalent, or permission of instructor.

CHEM 5331. ADVANCED BIOCHEMISTRY I. 3 Hours.
1) Learn the vocabulary and conceptually understand at an advanced level the biochemical processes by which cells break down organic molecules and trap some of the released energy in the form of reactive nucleotides; use these reactive nucleotides to drive the synthesis of organic building blocks such as sugars, lipids, amino acids and nucleic acids from simpler molecules that serve as precursors. 2) To learn to critically review primary research articles in biochemistry by reading the assigned material related to proteins, expression and purification, kinetics, and metabolism as they are presented in class. 3) Research Project: To learn to critically review primary research articles in biochemistry by preparing a presenting and NIH R15 proposal/paper on a topic relevant to the topics covered in class. This project will teach students how to design and interpret experiments, thereby contributing to the creation of new knowledge in the fields of biochemistry and biophysics. This project will allow students to become knowledgeable in a specific subfield of biochemistry. 4) Develop an awareness of ethical responsibilities when conducting and reporting research and reviewing the research of others. 5) Understanding of the structures and functions of biological molecules. 6) Understanding of intermediary metabolism and its control. 7) Understanding of molecular genetics. 8) Ability to present concepts in oral, written and visual forms.

CHEM 5332. CELL SIGNALING & HUMAN BIOCHEMISTRY. 3 Hours.
Explores different aspects of signal transduction and different types of signaling pathways including enzyme linked receptors, G-protein signaling, G-protein coupled receptors, cytokine signaling, cyclic AMP based signaling, Calcium signaling, lipid signaling, NO-signaling, hormone signaling, peptide hormones, amino acid based hormones, steroid hormones; immune response and inflammation; cancer cell signaling, hypoxia and angiogenesis, aging; metabolic interrelation, vitamins and mineral, dietary supplements; recent topics in signaling, clinical correlation and health impacts.

CHEM 5333. BIOPHYSICAL METHODS AND SPECTROSCOPY IN BIOCHEMISTRY. 3 Hours.
A) Examination of various biophysical methods that determine enzyme functions: the methods includes purification of enzymes, determination of various kinetic parameters, and choice of methodology. B) Discussion of various spectroscopic approaches that determine the enzyme structures and functions: the approaches includes the modern spectroscopic techniques including fluorescence fluctuation spectroscopy as well as UV spec, fragonomics, surface plasmon resonance, FTIR-spectroscopy, and advanced NMR techniques such as HSQC and NOE.

CHEM 5334. MECHANISMS OF ENZYME ACTIONS. 3 Hours.
A) Exploration of enzyme properties that include enzyme kinetics, allostery, structure and their functions. B) Evaluation of enzyme functions associated with cofactors and regulators and their significance with respect to human health and diseases; evaluation of emerging scientific advances and challenges associated with enzyme actions will also be discoursed throughout lectures, student paper presentation and student written proposal. Prerequisite: A passing grade in the ACS-test in Biochemistry.

CHEM 5335. GENES, GENOMES, AND NUCLEIC ACIDS. 3 Hours.
Concepts of genes and genomes in prokaryotes and eukaryotes. Nucleic acids structures and functions. Detailed mechanisms of prokaryotic and eukaryotic DNA replication and transcription; mRNA processing; Gene regulation, epigenetics and non-coding RNA. Fundamental theory of each topic will be covered with emphasis on current research literature and clinical correlations. Prerequisite: Passing grade in ACS-test in Biochemistry.

CHEM 5336. STRUCTURE & FUNCTION OF PROTEINS, MEMBRANES & CARBOHYDRATES AND FAST KINETICS. 3 Hours.
This is a one-semester course that extends fundamental concepts in chemistry, such as kinetic phenomena and thermodynamics into an exploration of biology. The content includes structure and function of proteins and membranes, and catalysis of biological reactions through: 1) applying equilibrium processes to study biochemical reactions 2) analyzing the kinetic parameters of enzymes that cause disease states as well as exploration of how drugs are used to inhibit enzymes.

CHEM 5337. MEDICINAL CHEMISTRY AND DRUG Discovery. 3 Hours.
This course will provide students with an understanding of the history of the modern drug discovery process, drugs and drug ionization states, biological targets, lead molecule discovery and optimization, cell signaling and metabolism, the investigation of structure activity relationships, translation with preclinical models, intellectual property and commercialization, and the regulatory process from target/lead discovery to clinical use. History and introduction to Discovery; Foundations: predicting structural ionization states using concepts from pH/pKa/acids and bases/buffers; Biological Targets: Enzymes, Receptors, Oligonucleotides; Drug-Target Structures and Interactions, Lead identification and optimization, Structure Activity Relationships: Computational Approaches (ligand based; structure based); Cell signaling and Metabolism, cardiovascular diseases, diabetes, obesity, neurological disorders, and cancer; and current therapies; Translation and intellectual property; FDA regulations and clinical trials. To enroll students must have completed or be concurrently enrolled in CHEM 4311 or receive special permission of the instructor. Prerequisite: CHEM 4311 or permission of the instructor.

CHEM 5341. INORGANIC CHEMISTRY. 3 Hours.
Structures, bonding, and properties of main group and transition element compounds including: symmetry, coordination chemistry, reaction mechanisms, organometallic chemistry, and modern characterization techniques. Prerequisite: CHEM 4318 or permission of instructor.

CHEM 5342. SOLID STATE CHEMISTRY. 3 Hours.
Chemical synthesis and characterization methods of extended structures. Principles of solid-state synthesis, classical equilibrium approaches, diffusion and chemical transport, non-equilibrium and deposition methods; high temperature and high pressure synthesis; basic characterization techniques using X-rays, electrons, and neutrons; basic structure types and symmetry; optical, electrical and magnetic properties; examples will relate to materials used for energy harvesting, sensors, and catalysis.

CHEM 5344. X-RAY DIFFRACTION, SCATTERING AND ABSORPTION. 3 Hours.
The class will focus on modern applications of X-ray diffraction and absorption techniques in crystal and molecular structure determination. A practical component will address aspects of state of the art methods, including how to solve structures using data collected on powder and single-crystal diffractometers, X-ray photoelectron spectroscopy (XPS), etc.

CHEM 5351. ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY. 3 Hours.
Bonding, structure, stereochemistry, substituent effects, isotope effects, solvent effects, kinetics, and linear free-energy relationships in determining reaction mechanisms. Acids and bases, orbital symmetry, pericyclic reactions, photochemistry, and nucleophilic substitution reactions. Prerequisites: CHEM 2322 and CHEM 3322 or equivalent.

CHEM 5354. ORGANIC CHEMISTRY II. 3 Hours.
A survey of organic reaction mechanisms including addition and elimination reactions, nucleophilic carbon species, carbonyl reactions, electrophilic substitution reactions, rearrangement reactions, electron deficient species, and free radical reactions. Prerequisite: CHEM 5309 or permission.

CHEM 5355. ADVANCED ORGANIC SYNTHESIS. 3 Hours.
Synthetically important reactions, strategy in organic synthesis using retrosynthetic analysis and mechanistic understanding of reactions, synthons, asymmetric synthesis. Prerequisite: CHEM 5310 or permission of instructor.

CHEM 5356. ADVANCED POLYMER CHEMISTRY. 3 Hours.
Polymer synthesis and reactions including condensation, free-radical, ionic, and coordination polymerizations; principles of polymerization including thermodynamics and kinetic considerations; physical characterizations including determinations of absolute molecular weights, relative molecular weights, morphology, glass transitions, and polymer crystallinity; relationships between macromolecular structure, properties, and uses of polymeric materials. Also offered as MSE 5346. Prerequisite: CHEM 2321 and CHEM 2322 or permission of instructor.

CHEM 5358. DETERMINATION OF MOLECULAR STRUCTURE BY PHYSICAL METHODS. 3 Hours.
The use of modern instrumental techniques to determine structure: infrared, ultraviolet, and magnetic resonance spectroscopy, mass spectrometry, optical rotatory dispersion. Emphasis on interpretation of spectra.

CHEM 5361. INTRODUCTION TO GRADUATE PHYSICAL CHEMISTRY. 3 Hours.
Classical thermodynamics and statistical thermodynamics. Equilibrium and kinetic processes. Reaction dynamics. Principles of quantum chemistry and its application to spectroscopy. Introduction to bonding in molecules and solids.

CHEM 5364. ADVANCED GRADUATE PHYSICAL CHEMISTRY. 3 Hours.
Statistical thermodynamics and its application to kinetics and spectroscopy. Quantum theory, ab initio methods and density functional theory. Advanced spectroscopic methods to investigate bonding in molecules and solids. Prerequisite: CHEM 5301 or permission of the instructor.

CHEM 5365. THERMODYNAMICS OF MATERIALS. 3 Hours.
Applications of thermodynamics to the study of materials, thermodynamic properties of liquid and solid solutions and their relationship to surface and crystalline defects.

CHEM 5366. CHEMICAL KINETICS. 3 Hours.
Experimental and theoretical aspects of chemical reaction kinetics. Classical and modern techniques for mechanistic characterization, methods for approximation, analysis and interpretation. Simple and complex reaction matrices are considered (gas, liquid, solid state). Specific topics include microscopic reversibility, transition state theory, homo/heterogenous catalysis, and quantum/statistical mechanical estimation of rate constants and chemical activation. Relevant examples relating to atmospheric and environmental, biological, organic, and inorganic reactions will be discussed. Prerequisite: CHEM 5301 or by permission from the instructor.

CHEM 5380. ADVANCED LABORATORY RESEARCH TOPICS IN CHEMISTRY. 3 Hours.
This course will provide a pathway for PhD-bound students to identify laboratories with appropriate research goals that align with the students' own goals for their terminal degrees. At the end of CHEM 5380, students and faculty mentors will identify mutually satisfactory research plans for PhD research during the students' remaining tenure within the Department of Chemistry & Biochemistry.

CHEM 5381. ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY I. 3 Hours.
The course will introduce to advanced laboratory techniques used in research laboratories in the Chemistry department. Handling of chemicals, synthesis procedures, characterization methods, data analysis, and safety regulations. Student will engage in reading primary literature and detailed process descriptions. Goal is to prepare students for successful work on their initial research project.

CHEM 5382. ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY II. 3 Hours.
The course will continue to provide up-to-date laboratory techniques used in research laboratories in the Chemistry department. Synthesis procedures, analytical instrumentation, characterization methods, and data analysis. Free literature studies and assignments by instructor will prepare student for research and development. Goal is to support the research progress of students towards their comprehensive exam. Prerequisite: CHEM 5381.

CHEM 5383. ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY III. 3 Hours.
The course will complete exposure to advanced laboratory techniques used in research laboratories in the Chemistry department and will make students ready for developing their own project proposal. Synthesis procedures, analytical instrumentation, characterization methods, and data analysis. Literature studies and explicit writing of scientific notes will prepare students for their comprehensive exam. Prerequisite: CHEM 5381, CHEM 5382.

CHEM 5391. READINGS IN CHEMISTRY. 3 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5392. RESEARCH IN CHEMISTRY. 3 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5398. THESIS. 3 Hours.
Graded R/F only. Prerequisite: permission of instructor.

CHEM 5421. ANALYTICAL INSTRUMENTATION. 4 Hours.
Theory of instrumentation and chemical signal source. Practical experiments utilizing atomic and molecular absorption and emission spectroscopy, chromatographic analysis, and electrochemical techniques.

CHEM 5491. READINGS IN CHEMISTRY. 4 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5492. RESEARCH IN CHEMISTRY. 4 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5591. READINGS IN CHEMISTRY. 5 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5592. RESEARCH IN CHEMISTRY. 5 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5691. READINGS IN CHEMISTRY. 6 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5692. RESEARCH IN CHEMISTRY. 6 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5698. THESIS. 6 Hours.
Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5998. THESIS. 9 Hours.
Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 6004. CHEMISTRY CAREER DEVELOPMENT. 0 Hours.
Every PhD-bound student is required to spend time for professional development outside their UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements, and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of research supervisor and graduate advisor.

CHEM 6011. TOPICS IN GRADUATE RESEARCH. 0 Hours.
Lectures by departmental and university faculty on current chemical research at U.T. Arlington. All graduate students are required to take this course once. May not be counted toward degree requirements. Graded P/F only.

CHEM 6012. ISSUES IN MODERN CHEMICAL RESEARCH. 0 Hours.
Topics to be discussed include the use of the library, maintenance of a research notebook, ethics in research, aspects of technical writing and presentations, and how research is funded. May not be counted toward degree requirements.

CHEM 6104. CHEMISTRY CAREER DEVELOPMENT. 1 Hour.
Every PhD-bound student is required to spend time for professional development outside his UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of research supervisor and graduate advisor.

CHEM 6202. PRINCIPLES OF INDUSTRIAL CHEMISTRY. 2 Hours.
Survey of industrial inorganic and organic chemical processes. Prerequisite: permission of instructor.

CHEM 6203. REGULATORY ASPECTS OF THE CHEMICAL INDUSTRY. 2 Hours.
Survey of chemical toxicology, regulatory aspects involved in the chemical industry, industrial safety, patents and patent law.

CHEM 6304. CHEMISTRY CAREER DEVELOPMENT. 3 Hours.
Every PhD-bound student is required to spend time for professional development outside his UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of the research supervisor and Graduate Advisor.

CHEM 6399. DISSERTATION. 3 Hours.
Graded R/F only. Prerequisite: admission to candidacy for the degree of Ph.D. in Applied Chemistry.

CHEM 6699. DISSERTATION. 6 Hours.
Graded R/F/P/W. Prerequisite: admission to candidacy for the degree of Ph.D. in Applied Chemistry.

CHEM 6904. CHEMISTRY CAREER DEVELOPMENT. 9 Hours.
Every PhD-bound student is required to spend time for professional development outside his UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of Graduate Advisor and research supervisor.

CHEM 6999. DISSERTATION. 9 Hours.
Graded P/F/R only. Prerequisite: admission to candidacy for the degree of Ph.D. in Applied Chemistry.

CHEM 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

Chemistry and Biochemistry - Graduate

Programs

DOCTORAL DEGREE

- Chemistry PhD (p. 1580)

MASTER'S DEGREE

- Chemistry MS (p. 1584)

Doctor of Philosphy in Chemistry (BS Entry)

About This Program

The program leading to the Doctor of Philosophy degree in Chemistry is designed primarily to prepare doctoral-level chemists for industrial research careers. The student must:

1. demonstrate the ability to carry out independent research and
2. acquire the practical knowledge of the type of research conducted in industry and of the constraints (both practical and philosophical) under which such research is conducted.

The areas of research include analytical chemistry, biochemistry, bioinorganic chemistry, colloid and surface chemistry, electrochemistry, inorganic chemistry, medicinal chemistry, organic chemistry, organometallic chemistry, physical chemistry, polymer chemistry, and theoretical chemistry.

Competencies

1. Graduates will have a depth of knowledge, both factual and conceptual, in the field of their dissertation work and areas supporting that work.
2. Graduates will have a depth of understanding of experimental methods used for their data collection specifically with respect to the spectroscopic or other instrumental methods used in their research.
3. Graduates will have the necessary understanding of their discipline to be able to communicate orally with others in their field as well as the general scientific community.
4. Graduates will be able to plan and implement investigative procedures and formulate hypotheses.

Admissions Criteria

In evaluating candidates for admission to its graduate degree programs, the Department of Chemistry and Biochemistry emphasizes the preparedness of the student as evidenced by quality and quantity of coursework and the student’s previous research experience. Recommendations from our own faculty, based on firsthand knowledge of the applicant or a faculty member at the applicant’s institution, are also very important.

To be admitted to the PhD program, an applicant must satisfy the general admission requirements of the program and his or her academic record must show preparation for advanced work in chemistry. The department may waive specific course requirements for students who demonstrate successful completion of graduate coursework in chemistry on entry.

UNCONDITIONAL ADMISSION

Unconditional admission may be granted under any one of the following options. The minimum undergraduate GPA requirement for all options is 3.0, as calculated by Graduate Admissions.

OPTION 1

A satisfactory completion of a Bachelor's degree or equivalent, official transcripts, and GRE scores, and three letters of recommendation.

OPTION 2

A satisfactory completion of a Bachelor's degree or equivalent, official transcripts, and a letter of recommendation from a faculty member at the applicant's undergraduate institution, *plus a recommendation from a UT Arlington Chemistry and Biochemistry faculty member.*

OPTION 3

A satisfactory completion of a bachelor's degree or equivalent, official transcripts, and a letter of recommendation from a faculty member at the undergraduate institution, *plus a recommendation from a UT Arlington Chemistry and Biochemistry faculty member based on a face-to-face interview.*

LANGUAGE REQUIREMENTS

An applicant whose native language is not English must submit a TOEFL score of at least 550 or a score of at least 213 on the computer-based test. A TSE-A score of 45 or higher can be substituted for the TOEFL. Those who have completed their undergraduate education in English *may be eligible for a TOEFL waiver* based on the recommendation letters.

PROVISIONAL ADMISSION

An applicant unable to supply all required documentation prior to the admission deadline but who otherwise appears to meet admission requirements may be granted provisional admission.

A deferred decision may be granted when a file is incomplete or when a denied decision is not appropriate.

PROBATIONARY ADMISSION

In rare cases, probationary admission may be granted as the result of a substandard performance on one or more of the admission criteria. In this case, the Graduate Advisor will set additional conditions for admission including, but not limited to, additional undergraduate coursework and/or achieving a B or better in the first 9 hours of graduate coursework.

DENIAL OF ADMISSION

A candidate may be denied admission if they have less than satisfactory performance on a majority of the admission criteria described above.

ELIGIBILITY FOR SCHOLARSHIPS/FELLOWSHIPS

Students that have no provisional admission conditions to meet will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the Fall semester, must have a GPA of 3.0 in their last 60 undergraduate credit hours plus any graduate credit hours as calculated by Graduate Admissions, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain their fellowships. (Students with graduate teaching or research assistantships, however, must be enrolled in a minimum of 9 hours of coursework in both long semesters and 6 hours of coursework in the summer sessions.)

CHEM 5381	ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY I	3
CHEM 5382	ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY II	3

CHEM 5383	ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY III	3
Specialization		
Select one of the following emphases:		15-18
Emphasis in Analytical Chemistry		15
Select 3 from the following:		
CHEM 5324	ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY	
CHEM 5325	SEPARATION SCIENCE	
CHEM 5326	ANALYTICAL CHEMISTRY - CONCEPTS AND IMPLEMENTATION	
CHEM 5327	ANALYTICAL ELECTROCHEMISTRY	
Select 2 CHEM courses outside analytical chemistry, such as:		
CHEM 5331	ADVANCED BIOCHEMISTRY I	
CHEM 5341	INORGANIC CHEMISTRY	
CHEM 5351	ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY	
CHEM 5361	INTRODUCTION TO GRADUATE PHYSICAL CHEMISTRY	
Emphasis in Biochemistry		15
CHEM 5331	ADVANCED BIOCHEMISTRY I	
CHEM 5334	MECHANISMS OF ENZYME ACTIONS	
CHEM 5335	GENES, GENOMES, AND NUCLEIC ACIDS	
Select 2 CHEM courses outside biochemistry, such as:		
CHEM 5262 & CHEM 5168	COMPUTATIONAL CHEMISTRY and QUANTUM CHEMISTRY LABORATORY	
CHEM 5336	STRUCTURE & FUNCTION OF PROTEINS, MEMBRANES & CARBOHYDRATES AND FAST KINETICS	
CHEM 5351	ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY	
CHEM 5341	INORGANIC CHEMISTRY	
CHEM 5358	DETERMINATION OF MOLECULAR STRUCTURE BY PHYSICAL METHODS	
CHEM 5324	ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY	
Emphasis in Inorganic Chemistry		15
CHEM 5341	INORGANIC CHEMISTRY	
CHEM 5358	DETERMINATION OF MOLECULAR STRUCTURE BY PHYSICAL METHODS	
CHEM 5342	SOLID STATE CHEMISTRY	
or CHEM 5336	STRUCTURE & FUNCTION OF PROTEINS, MEMBRANES & CARBOHYDRATES AND FAST KINETICS	
Select 2 courses in CHEM from outside of inorganic chemistry, such as:		
CHEM 5262 & CHEM 5168	COMPUTATIONAL CHEMISTRY and QUANTUM CHEMISTRY LABORATORY	
CHEM 5324	ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY	
CHEM 5331	ADVANCED BIOCHEMISTRY I	
CHEM 5351	ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY	
Emphasis in Organic Chemistry		18
CHEM 5358	DETERMINATION OF MOLECULAR STRUCTURE BY PHYSICAL METHODS	
CHEM 5351	ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY	
CHEM 5354	ADVANCED ORGANIC CHEMISTRY II - MECHANISMS AND PROPERTIES	
CHEM 5355	ADVANCED ORGANIC SYNTHESIS	
Select 2 courses in CHEM from outside organic chemistry, such as:		
CHEM 5262 & CHEM 5168	COMPUTATIONAL CHEMISTRY and QUANTUM CHEMISTRY LABORATORY	
CHEM 5324	ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY	
CHEM 5331	ADVANCED BIOCHEMISTRY I	
CHEM 5341	INORGANIC CHEMISTRY	
Emphasis in Physical Chemistry		15
CHEM 5361	INTRODUCTION TO GRADUATE PHYSICAL CHEMISTRY	
CHEM 5364	ADVANCED GRADUATE PHYSICAL CHEMISTRY	
CHEM 5300	SELECTED TOPICS IN ADVANCED CHEMISTRY	
Select 2 courses in CHEM from outside physical chemistry, such as:		

CHEM 5324	ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY	
or CHEM 5326	ANALYTICAL CHEMISTRY - CONCEPTS AND IMPLEMENTATION	
CHEM 5331	ADVANCED BIOCHEMISTRY I	
CHEM 5341	INORGANIC CHEMISTRY	
CHEM 5351	ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY	
Emphasis in Polymer Chemistry		18
CHEM 5356	ADVANCED POLYMER CHEMISTRY	
Select 5 courses in CHEM from outside polymer chemistry, such as:		
CHEM 5351	ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY	
CHEM 5354	ADVANCED ORGANIC CHEMISTRY II - MECHANISMS AND PROPERTIES	
CHEM 5358	DETERMINATION OF MOLECULAR STRUCTURE BY PHYSICAL METHODS	
CHEM 5355	ADVANCED ORGANIC SYNTHESIS

Electives		
Select research and elective courses with the guidance of the supervising committee		
Dissertation		
Select at least 9 hours from the following:		9
CHEM 6399	DISSERTATION	
CHEM 6699	DISSERTATION	
CHEM 6999	DISSERTATION	
CHEM 7399	DOCTORAL DEGREE COMPLETION (recommended for final semester)	
Total Hours		**33-36**

[1] For guidance and options of "Career Development" (possible "Internship"), students will consult with their research supervisor and with the Graduate Advisor.

[2] CHEM 5358 cannot be used to fulfill this requirement. Students who do not have a good instrumentation background should consider taking CHEM 5421.

Program Completion

After admission to the doctoral program, the student must successfully complete the appropriate examination(s) required by the faculty of the student's discipline.

15-18 hours of coursework in the student's selected emphasis should be completed in the first year of study but no later than the second year of study.

Students will enroll in Advanced Laboratory Techniques lecture courses in their 2nd (CHEM 5381), 3rd (CHEM 5382), and 4th (CHEM 5383) long semesters.

Students will enroll in Chemistry Career Development courses (CHEM 6104, CHEM 6304 or CHEM 6904) during their internship period, typically in years 3 to 5.

After completing coursework in their chosen emphasis area, students will register for research and elective courses under the guidance of their supervision committee until they pass the Comprehensive Examination. Upon passing the examination, they will enroll in dissertation courses (CHEM 6399, CHEM 6699 CHEM 6999) until they complete research.

A course grade may be used to satisfy degree requirements for no more than seven years after the course has been completed.

A supplementary set of guidelines, published by the Department of Chemistry and Biochemistry, should be consulted.

Advising Resources

Current students may contact our graduate advisor. Prospective students should contact our graduate recruiting chair.

Master of Science in Chemistry

About This Program

The objectives of the Chemistry and Biochemistry Department's program leading to the Master of Science degree include:

1. developing the individual's ability to do independent research,
2. preparing students for more advanced study in chemistry and
3. providing advanced training to professional chemists and those employed in technical and business areas in which chemistry at this level is necessary for efficient performance.

Research areas include analytical chemistry, biochemistry, bioinorganic chemistry, colloid and surface chemistry, electrochemistry, inorganic chemistry, medicinal chemistry, organic chemistry, physical chemistry, polymer chemistry, and theoretical chemistry.

Competencies

1. Upon completion, students will have a general knowledge of how chemical research is performed and the chemistry and/or biochemistry literature related to their thesis project.
2. Upon completion, students will have a broad knowledge of chemistry outside of their chosen area of specialization.
3. Upon completion, students will be able to communicate scientific concepts and findings in an oral presentation with others in their field as well as the general scientific community.
4. Upon completion, students will be able to communicate scientific concepts and findings in writing with others in their field as well as the general scientific community.

Admissions Criteria

In evaluating candidates for admission to its graduate degree programs, the Department of Chemistry and Biochemistry emphasizes the preparedness of the student as evidenced by quality and quantity of coursework and the student's previous research experience. Recommendations from our own faculty, based on firsthand knowledge of the applicant or a faculty member at the applicant's institution, are also very important.

A candidate for graduate study must satisfy the general admission requirements of the program.

UNCONDITIONAL ADMISSION

Unconditional admission may be granted under any one of the following options. The minimum undergraduate GPA requirement for all options is 3.0, as calculated by Graduate Admissions.

OPTION 1

A satisfactory completion of a Bachelor’s degree or equivalent, official transcripts, and GRE scores, and three letters of recommendation.

OPTION 2

A satisfactory completion of a Bachelor’s degree or equivalent, official transcripts, and a letter of recommendation from a faculty member at the applicant’s undergraduate institution, *plus a recommendation from a UT Arlington Chemistry and Biochemistry faculty member.*

OPTION 3

A satisfactory completion of a bachelor’s degree or equivalent, official transcripts, and a letter of recommendation from a faculty member at the undergraduate institution, *plus a recommendation from a UT Arlington Chemistry and Biochemistry faculty member based on a face-to-face interview.*

The Master's Degree with Thesis Substitute is available for students with at least five years of professional experience in an industrial, government, or other chemistry laboratory at the time the degree is awarded. Admission to the program requires specific approval of the Graduate Studies Committee.

LANGUAGE REQUIREMENTS

An applicant whose native language is not English must submit a TOEFL score of at least 550 or a score of at least 213 on the computer-based test. A TSE-A score of 45 or higher can be substituted for the TOEFL. Those who have completed their undergraduate education in English *may be eligible for a TOEFL waiver* based on the recommendation letters.

PROVISIONAL ADMISSION

An applicant unable to supply all required documentation prior to the admission deadline but who otherwise appears to meet admission requirements may be granted provisional admission.

A deferred decision may be granted when a file is incomplete or when a denied decision is not appropriate.

PROBATIONARY ADMISSION

In rare cases, probationary admission may be granted as the result of a substandard performance on one or more of the admission criteria. In this case, the Graduate Advisor will set additional conditions for admission including, but not limited to, additional undergraduate coursework and/or achieving a B or better in the first 9 hours of graduate coursework.

DENIAL OF ADMISSION

A candidate may be denied admission if they have less than satisfactory performance on a majority of the admission criteria described above.

ELIGIBILITY FOR SCHOLARSHIPS/FELLOWSHIPS

Students that have no provisional admission conditions to meet will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the Fall semester, must have a GPA of 3.0 in their last 60 undergraduate credit hours plus any graduate credit hours as calculated by Graduate Admissions, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain their fellowships. (Students with graduate teaching or research assistantships, however, must be enrolled in a minimum of 9 hours of coursework in both long semesters and 6 hours of coursework in the summer sessions.)

Curriculum

Foundations

Select 18 graduate hours in chemistry with at least 12 from 4 of the chemistry disciplines (Analytical, Biochemistry, Inorganic, Organic, and Physical). Suggested classes follow.		18
For biochemistry select:		
CHEM 5331	ADVANCED BIOCHEMISTRY I	
or CHEM 5336	STRUCTURE & FUNCTION OF PROTEINS, MEMBRANES & CARBOHYDRATES AND FAST KINETICS	
For inorganic chemistry select:		
CHEM 5341	INORGANIC CHEMISTRY	
For organic chemistry select:		
CHEM 5351	ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY	
For physcial chemistry select:		
CHEM 5361	INTRODUCTION TO GRADUATE PHYSICAL CHEMISTRY	
For analytical chemistry select from the following:		
CHEM 5324	ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY	
CHEM 5325	SEPARATION SCIENCE	

Thesis Options		
Complete 12 hours in one of the following options.		12
Thesis		
Select two elective, graduate division courses in a science or engineering subject approved by graduate advisor		
CHEM 5698	THESIS	
Thesis Substitute		
Select two to three graduate division courses in a science or engineering subject approved by graduate advisor		
CHEM 5392	RESEARCH IN CHEMISTRY	
Non-Thesis		
Select two graduate courses in chemistry approved by graduate advisor.		
Select two graduate division courses in a science or engineering subject approved by graduate advisor		
Total Hours		**30**

Advising Resources

Current students may contact our graduate advisor. Prospective students should contact our graduate recruiting chair.

Chemistry and Biochemistry - Undergraduate

Programs

BACHELOR OF ARTS DEGREES

- Chemistry BA (p. 1587)
- Chemistry BA 2nd Major (p. 1590)
- Chemistry BA UTeach (6-12 PS) (p. 1591)
- Chemistry BA UTeach (7-12 CH) (p. 1593)

BACHELOR OF SCIENCE DEGREES

- Biochemistry BS (p. 1597)
- Biological Chemistry BS (p. 1595)
- Chemistry BS (p. 1599)

FAST TRACKS

- Biochemistry BS to Biomedical Engineering MS Fast Track (p. 1602)
- Chemistry BS to MS Fast Track (p. 1603)

MINOR

- Biochemistry Minor (p. 1606)
- Chemistry Minor (p. 1606)

CHEmistry and BioChemistry Undergraduate Polices

All students pursuing a degree in one of the academic programs from the Department of Chemistry and Biochemistry must abide by the academic regulations of the University and the following additional rules established by the Department of Chemistry and Biochemistry.

DECLARING A MAJOR IN CHEMISTRY OR BIOCHEMISTRY

Beginning freshmen who intend to declare chemistry or biochemistry as a major must complete the following courses with a minimum GPA of 2.25 in chemistry and an overall GPA of 2.25.

- CHEM 1441 and CHEM 1442.
- Six hours of mathematics approved by the department.
- Three hours of biology or geology.
- 12 hours from courses in the University core curriculum other than science or mathematics (English, history, political science, social and cultural studies, and fine arts).

Transfer students who transfer part or all of the above requirements must complete a minimum of 11 hours of approved science and mathematics courses in residence with a minimum GPA of 2.25 to be eligible to major in chemistry or biochemistry.

All new students who intend to major in chemistry or biochemistry should schedule an appointment for advising with the departmental undergraduate advisor.

CALCULATION OF CHEMISTRY GRADE POINT AVERAGE

Only chemistry courses required in the degree program will be used in calculating the chemistry grade point average for chemistry degree candidates.

HONORS PROGRAM

Students who qualify are encouraged to participate in the University Honors College. Students should enroll in honors sections of chemistry courses when available and should include CHEM 4381 as approved by the departmental undergraduate advisor.

CHEMISTRY COURSE REGISTRATION & REQUIREMENTS

Students may not be "pre-enrolled" in chemistry courses while pre-requisite courses at another institution are pending grades. Only UT Arlington credits may be used for pre-enrollment purposes.

Canvas grades (or other learning-management system grades) may not be used as proof of completion for a pre-requisite course. Students must submit either an official transcript to the registrar's office, or submit a transcript with a letter grade for the pre-requisite course to the undergraduate chemistry advisor in order to be enrolled in a chemistry course. If a student is submitting the transcript via email, the email must be sent from their UTA email address.

The ACS-certified degree programs (Bachelor of Science in Chemistry and Bachelor of Science in Biochemistry) require the capstone course CHEM 3322. The capstone course is meant to test students in their knowledge of Math, Physics, and Chemistry in order to assess their cumulative knowledge of the sciences needed for success in their profession. This course requirement may not be satisfied with transfer credit without the approval of the undergraduate curriculum committee of the Department of Chemistry and Biochemistry.

THREE-ATTEMPT RULE

A student may not attempt a course (at UT Arlington and/or at any other institution) more than three times and apply that course toward a chemistry/ biochemistry degree. Enrollment in a course for a period of time sufficient for assignment of a grade, including a grade of W, is considered an attempt.

Bachelor of Arts in Chemistry

About This Program

Bachelor of Arts in Chemistry is suitable preparation for students who desire certification with a teaching field in chemistry without entering the UTeach pathway.

Competencies

1. Students will gain knowledge of an essential core of knowledge in chemistry, including organic, inorganic, physical, and biochemistry.
2. Students will communicate, both orally and in writing, chemical topics relevant to their field of interest.
3. Students will be able to read and analyze scientific papers in their area of interest.
4. Students will obtain standard laboratory skills and techniques that are relevant to the study of all areas of chemistry.
5. Students will gain fundamental knowledge of theory and operation of modern chemical instrumentation.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For Life and Physical Sciences select:		
PHYS 1441	GENERAL COLLEGE PHYSICS I	
PHYS 1442	GENERAL COLLEGE PHYSICS II	
For U.S. History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Chemistry Foundations		
Additional hours in required core courses.		4
CHEM 1101	SUCCESS IN CHEMISTRY AND BIOCHEMISTRY	1
Select 14 hours in a single modern/classical language or eight hours in a language plus six advanced hours from one liberal arts area cluster to be chosen with the guidance of the undergraduate advisor [1]		14
Select two Biology or Geology for science majors courses. [2]		8
Chemistry Specialization		
CHEM 1341	GENERAL CHEMISTRY I	3
CHEM 1181	GENERAL CHEMISTRY I LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES	1
CHEM 1342	GENERAL CHEMISTRY II	3
CHEM 1182	GENERAL CHEMISTRY II LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES	1
CHEM 2321	ORGANIC CHEMISTRY I	3
CHEM 2322	ORGANIC CHEMISTRY II	3
CHEM 2335	QUANTITATIVE CHEMISTRY [3]	3
CHEM 2283	SYNTHESIS AND ANALYSIS LABORATORY I	2
CHEM 2284	SYNTHESIS AND ANALYSIS LABORATORY II	2
CHEM 3315	INTRODUCTION TO BIOPHYSICAL CHEMISTRY	3
CHEM 3175	BIOPHYSICAL CHEMISTRY LABORATORY	1
CHEM 3317	INORGANIC CHEMISTRY	3
CHEM 4101	SEMINAR IN CHEMISTRY	1
CHEM 4311	BIOCHEMISTRY I	3
Select one from the following:		2
CHEM 3307	INTRODUCTION TO POLYMER CHEMISTRY	
CHEM 4242	LABORATORY TECHNIQUES IN BIOCHEMISTRY	
CHEM 4312	BIOCHEMISTRY II	
CHEM 4318	INORGANIC CHEMISTRY	
CHEM 4346	ADVANCED SYNTHETIC METHODS	
Select 3000/4000 level courses sufficient to meet the 36 advanced hours requirement.		17
Total Hours		**120**

The minimum biology requirement for premedical students is BIOL 1441 CELL AND MOLECULAR BIOLOGY and three additional courses. Specifically, BIOL 2444 GENERAL MICROBIOLOGY and BIOL 3442 HUMAN PHYSIOLOGY are recommended plus three additional hours.

SUGGESTED COURSE SEQUENCE

First Year

First Semester	Hours	Second Semester	Hours
CHEM 1341	3	CHEM 1342	3
CHEM 1181	1	CHEM 1182	1
MATH 1426	4	MATH 2425	4
BIOL 1441 or GEOL 1301[1C]	4	BIOL 1442 or GEOL 1302[1C]	4
ENGL 1301	3	ENGL 1302	3
CHEM 1101	1		
	16		**15**

Second Year

First Semester	Hours	Second Semester	Hours
CHEM 2321	3	CHEM 2322	3
CHEM 2283	2	CHEM 2335	3
PHYS 1441	4	CHEM 2284	2
Language, Philosophy, and Culture	3	PHYS 1442	4
Modern/Classical Language[1]	4	Modern/Classical Language[1]	4
	16		**16**

Third Year

First Semester	Hours	Second Semester	Hours
CHEM 3315	3	CHEM 4311	3
CHEM 3175	1	POLS 2312	3
POLS 2311	3	Modern/Classical Language[1]	3
Modern/Classical Language[1]	3	Creative Arts	3
Advanced Elective	6	Advanced Elective	3
	16		**15**

Fourth Year

First Semester	Hours	Second Semester	Hours
CHEM 3317	3	CHEM 3000 level or above (can be up to 3 hrs)	2
CHEM 4101	1	HIST 1302	3
HIST 1301	3	Social and Behavioral Sciences	3
Foundational Component Area	3	Advanced Electives	3
Advanced Electives	5		
	15		**11**

Total Hours: 120

1 Liberal arts course approved by advisor.

2 Student may take GEOL 1301 and 1302 to meet degree requirement. This will affect the number of electives needed to reach 120 hours.

3 Completion of CHEM 2335 with the grade of "C" or above will satisfy the computer proficiency requirement.

Program Completion

ORAL COMMUNICATION AND COMPUTER COMPETENCY REQUIREMENTS

For all chemistry degree programs except the UTeach certification degree programs, the university computer competency requirement will be met by: completion of CHEM 2335 QUANTITATIVE CHEMISTRY with the grade of "C" or above or taking CSE 1301 or by passing the University computer proficiency examination. For the UTeach certification degree programs, completion of EDUC 4331 KNOWING AND LEARNING IN MATH AND SCIENCE fulfills the requirement.

The University oral communication competency requirement may be satisfied by taking CHEM 4101 (required for the Bachelor of Science degree in Chemistry, the Bachelor of Arts degree in Chemistry, and the combined BS-MS degree in Chemistry) or by taking CHEM 4313 or CHEM 4314 (required for the Bachelor of Science degree in Biochemistry and the Bachelor of Science degree in Biological Chemistry). For the UTeach certification degree programs, completion ofSCIE 1201 or SCIE 1334 (required for the UTeach programs) fulfills the requirement.

Students should refer to the specific degree plans and the chemistry undergraduate advisor for details regarding these requirements.

Advising Resources

First time in college students should plan to speak to a program advisor when starting their second year. Transfer students should be advised prior to New Maverick Orientation.

Location:

SH 303

Second Major in Chemistry

About This Program

A Second Major in Chemistry may be earned by completing the required courses in addition to the requirements for any other baccalaureate degree. A second major is not the same as a double major in which students complete all of the requirements for both degrees. Please see the undergraduate chemistry advisor for additional information.

Competencies

1. Upon graduation, students will be able to identify, formulate, and solve chemistry problems.

Curriculum

CHEM 1441	GENERAL CHEMISTRY I	4
CHEM 1442	GENERAL CHEMISTRY II	4
CHEM 2321	ORGANIC CHEMISTRY I	3
CHEM 2181	ORGANIC CHEMISTRY I LABORATORY	1
CHEM 2322	ORGANIC CHEMISTRY II	3
CHEM 2182	ORGANIC CHEMISTRY II LABORATORY	1
CHEM 2335	QUANTITATIVE CHEMISTRY	3
CHEM 2285	QUANTITATIVE CHEMISTRY LABORATORY	2
CHEM 3315	INTRODUCTION TO BIOPHYSICAL CHEMISTRY	3
CHEM 4311	BIOCHEMISTRY I	3
Chemistry electives chosen with the Chemistry Advisor		6
Total Hours		**33**

Bachelor of Science in Biological Chemistry

About This Program

Bachelor of Science in Biological Chemistry is recommended to students who plan to enter into medical and dental school and for training in allied health sciences. This program is also suitable for students who anticipate professional careers in the field of biotechnology or graduate training in biochemistry.

Competencies

1. Students will gain knowledge of an essential core of knowledge in chemistry, including organic, inorganic, physical, and biochemistry.
2. Students will communicate, both orally and in writing, chemical topics relevant to their field of interest.
3. Students will be able to read and analyze scientific papers in their area of interest.
4. Students will obtain standard laboratory skills and techniques that are relevant to the study of all areas of chemistry.
5. Students will gain fundamental knowledge of theory and operation of modern chemical instrumentation.

Bachelor of Science in Biological Chemistry

About This Program

Bachelor of Science in Biochemistry is recommended to students who plan to enter into graduate study in biochemistry and for those who anticipate professional careers as biochemists. This program is also suitable for premedical and predental students and for training in allied health sciences. This is an American Chemical Society certified program.

Competencies

1. Students will gain knowledge of an essential core of knowledge in chemistry, including organic, inorganic, physical, and biochemistry.
2. Students will communicate, both orally and in writing, chemical topics relevant to their field of interest.
3. Students will be able to read and analyze scientific papers in their area of interest.
4. Students will obtain standard laboratory skills and techniques that are relevant to the study of all areas of chemistry.
5. Students will gain fundamental knowledge of theory and operation of modern chemical instrumentation.

Curriculum

Foundations	
General Core Requirements (p. 46)	42

Students must complete specific courses within certain core areas.

For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
& ENGL 1302	and RHETORIC AND COMPOSITION II	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For Life and Physical Sciences select:		
PHYS 1443	GENERAL TECHNICAL PHYSICS I	
PHYS 1444	GENERAL TECHNICAL PHYSICS II	
For US History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Biochemistry Foundations		
Additional hours in required core courses.		4
CHEM 1101	SUCCESS IN CHEMISTRY AND BIOCHEMISTRY	1
MATH 2326	CALCULUS III	3
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	4
BIOL 3315	GENETICS	3
BIOL 2444	GENERAL MICROBIOLOGY	4
Biochemistry Specialization		
CHEM 1341	GENERAL CHEMISTRY I	3
CHEM 1181	GENERAL CHEMISTRY I LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES	1
CHEM 1342	GENERAL CHEMISTRY II	3
CHEM 1182	GENERAL CHEMISTRY II LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES	1
CHEM 2321	ORGANIC CHEMISTRY I	3
CHEM 2322	ORGANIC CHEMISTRY II	3
CHEM 2335	QUANTITATIVE CHEMISTRY	3
CHEM 2283	SYNTHESIS AND ANALYSIS LABORATORY I	2
CHEM 2284	SYNTHESIS AND ANALYSIS LABORATORY II	2
CHEM 3321	PHYSICAL CHEMISTRY I	3
CHEM 3181	PHYSICAL CHEMISTRY I LABORATORY	1
CHEM 3322	PHYSICAL CHEMISTRY II	3
CHEM 3182	PHYSICAL CHEMISTRY II LABORATORY	1
CHEM 4242	LABORATORY TECHNIQUES IN BIOCHEMISTRY	2
CHEM 4311	BIOCHEMISTRY I	3
CHEM 4312	BIOCHEMISTRY II	3
CHEM 4313	METABOLISM AND REGULATION	3
or CHEM 4316	BIOCHEMICAL GENETICS	
CHEM 4314	ENZYMOLOGY	3
CHEM 3317	INORGANIC CHEMISTRY	3
or CHEM 4318	INORGANIC CHEMISTRY	
CHEM 4346	ADVANCED SYNTHETIC METHODS	3
CHEM 4461	INSTRUMENTAL ANALYSIS	4
Select 3000/4000 level electives sufficient to meet the 36 advanced hours requirement.		1
Select electives sufficient to complete 120 hours.		5
Total Hours		**120**

SUGGESTED COURSE SEQUENCE

First Year

First Semester	Hours	Second Semester	Hours
CHEM 1341	3	CHEM 1342	3
CHEM 1181	1	CHEM 1182	1
BIOL 1441	4	BIOL 1442	4

Bachelor of Science in Chemistry

About This Program

The Bachelor of Science in Chemistry meets the standards for professional baccalaureate programs established by the American Chemical Society. It is recommended to students who plan to enter into graduate study in chemistry and for those who anticipate professional careers as chemists.

Competencies

1. Students will gain knowledge of an essential core of knowledge in chemistry, including organic, inorganic, physical, and biochemistry.
2. Students will communicate, both orally and in writing, chemical topics relevant to their field of interest.

3. Students will be able to read and analyze scientific papers in their area of interest.
4. Students will obtain standard laboratory skills and techniques that are relevant to the study of all areas of chemistry.
5. Students will gain fundamental knowledge of theory and operation of modern chemical instrumentation.

Bachelor of Science in Biochemistry to Master of Science in Biomedical Engineering Fast-Track

About This Program

Bachelor of Science in Biochemistry to Master of Science in Biomedical Engineering Fast-Track enables outstanding UT Arlington senior undergraduate students in biochemistry to satisfy degree requirements leading to a master's degree in bioengineering while completing their undergraduate studies.

The BS in Biochemistry of this Fast-Track program is an American Chemical Society Certified degree.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Biochemistry BS (p. 1597)

Biomedical Engineering MS (p. 523)

Admissions Criteria

Students interested in this program should consult with Bioengineering Advisors when they are within 30 hours of completing their bachelor's degrees. They must have completed at least 30 hours of relevant course work at UT Arlington, achieving a GPA of at least 3.0 in those courses, and have an overall GPA of 3.0 or better in all UT Arlington College of Science courses.

Students must take the following undergraduate courses in order to be admitted into the fast track program.

- BE 3380 HUMAN PHYSIOLOGY IN BE
- CHEM 2335 QUANTITATIVE CHEMISTRY
- CHEM 4311 BIOCHEMISTRY I

The cumulative GPA required for the foundation courses is a 3.3. Students must also maintain a 3.3 GPA or higher in all CHEM courses completed at UTA, and have a cumulative GPA of a 3.3 or higher.

The following courses will satisfy requirements for both the BS and the MS:

- BE 5333 NANO BIOMATERIALS AND LIVING-SYSTEMS INTERACTIONS
- BE 5365 TISSUE ENGINEERING LAB
- BE 5372 DRUG DELIVERY SYSTEM

For automatic admission to the master's program, students must complete these courses with at least a B.

Curriculum

Foundations		
Complete foundations requirments in Biochemistry BS per catalog.		58
Specialization		
Biomedical Engineering

Bachelor of Science in Chemistry to Master of Science in Chemistry Fast-Track

About This Program

The Bachelor of Science in Chemistry to Master of Science in Chemistry Fast-Track is recommended for students who wish to earn graduate level course credit and who wish to obtain graduate level research experience. This program is suitable for those students who plan to pursue doctoral graduate studies in chemistry and for those who anticipate professional careers as chemists. BS in Chemistry degree of this fast-track program is an American Chemical Society Certified degree.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Chemistry BS

Chemistry MS

Admissions Criteria

For admission to the fast-track program students must:

- Be within 30 hours of graduation
- Have completed 30 hours at UTA.
- Complete fast track foundation courses with a GPA of 3.25 or better: CHEM 2322, CHEM 2335, CHEM 3317 (or CHEM 4318), CHEM 3321 (or CHEM 3322).
- Maintain a 3.3 GPA or higher in all Chemistry courses completed at UTA, and have a cumulative GPA of a 3.3 or higher.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
For Communcaiton, select:

Minor in Biochemistry

About This Program

The Minor in Biochemistry requires 18 hours of chemistry, of which at least 6 must be at the 3000/4000 level. Only lecture courses that satisfy a degree requirement for one of the degrees offered by the Department of Chemistry and Biochemistry may be used. Research courses, Chemistry Readings, and Internship credits may not be used towards the Chemistry Minor.

Competencies

1. Upon completion, students will be able to identify, formulate, and solve basic chemistry problems.

Curriculum

Data Science

Division of Data Science Overview

The Division of Data Science coordinates data science programs bridging multiple departments within the College of Science.

Graduate Programs (p. 1609)

Undergraduate Programs (p. 1610)

COURSES

DATA 1301. INTRODUCTION TO DATA SCIENCE. 3 Hours.
This course provides an introduction to the field of data science with a high level overview of basic concepts, data types, and techniques while introducing data-informed decision making.

DATA 2301. DATA VISUALIZATION & DATA STORYTELLING. 3 Hours.
In this course, students will learn about the principles and techniques of effective data visualization and communicate data using various tools and techniques. The course will cover a variety of tools and techniques commonly used in data visualization, including data visualization software, data preparation and cleaning, and techniques for creating static and interactive visualizations. Through a combination of lectures, hands-on exercises, and individual and group projects, students will explore the principles of data visualization and gain practical skills in designing and communicating data through visual representations. Topics covered will include data exploration, charting and graphing, dashboard design, data storytelling, and best practices for visualizing data. At the end of this course, students can design and implement effective visualizations for various fields, including STEM, psychology, scientific research, and so many others.

DATA 3311. MATHEMATICS FOR DATA SCIENCE. 3 Hours.
This course covers techniques from linear algebra and probability with an emphasis on how they are used in data science. Working with real data sets will be emphasized, along with basics of Matlab or R programming. Prerequisite: MATH 1426.

DATA 3401. PYTHON FOR DATA SCIENCE 1. 4 Hours.
This is the first of a two course sequence offering the foundations of Python programming in the context of data science. It introduces the full syntax of the Python language as it overviews structured, functional, and object oriented programming methodologies. It also provides a basic conceptual understanding of computing and introduces Unix command-line tools, software employed in data science such as git and Jupyter, and Python libraries such as numpy, matplotlib, and Pandas. Prerequisite: MATH 1426 or concurrent enrollment in MATH 1426.

DATA 3402. PYTHON FOR DATA SCIENCE 2. 4 Hours.
This is the second of a two course sequence offering the foundations of Python programming in the context of data science. It reinforces concepts presented in DATA 3401 with greater depth with a focus on application to various problems in data science, while exploring the python library ecosystem. Prerequisite: DATA 3401, or consent of instructor.

DATA 3421. DATA MINING, MANAGEMENT, AND CURATION. 4 Hours.
This lecture and lab course will provide training in working with databases, including data mining techniques and principles and best practices in data management, storage, and curation. Prerequisite: DATA 3402 or concurrent enrollment in DATA 3402, or consent of instructor.

DATA 3441. STATISTICAL METHODS FOR DATA SCIENCE 1. 4 Hours.
This lecture and lab course will provide an introduction to the fundamental building blocks of advanced data analysis, with emphasis on advanced linear algebra, optimization, statistical inference, and Monte Carlo methods. Working with real data sets will be emphasized, along with basics of R programming. Prerequisite: DATA 3401 or consent of instructor.

DATA 3442. STATISTICAL METHODS FOR DATA SCIENCE 2. 4 Hours.
This lecture and lab course will provide an introduction to the principles and general methods for the analysis of categorical data. This type of data occurs extensively in both observational and experimental studies, as well as industrial applications. While some theoretical statistical detail is given, the primary focus will be on methods of data analysis. Topics include generalized regression models, logistic regression models, Poisson regression models, and multinomial regression models. Problems will be motivated from a scientific perspective. Prerequisite: DATA 3441.

DATA 3461. MACHINE LEARNING. 4 Hours.
This course introduces and surveys Machine Learning techniques and their application to various problems in data science. Prerequisite: DATA 3401, DATA 3402 or consent of instructor.

DATA 4090. UNDERGRADUATE RESEARCH. 0 Hours.
Undergraduate research experiences under supervision of faculty. Students are expected to disseminate research findings by poster or oral presentations in meetings or conferences. Students are also expected to participate in other activities as directed by the grant-funded Research Program Director.

DATA 4380. DATA PROBLEMS. 3 Hours.
This course equips Data Science students with the skills to identify, define, and explore various data science challenges. Students will engage with practical projects and expert guidance throughout the course, preparing them for the capstone project. This course includes advanced data handling, machine learning algorithms, model evaluation, and ethical considerations in data science, culminating in real-world project presentations. Prerequisite: DATA 3402, DATA 3421. DATA 3461 or current enrollment in DATA 3461, or permission of the instructor.

DATA 4381. DATA CAPSTONE PROJECT 1. 3 Hours.
This is the first of a two-semester sequence that will involve deep engagement in a team or individual project in Data Science. Presentation of written and oral reports will be required. Corequisite: DATA 4380.

DATA 4382. DATA CAPSTONE PROJECT 2. 3 Hours.
This is the second of a two-semester sequence that will involve deep engagement in a team or individual project in Data Science. Presentation of written and oral reports will be required. Prerequisite: DATA 4381.

DATA 4390. DATA SCIENCE RESEARCH. 3 Hours.
Formulation and definition of research problems, the formulation and execution of strategies of solution, and the presentation of results. Prerequisite: consent of instructor. Recommendation by other faculty encouraged.

DATA 4391. SPECIAL TOPICS IN DATA SCIENCE. 3 Hours.
Special topics in Data Science are assigned to individuals or small groups. Faculty members closely supervise the projects and assign library reference material. Small groups will hold seminars at suitable intervals. May be repeated for credit. Prerequisite: senior standing and written permission of the instructor & department chair.

DATA 4392. ADVANCED TOPICS IN DATA SCIENCE. 3 Hours.
Varies from semester to semester. New developments in Data Science, in-depth study of a topic not covered in other courses, or a special faculty expertise made available to undergraduates. May be repeated for credit as topic varies. Prerequisite: permission of instructor.

DATA 4393. HONORS THESIS/SENIOR PROJECT. 3 Hours.
Required of all students in the University Honors College. During the senior year the student must complete a thesis or a project under the direction of a faculty member in Data Science. Prerequisite: Enrollment in the University Honors College and written permission of the instructor and chair.

DATA 4394. UNDERGRADUATE RESEARCH EXPERIENCES. 3 Hours.
Research under faculty supervision and mentorship involving collaboration within a small group. The topic varies from semester to semester, is determined by the faculty teaching the course, and is announced in advance. The course promotes active learning based on inquiry, development of higher-order thinking skills, and meaningful scientific research. Prerequisite: consent of instructor.

Data Science - Graduate

Programs

MASTER'S PROGRAM

- Applied Statistics & Data Science MS (p. 1609)

Master of Science in Applied Statistics and Data Science

About This Program

The Master of Science in Applied Statistics and Data Science (MS ASDS) will train students in statistical methodologies, data science, big data analytics, and machine learning. A primary objective of the MS ASDS is to prepare students for work in industry through an emphasis on cutting-edge methods commonly used to solve real-life problems. The MS ASDS curriculum will focus on applied statistics and data science (contrasted with theoretical statistics) and is designed for hands-on experience through in-class learning and opportunities for research project internships in different settings. Students will increase their breadth of knowledge of statistical research, machine learning, and big data analytics, and will be proficient in various programming languages at a suitable level for data analysis. The MS ASDS program includes a 3-semester credit hour (SCH) capstone project or professional internship that will allow students to experience the entire process of analyzing a given problem starting with problem conception all the way to product delivery. The MS ASDS program is designed for students with a wide range of backgrounds, including STEM degrees and those with non-technical backgrounds such as business majors. The program can be completed in 18 months (full-time students may complete in 12 months).

Competencies

1. Upon completion, students will be able to apply statistical methodologies to real-world data from diverse applications.
2. Upon completion, students will be able to design experiments.
3. Upon completion, students will be able to understand computational aspects of big data analytics.
4. Upon completion, students will be able to apply machine-learning algorithms for various learning tasks.
5. Upon completion, students will be able to work in a variety of disciplines.

Admissions Criteria

All applicants for the Applied Statistics and Data Science MS must meet UT Arlington's graduate admission requirements (p. 26). The program does not consider GRE scores in evaluating candidates for admission.

To be considered for admission, applicants must demonstrate undergraduate preparation equivalent to a baccalaureate degree in natural, physical, or social sciences, technology, engineering, mathematics, business, or related fields.

Applicants must submit two letters of recommendation from evaluators who can assess the candidate's potential for academic success.

UNCONDITIONAL ADMISSION

Applicants who demonstrate a GPA of 3.0 and strong support from references will be considered for unconditional admission. Applicants with a GPA of 2.7 or higher (but less than 3.0) who demonstrate relevant work experience and/or certification may be offered unconditional admission upon review.

All admitted students must complete the program's self-paced, non-credit online review, "Math Foundation of Machine Learning" prior to enrolling in classes.

Curriculum

Core Courses		
ASDS 5301	STATISTICAL THEORY AND APPLICATIONS	3
ASDS 5302	PRINCIPLE OF DATA SCIENCE	3
ASDS 5303	STATISTICAL AND SCIENTIFIC COMPUTING I	3
ASDS 6301	ADVANCE REGRESSION ANALYSIS	3
ASDS 6302	MACHINE LEARNING WITH APPLICATIONS	3
ASDS 6303	DATA MINING WITH INFORMATION VISUALIZATION	3
ASDS 6306	INTERNSHIP/CAPSTONE RESEARCH PROJECT	3
Electives		**9**
Select three from:		
ASDS 5304	APPLIED MULTIVARIATE STATISTICAL ANALYSIS	
ASDS 5305	DEEP LEARNING AND ARTIFICIAL NEURAL NETWORKS	

ASDS 5306	APPLIED TIME SERIES ANALYSIS IN DATA ANALYTICS
ASDS 6304	OPTIMIZATION AND BIG DATA ANALYTICS
ASDS 6305	STATISTICAL AND SCIENTIFIC COMPUTING II
Total Hours	**30**

Data Science - Undergraduate

Programs

BACCALAUREATE DEGREES

With the rise of Artificial intelligence and advanced analytics, the demand for data scientists is growing rapidly. Data Science is changing how we understand and solve problems across every field, from biology to psychology. In the Data Science major, students choose a Domain Concentration in one of the sciences, such as Biology, Chemistry, Environmental Science, Mathematics, Physics, or Psychology, and apply analytical tools to practical questions in their area of interest.

- Data Science BS (Biology) (p. 1610)
- Data Science BS (Biochemistry) (p. 1612)
- Data Science BS (Environmental Science) (p. 1615)
- Data Science BS (Geoscience) (p. 1617)
- Data Science BS (Mathematics) (p. 1619)
- Data Science BS (Physical Chemistry) (p. 1621)
- Data Science BS (Physics) (p. 1623)
- Data Science BS (Psychology) (p. 1625)

FAST TRACK

- Data Science BS to Applied Statistics & Data Science MS Fast Track (p. 1628)

MINOR

- Data Science Minor (p. 1630)

Bachelor of Science in Data Science (Biology)

About This Program

In the Bachelor of Science in Data Science Biology concentration, students integrate biological knowledge with data science methods to analyze biological systems, genomic data, and ecological patterns. This combination prepares students for roles that require managing and interpreting biological data in research, healthcare, environmental fields, and beyond. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Biology. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.
2. Upon completion, students will demonstrate knowledge of computer programming through receiving a certificate, and therefore passing, a programming course.
3. Upon completion, students will demonstrate the ability to effectively work in teams to complete data science projects

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students are required to complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
An additional communication area course.		
For Life & Physical Science select:		
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	
BIOL 1442	BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	
For Mathematics select:		
MATH 1421	PREPARATION FOR CALCULUS	
MATH 1426	CALCULUS I	
Data Science Foundations		
Additional hours required in core.		4
UNIV 1131	STUDENT SUCCESS	1
or UNIV-SC 1101	CAREER PREPARATION AND STUDENT SUCCESS	
Select any course numbered 3300 or higher.		3
Data Science Specialization		
DATA 3401	PYTHON FOR DATA SCIENCE 1	4
DATA 3402	PYTHON FOR DATA SCIENCE 2	4
DATA 3311	MATHEMATICS FOR DATA SCIENCE	3

Bachelor of Science in Data Science (Biochemistry)

About This Program

In the Bachelor of Science in Data Science Biochemistry concentration, students apply data science to molecular and biochemical data, learning to process complex datasets such as protein structures, metabolic pathways, and laboratory results. This training supports careers in pharmaceutical research, biotechnology, biomedical data analysis, and related fields. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Biochemistry. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.
2. Upon completion, students will demonstrate knowledge of computer programming through receiving a certificate, and therefore passing, a programming course.
3. Upon completion, students will demonstrate the ability to effectively work in teams to complete data science projects.

Bachelor of Science in Data Science (Environtmental Science)

About This Program

The Bachelor of Science in Data Science Environmental Science concentration focuses on analyzing environmental data related to climate, pollution, land use, and natural resources. Students learn to apply computational tools to datasets from satellite observations, fieldwork, environmental models, and similar sources. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Environmental Science. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.

Bachelor of Science in Data Science (Geoscience)

About This Program

In the Bachelor of Science in Data Science Geoscience concentration, students use data science tools to study Earth systems including geological formations, natural hazards, and spatial data from remote sensing. This track is suitable for students interested in earth observation, energy resources, geospatial analytics, and related areas. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Geoscience. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.

Bachelor of Science in Data Science (Mathematics)

About This Program

The Bachelor of Science in Data Science Mathematics concentration enhances theoretical and computational skills by blending advanced mathematics with algorithm design and statistical modeling. Students gain a deeper understanding of the mathematical principles that underlie modern data analysis, artificial intelligence, and other computational applications. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Mathematics. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.
2. Upon completion, students will demonstrate knowledge of computer programming through receiving a certificate, and therefore passing, a programming course.
3. Upon completion, students will demonstrate the ability to effectively work in teams to complete data science projects

Bachelor of Science in Data Science (Physical Chemistry)

About This Program

In the Bachelor of Science in Data Science Physical Chemistry concentration, students learn how to handle large-scale chemical datasets, including spectroscopic data, reaction models, and material simulations. This track prepares students for work in chemical informatics, industrial research, laboratory data automation, and other chemistry-related data science applications. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Chemistry. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.
2. Upon completion, students will demonstrate knowledge of computer programming through receiving a certificate, and therefore passing, a programming course.
3. Upon completion, students will demonstrate the ability to effectively work in teams to complete data science projects

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students are required to complete specific courses in certain core areas:		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
An additional communication area course		
For Life and Physical Science select:		
PHYS 1443	GENERAL TECHNICAL PHYSICS I	
PHYS 1444	GENERAL TECHNICAL PHYSICS II	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
Data Science Foundations

Bachelor of Science in Data Science (Physics)

About This Program

The Bachelor of Science in Data Science Physics concentration teaches students how to work with data from experimental measurements, simulations, and theoretical models. This track is ideal for those interested in computational physics, scientific computing, or quantitative modeling of complex systems. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Physics. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.
2. Upon completion, students will demonstrate knowledge of computer programming through receiving a certificate, and therefore passing, a programming course.
3. Upon completion, students will demonstrate the ability to effectively work in teams to complete data science projects

Bachelor of Science in Data Science (Psychology)

About This Program

In the Bachelor of Science in Data Science Psychology concentration, students study cognitive and behavioral data using statistical and computational methods. This track is well-suited for students interested in psychological research, human behavior analysis, mental health applications, human-computer interaction, and related areas. Beyond the UTA Core Curriculum requirements, the degree requires a sequence of courses in Mathematics, Data Science, and Psychology. In addition, students must complete a year-long Capstone project in collaboration with a supervisor within the College of Science or an Industry Partner.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.
2. Upon completion, students will demonstrate knowledge of computer programming through receiving a certificate, and therefore passing, a programming course.
3. Upon completion, students will demonstrate the ability to effectively work in teams to complete data science projects

Curriculum

Foundations	
General Core Requirements (p. 46)	42

BS in Data Science to MS in Applied Statistics and Data Science Fast Track

About This Program

The Bachelor of Science in Data Science to Master of Science in Applied Statistics and Data Science Fast Track program empowers academically gifted students to achieve their bachelor's degrees within the expected timeframe while concurrently making substantial progress in master's level studies. The guidelines outlined here form the foundation for establishing applicant selection criteria and degree requirements, with the primary goal of ensuring student success and maintaining the educational quality of both undergraduate and graduate degrees.

Once applicants have undergone screening and have been selected for participation in this program, they will embark on a challenging and thoughtfully curated selection of advanced undergraduate and graduate courses. These courses are structured to fulfill requirements for both their undergraduate and graduate degrees. The guidelines set an upper limit on the number of credit hours that can be applied to both the bachelor's and the master's degrees, ensuring that the total credit hours do not exceed the specified maximum. If accepted into the program, students can enroll in specific graduate courses that count toward their bachelor's and master's degrees.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Data Science BS (p. 1610)

Applied Statistics and Data Science MS (p. 1609)

Admissions Criteria

All applicants must complete 15 hours of prerequisite foundation coursework at UTA as specified by the College of Science and earn a minimum GPA of 3.5 in these courses.

UNCONDITIONAL ADMISSION

1. Students must be within 30 hours of graduation with an undergraduate data science degree from UTA.
2. Students must have completed at least 30 hours of study at UTA with a 3.3 GPA or better.
3. Students must have an overall GPA of at least 3.3 for all college courses (at all schools).
4. Students must have a GPA of at least 3.3 for all data science courses taken at UTA.

PROVISIONAL ADMISSION

A student may receive provisional admission if, during the semester in which they submit their application, they are expected to complete any outstanding courses required to fulfill prerequisite requirements. Provisional admission will be upgraded to unconditional admission upon the satisfactory fulfillment of these outstanding requirements. Students who do not meet all requirements by the end of the semester in which they applied will be disqualified from the fast track program. Any credits earned prior to dismissal from the program will be allocated exclusively to the undergraduate degree, and none of the additional advantages of the fast track program will be applicable. Provisionally admitted students who are removed from the program may subsequently seek admission to graduate programs through the standard application process, which entails the payment of all requisite fees and compliance with the relevant admission criteria. Admission will not be automatic, as it will be contingent on the standard admission procedures of the program to which the application is submitted.

APPLICATION PROCEDURES

Undergraduate students seeking admission to the fast track initiate the process by filling out a fast track application form, which is obtainable through their academic advisor. The academic program will inform the student of their acceptance into the program.

Undergraduate students in good standing within the fast track program may choose to pursue their master's degrees once they have fulfilled their undergraduate requirements. Following the census date of the student's final undergraduate semester, the academic program will forward the fast track application form to the graduate program. No additional fees, transcripts, or test scores will be necessary, and admission will be automatic with the approval of the program's advisor. The typical starting semester will be the following long semester immediately after the undergraduate graduation semester. However, students have the option to delay their starting date as specified below. Students who plan to pursue a master's degree in a program different from the one in which they participated as fast track students must apply as regular students. They will need to complete the full application process, pay all required fees, and meet all standard admission criteria. In such cases, admission will not be automatic and will be subject to the regular admission procedures outlined in the Graduate Catalog.

GOOD STANDING

To remain in the program, students must uphold an overall GPA of at least 3.00 and attain grades of B or higher in all fast track-approved courses used to fulfill both undergraduate and graduate degree requisites. Additionally, students are required to enroll in all 3 graduate courses and earn grades of B or better in all such graduate courses completed before obtaining their bachelor's degree. If a student fails to meet these requirements, including the three mandatory graduate courses or satisfactory grades, they will be required to exit the program and subsequently apply as a regular graduate student after obtaining their bachelor's degree.

COURSE ENROLLMENT AUTHORIZATION

Each semester, students are required to secure approval from the advisor to register for graduate courses that will be applied toward degree requirements. The advisor will closely monitor the progress of students and provide guidance accordingly.

PROGRESSING TO THE GRADUATE DEGREE

Upon successful completion of their undergraduate degree in good standing as a fast-track student, a graduate enrollment record will have been established for the student. In this case, the student is exempt from the usual graduate school admission process, including application fees and letter of reference requirements.

Eligible students can complete up to 9 credit hours of selected graduate coursework as undergraduates. Maintaining a GPA of 3.0 in each graduate course is necessary to continue taking graduate classes. Any Fast Track student who successfully completes up to 9 hours of graduate coursework with grades of B or higher will be granted automatic admission to graduate study. These students are exempt from submitting a standard graduate application and paying an application fee.

Graduating Fast track students are encouraged to consult with the MS ASDS Advisor to ensure a seamless transition.

TIMEFRAME TO BEGIN GRADUATE STUDIES

A student can take a leave of absence for one semester and a summer after receiving the undergraduate degree before starting as a graduate student. An application for graduate admission must be completed and approved before post-baccalaureate studies can begin. Students returning after longer delays will have to apply as regular students, completing a full application, paying all fees, and meeting all admission requirements outlined in the Graduate Catalog.

TAKING A BREAK DURING GRADUATE STUDIES

Once a student transitions into graduate status, they are subject to the regulations applicable to all graduate students. While there is no mandated minimum course load, students have the option to take authorized breaks as outlined in the graduate catalog. However, it is essential to complete their master's degree within a six-year timeframe. For additional information, students are encouraged to seek guidance from the graduate advisor.

TOTAL GRADUATE COURSES

Prior to receiving their bachelor's degree, fast track students are expected to successfully finish three graduate courses, earning grades of B or higher. To fulfill the master's degree will require a minimum of seven additional courses.

APPLICATION FOR ENROLLMENT IN GRADUATE COURSES AS AN UNDERGRADUATE

To enroll in graduate courses, students must secure the approval of the MS ASDS Advisor, which will be documented on a designated course registration form. The MS ASDS Graduate Advisor will evaluate the student's eligibility for the listed courses and verify that they align with the student's academic objectives for both their undergraduate and graduate degree programs.

CRITERIA FOR PROGRAM CONTINUATION

1. Students must maintain an overall GPA (combining graduate and undergraduate coursework) of at least 3.0.
2. It is expected that students achieve grades of B or higher in their graduate courses. If a student receives a grade below B in a graduate course prior to completing their undergraduate degree, they will lose their eligibility to remain in the fast track program.
3. To be eligible to continue in the fast track program, students must successfully
4. complete three graduate courses with grades of B or higher before graduating with their bachelor's degree
5. Throughout their entire undergraduate studies at UTA, which includes their fast track program, students are restricted from repeating more than three undergraduate courses, and they are not allowed to repeat any single course more than once. This regulation exclusively pertains to undergraduate courses, as graduate courses cannot be retaken.

Failure to fulfill these requirements at any point will result in the student's removal from the fact track program. Any graduate credits earned will only be applied toward the undergraduate degree, and none of the other program benefits will be applicable. Students who are dismissed from the fast track program will be eligible to apply for master's programs as regular applicants. These students will be required to pay the necessary application fee and meet all the admission requirements outlined in the Graduate Catalog.

Curriculum

Foundations		
These courses are prerequisites for admission to the fast track.		
DATA 3401	PYTHON FOR DATA SCIENCE 1	4
DATA 3402	PYTHON FOR DATA SCIENCE 2	4
DATA 3421	DATA MINING, MANAGEMENT, AND CURATION	4
DATA 3441	STATISTICAL METHODS FOR DATA SCIENCE 1	4
Graduate Courses Applied to both Degrees		
ASDS 5301	STATISTICAL THEORY AND APPLICATIONS (Replaces DATA 3442)	3
ASDS 6302	MACHINE LEARNING WITH APPLICATIONS (Replaces DATA 3461)	3
ASDS 6306	INTERNSHIP/CAPSTONE RESEARCH PROJECT (Replaces DATA 4391)	3

Foundation courses are mandatory and must be successfully completed at UTA, with each course earning a grade of B or better and a GPA of 3.5 or higher. Students are not obligated to complete the program to obtain their bachelor's degrees and have the option to discontinue their participation at any point. The selection of graduate and undergraduate courses during their fast track program journey is designed to ensure that these courses can be applied to their bachelor's degree, even if students decide to leave the program before completing all available courses.

Minor in Data Science

About This Program

The College of Science offers a Minor in Data Science to pair with an existing major. Course schedule may vary based on transferable credits or credits earned.

Students must gain advising and approval from both the department that offers the minor and from their major department. Failure to gain major department approval can result in no minor applied at graduation and final transcripts.

Competencies

1. Upon completion, students will demonstrate knowledge of fundamentals of mathematics and statistics, in applications to data science.
2. Upon completion, students will demonstrate knowledge of computer programming through receiving a certificate, and therefore passing, a programming course.

Curriculum

Foundations		
Select 4 of the following:		16
DATA 3401	PYTHON FOR DATA SCIENCE 1	
DATA 3402	PYTHON FOR DATA SCIENCE 2	

DATA 3421	DATA MINING, MANAGEMENT, AND CURATION	
DATA 3441	STATISTICAL METHODS FOR DATA SCIENCE 1	
DATA 3442	STATISTICAL METHODS FOR DATA SCIENCE 2	
DATA 3461	MACHINE LEARNING	
Electives		
Select 1 of the following:		3
DATA 1301	INTRODUCTION TO DATA SCIENCE	
DATA 2301	DATA VISUALIZATION & DATA STORYTELLING	
BIOL 3340	BIOINFORMATICS	
ENVR/GEOL 3454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	
ENVR/GEOL 4458	MACHINE LEARNING FOR EARTH AND ENVIRONMENTAL SCIENTISTS	
ENVR 4455	ENVIRONMENTAL DATA SCIENCE	
GEOL 4330	UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS	
MATH 3313	INTRODUCTION TO PROBABILITY	
MATH 3316	STATISTICAL INFERENCE	
PHYS 2321	COMPUTATIONAL PHYSICS	
PSYC 3325	DATA SCIENCE IN PSYCHOLOGY	
Select an additional Data Science foundations course.		
Total Hours		**19**

Students must maintain a minimum GPA of 2.0. Course substitutions may be permitted with the approval of the department offering the minor.

Earth and Environmental Sciences

Department Overview

The Department of Earth and Environmental Sciences prepares students for a rewarding careers through innovative education and world-class research programs. These programs are led by highly esteemed faculty and conducted in top-notch facilities which equip students for careers in industry, research, or academia.

Graduate Programs (p. 1645)

COURSES

ENVR 1101. SUCCESS IN EARTH AND ENVIRONMENTAL SCIENCES. 1 Hour.
A first-year experience course for new students and new transfer students interested in a career in Earth and Environmental Sciences. Provides the necessary foundation for success in a college environment while balancing personal and work obligations. Orients students to life on campus, demonstrates how to leverage campus resources to achieve career and academic goals, and emphasizes engagement outside the classroom through collaborative and co-curricular opportunities. This course is reserved exclusively for students planning to major in Earth and Environmental Sciences who are in their first semester at UTA. Fulfills the University requirement for either UNIV 1101 or UNIV 1131. Offered as GEOL 1101 and ENVR 1101. Credit will not be given for both.

ENVR 1301. INTRODUCTION TO ENVIRONMENTAL SCIENCE. 3 Hours.
This course provides an introduction to the basic principles of environmental science. Environmental science, as a discipline, along with key chemical, physical, geological, and biological aspects and relevant societal issues will be examined.

ENVR 1330. GLOBAL WARMING. 3 Hours.
Global environmental challenges confronting humanity such as pollution, depletion of natural resources, ecosystem deterioration, food production, and population growth. Offered as ENVR 1330 and GEOL 1330. Credit will not be given for both.

ENVR 2314. THE GLOBAL ENVIRONMENT AND HUMAN HEALTH. 3 Hours.
This course will assess the impact on human health of: 1) population growth and available resources; 2) exposure to man-made harmful substances; and 3) environmental degradation.

ENVR 2316. CONSERVATION OF NATURAL RESOURCES. 3 Hours.
During this course the students will explore natural resources, with special emphasis on new solutions to problems of resource scarcity and conservation. During this course the students will learn about energy, water, air, and food resources conservation. Students will work on developing proposals for addressing water conservation issues. Prerequisite: ENVR 1301, or consult instructor.

ENVR 2318. CLIMATE CHANGE RISK AND RESILIENCE. 3 Hours.
Climate risk is emerging as a key risk driver for systems as diverse as critical infrastructure (e.g. water, energy, transport, communications, buildings, transportation) and the natural environment. The course covers the topics of long-term climate trends, identification and management of climate risks, climate change's impact on extreme weather events and public health. Students will gain an understanding of climate equity, environmental justice, mitigation and adaptation strategies, and emerging concepts of climate resilience. The course also emphasizes the ethical responsibilities of scientists, engineers, and risk professionals, equipping students with the necessary theories, methods, and tools to conduct climate risk assessments.

ENVR 3100. ENVIRONMENTAL SCIENCE PROFESSIONAL ORIENTATION. 1 Hour.
Review of various careers in environmental science, and how to prepare a resume, network, and interview. Principles to follow for on-the-job success. Class will involve field trips and work force guest lectures. Prerequisite: ENVR 1301 or cons. inst.

ENVR 3317. ENVIRONMENTAL HYDROLOGY. 3 Hours.
An introduction to environmental hydrology topics including basic principles of the processes and measurements of precipitation, interception, infiltration, evaporation, evapotranspiration, interflow, overland flow, stream flow, and groundwater flow. Introduction to quantification of watershed metrics such as water budgets, hydrographs, discharge-concentration relationships, and flood routing. Examples and case studies will cover a broad spectrum of modern environmental scenarios (in a changing climate) across urban, agricultural, mining, and natural landscapes and biomes. Prerequisite: MATH 1426, or consent of instructor.

ENVR 3387. ENVIRONMENTAL SCIENCE FIELD METHODS. 3 Hours.
Measurement and analysis of environmental data collected in the field. Special fee covers cost of transportation and equipment. Prerequisite: CHEM 1442.

ENVR 3454. STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of statistics and helps students apply statistics to analyze data and interpret results from the perspective of Earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in Earth and environmental sciences. Offered as ENVR 3454 and GEOL 3454, credit will not be given for both. Prerequisite: MATH 1426 or HONR-SC 1426.

ENVR 3457. ENVIRONMENTAL ANALYTICAL CHEMISTRY. 4 Hours.
This course offers an introduction to chemical and biochemical phenomena that occur in water, air, terrestrial and living environments, and the effects of human activity on them. Environmental chemistry can broaden as much as atmospheric chemistry, aquatic chemistry, chemistry of soil/geosphere, toxicological chemistry and industrial ecology. In this course, mainly chemical substances in diverse environmental compartments and interactions and exposure impact to human and wildlife receptors will be focus based on analytical chemistry principles and perspective. Prerequisite: CHEM 1442.

ENVR 4189. RESEARCH IN ENVIRONMENTAL SCIENCE. 1 Hour.
Supervised undergraduate research in some aspect of environmental science. Prerequisite: Permission from Instructor.

ENVR 4190. ENVIRONMENTAL SCIENCE INTERNSHIP. 1 Hour.
Work in environmental sciences for a commercial concern at least 20 hours per week for three months. Requirements include: writing a resume, learning how to interview and function on the job, and a report describing the work.

ENVR 4199. TECHNICAL SESSIONS. 1 Hour.
Forum for presentation of results of undergraduate and graduate students and faculty research. Offered as ENVR 4199 and GEOL 4199. Credit will not be given for both. Prerequisite: For ENVR: ENVR 1301 or equivalent. For GEOL: GEOL 1301 or equivalent.

ENVR 4289. RESEARCH IN ENVIRONMENTAL SCIENCES. 2 Hours.
Supervised undergraduate research in any one of the various fields of environmental sciences. May be repeated but will not meet Environmental Science degree requirements. Prerequisite: permission from instructor.

ENVR 4303. TOPICS IN SUSTAINABILITY. 3 Hours.
Governmental and regulatory issues as they relate to sustainability. Course offered as SUST 5303 and EVSE 5303. Credit will be granted only once.

ENVR 4305. SELECTED TOPICS IN ENVIRONMENTAL SCIENCES. 3 Hours.
Environmental science topics not treated in the regular curriculum. Topic, format, and prerequisites to be determined by the instructor. May be repeated for Environmental Science elective credit as different topics are offered. Prerequisite: Determined by instructor.

ENVR 4306. SYNOPTIC METEOROLOGY. 3 Hours.
This course discuss the core principles of synoptic meteorology including the following topics: Earth observations (radar, satellite, ground-based), cloud classification, analysis and forecasting of major weather systems and extreme weather events (fronts, hurricanes, tornadoes, flood, heatwaves, wildfires, and dust storms), weather forecasts, munerical forecasting models, and data assimilation techniques. Prerequisite: MATH 1426 and PHYS 1441 or PHYS 1443.

ENVR 4308. ENVIRONMENTAL GEOCHEMISTRY. 3 Hours.
The geochemistry of natural waters with emphasis on processes that control solute concentrations including complexation reactions, oxidation and reduction reactions, biogeochemistry, and chemical weathering reactions. Offered as ENVR 4308 and GEOL 4308. Credit will not be given for both. Prerequisite: CHEM 1442 or GEOL 2445.

ENVR 4312. ENVIRONMENTAL RISK BASED ACTION. 3 Hours.
This course offers an introduction to environmental risk-based actions including environmental laws and regulations, hazard identification, toxicology, common contaminants, chemical intake models, chemical fate and transport models, and vapor intrusions. Prerequisite: ENVR 1301 or GEOL 1301 or equivalent.

ENVR 4313. ENVIRONMENTAL REGULATION OF CHEMICAL HAZARDS. 3 Hours.
This course offers an introductory knowledge about regulations and management of environmental and life quality in relation to chemical pollution, waste disposal, energy/resources sustainability, public health threats, and food/consumer product safety. Prerequisite: CHEM 1441 or equivalent.

ENVR 4314. TOXICOLOGY FOR ENVIRONMENTAL SCIENTISTS. 3 Hours.
This course offers an introduction to environmental toxicology and methods of measuring and using data on the adverse effects of chemical substances in line with understanding chemical and biochemical phenomena that occur in water, air, terrestrial and living environments, and the impact to human population. Prerequisite: CHEM 1441 or equivalent.

ENVR 4315. INTRODUCTION TO ENVIRONMENTAL STUDIES. 3 Hours.
This course serves as an introduction to and covers broad aspects of environmental studies. It is designed to foster an increased understanding of physical, chemical and biological systems of terrestrial and aquatic environments, their complex connections and patterns, and human interactions. In this course emphasis is placed on a holistic approach to environmental studies using case studies, learning activities, and discussions to reinforce scientific principles. Students will examine the relationship between humankind and nature in order to gain a broad understanding of issues, causes, and possible solutions to the array of environmental challenges faced in today's world. Prerequisite: Junior standing, core complete.

ENVR 4323. ISSUES IN ENVIRONMENTAL HEALTH. 3 Hours.
An introduction to health issues of current concern resulting from environmental exposures. Topics include: environmental asthma, endocrine disruptors, climate change and health, emerging contaminants, nanotechnology and health, airborne particles and pediatric health. Offered as ENVR 4323 and GEOL 4323. Credit will not be given for both.

ENVR 4325. TRACER HYDROLOGY. 3 Hours.
This course is primarily focused on the applications of chemical tracers to study the interaction between precipitation, surface water, and groundwater. The first part covers the basics of water fluxes and naturally occurring and artificial tracers such as stable and radioactive isotopes, noble gases, fluorescent nanoparticles, ions, and DNA. The second part is oriented towards the assimilation of chemical tracer information to enhance hydrological metrics, conceptual model development, and numerical modeling. Prerequisite: ENVR 1301, or GEOL 1301, or cons. inst.

ENVR 4330. UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS. 3 Hours.
A practical introduction to GIS and methods of creating, maintaining and displaying spatial data using the ArcGIS software. Prerequisite: Junior Standing.

ENVR 4353. DATA ANALYSIS FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 3 Hours.
This course is an introduction to data analysis and data science by means of mathematics and statistics. We analyze real-world data to find patterns, detect trends and better forecast complex systems in nature. This course provides quantitative methods and deep understanding of applications of data analysis in earth and environmental sciences. It covers analyzing a broad type of data related to geology, earth sciences and environmental engineering. Offered as ENVR 4353 and GEOL 4353; credit will not be given for both. Prerequisite: ENVR 3454, or GEOL 3454, or STATS 1301.

ENVR 4389. RESEARCH IN ENVIRONMENTAL SCIENCES. 3 Hours.
Supervised undergraduate research in any one of the various fields of environmental sciences. May be repeated but will not meet Environmental Science degree requirements.

ENVR 4455. ENVIRONMENTAL DATA SCIENCE. 4 Hours.
This course focuses on acquisition, analysis, interpretation, and presentation of environmental data. Available datasets will be utilized to explore different models and case studies of the fate and transport of contaminants in multimedia environments, climate and health, toxicology prediction, water quality, environmental epidemiology, etc. The course includes practical exercises with Python and R. Offered as ENVR 4455 and GEOL 4455. Credit will not be given for both.

ENVR 4456. ENVIRONMENTAL RISK ASSESSMENT. 4 Hours.
This course introduces the basic scientific components of environmental and occupational health risk assessment and describes the policy context in which decisions to manage environmental health risks are made. The course presents the quantitative methods used to assess the human health risks associated with exposure to toxic chemicals, focusing on the four major components of risk assessment-hazard identification, dose-response assessment, exposure assessment, and risk characterization. Offered as ENVR 4456 and GEOL 4456. Credit will not be given for both.

ENVR 4458. MACHINE LEARNING FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of machine learning and helps students apply machine learning to analyze data, predict outcomes and interpret results from the perspective of earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in earth and environmental sciences. Offered as GEOL 4458 and ENVR 4458. Credit will be not given for both. Prerequisite: GEOL 3454 or ENVR 3454 or equivalent.

COURSES

EVSE 5100. SELECTED TOPICS IN ENVIRONMENTAL SCIENCE AND ENGINEERING. 1 Hour.
May be repeated for credit when topic changes.

EVSE 5115. PROFESSIONAL EXPERIENCE. 1 Hour.
Work in environmental science for a commercial concern at least 20 hrs/wk for 3 months. Requirements include writing a resume, learning how to interview and function on the job, and a report describing the work. Prerequisite: Cons. inst.

EVSE 5120. ENVIRONMENTAL PROFESSIONAL MENTORING & BUSINESS ETHICS. 1 Hour.
Provides credit to students participating in an approved mentoring program with an experience environmental professional. May be repeated once for credit.

EVSE 5189. RESEARCH IN ENVIRONMENTAL SCIENCES. 1 Hour.
Independent study in various areas of environmental research. May be repeated for credit. Graded R.

EVSE 5199. SEMINAR IN ENVIRONMENTAL & EARTH SCIENCES. 1 Hour.
Topics presented by faculty, students, and invited lecturers.

EVSE 5200. SELECTED TOPICS IN ENVIRONMENTAL & EARTH SCIENCES. 2 Hours.
May be repeated for credit when topic changes.

EVSE 5289. RESEARCH IN ENVIRONMENTAL SCIENCES. 2 Hours.
Independent study in various areas of environmental research. May be repeated for credit. Graded R.

EVSE 5294. INDIVIDUAL PROBLEMS IN ENVIRONMENTAL & EARTH SCIENCES. 2 Hours.
Individual research projects supervised by a faculty member.

EVSE 5300. SELECTED TOPICS IN ENVIRONMENTAL & EARTH SCIENCE. 3 Hours.
May be repeated for credit when topic changes.

EVSE 5303. SUSTAINABILITY ISSUES SEMINAR III. 3 Hours.
Governmental and regulatory issues as they relate to sustainability.

EVSE 5306. SYNOPTIC METEOROLOGY. 3 Hours.
This course discuss the core principles of synoptic meteorology including the following topics: Earth observations (radar, satellite, ground-based), cloud classification, analysis and forecasting of major weather systems and extreme weather events (fronts, hurricanes, tornadoes, flood, heatwaves, wildfires, and dust storms), weather forecasts, munerical forecasting models, and data assimilation techniques. Prerequisite: MATH 1426 and PHYS 1441 or PHYS 1443.

EVSE 5309. ENVIRONMENTAL SYSTEMS-BIOLOGICAL ASPECTS. 3 Hours.
An introduction to the biological components of environmental systems. Population dynamics, species interactions, community structure, biodiversity, bioenergetics, nutrient cycling and human impacts are reviewed. Focus will be on natural processes and their engineering applications.

EVSE 5310. ENVIRONMENTAL SYSTEMS-CHEMICAL ASPECTS. 3 Hours.
An introduction to the chemistries of air at different altitudes, of water systems and of soils. Chemical and physico-chemical processes at phase boundaries, modeling for kinetics and mass transport, analytical techniques and disposal and recycling are included as well as their impact on engineering decisions.

EVSE 5311. ENVIRONMENTAL SYSTEMS-GEOLOGICAL ASPECTS. 3 Hours.
Introduction to the tectonic, volcanic, atmospheric, climatic, hydrologic and geochemical processes and natural hazards of the earth, and their interaction with political, economic and engineering decisions.

EVSE 5312. ENVIRONMENTAL RISK BASED ACTION. 3 Hours.
This course offers an introduction to environmental risk-based actions including environmental laws and regulations, hazard identification, toxicology, common contaminants, chemical intake models, chemical fate and transport models, and vapor intrusions.

EVSE 5313. ENVIRONMENTAL REGULATION OF CHEMICAL HAZARDS. 3 Hours.
This course offers an introductory knowledge about regulations and management of environmental and life quality in relation to chemical pollution, waste disposal, energy/resources sustainability, public health threats, and food/consumer product safety. Prerequisite: CHEM 1441 or equivalent.

EVSE 5314. TOXICOLOGY FOR ENVIRONMENTAL SCIENTISTS. 3 Hours.
This course offers an introduction to environmental toxicology and methods of measuring and using data on the adverse effects of chemical substances in line with understanding chemical and biochemical phenomena that occur in water, air, terrestrial and living environments, and the impact to human population. Prerequisite: CHEM 1441 or equivalent.

EVSE 5316. CONSERVATION OF NATURAL RESOURCES. 3 Hours.
During this course the students will explore natural resources, with special emphasis on new solutions to problems of resource scarcity and conservation. During this course the students will learn about energy, water, air, and food resources conservation. Students will work on developing proposals for addressing water conservation issues. Prerequisite: ENVR 1301, or equivalent, or consult instructor.

EVSE 5317. ENVIRONMENTAL HYDROLOGY. 3 Hours.
An introduction to environmental hydrology topics including basic principles of the processes and measurements of precipitation, interception, infiltration, evaporation, evapotranspiration, interflow, overland flow, stream flow, and groundwater flow. Introduction to quantification of watershed metrics such as water budgets, hydrographs, discharge-concentration relationships, and flood routing. Examples and case studies will cover a broad spectrum of modern environmental scenarios (in a changing climate) across urban, agricultural, mining, and natural landscapes and biomes. Prerequisite: MATH 1426, or consent of instructor.

EVSE 5318. CLIMATE CHANGE RISK AND RESILIENCE. 3 Hours.
Climate risk is emerging as a key risk driver for systems as diverse as critical infrastructure (e.g. water, energy, transport, communications, buildings, transportation) and the natural environment. The course covers the topics of long-term climate trends, identification and management of climate risks, climate change's impact on extreme weather events and public health. Students will gain an understanding of climate equity, environmental justice, mitigation and adaptation strategies, and emerging concepts of climate resilience. The course also emphasizes the ethical responsibilities of scientists, engineers, and risk professionals, equipping students with the necessary theories, methods, and tools to conduct climate risk assessments.

EVSE 5320. TOXICOLOGY. 3 Hours.
An introduction to the general principles of toxicology with an emphasis on certain classes of toxic agents, their sources and toxic effects, as well as their environmental fate. Prerequisite: CHEM 2322.

EVSE 5323. ISSUES IN ENVIRONMENTAL HEALTH. 3 Hours.
An introduction to health issues of current concern resulting from environmental exposures. Topics include: environmental asthma, endocrine disruptors, climate change and health, emerging contaminants, nanotechnology and health, airborne particles and pediatric health.

EVSE 5325. TRACER HYDROLOGY. 3 Hours.
This course is primarily focused on the applications of chemical tracers to study the interaction between precipitation, surface water, and groundwater. The first part covers the basics of water fluxes and naturally occurring and artificial tracers such as stable and radioactive isotopes, noble gases, fluorescent nanoparticles, ions, and DNA. The second part is oriented towards the assimilation of chemical tracer information to enhance hydrological metrics, conceptual model development, and numerical modeling. Prerequisite: ENVR 1301, or GEOL 1301, or cons. inst.

EVSE 5350. CONTAMINANT HYDROGEOLOGY. 3 Hours.
Sources and types of various organic and inorganic contaminants; the physical, chemical, and biological factors and processes that affect the transport and fate of contaminants in the subsurface; non-aqueous phase liquids and multiphase flow; and various remedial techniques of contaminated sites. Prerequisite: GEOL 4320 or GEOL 5328 (or concurrent enrollment).

EVSE 5351. GEOMORPHOLOGY AND QUATERNARY STRATIGRAPHY OF SEDIMENTARY SYSTEMS. 3 Hours.
This course examines those physical processes that sculpt the surface of the Earth and result in deposition of sediments. Surface systems covered include weathering, mass wasting, rivers, shorelines, eolian processes, and glaciers. The course also examines the stratigraphic techniques used to decode the recent (2 million to present) stratigraphic record of these systems. Course is designed for geologists, biologists, and other fields concerned with interpreting and/or managing modern environments.

EVSE 5353. DATA ANALYSIS FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 3 Hours.
This course is an introduction to data analysis and data science by means of mathematics and statistics. We analyze real-world data to find patterns, detect trends and better forecast complex systems in nature. This course provides quantitative methods and deep understanding of applications of data analysis in earth and environmental sciences. It covers analyzing a broad type of data related to geology, earth sciences and environmental engineering.

EVSE 5357. MEDICAL GEOLOGY. 3 Hours.
Introduction to geoscience and health. Students will learn how the geologic and geochemical environment can impact health. The historic background to geoscience and health will be presented followed by discussions on the natural abundance of elements in the earth, and the nature of essential and toxic elements (dose-response). Students will then learn about health responses following exposures in specific geologic/geochemical situations.

EVSE 5389. RESEARCH IN ENVIRONMENTAL SCIENCES. 3 Hours.
Independent study in various areas of environmental research. May be repeated for credit. Graded R.

EVSE 5394. INDIVIDUAL PROBLEMS IN ENVIRONMENTAL & EARTH SCIENCES. 3 Hours.
Individual research projects supervised by a faculty member. Prerequisite: consent of instructor.

EVSE 5395. MASTER'S PROJECT. 3 Hours.
May be used as elective for students in non-thesis program. Graded F, P.

EVSE 5398. THESIS. 3 Hours.
Graded F, R.

EVSE 5405. METEOROLOGY AND CLIMATOLOGY. 4 Hours.
A quantitative approach to the study of the structure, energy, and motions of the atmosphere.

EVSE 5454. STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of statistics and helps students apply statistics to analyze data and interpret results from the perspective of Earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in Earth and environmental sciences. Offered as EVSE 5454 and GEOL 5454. Credit will not be given for both.

EVSE 5455. ENVIRONMENTAL DATA SCIENCE. 4 Hours.
This course focuses on acquisition, analysis, interpretation, and presentation of environmental data. Available datasets will be utilized to explore different models and case studies of the fate and transport of contaminants in multimedia environments, climate and health, toxicology prediction, water quality, environmental epidemiology, etc. The course includes practical exercises with Python and R.

EVSE 5456. ENVIRONMENTAL RISK ASSESSMENT. 4 Hours.
This course introduces the basic scientific components of environmental and occupational health risk assessment and describes the policy context in which decisions to manage environmental health risks are made. The course presents the quantitative methods used to assess the human health risks associated with exposure to toxic chemicals, focusing on the four major components of risk assessment-hazard identification, dose-response assessment, exposure assessment, and risk characterization. Offered as EVSE 5456 and GEOL 5456, credit will not be given for both.

EVSE 5457. ENVIRONMENTAL ANALYTICAL CHEMISTRY. 4 Hours.
This course offers an introduction to chemical and biochemical phenomena that occur in water, air, terrestrial and living environments, and the effects of human activity on them. Environmental chemistry can broaden as much as atmospheric chemistry, aquatic chemistry, chemistry of soil/geosphere, toxicological chemistry and industrial ecology. In this course, mainly chemical substances in diverse environmental compartments and interactions and exposure impact to human and wildlife receptors will be focus based on analytical chemistry principles and perspective. Prerequisite: CHEM 1442 or equivalent courses.

EVSE 5458. MACHINE LEARNING FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of machine learning and helps students apply machine learning to analyze data, predict outcomes and interpret results from the perspective of earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in earth and environmental sciences. Offered as GEOL 5458 and EVSE 5458. Credit will not be given for both. Prerequisite: ENVR 3454 or GEOL 3454 or EVSE 5454 or GEOL 5454 or equivalent.

EVSE 5465. PHYSICAL OCEANOGRAPHY AND LIMNOLOGY. 4 Hours.
An introduction to physical processes in lakes and oceans. Changes in lakes and oceans influence heat, and momentum fluxes at the aquatic/oceanic and atmospheric interface. Topics include ocean/lake structure and circulation, and the impact of global climate change on lakes and oceans. Field excursions to nearby lakes combine theoretical knowledge and field measurements. Prerequisite: PHYS 1441 or PHYS 1443; and MATH 1426.

EVSE 5689. RESEARCH IN ENVIRONMENTAL SCIENCES. 6 Hours.
Independent study in various areas of environmental research. May be repeated for credit. Graded R.

EVSE 5698. THESIS. 6 Hours.
Graded F, P, R.

EVSE 5998. THESIS. 9 Hours.
Graded F, P, R.

EVSE 6197. RESEARCH IN ENVIRONMENTAL & EARTH SCIENCES. 1 Hour.
Individually approved research projects. May be repeated for credit. Graded F, P, R.

EVSE 6297. RESEARCH IN ENVIRONMENTAL & EARTH SCIENCES. 2 Hours.
Individually approved research projects. May be repeated for credit. Graded F, P, R.

EVSE 6397. RESEARCH IN ENVIRONMENTAL AND EARTH SCIENCES. 3 Hours.
Individually approved research projects. May be repeated for credit. Graded F, P, R.

EVSE 6399. DISSERTATION. 3 Hours.
Graded F, R.

EVSE 6697. RESEARCH IN ENVIRONMENTAL & EARTH SCIENCE. 6 Hours.
Individually approved research projects. May be repeated for credit. Graded F, P, R.

EVSE 6699. DISSERTATION. 6 Hours.
Graded F, R, P, W.

EVSE 6997. RESEARCH IN ENVIRONMENTAL & EARTH SCIENCE. 9 Hours.
Individually approved research projects. May be repeated for credit. Graded F, P, R.

EVSE 6999. DISSERTATION. 9 Hours.
Graded F, P, R.

EVSE 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

GEOL 1101. SUCCESS IN EARTH AND ENVIRONMENTAL SCIENCES. 1 Hour.
A first-year experience course for new students and new transfer students interested in a career in Earth and Environmental Sciences. Provides the necessary foundation for success in a college environment while balancing personal and work obligations. Orients students to life on campus, demonstrates how to leverage campus resources to achieve career and academic goals, and emphasizes engagement outside the classroom through collaborative and co-curricular opportunities. This course is reserved exclusively for students planning to major in Earth and Environmental Sciences who are in their first semester at UTA. Fulfills the University requirement for either UNIV 1101 or UNIV 1131. Offered as GEOL 1101 and ENVR 1101. Credit will not be given for both.

GEOL 1301. EARTH SYSTEMS. 3 Hours. (TCCN = GEOL 1303)
An integrated study of the earth, emphasizing interactions between plate tectonics, the atmosphere, the oceans, the biosphere, and human activity. Formerly listed as GEOL 1425, credit will not be given for both.

GEOL 1302. EARTH HISTORY. 3 Hours. (TCCN = GEOL 1304)
History of the earth and evolution of life emphasizing the co-evolution of the atmosphere, oceans, and biosphere. Formerly listed as GEOL 1426, credit will not be given for both.

GEOL 1330. GLOBAL WARMING. 3 Hours.
Global environmental challenges confronting humanity such as pollution, depletion of natural resources, ecosystem deterioration, food production, and population growth. Offered as ENVR 1330 and GEOL 1330. Credit will not be given for both.

GEOL 1340. WEATHER AND CLIMATE. 3 Hours. (TCCN = GEOL 1347)
Nature and variability of weather and climate, including wind, temperature, clouds and precipitation, droughts and flooding. Storm systems, fronts, thunderstorms, tornadoes, hurricanes. Atmospheric chemistry and air pollution. Mean climate, seasonal variations and climatic change. Formerly listed as GEOL 2401, credit will not be given for both.

GEOL 1350. INTRODUCTION TO OCEANOGRAPHY. 3 Hours. (TCCN = GEOL 1345)
The study of ocean basins and their origin, ocean currents, waves and tides, properties of sea water, and marine ecosystems, emphasizing the role of the ocean in the Earth system. Discussion of weekly ocean news, and incorporation of web-delivered current oceanographic data into the course material. Formerly offered as GEOL 3301 and GEOL 3184 and GEOL 2412; credit will be granted only once. Formerly listed as GEOL 1450, credit will not be given for both.

GEOL 1360. GEOLOGIC HAZARDS. 3 Hours.
Processes producing earthquakes, floods, eruptions and landslides, and their effect on people. Formerly listed as GEOL 2404, credit will not be given for both.

GEOL 2406. NATURAL RESOURCES & SUSTAINABILITY. 4 Hours.
Energy, construction, agricultural, and hydrological resources are evaluated in terms of their production and use, including storage and disposal of waste. Emphasis is placed on the importance of preserving clean water, air and soils. The course will concentrate on what humans take from the Earth, the impacts it has on their environment, and what it takes to make the planet sustainable for human habitation.

GEOL 2445. MINERALOGY. 4 Hours.
Lectures discuss the physical and chemical principles governing the properties and formation of minerals. There are three major divisions of the subject matter: (a) geometric and optical crystallography; (b) crystal chemistry and properties of minerals, and (c) occurrence, origins, and pressure-temperature stabilities of the major rock-forming minerals. Laboratories are devoted to exercises in crystallography, X-ray diffraction, optical mineralogy and hand-specimen mineral identification. Prerequisite: GEOL 1301 or GEOL 3340, and CHEM 1442, or permission from instructor.

GEOL 3100. GEOSCIENCE PROFESSIONAL ORIENTATION. 1 Hour.
Review of various careers in the Geosciences, and how to prepare a resume, network, and interview. Principles to follow for on-the-job success. Class will involve field trips and guest lectures.

GEOL 3305. METEOROLOGY AND CLIMATOLOGY. 3 Hours.
A quantitative approach to the study of the structure, energy, and motions of the atmosphere. Prerequisite: MATH 1426 and PHYS 1441, or PHYS 1443, or permission of instructor.

GEOL 3316. ASTROBIOLOGY I. 3 Hours.
This is an interdisciplinary course between astrophysics, biology and geology. Topics include properties of life, origin and evolution of life on Earth, terrestrial geology and habitability, environmental forcings, extremophiles, mass extinctions, meteorites, searches for life in the solar system. Offered as BIOL 3316, GEOL 3316 and PHYS 3316; credit will be granted only once. Prerequisite: PHYS 1441 & PHYS 1442 or equivalent and PHYS 2315 or PHYS 3315, or permission from instructor. Prerequisites for Biology majors: PHYS 1441 & PHYS 1442 or equivalent.

GEOL 3340. GEOLOGY FOR ENGINEERS. 3 Hours.
Introduction to geological materials and processes important to engineering. Includes processes forming minerals and rocks; mechanics and deformation of rocks, weathering, erosion and soils; soil hazards, land subsidence and mass movements; groundwater hydrology, geochemistry and contamination; and rivers. Labs will include introduction to geologic materials and use of GIS software to store, analyze and display geologic and engineering data. Prerequisites: PHYS 1443 and CHEM 1465 or CHEM 1442.

GEOL 3358. ASTROBIOLOGY II. 3 Hours.
This is an interdisciplinary course between astrophysics, biology and geology. Topics include basic properties of life, habitability of Earth, studies of possible life regarding Mars, Europa & Titan, space missions, exoplanets and exomoons, stellar habitable zones, multistellar systems, exoEarths, biomarkers, SETI, Fermi paradox, Drake equation, cosmology. Offered as BIOL 3358, GEOL 3358, and PHYS 3358; credit will be granted only once. Prerequisite: PHYS 1441 & PHYS 1442 or equivalent and PHYS 2315 or PHYS 3315, or permission from instructor. Prerequisites for Biology majors: PHYS 1441 & PHYS 1442 or equivalent. Note that Astrobiology I is strongly recommended to students to be taken prior to Astrobiology II, but is not a prerequisite.

GEOL 3387. FIELD GEOLOGY I. 3 Hours.
Stratigraphic and structural mapping and analysis of data collected in the field. Taught for three weeks only in the summer session. Special fee covers cost of transportation, room, and board while in the field. Prerequisite: GEOL 2445, GEOL 3442, GEOL 3443, and GEOL 3446.

GEOL 3388. FIELD GEOLOGY II. 3 Hours.
Mapping and analysis of igneous and metamorphic rock data as well as hydrologic, geochemical and mass wasting data collected in the field. Taught for three weeks after GEOL 3387 only in the summer session. Special fee covers cost of transportation, room, and board while in the field. Prerequisite: GEOL 2445, GEOL 3442, GEOL 3443, and GEOL 3387.

GEOL 3441. BIOSTRATIGRAPHY AND LIFE THROUGH TIME. 4 Hours.
Basic principles of bio- and chronostratigraphy including the classification of fossil groups, how index fossils are used to construct the geologic timescale and correlate strata. Prerequisite: GEOL 1302.

GEOL 3442. SEDIMENTOLOGY AND STRATIGRAPHY. 4 Hours.
An introduction to the description, origin, and historical interpretation of stratified rocks. Prerequisite: GEOL 2445.

GEOL 3443. STRUCTURAL GEOLOGY. 4 Hours.
The genesis, classification, and description of structural features resulting from deformation of the earth's crust. Prerequisite: GEOL 2445 and PHYS 1441 or PHYS 1443, or permission of instructor.

GEOL 3446. PETROLOGY AND GEOCHEMISTRY. 4 Hours.
Distribution, description, classification, plate-tectonic setting and origins of igneous and metamorphic rocks in the light of theoretical-experimental multicomponent phase equilibria studies; use of trace elements and radiogenic and stable isotopes as tracers in rock genesis; hand specimen and microscopic examinations of the major igneous-metamorphic rock types in the laboratory. Prerequisite: GEOL 2445.

GEOL 3454. STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of statistics and helps students apply statistics to analyze data and interpret results from the perspective of Earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in Earth and environmental sciences. Offered as ENVR 3454 and GEOL 3454, credit will not be given for both. Prerequisite: MATH 1426 or HONR-SC 1426.

GEOL 4081. RESEARCH IN EARTH & ENVIRONMENTAL SCIENCES. 0 Hours.
Research problems on an individual or group basis, conducted on a selected topic under the direction of a member of the Earth & Environmental Sciences faculty. May be repeated. This is a non-credit course so cannot be used to meet degree requirements. Prerequisite: Permission of the instructor.

GEOL 4181. TOPICS IN ENERGY AND EARTH RESOURCES. 1 Hour.
Lectures will discuss the historical evolution and current status of major research thrusts in the environment, energy, and resources studies, including Superfund and groundwater remediation, carbon sequestration, tight sands and coalbed methane, petroleum production in shale gas and oil reservoirs, geological repository of high-level nuclear waste, geothermal energy exploitation, mining of critical minerals, and gas (methane) hydrate. Prerequisite: GEOL 1301 or GEOL 3340 or equivalent.

GEOL 4189. RESEARCH IN GEOLOGY. 1 Hour.
Supervised undergraduate research in any one of the various fields of geology. May be repeated but will not meet Geology degree requirements. Prerequisite: permission from instructor.

GEOL 4190. GEOSCIENCE INTERNSHIP. 1 Hour.
Work in geoscience for a commercial concern at least 20 hours per week for three months. Requirements include: writing a resume, learning how to interview and function on the job, and a report describing the work. Prerequisite: 16 hours of Geology coursework.

GEOL 4199. TECHNICAL SESSIONS. 1 Hour.
Forum for presentation of results of undergraduate and graduate students and faculty research. Offered as ENVR 4199 and GEOL 4199. Credit will not be given for both. Prerequisite: For ENVR: ENVR 1301 or equivalent. For GEOL: GEOL 1301 or equivalent.

GEOL 4289. RESEARCH IN GEOLOGY. 2 Hours.
Supervised undergraduate research in any one of the various fields of geology. May be repeated but will not meet Geology degree requirements. Prerequisite: permission from instructor.

GEOL 4302. GEODYNAMICS. 3 Hours.
A comprehensive and quantitative study of fundamental aspects of plate tectonics. Introduction to heat flow, elasticity and flexure, fluid mechanics, faulting, gravity, and flow in porous media, with a wide range of geological applications. Includes collaborative problem solving. Prerequisite: GEOL 3443 and MATH 2425.

GEOL 4304. SOLID EARTH GEOMECHANICS. 3 Hours.
Application of continuum mechanics to understanding deformation in the earth, including mechanical analysis of natural geologic structures such as faults, folds, lava flows, and dikes, as well as practical problems related to reservoir geomechanics and mining applications. Prerequisites: GEOL 3443, MATH 2425, and PHYS 1444.

GEOL 4305. SELECTED TOPICS IN GEOLOGY. 3 Hours.
Geological topics not treated in the regular curriculum. Topic, format, and prerequisites to be determined by the instructor. May be repeated for Geology elective credit as different topics are offered.

GEOL 4307. SEQUENCE STRATIGRAPHY. 3 Hours.
This course introduces sequence stratigraphy within context of all stratigraphy and history of sequence stratigraphy. Includes overview of sequence stratigraphy principles. Review of basic fundamental concepts of surface- and facies-based physical stratigraphy. Review of architectural element analysis, sequence stratigraphic in seismic, borehole expression of sequences and overview of subsurface stratigraphic techniques. Prerequisite: GEOL 3442.

GEOL 4308. ENVIRONMENTAL GEOCHEMISTRY. 3 Hours.
The geochemistry of natural waters with emphasis on processes that control solute concentrations including complexation reactions, oxidation and reduction reactions, biogeochemistry, and chemical weathering reactions. Offered as ENVR 4308 and GEOL 4308. Credit will not be given for both. Prerequisite: CHEM 1442 or GEOL 2445.

GEOL 4323. ISSUES IN ENVIRONMENTAL HEALTH. 3 Hours.
An introduction to health issues of current concern resulting from environmental exposures. Topics include: environmental asthma, endocrine disruptors, climate change and health, emerging contaminants, nanotechnology and health, airborne particles and pediatric health. Offered as ENVR 4323 and GEOL 4323. Credit will not be given for both.

GEOL 4330. UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS. 3 Hours.
A practical introduction to GIS and methods of creating, maintaining and displaying spatial data using the ArcGIS software. This course replaces GEOL 4352; credit will not be granted for both. This course is offered as GEOL 4330 and GEOG 4330. Prerequisite: Junior standing.

GEOL 4331. ANALYSIS OF SPATIAL DATA. 3 Hours.
Analyzing spatial data using ArcGIS, Spatial Analyst, and 3-D Analyst, topological surface analysis and modeling; 3-D visualization and viewscapes; spatial statistics and data quality management. Course taught as GEOL 4331 and GEOG 4331. Credit will be granted in only one department. Prerequisite: GEOL 4330 or GEOG 4330.

GEOL 4332. GLOBAL POSITIONING SYSTEM. 3 Hours.
Review of the NAVSTAR Global Positioning System and its segments: space, operational control, and GPS receivers. Mechanics of the satellite constellation; GPS signal structure; datums and coordinate systems; precision and accuracy; error factors; absolute (point) versus relative (differential) positioning. Various positioning techniques using several types of GPS receivers; field data collection and input into GIS programs for data analysis and presentation. Course taught as GEOL 4332 and GEOG 4332. Credit will be granted in only one department. Prerequisite: GEOL 4330 or GEOG 4330.

GEOL 4333. REMOTE SENSING FUNDAMENTALS. 3 Hours.
The electromagnetic spectrum and the interaction of EM waves with matter; various types of sensing devices; spectral and spatial resolution parameters; airborne and satellite sensor platforms; aerial photographs and false-color images. The sequence of data acquisition, computer processing, and interpretation; sources of data; the integration of remote sending data with other data types in GIS. Course taught as GEOL 4333 and GEOG 4333. Credit will be granted in only one department. Prerequisite: GEOL 4330 or GEOG 4330.

GEOL 4334. GEOGRAPHIC DATA ANALYSIS. 3 Hours.
Acquisition, processing and analysis of a set of spatial data selected by the student with approval of the instructor. A written report of the results is required. Course taught as GEOL 4334 and GEOG 4334. Credit will be granted in only one department. Prerequisite: GEOL 4330 or GEOG 4330; or cons. inst.

GEOL 4335. TECTONICS AND ISOTOPES. 3 Hours.
Fundamentals of global tectonics, and the application of isotope geochemistry in sedimentary rocks to understanding tectonic questions. Emphasis will be given to the mechanisms of mountain formation, isotope paleoaltimetry, detrital geochronology, and thermochronology. Prerequisite: GEOL 3442, GEOL 3446.

GEOL 4342. MICROFOSSILS AND CARBONATE ROCKS. 3 Hours.
Half of this course consists of an introduction to microfossil groups occurring in sedimentary rocks: foraminifers, conodonts, coccolithophorids and others, and their usefulness in regional and global correlation of Phanerozoic strata. The biostratigraphy of these groups will be discussed along with the principles used in the correlation of sedimentary rocks. The other half of the course consists of the analysis of the lithofacies and biofacies of carbonate rocks, their genesis, depositional environments, and diagenesis. Prerequisite: GEOL 1302, or cons. inst.

GEOL 4343. RESEARCH METHODS - UTEACH. 3 Hours.
The purpose of this course is to present UTeach students with the tools scientists use to solve scientific problems. These tools enable scientists to develop new knowledge and insights, the most important of which are eventually presented in textbooks and taught in more conventional science classes. These tools include: design of experiments to answer scientific questions; use of statistics to interpret experimental results and deal with sampling errors; mathematical modeling of scientific phenomena; finding and reading articles in the current scientific literature; applying scientific arguments in matters of social importance; writing scientific papers; reviewing scientific papers; oral presentation of scientific work; use of probes and computers to gather and analyze data; ethical treatment of human subjects; laboratory safety. Research Methods is primarily a laboratory course, and most of these topics are developed in connection with four independent inquiries UTeach students design and carry out. Written inquiries will be evaluated as examples of scientific writing. Prerequisite: C or better in SCIE 1201 or SCIE 1334, or concurrent enrollment; and junior or senior standing.

GEOL 4346. BASIN ANALYSIS. 3 Hours.
The classification and characteristics of sedimentary basins and the mechanisms forming them; and the tectonic, climatic, and eustatic controls on basin subsidence and the basin fill. Applications include the influence of basin evolution on petroleum generation, migration, and accumulation. Prerequisite: GEOL 3442 and MATH 1426.

GEOL 4350. STABLE ISOTOPE GEOCHEMISTRY. 3 Hours.
Principles governing the fractionation and distribution of stable isotopes (C, H, N, O, S) in nature, and application of stable isotope geochemistry to environmental problems and global climate change. Prerequisite: GEOL 2445 and CHEM 1442, or permission from instructor.

GEOL 4351. SUSTAINABLE ENERGY RESOURCES. 3 Hours.
The seminar will review literature of sustainable energy resources including critical minerals, subsurface storage and generation of hydrogen and hydrocarbons, geothermal energy, carbon capture and CO2 sequestration, waste management, and green energies. Prerequisite: GEOL 1301, or ENVR 1301, or GEOL 3340, or cons. inst.

GEOL 4352. ANALYTICAL METHODS IN GEOCHEMISTRY. 3 Hours.
Principles of geochemical analysis of waters, rocks and soils, and gases. Methods to be covered include x-ray fluorescence and diffraction, mass spectrometry, coulometry, inductively-coupled plasma, and gas/ion chromatography with various detection methods. Prerequisite: CHEM 1442.

GEOL 4353. DATA ANALYSIS FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 3 Hours.
This course is an introduction to data analysis and data science by means of mathematics and statistics. We analyze real-world data to find patterns, detect trends and better forecast complex systems in nature. This course provides quantitative methods and deep understanding of applications of data analysis in earth and environmental sciences. It covers analyzing a broad type of data related to geology, earth sciences and environmental engineering. Offered as ENVR 4353 and GEOL 4353; credit will not be given for both. Prerequisite: ENVR 3454, or GEOL 3454, or STATS 1301.

GEOL 4356. ENVIRONMENTAL RISK ASSESSMENT. 3 Hours.
This course introduces the basic scientific components of environmental and occupational health risk assessment and describes the policy context in which decisions to manage environmental health risks are made. The course presents the quantitative methods used to assess the human health risks associated with exposure to toxic chemicals, focusing on the four major components of risk assessment-hazard identification, dose-response assessment, exposure assessment, and risk characterization.

GEOL 4357. MEDICAL GEOLOGY. 3 Hours.
Introduction to geoscience and health. Students will learn how the geologic and geochemical environment can impact health. The historic background to geoscience and health will be presented followed by discussions on the natural abundance of elements in the earth, and the nature of essential and toxic elements (dose-response). Students will then learn about health responses following exposures in specific geologic/geochemical situations. Prerequisite: GEOL 1301 or ENVR 1301, or equivalent.

GEOL 4360. GEOLOGICAL PROCESSES OF OCEANS. 3 Hours.
Sedimentation in the oceans, chemistry of seawater, geochemical cycles in the oceans, and physical and biological processes that relate to sediment production, origin of seafloor topography, and seafloor spreading. Prerequisite: GEOL 3442.

GEOL 4367. PALEO EARTH SYSTEMS. 3 Hours.
This course discusses the evolution of Earth's complex dynamic system that is controlled by feedback processes that are both non-linear and stochastic in nature. Prerequisite: GEOL 1301.

GEOL 4368. GEOLOGY OF THE PERMIAN BASIN. 3 Hours.
Overview of the geologic evolution of the Permian Basin of W Texas and SE New Mexico and its petroleum resources. Emphasis on student presentations and term paper. Prerequisite: GEOL 1301 or equivalent.

GEOL 4389. RESEARCH IN GEOLOGY. 3 Hours.
Supervised undergraduate research in any one of the various fields of geology. May be repeated but will not meet Geology degree requirements. Prerequisite: permission from instructor.

GEOL 4393. HONORS THESIS/SENIOR PROJECT. 3 Hours.
Required of all students in the University Honors College. During the senior year, the student must complete a thesis or project under the direction of a faculty member in the Earth and Environmental Sciences Department.

GEOL 4402. COMPUTER MODELING IN EARTH SCIENCE. 4 Hours.
An introduction to basic programming and computation in the earth sciences using Matlab®, with emphasis on development of univariate and bivariate statistical models, spatial and image analysis, time series analysis, and the development of basic deterministic physics-based models of geological processes. Prerequisite: MATH 2425.

GEOL 4405. METEOROLOGY AND CLIMATOLOGY. 4 Hours.
A quantitative approach to the study of the structure, energy, and motions of the atmosphere. Prerequisite: MATH 1426, and PHYS 1441 or PHYS 1443, or permission of instructor.

GEOL 4420. HYDROGEOLOGY. 4 Hours.
This course is a comprehensive presentation of groundwater and subsurface hydrology that integrates chemistry, physics, geology, and calculus while applying theories to real-world geology and environmental science. It provides quantitative methods of calculation in groundwater and deep understanding of fundamental basics and concepts in subsurface hydrology. This course covers a broad range of topics related to transport processes, flow in porous media, groundwater contamination, well hydraulics, and aquifer yield. Prerequisite: PHYS 1441, or PHYS 1443, or cons. inst.

GEOL 4421. GEOCHRONOLOGY. 4 Hours.
Introduction to dating techniques, applied to understand past climate and tectonics. Prerequisite: GEOL 1301 or equivalent.

GEOL 4422. CONTAMINANT HYDROGEOLOGY. 4 Hours.
Sources and types of organic and inorganic contaminants; the physical, chemical, and biological factors and processes that affect the transport and fate of contaminants in the subsurface; non-aqueous phase liquids and multiphase flow; and various remedial techniques of contaminated sites. Prerequisite: GEOL 1301, ENVR 1301, or equivalent.

GEOL 4425. PALEOCLIMATE & CLIMATE CHANGE. 4 Hours.
Climate change throughout geologic time, especially the last 100 million years: models of the climate system, reconstruction and modeling of past climates, abrupt climate change, warm climates, paleoclimatology, climate change and mass extinctions. Prerequisite: GEOL 1301 or ENVR 1330 or GEOL 1330, or permission from instructor.

GEOL 4443. SEDIMENTARY SYSTEMS. 4 Hours.
Focuses on the processes transporting and archiving siliciclastic sediment, and the approaches using siliciclastic sedimentary rocks to reconstruct earth surface processes. This course includes a heavy component of student-led presentation and discussion. Prerequisite: GEOL 3442.

GEOL 4455. ENVIRONMENTAL DATA SCIENCE. 4 Hours.
This course focuses on acquisition, analysis, interpretation, and presentation of environmental data. Available datasets will be utilized to explore different models and case studies of the fate and transport of contaminants in multimedia environments, climate and health, toxicology prediction, water quality, environmental epidemiology, etc. The course includes practical exercises with Python and R. Offered as ENVR 4455 and GEOL 4455. Credit will not be given for both.

GEOL 4456. ENVIRONMENTAL RISK ASSESSMENT. 4 Hours.
This course introduces the basic scientific components of environmental and occupational health risk assessment and describes the policy context in which decisions to manage environmental health risks are made. The course presents the quantitative methods used to assess the human health risks associated with exposure to toxic chemicals, focusing on the four major components of risk assessment-hazard identification, dose-response assessment, exposure assessment, and risk characterization. Offered as ENVR 4456 and GEOL 4456. Credit will not be given for both.

GEOL 4458. MACHINE LEARNING FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of machine learning and helps students apply machine learning to analyze data, predict outcomes and interpret results from the perspective of earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in earth and environmental sciences. Offered as GEOL 4458 and ENVR 4458. Credit will be not given for both. Prerequisite: GEOL 3454 or ENVR 3454 or equivalent.

GEOL 4465. PHYSICAL OCEANOGRAPHY AND LIMNOLOGY. 4 Hours.
An introduction to physical processes in lakes and oceans. Changes in lakes and oceans influence heat, and momentum fluxes at the aquatic/oceanic and atmospheric interface. Topics include ocean/lake structure and circulation, and the impact of global climate change on lakes and oceans. Field excursions to nearby lakes combine theoretical knowledge and field measurements. Prerequisite: MATH 1426 and PHYS 1441 or PHYS 1443.

GEOL 5151. TOPICS IN ENERGY AND EARTH RESOURCES. 1 Hour.
This course will discuss the historical evolution and current status of major research thrusts in the environment, energy, and resources studies, including Superfund and groundwater remediation, carbon sequestration, tight sands and coalbed methane, petroleum production in shale gas and oil reservoirs, geological repository of high-level nuclear waste, geothermal energy exploitation, mining of critical minerals, and gas (methane) hydrate. Prerequisite: GEOL 1301 or GEOL 3340 or EVSE 5311 or equivalent.

GEOL 5180. PROFESSIONAL ORIENTATION AND BUSINESS ETHICS. 1 Hour.
A mentoring program using working professionals selected by the Earth and Environmental Sciences Department. Each participant meets at least once a month with a mentor who provides information on practices and skills necessary to succeed in the workplace. Course participants review business ethics statements provided by the mentor's company or other companies and write a critique based on materials from professional business ethics organizations such as the International Business Ethics Institute. Prerequisite: Prerequisite or concurrent enrollment GEOL 5345.

GEOL 5181. RESEARCH IN GEOLOGY. 1 Hour.
Independent study in various areas of research including paleontology, stratigraphy, tectonics, structural geology, sedimentology, geochemistry, petrology, geophysics, and volcanology. May be repeated for credit. Graded P/F/R/W.

GEOL 5190. GEOSCIENCE INTERNSHIP. 1 Hour.
Work in geoscience for a commercial concern at least 20 hrs/wk for 3 months. Requirements include writing a resume, learning how to interview and function on the job, and a report describing the work. Prerequisite: Cons. inst.

GEOL 5199. TECHNICAL SESSIONS. 1 Hour.
Forum for presentation of results of graduate students and faculty research. Required each semester of all graduate students.

GEOL 5265. TOPICS IN GEOL. 2 Hours.

GEOL 5281. RESEARCH IN GEOLOGY. 2 Hours.
Independent study in various areas of research including paleontology, stratigraphy, tectonics, structural geology, sedimentology, geochemistry, petrology, geophysics, and volcanology. May be repeated for credit. Graded P/F/R/W.

GEOL 5301. ENVIRONMENTAL GEOCHEMISTRY. 3 Hours.
Fundamentals of low-temperature aqueous geochemistry, and anthropogenic impacts on natural water systems. Topics include equilibrium thermodynamics, kinetics, aqueous complexation, and oxidation/reduction processes that affect metals and organic matter in natural waters.

GEOL 5302. GEODYNAMICS. 3 Hours.
A comprehensive and quantitative study of fundamental aspects of plate tectonics. Introduction to heat flow, elasticity and flexure, fluid mechanics, faulting, gravity, and flow in porous media, with a wide range of geological applications. Includes collaborative problem solving. Prerequisite: GEOL 3443 and MATH 2425.

GEOL 5303. ROCK FRACTURE MECHANICS. 3 Hours.
Principles and tools of fracture mechanics are applied to the origins and physical behaviors of faults, dikes, joints, veins, and other natural structures in rock. Special emphasis will be given to combining field observations of fractures in rock with the elastic theory of cracks in order to explore the role of natural fractures in brittle rock deformation in the earth's crust with applications to crustal deformation, structural geology, engineering geology, and induced hydraulic fracture, i.e. Fracking. Prerequisite: GEOL 3443 and MATH 2425; or GEOL 3340 and CE 2313.

GEOL 5304. SOLID EARTH GEOMECHANICS. 3 Hours.
Application of continuum mechanics to understanding deformation in the earth, including mechanical analysis of natural geologic structures such as faults, folds, lava flows, and dikes, as well as practical problems related to reservoir geomechanics and mining applications. Prerequisite: GEOL 3443, MATH 2325, PHYS 1441 or PHYS 1443.

GEOL 5305. METEOROLOGY AND CLIMATOLOGY. 3 Hours.
A quantitative approach to the study of the structure, energy, and motions of the atmosphere. Prerequisite: MATH 1426 and PHYS 1441, or PHYS 1443, or permission of instructor.

GEOL 5309. GEOMORPHOLOGY & QUATERNARY STRATIGRAPHY OF SEDIMENTARY SYSTEMS. 3 Hours.
This course examines those physical processes that sculpt the surface of the Earth and result in deposition of sediments. Surface systems covered include weathering, mass wasting, rivers, shorelines, eolian processes, and glaciers. The course also examines the stratigraphic techniques used to decode the recent (2 million to present) stratigraphic record of these systems. Course is designed for geologists, biologists, and other fields concerned with interpreting and/or managing modern environments.

GEOL 5320. UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS. 3 Hours.
A practical introduction to GIS and methods of creating, maintaining and displaying spatial data using the ArcGIS software.

GEOL 5321. ANALYSIS OF SPATIAL DATA. 3 Hours.
Analyzing spatial data using ArcGIS, Spatial Analyst, and 3D Analyst, topological surface analysis and modeling; 3D visualization and viewscapes; spatial statistics and data quality management. Prerequisite: GEOL 4330 or GEOL 5320.

GEOL 5322. GLOBAL POSITIONING SYSTEM. 3 Hours.
Review of the NAVSTAR Global Positioning System and its segments: space, operational control, and GPS receivers. Mechanics of the satellite constellation; GPS signal structure; data and coordinate systems; precision and accuracy; error factors; absolute (point) versus relative (differential) positioning. Various positioning techniques using several types of GPS receivers; field data collection and input into GIS programs for data analysis and presentation. Prerequisite: GEOL 4330 or GEOL 5320.

GEOL 5323. REMOTE SENSING FUNDAMENTALS. 3 Hours.
The electromagnetic spectrum and the interaction of EM waves with matter; various types of sensing devices; spectral and spatial resolution parameters; airborne and satellite sensor platforms; aerial photographs and false-color images. The sequence of data acquisition, computer processing and interpretation; sources of data; the integration of remote sensing data with other data types in GIS. Prerequisite: GEOL 4330 or GEOL 5320.

GEOL 5324. GEOGRAPHIC DATA ANALYSIS PROJECT. 3 Hours.
Acquisition, processing and analysis of a set of spatial data selected by the student with the approval of the instructor. A written report of the results is required. Offered as GEOL 5324 and GEOG 5334. Credit will not be given for both. Prerequisite: GEOL 5320, or GEOL 4330 or GEOG 4330, or cons. inst.

GEOL 5332. STABLE ISOTOPE GEOCHEMISTRY. 3 Hours.
Principals governing the fractionation and distribution of stable isotopes (C, H, N, O, S) in nature, and application of stable isotope geochemistry to environmental problems and global climate change.

GEOL 5333. FIELD METHODS. 3 Hours.

GEOL 5334. ANALYTICAL METHODS IN ENVIRONMENTAL SCIENCE. 3 Hours.
Principals of geochemical analysis of waters, rocks and soils, and gases. Methods to be covered include x-ray fluorescence and diffraction, mass spectrometry, coulometry, inductively-coupled plasma, and gas/ion chromatography with various detection methods.

GEOL 5335. ISOTOPES AND TECTONICS. 3 Hours.
An Introduction to the fundamentals of clumped isotopes, and major radiogenic and cosmogenic isotope systems and their applications to the study of earth system processes and Earth history; emphasis will be placed on applications to tectonics, geochronology, and thermochronology. Prerequisite: CHEM 1442 or GEOL 4302.

GEOL 5342. MICROFOSSILS AND CARBONATE ROCKS. 3 Hours.
Half of this course consists of an introduction to microfossil groups occurring in sedimentary rocks: foraminifers, conodonts, coccolithophorids and others, and their usefulness in regional and global correlation of Phanerozoic strata. The biostratigraphy of these groups will be discussed along with the principles used in the correlation of sedimentary rocks. The other half of the course consists of the analysis of the lithofacies and biofacies of carbonate rocks, their genesis, depositional environments, and diagenesis. Prerequisite: GEOL 1302 or permission of the instructor.

GEOL 5345. PETROLEUM GEOLOGY. 3 Hours.
Origin, generation and migration of petroleum; reservoirs, seals and traps; the subsurface environment; properties of petroleum; exploration and production methods; use of seismic lines and well logs; types of petroleum basins; reserves and resources. Prerequisite: GEOL 3442 and GEOL 3443.

GEOL 5351. SUSTAINABLE ENERGY RESOURCES. 3 Hours.
The seminar will review literature of sustainable energy resources including critical minerals, subsurface storage and generation of hydrogen and hydrocarbons, geothermal energy, carbon capture and CO2 sequestration, waste management, and green energies. Prerequisite: GEOL 1301, or ENVR1301, or GEOL 3340, or cons. inst.

GEOL 5365. TOPICS IN GEOLOGY. 3 Hours.
Topics offered depend on student and faculty interest. Such topics might include identification of fossil fragments in thin section; magmatic processes; plate tectonics and sedimentary basin evolution; stratigraphic paleontology; sedimentary or volcanogenic ore deposition; geostatistics; geophysical archeology; and various advanced subjects in sedimentology, stratigraphy, paleontology, geophysics, geochemistry, volcanology and petrology. May be repeated for credit when topic changes.

GEOL 5367. PALEO EARTH SYSTEMS. 3 Hours.
This course discusses the evolution of Earth's complex dynamic system that is controlled by feedback processes that are both non-linear and stochastic in nature. Prerequisite: GEOL 1301.

GEOL 5368. GEOLOGY OF THE PERMIAN BASIN. 3 Hours.
Overview of the geologic evolution of the Permian Basin of W Texas and SE New Mexico and its petroleum resources. Emphasis on student presentations and term paper.

GEOL 5369. SEQUENCE STRATIGRAPHY. 3 Hours.
This course introduces sequence stratigraphy within context of all stratigraphy and history of sequence stratigraphy. Includes overview of sequence stratigraphy principles. Review of basic fundamental concepts of surface- and facies-based physical stratigraphy. Review of architectural element analysis, sequence stratigraphic in seismic, borehole expression of sequences and overview of subsurface stratigraphic techniques. Prerequisite: GEOL 3442.

GEOL 5370. SEDIMENTARY SYSTEMS. 3 Hours.
Carbonate and clastic depositional systems, recognition of facies, systems tracts, diagenetic overprint, shelf to basin profiling, and sequence stratigraphic analysis.

GEOL 5371. BASIN ANALYSIS. 3 Hours.
Topics include: the classification and characteristics of of sedimentary basins and the mechanisms forming them; and the tectonic, climatic, and eustatic controls on basin subsidence and the basin fill. Applications include the influence of basin evolution on petroleum generation, migration, and accumulation. Prerequisite: GEOL 3442 (Sedimentology and Stratigraphy).

GEOL 5372. STRUCTURAL GEOMETRY AND TECTONICS OF PETROLEUM FIELDS. 3 Hours.
Structural styles of thin-skinned, basement involved and reactivated systems in shortening, extensional and strike-slip deformation. Use of structural modeling and restoration methods to test the reliability of structural interpretations. Prerequisite: GEOL 3443.

GEOL 5373. RESERVOIR CHARACTERIZATION. 3 Hours.
Principles, protocols, analysis and measurement of petrophysical properties (e.g., fluid content, porosity, permeability, pore size distribution, water retention curve, imbibition) of petroleum reservoir rocks.

GEOL 5374. SEISMIC INTERPRETATION. 3 Hours.
Introduction to the methods of acquisition and processing as they relate to the interpretation of seismic records. Structural and stratigraphic interpretation methods and pitfalls using two and three dimensional seismic data. Introduction to Seismic Interpretation Software such as the Kingdom Suite from Seismic Micro Technology, Inc. Prerequisite: GEOL 3442 and GEOL 3443.

GEOL 5375. INTRODUCTION TO WELL LOG INTERPRETATION AND MAPPING. 3 Hours.
Introduction to the various types of well logs used in the petroleum industry and their petrophysical interpretations, including evaluations of porosity, water saturation, shale volume, permeability, and lithology. Introduction to techniques of contouring data and use of mapping software such as PETRA. Prerequisite: GEOL 3442.

GEOL 5381. RESEARCH IN GEOLOGY. 3 Hours.
Independent study in various areas of research including paleontology, stratigraphy, tectonics, structural geology, sedimentology, geochemistry, petrology, geophysics, and volcanology. May be repeated for credit. Graded R.

GEOL 5395. MASTER'S PROJECT. 3 Hours.
May be used as elective for students in non-thesis program. Graded F,P,R,W. Prerequisite: GEOL 1301 or equivalent course.

GEOL 5398. THESIS. 3 Hours.
Graded F, R.

GEOL 5405. METEOROLOGY AND CLIMATOLOGY. 4 Hours.
A quantitative approach to the study of the structure, energy, and motions of the atmosphere. Prerequisite: MATH 1426 and PHYS 1441, or cons. inst.

GEOL 5421. GEOCHRONOLOGY. 4 Hours.
Introduction to dating techniques, applied to understand past climate and tectonics. Prerequisite: GEOL 1301 or equivalent.

GEOL 5425. PALEOCLIMATE AND CLIMATE CHANGE. 4 Hours.
Climate change throughout geologic time, especially the last 100 million years: models of the climate system, reconstruction and modeling of past climates, abrupt climate change, warm climates, paleoclimatology, climate change and mass extinctions. Prerequisite: GEOL 1301 or ENVR 1330 or GEOL 1330, or cons. inst.

GEOL 5428. HYDROGEOLOGY. 4 Hours.
This course is a comprehensive presentation of groundwater and subsurface hydrology that integrates chemistry, physics, geology, and calculus while applying theories to real-world geology and environmental science. It provides quantitative methods of calculation in groundwater and deep understanding of fundamental basics and concepts in subsurface hydrology. This course covers a broad range of topics related to transport processes, flow in porous media, groundwater contamination, well hydraulics, and aquifer yield. Prerequisite: PHYS 1441, or PHYS 1443, or cons. inst.

GEOL 5450. CONTAMINANT HYDROGEOLOGY. 4 Hours.
Sources and types of organic and inorganic contaminants; the physical, chemical, and biological factors and processes that affect the transport and fate of contaminants in the subsurface; non-aqueous phase liquids and multiphase flow; and various remedial techniques of contaminated sites.

GEOL 5454. STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of statistics and helps students apply statistics to analyze data and interpret results from the perspective of Earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in Earth and environmental sciences. Offered as EVSE 5454 and GEOL 5454. Credit will not be given for both.

GEOL 5456. ENVIRONMENTAL RISK ASSESSMENT. 4 Hours.
This course introduces the basic scientific components of environmental and occupational health risk assessment and describes the policy context in which decisions to manage environmental health risks are made. The course presents the quantitative methods used to assess the human health risks associated with exposure to toxic chemicals, focusing on the four major components of risk assessment-hazard identification, dose-response assessment, exposure assessment, and risk characterization. Offered as EVSE 5456 and GEOL 5456, credit will not be given for both.

GEOL 5458. MACHINE LEARNING FOR EARTH AND ENVIRONMENTAL SCIENTISTS. 4 Hours.
This course provides students with basic principles of machine learning and helps students apply machine learning to analyze data, predict outcomes and interpret results from the perspective of earth and environmental scientists. The course will first introduce basic concepts and then focus on applications to various examples in earth and environmental sciences. Offered as GEOL 5458 and EVSE 5458. Credit will not be given for both. Prerequisite: ENVR 3454 or GEOL 3454 or EVSE 5454 or GEOL 5454 or equivalent.

GEOL 5465. PHYSICAL OCEANOGRAPHY AND LIMNOLOGY. 4 Hours.
An introduction to physical processes in lakes and oceans. Changes in lakes and oceans influence heat, and momentum fluxes at the aquatic/oceanic and atmospheric interface. Topics include ocean/lake structure and circulation, and the impact of global climate change on lakes and oceans. Field excursions to nearby lakes combine theoretical knowledge and field measurements. Prerequisite: PHYS 1441 or PHYS 1443; and MATH 1426.

GEOL 5698. THESIS. 6 Hours.
Graded F, P, R.

Earth and Environmental Sciences - Graduate

Programs

DOCTORAL DEGREE

- Earth and Environmental Sciences PhD (BS Entry) (p. 1649)
- Earth and Environmental Sciences PhD (MS Entry) (p. 1650)

MASTER'S DEGREES

- Master of Science in Earth and Environmental Science (Energy Geoscience Professional) (p. 1652)
- Master of Science in Earth and Environmental Science (Environmental Professional) (p. 1653)
- Master of Science in Earth and Environmental Science (Environmental Science) (p. 1655)
- Master of Science in Earth and Environmental Science (Geoscience Professional) (p. 1656)

Earth and Environmental Sciences Master's Program Admissions

For unconditional admission a student must meet the following requirements:

For the Environmental Science Options: A B.S. degree in biology, chemistry, geoscience, mathematics, or engineering with the following courses or their equivalent: 1 semester of introductory physics for science majors; 2 semesters of introductory chemistry for science majors; and Calculus I and II. Students with a Bachelor's Degree in other sciences will also be considered, subject to satisfactory completion of deficiency courses.

For the Geoscience Options: A B.S. degree in an Earth Science discipline with the following courses or their equivalent: Mineralogy, Petrology, Structure, Stratigraphy/sedimentology, Field Geology and Geophysics or Paleontology. In addition, one semester of Biology, Calculus I and II, and a year of Chemistry and Physics is required.

For all Options:

1. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the Graduate School.
2. Graduate Record Examination (GRE) scores are used in conjunction with GPA's. For example a person with a GPA below 3.0 will need a GRE score better than average. Masters students who have succeeded in the Earth and Environmental Science s Program typically score higher than the 60th Percentile on the verbal and quantitative portion of the GRE.
3. An applicant whose native language is not English must submit a score of at least 550 on the paper-based TOEFL, a score of at least 213 on the computer-based TOEFL, a minimum score of 40 on the TSE, a minimum score of 6.5 on the IELTS, or a minimum TOEFL iBT total score of 79 with sectional scores that meet or exceed 22 for the writing section, 21 for the speaking section, 20 for the reading section, and 16 for the listening section. However, an applicant whose native language is not English with a bachelor's or a master's degree from a regionally accredited U.S. college or university is not required to submit a TOEFL, TOEFL iBT,TSE or IELTS score for admission purposes.
4. Favorable letters of recommendation from people familiar with the applicant's academic work.

Master's Degree Requirements

EARTH AND ENVIRONMENTAL SCIENCES MASTER'S DEGREE

There are additional requirements for all Master's programs listed in this CATALOG under University Requirements and Policies.

Environmental Science Thesis Option

Core Courses		
General core courses		7
EVSE 5303	SUSTAINABILITY ISSUES SEMINAR III	
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	
Select one of the following engineering courses		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
CE 5319	PHYSICAL-CHEMICAL PROCESSES II	
or CE 5328	FUNDAMENTALS OF AIR POLLUTION	
Select one of the following science courses		3
EVSE 5309	ENVIRONMENTAL SYSTEMS-BIOLOGICAL ASPECTS [1]	

EVSE 5310	ENVIRONMENTAL SYSTEMS-CHEMICAL ASPECTS [1]	
EVSE 5311	ENVIRONMENTAL SYSTEMS-GEOLOGICAL ASPECTS [1]	
Select one of the following in City, or Regional Planning:		3
PLAN 5342	ENVIRONMENTAL POLICY	
PLAN 5343	FOUNDATIONS OF ENVIRONMENTAL POLICY	
PLAN 5351	TECHNIQUES OF ENVIRONMENTAL ASSESSMENT	
Electives within one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs		6
Two semesters of GEOL 5199 or EVSE 5199 - Seminar		2
EVSE 5698	THESIS	6
Total Hours		**30**

[1] Students with less than 20 undergraduate hours in biology, chemistry, or geology will need to take a third environmental systems course as a deficiency. Students entering with a BS degree in one of these areas must take their two courses in the other areas.

Environmental Science Non-Thesis Option

Core Courses		
General core courses		**7**
EVSE 5303	SUSTAINABILITY ISSUES SEMINAR III	
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	
Select one of the following engineering courses		**3**
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
CE 5319	PHYSICAL-CHEMICAL PROCESSES II	
or CE 5328	FUNDAMENTALS OF AIR POLLUTION	
Select one of the following in science:		**3**
EVSE 5309	ENVIRONMENTAL SYSTEMS-BIOLOGICAL ASPECTS [1]	
EVSE 5313	ENVIRONMENTAL REGULATION OF CHEMICAL HAZARDS [1]	
EVSE 5311	ENVIRONMENTAL SYSTEMS-GEOLOGICAL ASPECTS [1]	
Select one of the following in City and Regional Planning		**3**
PLAN 5305	LAND USE, MANAGEMENT AND DEVELOPMENT	
PLAN 5316	LAND USE PLANNING AND THE LAW	
PLAN 5352	ENVIRONMENT ASSESSMENT POLICY & PRACTICE	
Electives within one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs		9
EVSE Seminar		2
Two semesters of GEOL 5199 or EVSE 5199		
EVSE 5395	MASTER'S PROJECT	3
Successful completion of the Master's Comprehensive Examination in the final semester		
Total Hours		**30**

[1] Students with less than 20 undergraduate hours in biology, chemistry, or geology will need to take a third environmental systems course as a deficiency. Students entering with a BS degree in one of these areas must take their two courses in the other areas.

[2] Must include at least 6 hours in department(s) outside that in which the first 9 hours of electives are taken.

The Geoscience Thesis Option

Core Courses		
GEOL 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following in engineering (or advisor approved):		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
IE 5304	ADVANCED ENGINEERING ECONOMY	
take two hours in the following seminar:		2
GEOL 5199	TECHNICAL SESSIONS	

Advisor Approved Electives		15
GEOL 5698	THESIS	6
Total Hours		**30**

The Geoscience Non-Thesis Option

Core Courses		
GEOL 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following in engineering (or advisor approved):		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
IE 5304	ADVANCED ENGINEERING ECONOMY	
take two hours in the following seminar:		2
GEOL 5199	TECHNICAL SESSIONS	
Advisor Approved Electives		18
GEOL 5395	MASTER'S PROJECT	3
Total Hours		**30**

Environmental Science Professional Option

Foundations		
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following engineering courses		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
IE 5304	ADVANCED ENGINEERING ECONOMY	
For science, select any 5000-level EVSE or GEOL course except 5000-level EVSE or GEOL research credits		3
For City and Regional Planning select any 5000-level PLAN course		3
Specialization		
EVSE 5120	ENVIRONMENTAL PROFESSIONAL MENTORING & BUSINESS ETHICS	1
EVSE 5199	SEMINAR IN ENVIRONMENTAL & EARTH SCIENCES	1
EVSE 5115	PROFESSIONAL EXPERIENCE	1
or EVSE 6197	RESEARCH IN ENVIRONMENTAL & EARTH SCIENCES	
Electives		
Select 11 hours from one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs		11
EVSE 5395	MASTER'S PROJECT	3
Successful completion of the Master's Comprehensive Examination in final semester.		
Total Hours		**30**

[1] Students with less than 20 undergraduate hours in biology, chemistry, or geology will need to take a third environmental systems course as a deficiency. Students entering with a BS degree in one of these areas must take their two courses in the other areas.

Energy Geoscience Professional Option

Foundations		
GEOL 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
GEOL 5351	SUSTAINABLE ENERGY RESOURCES	3
GEOL 5190	GEOSCIENCE INTERNSHIP	1
or GEOL 5199	TECHNICAL SESSIONS	
IE 5304	ADVANCED ENGINEERING ECONOMY	3
Specialization		
Select 13 hours from one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, or Civil and Environmental Engineering		13
Select thesis or non-thesis option		6
Non-thesis option		
Select an additional advisor-approved course		
GEOL 5395	MASTER'S PROJECT	

Thesis option		
GEOL 5698	THESIS	
Total Hours		**30**

Dual Degree Program

Dual master's degrees can be arranged with any suitable program. By participating in a dual degree program, students may apply 6-18 total semester credit hours jointly to meet the requirements of both degrees, thus reducing the total number of hours which would be required to earn both degrees separately. The number of hours which may be jointly applied ranges from six to 18, subject to the approval of Graduate Advisors from both programs. Degree plans, thesis or professional report proposals and programs of work must be approved by Graduate Advisors from both programs. The successful candidate will be awarded both degrees rather than one joint degree.

To participate in the dual degree program, students must make separate application to each program and must submit a separate program of work for each degree. Those interested in the dual degree program should consult the appropriate Graduate Advisors for further information on course requirements. See also the statement on Dual Degree Programs in the general information section of this catalog.

Arrangements to offer a dual degree have already been made between Earth and Environmental Sciences and the Program in City and Regional Planning (M.C.R.P. degree), School of Urban and Public Affairs.

Admission Requirements

For unconditional admission a student must meet the following requirements:

1. A masters segree or at least 30 hours of graduate coursework in environmental science, biology, chemistry, geology, mathematics or engineering.
2. A strong quantitative background including courses in differential and integral calculus (i.e., Calculus I and II). Students that have not taken these courses will be expected to complete them during their first year of residence.
3. A minimum graduate coursework GPA of 3.0 on a 4.0 scale, as calculated by the Graduate School.
4. Graduate Record Examination (GRE) scores are considered in admission decisions. Doctoral students who have succeeded in the Earth and Environmental Sciences Program typically score higher than the 60th percentile the verbal and the quantitative portion of the GRE.
5. For applicants whose native language is not English and have not completed a Bachelors degree at a US institution, they must meet the following minimums: TOEFL iBT (minimum 81 overall, with sectional scores of at least 22 writing, 23 speaking, 20 reading, or 16 listening) or IELTS (minimum overall band of 6.5, with a speaking score of 7.0).
6. Favorable letters of recommendation from people familiar with the applicant's academic work and/or professional work.
7. A statement must be submitted to the program detailing the applicant's specific research interests and identifying the faculty member who is requested as supervisor of the dissertation research.
8. Students may be considered for unconditional admission if further review of their transcripts, recommendation letters, correspondence or direct interactions with Earth and Environmental Sciences faculty, and statement of research interests indicates that they are qualified to enter the doctoral program.

1.

Doctoral Degree Requirements

EARTH AND ENVIRONMENTAL SCIENCES DOCTORAL DEGREE

Foundations		
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following engineering courses		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
CE 5319	PHYSICAL-CHEMICAL PROCESSES II	
or CE 5328	FUNDAMENTALS OF AIR POLLUTION	
Select 3 hours in EVSE or GEOL at the 5000 level		3
Select 3 hours in PLAN at the 5000 level		3
Select two semesters of:		2
EVSE 5199	SEMINAR IN ENVIRONMENTAL & EARTH SCIENCES	
or GEOL 5199	TECHNICAL SESSIONS	
Select 6 hours in EVSE, GEOL, CE, PLAN, or BIOL at the 5000/6000 level		6
Dissertation		
Select at least 9 hours from:		9
EVSE 6399	DISSERTATION	

EVSE 6699	DISSERTATION	
EVSE 6999	DISSERTATION	
EVSE 7399	DOCTORAL DEGREE COMPLETION	
Total Hours		**30**

Students who enter with a master's degree in a science or engineering field, or with 30 semester hours of graduate coursework, take a diagnostic examination in the first year of residence to evaluate this previous work. Students take their comprehensive exam in the third year of residence. Dissertation hours and doctoral degree completion course are taken after passing the comprehensive exam. The student's supervising committee must approve all courses taken to meet degree requirements.

Students may choose among any of the five participating units for their primary and secondary areas of emphasis. Course selection within these areas of emphasis is guided by the student's supervising committee and must result in a cohesive program that supports the dissertation research.

Doctor of Philosophy in Earth and Environmental Sciences (BS Entry)

About This Program

Doctor of Philosophy in Earth and Environmental Sciences provides students with the interdisciplinary knowledge and skills to conduct independent research in Earth and Environmental Sciences. Students conduct dissertation research under the supervision of a faculty member in one of the participating departments (Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs). The supervising professor and a faculty committee assign courses in this primary area of emphasis to support the student's research and professional goals. To provide interdisciplinary training, additional courses are assigned in a secondary area of emphasis.

Competencies

1. Upon completion, students will demonstrate expertise in methods found in multiple discipline areas within geoscience and/or environmental science and also demonstrate expertise in their chosen geoscience and/or environmental science discipline area.
2. Upon completion, students will be able to critically analyze scientific data in geoscience and environmental sciences, critically evaluate and design geoscience and/or environmental montoring sytems and/or models, and synthesize and integrate methodologies found in scientific and engineering disciplines into a multi-disciplinary scientific framework.
3. Upon completion students will be able to communicate complex information from geoscience and/or environmental science sub-disciplines using written reports, peer-reviewed journals, and oral presentations to specialists and non#specialists.

Admissions Criteria

For unconditional admission a student must meet the following requirements:

1. A bachelor's degree in environmental science, geosciences, biology, chemistry, mathematics, or engineering. Students with a bachelor's in other sciences will also be considered, subject to satisfactory completion of courses to make up deficiencies.
2. A strong quantitative background including courses in differential and integral calculus (i.e., Calculus I and II). Students that have not taken these courses will be expected to complete them during their first year of residence.
3. A minimum graduate coursework GPA of 3.0 on a 4.0 scale, as calculated by the Graduate School.
4. Graduate Record Examination (GRE) scores are considered in admission decisions. Doctoral students who have succeeded in the Earth and Environmental Sciences Program typically score higher than the 60th percentile the verbal and the quantitative portion of the GRE.
5. For applicants whose native language is not English and have not completed a bachelors degree at a US institution, the following minimum scores must be reported: TOEFL iBT (minimum 81 overall, with sectional scores of at least 22 writing, 23 speaking, 20 reading, or 16 listening) or IELTS (minimum overall band of 6.5, speaking 7.0).
6. Favorable letters of recommendation from people familiar with the applicant's academic work and/or professional work.
7. A statement must be submitted to the program detailing the applicant's specific research interests and identifying the faculty member who is requested as supervisor of the dissertation research.
8. Students may be considered for unconditional admission if further review of their transcripts, recommendation letters, correspondence or direct interactions with Earth and Environmental Sciences faculty, and statement of research interests indicates that they are qualified to enter the doctoral program.

Curriculum

Foundations		
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following engineering courses		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
CE 5319	PHYSICAL-CHEMICAL PROCESSES II	

or CE 5328	FUNDAMENTALS OF AIR POLLUTION	
Select 3 hours in EVSE or GEOL at the 5000 level		3
Select 3 hours in PLAN at the 5000 level		3
Select two semesters of:		2
EVSE 5199	SEMINAR IN ENVIRONMENTAL & EARTH SCIENCES	
or GEOL 5199	TECHNICAL SESSIONS	
Select 21 hours of EVSE, GEOL, BIO, CE, PLAN, or DATSC at the 5000/6000 level		21
Dissertation		
Select at least 9 hours from:		9
EVSE 6399	DISSERTATION	
EVSE 6699	DISSERTATION	
EVSE 6999	DISSERTATION	
EVSE 7399	DOCTORAL DEGREE COMPLETION	
Total Hours		**45**

Students who enter with a bachelor's degree take 45 semester hours of graduate coursework that includes engineering, science, and Public Policy courses. In addition, students take after the comprehensive exam dissertation and doctoral degree completion courses. These students are encouraged to take the diagnostic exam in their first year of enrollment and the compressive exam in their third year of enrollment. The student's supervising committee must approve all courses taken to meet degree requirements.

Students may choose among any of the five participating units for their primary and secondary areas of emphasis. Course selection within these areas of emphasis is guided by the student's supervising committee and must result in a cohesive program that supports the dissertation research.

Program Completion

In addition to coursework, the PhD program requires completion of significant additional milestones that require time and effort beyond the core 45 credit hours:

1. Successful completion of the Diagnostic Examination at the end of the first year of residence.
2. Successful completion of the Comprehensive Examination, an oral defense of a research proposal to be pursued for the dissertation, and a specialization examination over areas of the student's proposed research.
3. Demonstration of proficiency in one foreign language or a research tool such as advanced computer skills, statistics, or operations research.
4. Successful defense of the dissertation and acceptance of the dissertation by the supervising committee.

Advising Resources

First time in college students should plan to speak to a program advisor when starting their second year. or have an academic advising hold. Transfer students should contact program advising when enrolled or have an academic advising hold.

Doctor of Philosophy in Earth and Environmental Sciences (MS Entry)

About This Program

Doctor of Philosophy in Earth and Environmental Sciences provides students with the interdisciplinary knowledge and skills to conduct independent research in Earth and Environmental Sciences. Students conduct dissertation research under the supervision of a faculty member in one of the participating departments (Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs).

The supervising professor and a faculty committee assign courses in this primary area of emphasis to support the student's research and professional goals. To provide interdisciplinary training, additional courses are assigned in a secondary area of emphasis.

Competencies

1. Upon completion, students will demonstrate expertise in methods found in multiple discipline areas within geoscience and environmental science, and also demonstrate expertise in their chosen geoscience and environmental science challenge discipline area.
2. Upon completion, students will be able to critically analyze scientific data in geoscience and environmental sciences, evaluate and design geoscience and/or environmental monitoring and/or models, and synthesize and integrate methodologies found in scientific and engineering disciplines into a multi-disciplinary scientific framework.
3. Upon completion, students will be able to communicate complex information from geoscience and/or environmental science sub-disciplines using written reports, peer-reviewed journals, and oral presentations to specialists and non#specialists.

Admissions Criteria

For unconditional admission a student must meet the following requirements:

1. A masters segree or at least 30 hours of graduate coursework in environmental science, biology, chemistry, geology, mathematics or engineering.
2. A strong quantitative background including courses in differential and integral calculus (i.e., Calculus I and II). Students that have not taken these courses will be expected to complete them during their first year of residence.
3. A minimum graduate coursework GPA of 3.0 on a 4.0 scale, as calculated by the Graduate School.
4. Graduate Record Examination (GRE) scores are considered in admission decisions. Doctoral students who have succeeded in the Earth and Environmental Sciences Program typically score higher than the 60th percentile the verbal and the quantitative portion of the GRE.
5. For applicants whose native language is not English and have not completed a Bachelors degree at a US institution, they must meet the following minimums: TOEFL iBT (minimum 81 overall, with sectional scores of at least 22 writing, 23 speaking, 20 reading, or 16 listening) or IELTS (minimum overall band of 6.5, with a speaking score of 7.0).

Master of Science in Earth and Environmental Science (Energy Geoscience Professional)

About This Program

Master of Science in Earth and Environmental Science Energy Geoscience Professional option is intended for those interested in a career in the petroleum Industry. In addition to core geology courses, students are required to participate in a networking program with industry professionals, work as an intern or in a part time job in petroleum geoscience, take a course in project economics, and participate in course activities that emphasize business ethics, teamwork and communications. Thesis or non thesis options are available. However, all new students are admitted into the non-thesis option. During the first year, students may transfer to the thesis option after obtaining a faculty thesis supervisor. A thesis supervisor is not guaranteed.

Competencies

1. Upon graduation the student should be able to demonstrate expertise in methods found in sustainable energy geoscience.
2. Upon graduation the student should be able critically analyze scientific data in energy geosciences and critically evaluate resources and risks of exploration.
3. Upon graduation the student should be able to integrate methodologies found in scientific and engineering disciplines into a multi-disciplinary scientific framework.
4. Upon graduation the student should be able to analyze complex information from energy geosciences using written reports, and oral presentations to specialists and non#specialists.

Admissions Criteria

For unconditional admission a student must meet the following requirements:

1. A BS in an earth science discipline with the following courses or their equivalent: mineralogy, petrology, structure, stratigraphy/sedimentology, field geology and geophysics, or paleontology. In addition, one semester of biology, calculus I and II, and a year of chemistry and physics is required.
2. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the graduate admissions.

3. Graduate Record Examination (GRE) scores are used in conjunction with GPA's. For example a person with a GPA below 3.0 will need a GRE score better than average. Masters students who have succeeded in the Earth and Environmental Science s Program typically score higher than the 60th Percentile on the verbal and quantitative portion of the GRE.
4. For applicants whose native language is not English and have not completed a Bachelors degree at a US institution, they must meet~~English, a minimum score of 550 on~~ the following minimums: TOEFL iBT (minimum 81 overall, with sectional scores of at least 22 writing, 23 speaking, 20 reading, ~~Test of English as a Foreign Language (or an equivalent score on a computer-based test)~~ or 16 listening) or IELTS (minimum overall band of 6.5, with a speaking score ~~a score~~ of 7.0).
5. Favorable letters of recommendation from people familiar with the applicant's academic work.

Curriculum

Foundations		
GEOL 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
GEOL 5351	SUSTAINABLE ENERGY RESOURCES	3
GEOL 5190	GEOSCIENCE INTERNSHIP	1
or GEOL 5199	TECHNICAL SESSIONS	
IE 5304	ADVANCED ENGINEERING ECONOMY	3
Specialization		
Select 13 hours from one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, or Civil and Environmental Engineering		13
Select thesis or non-thesis option		6
Non-thesis option		
Select an additional advisor-approved course		
GEOL 5395	MASTER'S PROJECT	
Thesis option		
GEOL 5698	THESIS	
Total Hours		**30**

Advising Resources

First time in college students should plan to speak to a program advisor when starting their second year. or have an academic advising hold. Transfer students should contact program advising when enrolled or have an academic advising hold.

Master of Science in Earth and Environmental Science (Environmental Professional)

About This Program

Master of Science in Earth and Environmental Science Environmental Science Professional program is for those interested in a career in environmental science. Instead of a thesis, students participate in a mentoring program, take a course in project economics, work as an intern or in a part time job in the environmental science profession, and course experiences involving business ethics, teamwork, a small research project, and communication. This is a non-thesis program.

Competencies

1. Upon graduation, students should be are able to demonstrate expertise in their chosen environmental science professional discipline area.
2. Upon graduation, students should be able to analyze scientific data in geoscience and environmental sciences.
3. Upon graduation, students should be able to communicate complex information from environmental science professional sub-disciplines using written reports, and oral presentations to specialists and non#specialists.

Admissions Criteria

For unconditional admission a student must meet the following requirements:

1. A BS in biology, chemistry, geoscience, mathematics, or engineering with the following courses or their equivalent: 1 semester of introductory physics for science majors, 2 semesters of introductory chemistry for science majors, Calculus I and II. Students with a bachelor's degree in other sciences will also be considered, subject to satisfactory completion of deficiency courses.
2. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the graduate admissions.
3. Graduate Record Examination (GRE) scores are used in conjunction with GPA's. For example a person with a GPA below 3.0 will need a GRE score better than average. Masters students who have succeeded in the Earth and Environmental Science s Program typically score higher than the 60th Percentile on the verbal and quantitative portion of the GRE.
4. For applicants whose native language is not English and have not completed a Bachelors degree at a US institution, they must meet~~English, a minimum score of 550 on~~ the following minimums: TOEFL iBT (minimum 81 overall, with sectional scores of at least 22 writing, 23 speaking, 20 reading, ~~Test of English as a Foreign Language (or an equivalent score on a computer-based test)~~ or 16 listening) or IELTS (minimum overall band of 6.5, with a speaking score ~~a score~~ of 7.0).
5. Favorable letters of recommendation from people familiar with the applicant's academic work.

Curriculum

Foundations		
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following engineering courses		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
IE 5304	ADVANCED ENGINEERING ECONOMY	
For science, select any 5000-level EVSE or GEOL course except 5000-level EVSE or GEOL research credits		3
For City and Regional Planning select any 5000-level PLAN course		3
Specialization		
EVSE 5120	ENVIRONMENTAL PROFESSIONAL MENTORING & BUSINESS ETHICS	1
EVSE 5199	SEMINAR IN ENVIRONMENTAL & EARTH SCIENCES	1
EVSE 5115	PROFESSIONAL EXPERIENCE	1
or EVSE 6197	RESEARCH IN ENVIRONMENTAL & EARTH SCIENCES	
Electives		
Select 11 hours from one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs		11
EVSE 5395	MASTER'S PROJECT	3
Successful completion of the Master's Comprehensive Examination in final semester.		
Total Hours		**30**

Master of Science in Earth and Environmental Science (Environmental Science)

About This Program

Master of Science in Earth and Environmental Science (Environmental Science) provides graduate students with an integrated, multidisciplinary education, requiring a breadth of understanding and mastery of a spectrum of scientific and engineering principles. A thesis option, designed for those interested in an in-depth experience in some particular topic, and a non-thesis option are available. All new students are admitted into the non-thesis option. During the first year, students may transfer to the thesis option after obtaining a faculty thesis supervisor. A thesis supervisor is not guaranteed.

Competencies

1. Upon graduation the student should have gained expertise in their chosen environmental challenge discipline area(s).
2. Upon graduation the student should be able evaluate and design environmental monitoring programs or models.
3. Upon graduation the student should be able to integrate methodologies found in physics, chemistry, biology, engineering, and social scientific disciplines into a multi-disciplinary scientific framework.
4. Upon graduation the student should be able to communicate complex environmental information using written reports and oral presentations to specialists and non#specialists.

Admissions Criteria

For unconditional admission a student must meet the following requirements:

1. A BS in biology, chemistry, geoscience, mathematics, or engineering with the following courses or their equivalent: 1 semester of introductory physics for science majors, 2 semesters of introductory chemistry for science majors, Calculus I and II. Students with a bachelor's degree in other sciences will also be considered, subject to satisfactory completion of deficiency courses.
2. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the graduate admissions.
3. Graduate Record Examination (GRE) scores are used in conjunction with GPA's. For example a person with a GPA below 3.0 will need a GRE score better than average. Masters students who have succeeded in the Earth and Environmental Science s Program typically score higher than the 60th Percentile on the verbal and quantitative portion of the GRE.
4. For applicants whose native language is not English and have not completed a Bachelors degree at a US institution, they must meet~~English, a minimum score of 550 on~~ the following minimums: TOEFL iBT (minimum 81 overall, with sectional scores of at least 22 writing, 23 speaking, 20 reading, ~~Test of English as a Foreign Language (or an equivalent score on a computer-based test)~~ or 16 listening) or IELTS (minimum overall band of 6.5, with a speaking score ~~a score~~ of 7.0).
5.
6. Favorable letters of recommendation from people familiar with the applicant's academic work.

Curriculum

Foundations		
EVSE 5303	TOPICS IN SUSTAINABILITY	3
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
For engineering select one of the following:		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
CE 5319	PHYSICAL-CHEMICAL PROCESSES II	
or CE 5328	FUNDAMENTALS OF AIR POLLUTION	
For science select any 5000-level EVSE or GEOL course except 5000-level research courses		3
For City and Regional Planning select any 5000-level PLAN course		3
Specialization		
Select 2 courses from one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs		6
Two semesters of GEOL 5199 or EVSE 5199		2
Select thesis or non-thesis option		6
Non-thesis option		
Select an additional elective in the area of specializtion.		

EVSE 5395	MASTER'S PROJECT	
Successful completion of the Master’s Comprehensive Examination in the final semester		
Thesis option		
EVSE 5698	THESIS	
Total Hours		**30**

1 Students with less than 20 undergraduate hours in biology, chemistry, or geology will need to take a third environmental systems course as a deficiency. Students entering with a BS degree in one of these areas must take their two courses in the other areas.

2 Must include at least 6 hours in department(s) outside that in which the first 9 hours of electives are taken.

Advising Resources

First time in college students should plan to speak to a program advisor when starting their second year. or have an academic advising hold. Transfer students should contact program advising when enrolled or have an academic advising hold.

Master of Science in Earth and Environmental Science (Geoscience)

About This Program

The Master of Science in Earth and Environmental Science Geoscience option is a two year program with specializations in stratigraphy, petrology, paleontology, sedimentology, structural geology, geomechanics, plate tectonics, computer modeling, hydrology, geochemistry and paleoclimatology. Students in this program are prepared for additional graduate work at the PhD level, or for positions in industry and government. Thesis or non thesis options are available However, all new students are admitted into the non-thesis option. During the first year, students may transfer to the thesis option after obtaining a faculty thesis supervisor. A thesis supervisor is not guaranteed.

Competencies

1. Upon graduation the student should have gained expertise in their chosen geoscience challenge discipline area.
2. Upon graduation the student should be able to\\ncritically evaluate and design in geoscience monitoring and/or models.
3. Upon graduation the student should be able to integrate methodologies found in scientific and engineering disciplines into a multi-disciplinary scientific framework.
4. Upon graduation the student should be able to analyze complex information from geoscience sub-disciplines using written reports and oral presentations to specialists and non#specialists.

Admissions Criteria

For unconditional admission a student must meet the following requirements:

1. A BS in an earth science discipline with the following courses or their equivalent: mineralogy, petrology, structure, stratigraphy/sedimentology, field geology and geophysics, or paleontology. In addition, one semester of biology, calculus I and II, and a year of chemistry and physics is required.
2. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the graduate admissions.
3. Graduate Record Examination (GRE) scores are used in conjunction with GPA's. For example a person with a GPA below 3.0 will need a GRE score better than average. Masters students who have succeeded in the Earth and Environmental Science s Program typically score higher than the 60th Percentile on the verbal and quantitative portion of the GRE.
4. An applicant whose native language is not English must submit a score of at least 550 on the paper-based TOEFL, a score of at least 213 on the computer-based TOEFL, a minimum score of 40 on the TSE, a minimum score of 6.5 on the IELTS, or a minimum TOEFL iBT total score of 79 with sectional scores that meet or exceed 22 for the writing section, 21 for the speaking section, 20 for the reading section, and 16 for the listening

section. However, an applicant whose native language is not English with a bachelor's or a master's degree from a regionally accredited U.S. college or university is not required to submit a TOEFL, TOEFL iBT, TSE or IELTS score for admission purposes.

5. Favorable letters of recommendation from people familiar with the applicant's academic work.

Curriculum

Foundations		
GEOL 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following in engineering (or advisor approved):		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
IE 5304	ADVANCED ENGINEERING ECONOMY	
Complete two hours in the following seminar:		2
GEOL 5199	TECHNICAL SESSIONS	
Specialization		
Select 15 hours approved by advisor.		15
Select thesis or non-thesis option		6
Non-thesis option		
Select an additional advisor-approved course.

Bachelor of Arts in Geology

About This Program

The Bachelor of Arts in Geology Geographic Information Systems option is for students who want to combine Geology with computer technology to store and analyze spatial data using GIS software.

Competencies

1. Upon graduation, students will demonstrate expertise in the use of methods found within the core disciplines of geology including mineralogy, petrology, sedimentology and stratigraphy, paleontology, and structural geology.
2. Upon graduation, students will be able to interpret geological maps and describe three-dimensional structures of rocks in the earth's crust.
3. Upon graduation, students will be able to analyze scientific data in geoscience.
4. Upon graduation, students will be able to communicate complex information using written reports and oral presentation to both specialists and non-specialists.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Life & Physical Sciences select:		
PHYS 1441	GENERAL COLLEGE PHYSICS I	
PHYS 1442	GENERAL COLLEGE PHYSICS II	
For Mathematics select:		
MATH 1308	ELEMENTARY STATISTICAL ANALYSIS	
MATH 1421	PREPARATION FOR CALCULUS	
For U.S. History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Geology Foundations		
Additional hours required in core.		3
UNIV 1131	STUDENT SUCCESS	1
Communication Competence - pass oral presentation requirement in GEOL 3441 or GEOL 3443, or complete COMS 1301, COMS 2302, or other equivalent course		
Computer Competence - pass Computer Skills Placement test or any computer-related course such as:		
GEOL 4330	UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS	
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	4
BIOL 1442	BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	4
CHEM 1441	GENERAL CHEMISTRY I	4
CHEM 1442	GENERAL CHEMISTRY II	4
Geology Specialization		
GEOL 1301	EARTH SYSTEMS	3

Bachelor of Arts in Geology - Composite Science Teacher Certification (UTEACH)

About This Program

The Bachelor Arts in Geology Composite Science Teacher Certification Option is for students who want teacher certification, and it is offered through the UTeach program.

Competencies

1. Upon graduation, students will demonstrate expertise in the use of methods found within the core disciplines of geology including mineralogy, petrology, sedimentology and stratigraphy, paleontology, and structural geology.
2. Upon graduation, students will be able to interpret geological maps and describe three-dimensional structures of rocks in the earth's crust.
3. Upon graduation, students will be able to analyze scientific data in geoscience.
4. Upon graduation, students will be able to communicate complex information using written reports and oral presentation to both specialists and non-specialists.
5. Upon graduation, students will be able to provide scientific instruction at the secondary level in Texas.

Bachelor of Science in Environmental Science

About This Program

Bachelor of Science in Environmental Science emphasizes interdisciplinary training related to environmental sciences and is designed for students who plan to enter the profession or go to graduate school.

Competencies

1. Upon graduation, students will be able to identify, formulate, and solve problems in environmental sciences
2. Upon graduation, students will be able to identify, formulate, and solve problems in core sciences including mathematics/statistics, biology, chemistry, and physics
3. Upon graduation, students will be able to have competencies for field work that refers to the analytical and measurement skills, knowledge including uncertainties in observations, and attitudes to successfully participate in a practical, on-location learning experience

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Life & Physical Science select:		
PHYS 1443	GENERAL TECHNICAL PHYSICS I	
or PHYS 1441	GENERAL COLLEGE PHYSICS I	
PHYS 1444	GENERAL TECHNICAL PHYSICS II	

or PHYS 1442	GENERAL COLLEGE PHYSICS II	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For US History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
EES Foundations		
Additional hours required in core.		4
UNIV 1131	STUDENT SUCCESS	1
Computer Competence - pass Computer Skills Placement test or any computer-related course such as:		
GEOL 4330	UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS	
EES Specialization		
ENVR 3454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
ENVR 1301	INTRODUCTION TO ENVIRONMENTAL SCIENCE	3
ENVR 1330	GLOBAL WARMING	3
or GEOL 1340	WEATHER AND CLIMATE	
ENVR 2314	THE GLOBAL ENVIRONMENT AND HUMAN HEALTH	3
ENVR 3317	ENVIRONMENTAL HYDROLOGY	3
or ENVR 4325	TRACER HYDROLOGY	
ENVR 3387	ENVIRONMENTAL SCIENCE FIELD METHODS	3
ENVR 4303	TOPICS IN SUSTAINABILITY	3
ENVR 4308	ENVIRONMENTAL GEOCHEMISTRY	3
ENVR 4313	ENVIRONMENTAL REGULATION OF CHEMICAL HAZARDS	3
GEOL 4331	ANALYSIS OF SPATIAL DATA	3
or GEOL 4332	GLOBAL POSITIONING SYSTEM	
or GEOL 4333	REMOTE SENSING FUNDAMENTALS	
or GEOL 4334	GEOGRAPHIC DATA ANALYSIS	
GEOL 4405	METEOROLOGY AND CLIMATOLOGY	4
or GEOL 4465	PHYSICAL OCEANOGRAPHY AND LIMNOLOGY	
or GEOL 4425	PALEOCLIMATE & CLIMATE CHANGE	
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	4
BIOL 1442	BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	4
BIOL 3356	ENVIRONMENTAL SYSTEMS, BIOLOGICAL ASPECTS	3
or BIOL 3355	TOXICOLOGY	
CHEM 1441	GENERAL CHEMISTRY I	4
CHEM 1442	GENERAL CHEMISTRY II	4
Electives		
Select ENVR/GEOL/DATA/CHEM/BIOL coursework sufficent to complete 120 hours with at least 36 hours at the 3000/4000 level.		19
Total Hours		**120**

SUGGESTED COURSE SEQUENCE

Details of a personal course sequence should be made with the guidance of the Earth and Environmental Sciences undergraduate advisor, particularly since many GEOL courses are not offered every semester. Biology minors should consult with the Earth and Environmental Sciences undergraduate advisor for minor requirements, and Chemistry minors should consult with the Chemistry and Biochemistry undergraduate advisor for minor requirements.

First Year

First Semester	Hours	Second Semester	Hours
UNIV 1131	1	BIOL 1442	4

Bachelor of Arts in Geology (Engineering)

About This Program

Bachelor of Science in Geology Engineering Geology Option is for students who are interested in combining Geology with Civil Engineering coursework to work with engineering firms on construction and environmental problems.

Competencies

1. Upon graduation, students will demonstrate expertise in the use of methods found within the core disciplines of geology including mineralogy, petrology, sedimentology and stratigraphy, paleontology, and structural geology. In particular, students will be able to evaluate and design in engineering geoscience monitoring and/or models.
2. Upon graduation, students will be able to interpret geological maps and describe three-dimensional structures of rocks in the earth's crust.
3. Upon graduation, students will be able to analyze scientific data in geoscience.

4. Upon graduation, students will be able to communicate complex information using written reports and oral presentation to both specialists and non-specialists.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must select specific courses in certain core areas.		
For Communication select:		
ENGL 1301/1302	RHETORIC AND COMPOSITION I	
For Life & Physical Sciences select:		
PHYS 1443	GENERAL TECHNICAL PHYSICS I	
PHYS 1444	GENERAL TECHNICAL PHYSICS II	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For US History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Geology Engineering Foundations		
Additional hours required in core.		4
UNIV 1131	STUDENT SUCCESS	1
Communication Competence - pass oral presentation requirement in GEOL 3443, or complete COMS 1301, COMS 2302, or other equivalent course		
Computer Competence - pass Computer Skills Placement test or any computer-related course such as:		
GEOL 4330	UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS	
CHEM 1441	GENERAL CHEMISTRY I	4
CHEM 1442	GENERAL CHEMISTRY II	4
CE 2221	DYNAMICS	2
CE 2311	STATICS	3
CE 2313	MECHANICS OF MATERIALS I	3
12 hours of 3000/4000-level advisor-approved Civil Engineering courses plus prerequisites.		12
Geology Engineering Specialization		
GEOL 1301	EARTH SYSTEMS	3
GEOL 1302	EARTH HISTORY	3

Bachelor of Science in Geology (Professional)

About This Program

Bachelor of Arts in Geology Professional Option is for students who plan to enter the profession or go to graduate school. The program emphasizes breadth and exposes students to most of the geological disciplines.

Competencies

1. Upon graduation, students will demonstrate expertise in the use of methods found within the core disciplines of geology including mineralogy, petrology, sedimentology and stratigraphy, paleontology, and structural geology.
2. Upon graduation, students will be able to interpret geological maps and describe three-dimensional structures of rocks in the earth's crust.
3. Upon graduation, students will be able to analyze scientific data in geoscience.
4. Upon graduation, students will be able to communicate complex information using written reports and oral presentation to both specialists and non-specialists.

Bachelor of Science in Environmental Science to Master of Science in Earth and Environmental Science

About This Program

Master of Science in Earth and Environmental Science Environmental Science Professional program is for those interested in a career in environmental science. Instead of a thesis, students participate in a mentoring program, take a course in project economics, work as an intern or in a part time job in the environmental science profession, and course experiences involving business ethics, teamwork, a small research project, and communication. This is a non-thesis program.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Environmental Science BS

Earth and Environmental Science MS (Environmental Professional)

Admissions Criteria

For unconditional admission a student must meet the following requirements:

1. A BS in biology, chemistry, geoscience, mathematics, or engineering with the following courses or their equivalent: 1 semester of introductory physics for science majors, 2 semesters of introductory chemistry for science majors, Calculus I and II. Students with a bachelor's degree in other sciences will also be considered, subject to satisfactory completion of deficiency courses.
2. A minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the graduate admissions.
3. Graduate Record Examination (GRE) scores are used in conjunction with GPA's. For example a person with a GPA below 3.0 will need a GRE score better than average. Masters students who have succeeded in the Earth and Environmental Science s Program typically score higher than the 60th Percentile on the verbal and quantitative portion of the GRE.
4. For applicants whose native language is not English and have not completed a Bachelors degree at a US institution, they must meet~~English, a minimum score of 550 on~~ the following minimums: TOEFL iBT (minimum 81 overall, with sectional scores of at least 22 writing, 23 speaking, 20 reading, ~~Test of English as a Foreign Language (or an equivalent score on a computer-based test)~~ or 16 listening) or IELTS (minimum overall band of 6.5, with a speaking score ~~a score~~ of 7.0).
5. Favorable letters of recommendation from people familiar with the applicant's academic work.

Curriculum

Foundations		
EVSE 5454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Select one of the following engineering courses		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
IE 5304	ADVANCED ENGINEERING ECONOMY	
For science, select any 5000-level EVSE or GEOL course except 5000-level EVSE or GEOL research credits		3
For City and Regional Planning select any 5000-level PLAN course		3
Specialization		
EVSE 5120	ENVIRONMENTAL PROFESSIONAL MENTORING & BUSINESS ETHICS	1
EVSE 5199	SEMINAR IN ENVIRONMENTAL & EARTH SCIENCES	1
EVSE 5115	PROFESSIONAL EXPERIENCE	1
or EVSE 6197	RESEARCH IN ENVIRONMENTAL & EARTH SCIENCES	
Electives		
Select 11 hours from one of the following departments: Biology, Chemistry, Earth and Environmental Sciences, Civil and Environmental Engineering, or Urban and Public Affairs		11
EVSE 5395	MASTER'S PROJECT	3

Successful completion of the Master's Comprehensive Examination in final semester.	
Total Hours	**30**

Bachelor of Science in Geology to Master of Science in Earth and Environmental Science

About This Program

Bachelor of Science in Geology to Master of Science in Earth and Environmental Science (Geoscience) Fast Track will enable outstanding senior undergraduate geology students to satisfy degree requirements leading to a master's degree in environmental science while completing their undergraduate studies. This degree is designed for students who plan to work in the geoscience sectors.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Geology BS (Environmental Science)

Earth and Environmental Science MS (Geoscience)

Admissions Criteria

UNCONDITIONAL ADMISSION

Undergraduate Geology students can apply when they are within 30 hours of completing their BS in Geology degree from the University of Texas Arlington (UTA). They must have completed at least 30 hours of study at UTA with a total GPA of 3.3 and earned an overall GPA of 3.3 or better in all college of science courses as well as Earth and environmental science courses taken at UTA. Additionally, they must have completed 16 credit hours of specified undergraduate Fast Track screening courses at UTA that are listed below and earn a GPA of at least 3.3 in these courses. If one of these courses is transferred from another school it will not be included, and an equivalent course determined by the undergraduate advisor will be used as a Fast Track foundation course. Students must meet any other requirements imposed by the BS in Geology and MS in Earth and Environmental Science program.

Undergraduate Screening Courses Required for Admission into the Fast Track program:

1. GEOL 2445 MINERALOGY
2. GEOL 3454 STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS
3. Two of the following courses:
   a. GEOL 3441 BIOSTRATIGRAPHY AND LIFE THROUGH TIME
   b. GEOL 3442 SEDIMENTOLOGY AND STRATIGRAPHY
   c. GEOL 3443 STRUCTURAL GEOLOGY
   d. GEOL 3446 PETROLOGY AND GEOCHEMISTRY

Provisional Admission

A student may gain provisional admission if, during the semester in which application is made, he or she will complete any remaining courses needed to satisfy prerequisite requirements. Provisional admission will be changed to unconditional admission upon satisfactory completion of remaining

requirements. Students failing to meet all requirements at the end of their semester of application will be removed from the Fast Track program. Any credits earned prior to removal from the program will be applied to the undergraduate degree only. None of the other benefits of the Fast Track program will apply. Provisionally admitted students who have been removed from the program may subsequently apply to graduate programs via the normal application process, paying all fees and meeting all relevant admission criteria. Admission will not be automatic as it will be subject to the normal admission practices of the program to which application is made and the Graduate School.

DENIAL

Students who are not admissible under the conditions specified above shall be denied admission to the Fast Track program. They may apply to graduate programs via the regular application process, paying all required fees and meeting all relevant admission criteria. Admission will not be automatic as it will be subject to the normal admission practices of the program to which application is made and the Graduate School.

Curriculum

Students in the Fast Track BS-MS Geology program may take three 5000-level GEOL/EVSE electives with a total of 12 credit hours in place of 3000/4000-level undergraduate ENVR/GEOL/DATA/CHEM/BIO electives. These credits can be used to meet the required 120 credit hours and the required 30 credit hours for MS degree at UTA.

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Life & Physical Science select:		
PHYS 1441	GENERAL COLLEGE PHYSICS I	
or PHYS 1443	GENERAL TECHNICAL PHYSICS I	
PHYS 1442	GENERAL COLLEGE PHYSICS II	
or PHYS 1444	GENERAL TECHNICAL PHYSICS II	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For US History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Geology/EES Foundations		
Additional hours required in core		4
UNIV 1131	STUDENT SUCCESS	1
Communication Competence - pass oral presentation requirement in GEOL 3442, GEOL 3444, COMS 1301, or COMS 1302 or equivalent course		
Computer Competence - pass Computer Skills Placement test or any computer-related course such as:		
GEOL 4330	UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS	
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	4
BIOL 1442	BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	4
CHEM 1441	GENERAL CHEMISTRY I	4
CHEM 1442	GENERAL CHEMISTRY II	4
GEOL 3454	STATISTICS FOR EARTH AND ENVIRONMENTAL SCIENTISTS	4
Geology/EES Specialization		
GEOL 1301	EARTH SYSTEMS	3
GEOL 1302	EARTH HISTORY	3
GEOL 2445	MINERALOGY	4
GEOL 3441	BIOSTRATIGRAPHY AND LIFE THROUGH TIME	4
GEOL 3442	SEDIMENTOLOGY AND STRATIGRAPHY	4
GEOL 3443	STRUCTURAL GEOLOGY	4
GEOL 3446	PETROLOGY AND GEOCHEMISTRY	4
GEOL 3387	FIELD GEOLOGY I	3

GEOL 3388	FIELD GEOLOGY II	3
Select at least 2 hours in GEOL, ENVR, or DATA 3000-4000-level electives (excluding GEOL 4331, 4333, 4334, and 4354)		2
Minor and Electives		
Select a minor of at least 18 hours as required for Biology, Chemistry, Mathematics, or Physics (including two EES Foundations courses)		10
General Elective(s)		4
Master's Degree Foundations		
Select one of the following in engineering (or advisor approved):		3
CE 5321	ENGINEERING FOR ENVIRONMENTAL SCIENTISTS	
IE 5321	ENTERPRISE ANALYSIS AND DESIGN	
Master's Degree Specialization		
Select 18 hours in GEOL or EVSE 5000-level electives (excluding GEOL 5320, 5454, 4334, and 4354)		18
Take two hours in the following seminar:		2
GEOL 4199	TECHNICAL SESSIONS	
GEOL 5395	MASTER'S PROJECT (or 5000-level class approved by advisor)	3
or GEOL 5698	THESIS	
Total Hours		**141**

SUGGESTED COURSE SEQUENCE

Details of a personal course sequence should be made with the guidance of the Earth and Environmental Sciences undergraduate advisor, particularly since many GEOL courses are not offered every semester. Students should also consult with the appropriate department for minor requirements; Biology minors should consult with the Earth and Environmental Sciences undergraduate advisor.

First Year

	First Semester	Hours	Second Semester	Hours
	UNIV 1131	1	GEOL 1302	3
	GEOL 1301	3	MATH 2425	4
	MATH 1426	4	ENGL 1302	3
	ENGL 1301	3	CHEM 1442	4
	CHEM 1441	4		
	15		**14**	

Second Year

	First Semester	Hours	Second Semester	Hours
	BIOL 1441	4	PHYS 1442	4
	POLS 2311	3	POLS 2312	3
	PHYS 1441	4	Creative Arts*	3
	GEOL 2445	4	Minor Course**	4
	15		**14**	

Third Year

Summer Session	Hours	First Semester	Hours	Second Semester	Hours
GEOL 3387	3	GEOL 3441	4	GEOL 3442	4
GEOL 3388	3	GEOL 3443	4	GEOL 3446	4
		GEOL 4330	3	HIST 1302	3
		HIST 1301	3	GEOL 3454	4
	6		**14**		**15**

Fourth Year

	First Semester	Hours	Second Semester	Hours
	Minor course**	6	Foundational Component Area*	3
	General elective(s)	4	GEOL 5000 level electives	6
	GEOL 5000 level elective	3	Language, Philosophy and Culture*	3
			Additional 4000 level Geology elective	2
	13		**14**	

Fifth Year

	First Semester	Hours	Second Semester	Hours
	CE 5321 or IE 5304	3	Electives in 5000-level GEOL or EVSE courses	5
	GEOL 5199	1	GEOL 5199	1
	Electives in 5000-level GEOL or EVSE courses	8	GEOL 5395	3
	12		**9**	

Total Hours: 141

* See General Core Requirements (https://catalog.uta.edu/academicregulations/degreerequirements/generalcorerequirements/) for approved courses.

** Actual number of courses/hours and course sequence determined by appropriate department.

Advising Resources

First time in college students should plan to speak to a program advisor when starting their second year. or have an academic advising hold. Transfer students should contact program advising when enrolled or have an academic advising hold.

Location:

SH 328C

kaycee.nikses@uta.edu

Phone:

817-272-9686

Web:

Schedule an appointment (https://outlook.office365.com/book/PHYSGEOLEESADVISING@mavs.uta.edu/)

Certificate in Geographic Information Systems

About This Program

Certification in Geographic Information Systems is designed for students in non-Earth and Environmental Sciences majors who want to become proficient in spatial data analysis, which is used in business, liberal arts, engineering and architecture disciplines.

This is a certification program and does not lead to a second major or minor. However, students may use these courses to count towards a Geology minor. Students completing the Geology BA Geographic Information Systems Option or Geoinformatics BS plans may not also earn this certificate, as the certificate courses are required for those degrees.

Competencies

1. Upon graduation, students will be able to acquire skills in critical thinking and technical knowledge.
2. Upon graduation, students will be able to skills in data analysis and geographic mapping.
3. Upon graduation, students will be able to learn approaches of cartographic design that can offer new perspectives on the physical processes and social interactions that take place on the earth’s surface.

Curriculum

Foundations		
GEOL 4330	UNDERSTANDING GEOGRAPHIC INFORMATION SYSTEMS	3
GEOL 4331	ANALYSIS OF SPATIAL DATA	3
GEOL 4333	REMOTE SENSING FUNDAMENTALS	3
GEOL 4334	GEOGRAPHIC DATA ANALYSIS	3
Total Hours		**12**

Program Completion

Students must obtain a 3.0 cumulative GPA in the required courses in order to earn the certificate.

Advising Resources

First time in college students should plan to speak to a program advisor when starting their second year. or have an academic advising hold. Transfer students should contact program advising when enrolled or have an academic advising hold.

Minor in Geology

About This Program

The Minor in Geology is designed to strengthen students' understanding of geology and other geoscience disciplines. This minor program of study focuses on key concepts related to e.g., mineralogy, structural geology, sedimentology, petrology, hydrology, paleontology, and atmospheric and oceanic sciences The goal of the minor is to train students with the knowledge, skills, and perspectives essential to geology.

Competencies

1. Upon completion, students will be able to demonstrate expertise in methods found in multiple discipline areas within geology.
2. Upon completion, students will be able to critically analyze scientific data in geology or geoscience disciplines.
3. Upon completion, students will be able to communicate complex information from geoscience in form of oral presentations or written project documents.

Curriculum

Select 18 hours of GEOL courses.	18
Select up to 12 hours in GEOL courses numbered below 3000.	
Select at least 6 hours in 3000/4000 level GEOL courses excluding: GEOL 3100, GEOL 3340, GEOL 4189, GEOL 4190, GEOL 4289, GEOL 4393..	
Total Hours	**18**

Transfer students must complete a minimum of 9 hours at UTA, 6 of which must be 3000-4000 level. A 2.0 GPA is required for coursework in the minor.

Advising Resources

First time in college students should plan to speak to a program advisor when starting their second year. or have an academic advising hold. Transfer students should contact program advising when enrolled or have an academic advising hold.

Mathematics

Department Overview

The Department of Mathematics offers comprehensive undergraduate and graduate programs designed to cultivate a deep understanding of mathematical principles and their applications. Our programs emphasize both theoretical and practical aspects of mathematics, preparing students for diverse careers in academia, industry, and beyond.

Undergraduate students gain a robust foundation in mathematical concepts, fostering critical thinking and problem-solving skills essential for careers in science, engineering, finance, education, and more. At the graduate level, students may pursue advanced degrees including MA, MS, and PhD

programs in Mathematics. The PhD in Mathematics prepares students as researchers, providing them with opportunities to specialize in areas such as algebra, geometry, applied mathematics, computational mathematics, data science, mathematical biology, probability, statistics, and mathematics education. Students may enter the PhD program through two pathways: by first completing an MS degree or directly from a BS degree via the department's fast-track BS to PhD option.

Our mission is to inspire and educate students about the beauty and power of mathematics, removing barriers and fostering a welcoming environment for all. We are committed to excellence in teaching and research, with faculty members who are leaders in their fields and dedicated to mentoring students. Through active participation in research projects, students can explore the frontiers of mathematical knowledge and contribute to innovative solutions for real-world problems.

COURSES

MATH 0100. DEVELOPMENTAL MATHEMATICS SUPPORT. 1 Hour.
The course supports students in developing skills, strategies, and reasoning needed to succeed in mathematics, including communication and appropriate use of technology. Topics include the study of numeracy and the real number system; algebraic concepts, notation, and reasoning; quantitative relationships; mathematical models; problem-solving; relations and functions, inequalities, and algebraic expressions and equations. Credit in this course does not fulfill any degree requirements. This is a corequisite course and requires continuous concurrent enrollment with the appropriately paired college-level math course. Prerequisite: An appropriate assessment test score. TSI MATH score of at least 940.

MATH 0101. DEVELOPMENTAL MATHEMATICS SUPPORT. 1 Hour.
The course supports students in developing skills, strategies, and reasoning needed to succeed in mathematics, including communication and appropriate use of technology. Topics include the study of numeracy and the real number system; algebraic concepts, notation, and reasoning; quantitative relationships; mathematical models; problem-solving; relations and functions, inequalities, and algebraic expressions and equations. Credit in this course does not fulfill any degree requirements. This is a corequisite course and requires continuous concurrent enrollment with MATH 1301. Prerequisite: An appropriate assessment test score. TSI MATH score of at least 940. Corequisite: MATH 1301.

MATH 0102. INTERMEDIATE ALGEBRA SUPPORT. 1 Hour.
The course supports students in developing skills, strategies, and reasoning needed to succeed in mathematics, including communication and appropriate use of technology. Topics include the study of relations and functions, inequalities, and algebraic expressions and equations (including absolute value, polynomial, radical, and rational), with a special emphasis on linear and quadratic expressions and equations. Credit in this course does not fulfill any degree requirements. This is a corequisite course and requires continuous concurrent enrollment with MATH 1302. Prerequisite: An appropriate assessment test score. TSI MATH score of at least 940. Corequisite: MATH 1302.

MATH 0115. INTERMEDIATE ALGEBRA SUPPORT FOR BUSINESS. 1 Hour.
The course supports students in developing skills, strategies, and reasoning needed to succeed in mathematics for business, including communication and appropriate use of technology. Topics include the study of relations and functions, inequalities, and algebraic expressions and equations (including absolute value, polynomial, radical, and rational), with a special emphasis on linear and quadratic expressions and equations. Credit in this course does not fulfill any degree requirements. This is a corequisite course and requires continuous concurrent enrollment with MATH 1315. Prerequisite: An appropriate assessment test score. TSI MATH score of at least 940. Corequisite: MATH 1315.

MATH 0302. FUNDAMENTALS OF ALGEBRA. 3 Hours.
This course is designed for students whose placement scores or life experience indicate that they may need additional preparation in order to take a college credit bearing mathematics course. Topics may include basic algebraic operations and expressions, linear equations and inequalities, polynomials, rational expressions, factoring, exponents and radicals, graphing, quadratic equations, and mathematical reasoning. Students will use mathematical software to master targeted areas and progress through a self-paced environment in order to achieve college readiness. Immediately following the successful completion of this foundational course, students should register for a credit bearing mathematics course accordingly to their degree plan. Credit in this course does not fulfill any degree requirement.

MATH 0311. FOUNDATIONS FOR CONTEMPORARY MATHEMATICS. 3 Hours.
This course is designed for students whose placement scores or life experience indicate that they may need additional preparation in order to take a college credit-bearing mathematics course. This course provides foundational preparation for MATH 1301. Topics include basic numeric and algebraic operations, expressions, linear and quadratic equations, solving techniques, graphing, mathematical logic and reasoning, as well as a brief introduction to probability and statistics. Students will use mathematical software to master targeted areas and progress through a modified self-paced environment in order to achieve college readiness. Immediately following the successful completion of this foundational course, students should register for a credit-bearing mathematics course according to their degree plan, specifically MATH 1301. Credit in this course does not fulfill any degree requirements.

MATH 0312. FOUNDATIONS FOR ALGEBRA. 3 Hours.
This course is designed for students whose placement scores or life experience indicate that they may need additional preparation in order to take a college credit-bearing mathematics course. This course provides foundational support for MATH 1302. Topics include basic numeric and algebraic operations and expressions, linear equations and inequalities, polynomials, rational expressions, factoring, exponents and radicals, graphing, and quadratic equations. Students will use mathematical software to master targeted areas and progress through a modified self-paced environment to achieve college readiness. This corequisite course requires continuous concurrent enrollment with MATH 1302. Credit in this course does not fulfill any degree requirements.

MATH 0315. FOUNDATIONS FOR BUSINESS ALGEBRA. 3 Hours.
This course is designed for students whose placement scores or life experience indicate that they may need additional preparation in order to take a college credit-bearing mathematics course. This course provides foundational support for MATH 1315. Topics include basic numeric and algebraic operations and expressions, linear equations and inequalities, polynomials, rational expressions, factoring, exponents and radicals, graphing, and quadratic equations. Students will use mathematical software to master targeted areas and progress through a modified self-paced environment to achieve college readiness. This corequisite course requires continuous concurrent enrollment with MATH 1315. Credit in this course does not fulfill any degree requirements.

MATH 1301. CONTEMPORARY MATHEMATICS. 3 Hours. (TCCN = MATH 1332)
This course covers real-world applications of mathematics intended for Non STEM (Science, Technology, Engineering and Mathematics) majors. It develops problem-solving and critical thinking skills. Topics include the mathematics of dimensional analysis, mathematical sets and logic, voting methods, number sense, intermediate algebra skills, probability, statistics, and finance. The use of online platforms and calculators are required. See course syllabus for details. Credit may be received for only one of MATH 1301, MATH 1302/1402, or MATH 1315.

MATH 1302. COLLEGE ALGEBRA. 3 Hours. (TCCN = MATH 1314)
This course is designed as preparation for higher level mathematics courses. Topics include the study of linear, quadratic, polynomial, rational, radical absolute value, logarithmic, and exponential functions, relations and inequalities; graphs, basic characteristics, and operations on functions; real and complex zeros of functions; graphing techniques; systems of equations and matrices. The use of mathematical software and calculators is required. See course syllabus for more details. Non-STEM (Science-Technology-Engineering-Mathematics) majors should enroll in MATH 1301, and Business majors should enroll in MATH 1315. Credit may be received for only one of MATH 1301, MATH 1302, MATH 1402 or MATH 1315. Students may not co-enroll in MATH 1302 and MATH 1402.

MATH 1303. TRIGONOMETRY. 3 Hours. (TCCN = MATH 1316)
Trigonometric functions, radian measure, solution of triangles, graphs of trigonometric functions, trigonometric identities and equations, and complex numbers. This course is not intended for Science majors. Prerequisite: C or better in MATH 1301, MATH 1302, MATH 1402, MATH 1308, MATH 1315, or a qualifying score on either Math Placement Test (MPT) or ALEKS PPL.

MATH 1308. ELEMENTARY STATISTICAL ANALYSIS. 3 Hours. (TCCN = MATH 1342)
Topics may include collection, analysis, presentation, and interpretation of data. Analysis includes descriptive statistics, probability, relationships between variables and graphs, elementary statistical models, hypothesis testing, inference, estimation, correlation, regression and confidence intervals. The use of mathematical software and calculators is required. See course syllabus for details.

MATH 1309. STATISTICAL LITERACY. 3 Hours. (TCCN = MATH 1342)
Topics may include collection, analysis, presentation, and interpretation of data. Analysis includes descriptive statistics, probability, relationships between variables and graphs, hypothesis testing, inference, estimation, correlation, regression, and confidence intervals. Special emphasis placed on statistical reasoning for everyday life, understanding statistical language and methods, and interpreting results. The use of mathematical software and calculators is required.

MATH 1313. LIBERAL ARTS HONORS MATHEMATICS. 3 Hours.
Topics include the development of the real number system, different orders of infinity, the idea of convergence and how this led to the development of calculus, the concept of a mathematical proof, the conceptual foundations of topology, networks, and knot theory, and modern applications of mathematics to the sciences.

MATH 1315. COLLEGE ALGEBRA FOR ECONOMICS & BUSINESS ANALYSIS. 3 Hours. (TCCN = MATH 1324)
This course covers material in a traditional algebra course with emphasis on business and financial application. The application of common algebraic functions including polynomial, exponential, logarithmic, and rational, to problems in business, economics, and the social sciences are addressed. Additional topics include systems of linear equations and inequalities, linear programming, mathematics of finance, elements of matrix algebra, logic and probability including expected value. Credit may be received for only one of MATH 1301, MATH 1302, MATH 1402, or MATH 1315.

MATH 1316. MATHEMATICS FOR ECONOMICS AND BUSINESS ANALYSIS. 3 Hours. (TCCN = MATH 1325)
This course is the basic study of limits and continuity, differentiation, optimization and graphing, and integration of elementary functions, with emphasis on mathematical tools and applications in business, economics, and social sciences. This course is not a substitute for MATH 1426 Calculus I. Prerequisite: C or better in MATH 1315 or MATH 1302 or MATH 1402, or a qualifying score on Math Placement Test (MPT) or ALEKS PPL, or student group.

MATH 1324. ALGEBRA AND TRIGONOMETRY. 3 Hours. (TCCN = MATH 2412)
A fast-paced summary study of the topics of MATH 1302 and MATH 1303. This course is not intended for calculus track students; those students should take MATH 1421. Credit cannot be received for MATH 1324 and MATH 1302/1402 or MATH 1303.

MATH 1325. ANALYTIC GEOMETRY. 3 Hours.
Vectors, lines in two dimensions, circles, conics, transformation of coordinates, polar coordinates, parametric equations, and the solid analytic geometry of vectors, lines, planes, cylinders, spherical and cylindrical coordinates. Prerequisite:C or better in MATH 1301 or MATH 1302 or MATH 1402 or MATH 1315 or MATH 1324, or a qualifying score on Math Placement Test.

MATH 1327. ARCHITECTURAL CALCULUS WITH ANALYTIC GEOMETRY. 3 Hours.
Topics from Analytic Geometry and Calculus including conics, polar coordinates, parametric equations; concepts of limit, continuity, differentiation and integration; applications of these concepts. This course will not substitute for MATH 1426. Prerequisite: Major or intended major in Architecture or Interior Design and C or better in MATH 1303 or MATH 1421, or a qualifying score on either the Math Placement Test (MPT) or ALEKS PPL, or student group.

MATH 1330. ARITHMETICAL PROBLEM SOLVING. 3 Hours.
This is a course in small and large group problem solving, with emphasis on reasoning and writing. Topics include problem solving, sets, operations and relations, arithmetic, place value and bases, propositional logic, fractions, number theory, number systems and estimation. Prerequisite: C or better in MATH 1301 or MATH 1302 or MATH 1402, and enrollment as an education major.

MATH 1331. GEOMETRICAL INFERENCE AND REASONING. 3 Hours.
A discovery-oriented exploration of two-and three-dimensional geometry, with emphasis on reasoning and writing. Topics include constructions, polygons, tessellations, polyhedra, symmetry, rigid motions in the plane, measurement, and discovering theorems. Prerequisite: C or better in MATH 1330 and enrollment as an education major.

MATH 1332. FUNCTIONS, DATA, AND APPLICATIONS. 3 Hours.
An exploration of interpreting data, using cooperative groups, spreadsheets and mathematical models. Topics include graphs, applications to economics and natural sciences, function concepts, counting principles, and basic probability and statistics. Prerequisite: C or better in MATH 1330 and enrollment as an education major.

MATH 1402. COLLEGE ALGEBRA. 4 Hours. (TCCN = MATH 1414)
This course is designed as preparation for higher level mathematics courses. Integrated review materials will be used to master targeted areas as students proceed through the course. Topics include foundational numeric and algebraic operations in addition to the study of linear, quadratic, polynomial, rational, radical absolute value, logarithmic, and exponential functions, relations and inequalities; graphs, basic characteristics, and operations on functions; real and complex zeros of functions; graphing techniques; systems of equations and matrices. The use of mathematical software and calculators is required. See course syllabus for more details. Non-STEM (Science-Technology-Engineering-Mathematics) majors should enroll in MATH 1301, and Business majors should enroll in MATH 1315. Credit may be received for only one of MATH 1301, MATH 1302, MATH 1402, or MATH 1315. Students may not co-enroll in MATH 1302 and MATH 1402.

MATH 1421. PREPARATION FOR CALCULUS. 4 Hours.
This course integrates and builds upon concepts and skills from college algebra and trigonometry that are essential to success in calculus. Problem solving activities form the basis for the establishment of these mathematical connections. Prerequisite: C or better in MATH 1302 or MATH 1402 or MATH 1315, or a qualifying score on either the Math Placement Test (MPT) or ALEKS PPL, or student group.

MATH 1426. CALCULUS I. 4 Hours. (TCCN = MATH 2413)
Concepts of limit, continuity, differentiation and integration; applications of these concepts. Prerequisite: A qualifying score on the Math Placement Test (MPT) or ALEKS PPL is required to register for this course, or student group.

MATH 2326. CALCULUS III. 3 Hours. (TCCN = MATH 2315)
Vectors, dot product, cross product, planes, quadric surfaces, partial differentiation, multiple integrals (with applications), line integrals, Green's Theorem, surface integrals, Stokes' Theorem, divergence theorem. Prerequisite: C or better in MATH 2425 or HONR-SC 2425, or student group.

MATH 2330. FUNCTIONS AND MODELING. 3 Hours.
Students engage in explorations and lab activities designed to strengthen and expand their knowledge of the topics found in secondary mathematics. Students collect data and explore a variety of situations that can be modeled using linear, exponential, polynomial, and trigonometric functions. Activities are designed to have them take a second, deeper look at topics they should have been exposed to previously; illuminate the connections between secondary and college mathematics; illustrate good, as opposed to typically poor, sometimes counterproductive, uses of technology in teaching; illuminate the connections between various areas of mathematics; and engage them in serious (i.e., non-routine) problem solving, problem-based learning, and applications of mathematics. While there is some discussion of how the content relates to secondary mathematics instruction, the course primarily emphasizes mathematics content knowledge and content connections, as well as applications of the mathematics topics covered. This course is part of the UTeach program. Prerequisite: C or better in MATH 2425; C or better in SCIE 1201 or SCIE 1334 or concurrent enrollment.

MATH 2333. INTRODUCTION TO LINEAR ALGEBRA. 3 Hours.
Solving systems of linear equations by (reduced) row-echelon form and matrix inversion, matrix algebra, determinants, real n-dimensional space and its geometric structure, linear transformations, eigenvalues and eigenvectors, basis, dot product, quadratic forms, and applications in science and engineering. Prerequisite: C or better in MATH 2425.

MATH 2425. CALCULUS II. 4 Hours. (TCCN = MATH 2414)
Applications of integration, techniques of integration, parametric equations, polar coordinates, sequences, and series. Prerequisite: C or better in MATH 1426 or HONR-SC 1426, or student group.

MATH 3300. INTRODUCTION TO PROOFS. 3 Hours.
Techniques for constructing proofs for various propositions. The propositions chosen exhibit properties of functions, relations, sets, cardinality, and other ideas in mathematics. An axiomatic approach to some areas in mathematics. Oral presentations of proofs are required. Prerequisite: Math major or math intended major. C or better in MATH 2425 or HONR-SC 2425, or student group.

MATH 3301. FOUNDATIONS OF GEOMETRY. 3 Hours.
A development of the foundations of geometry. Prerequisite: C or better in MATH 2425 or HONR-SC 2425, or student group.

MATH 3302. MULTIVARIATE STATISTICAL METHODS. 3 Hours.
Topics in multivariate data analysis with applications in various areas of interest, including multiple regression, analysis of experimental designs, covariate adjustment, non-linear regression and the use of standard multivariate statistical packages. Offered as MATH 3302 and STATS 3302; credit will be granted in only one department. Prerequisite: C or better in MATH 3313 or STATS 3313 or MATH 3316 or STATS 3316 or MATH 3351 or BIOL 3351 or consent of the instructor.

MATH 3303. MATHEMATICAL GAME THEORY. 3 Hours.
Two-person zero-sum games, solving matrix games by linear programming, two-person non-zero sum games, noncooperative n-person games, Nash equilibrium points and refinements, cooperative n-person games, core, Shapley value, and other concepts of solution. Applications to cost allocation, fair division, and voting power. Prerequisite: C or better in MATH 3330 or MATH 3319, or consent of the instructor.

MATH 3304. LINEAR OPTIMIZATION APPLICATIONS. 3 Hours.
An introduction to basic methods of optimization with applications to optimal resource application, minimal cost allocation and interpersonal decision making in noncooperative and cooperative environments. Includes simplex method, duality, zero sum games, transportation and assignment. Prerequisite: C or better in MATH 3330 or MATH 3319.

MATH 3307. ELEMENTARY NUMBER THEORY. 3 Hours.
Various topics in elementary number theory. Divisibility, congruences, quadratic reciprocity, and multiplicative functions. Prerequisite: 2.0 or better in nine hours of college mathematics, or student group.

MATH 3313. INTRODUCTION TO PROBABILITY. 3 Hours.
Basic concepts in probability, random variables, probability distributions, functions of random variables, moment generating functions, central limit theorem and its role in statistics, joint probability functions and joint probability density functions, joint cumulative distribution functions, conditional and marginal probability distributions, covariance and correlation coefficients, transformation and order statistics. Offered as MATH 3313 and STATS 3313; credit will be granted in only one department. Prerequisite: C or better in MATH 2326, or student group.

MATH 3314. DISCRETE MATHEMATICS. 3 Hours.
An introduction into discrete structures. Topics may include propositional calculus, sets and operations, functions and relations, induction, principles of counting, sequences and summations, the binomial theorem, divisibility and modular arithmetic, equivalences and partial orders, graphs and shortest path algorithms, trees and minimal spanning trees, tree traversal, and elements of boolean algebra. Prerequisite: C or better in MATH 1426 or HONR-SC 1426.

MATH 3315. MATHEMATICAL MODELS. 3 Hours.
Methods for solving, by means of mathematics, problems which occur in other disciplines such as physics, engineering, biology, and economics. Basic mathematical tools are chosen from areas such as optimization, probability, differential equations, and computer-oriented mathematics. Problems arising in other disciplines or industrial applications are emphasized. Subject matter will depend on the instructor. Prerequisite: C or better in MATH 2326, or permission of instructor, or student group.

MATH 3316. STATISTICAL INFERENCE. 3 Hours.
A comprehensive study of basic data analysis, focused on reasoning process of statistical investigations from asking question and collecting data to analyzing data and drawing inferences. Topics include exploratory data analysis, sampling, sampling distribution, estimation, hypothesis tests, regression, and ANOVA, with an emphasis on applications of these techniques using statistical software. Offered as MATH 3316 and STATS 3316; credit will be granted in only one department. Prerequisite: C or better in 6 hours from the following: MATH 1302, MATH 1308, MATH 1322, MATH 1323, MATH 1330, MATH 1331, MATH 1332, MATH 1402, MATH 1421, MATH 1426, MATH 2425, MATH 2326, MATH 3300, MATH 3307, MATH 3314, MATH 3319, or MATH 3330; HONR-SC 1426, HONR-SC 2425, or student group.

MATH 3318. DIFFERENTIAL EQUATIONS. 3 Hours.
Ordinary differential equations with emphasis on the solutions and analysis of first and higher order differential equations drawn from fields of physics, chemistry, geometry, and engineering. Prerequisite: C or better in MATH 2326 or concurrent registration, or student group.

MATH 3319. DIFFERENTIAL EQUATIONS & LINEAR ALGEBRA. 3 Hours.
Introductory course with emphasis on solution techniques. Ordinary differential equations, vector spaces, linear transformations, matrix/vector algebra, eigenvectors, and systems of equations. Math majors will not receive credit for this course. Prerequisite: C or better in MATH 2425 or student group.

MATH 3321. ABSTRACT ALGEBRA I. 3 Hours.
Groups including Lagrange's Theorem, Cauchy's Theorem, the homomorphism theorems, and symmetric groups. Prerequisite: C or better in MATH 3300 and MATH 3330, or student group.

MATH 3330. INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES. 3 Hours.
Solving systems of linear equations by (reduced) row-echelon form and matrix inversion, matrix operations, linear transformations, projections, characterizing invertibility, determinants, bases, change of basis, real n-dimensional space and its geometric structure, subspaces, kernel and image of a linear transformation, application to abstract vector spaces of arbitrary dimension, dot product, orthogonality, Gram-Schmidt process, eigenvalues and eigenvectors, characteristic polynomial, diagonalization, symmetric matrices, and principal-axis theorem. Prerequisite: C or better in MATH 2425, or student group.

MATH 3335. ANALYSIS I. 3 Hours.
Real numbers, sequences, series, limits of functions, continuity. Prerequisite: Grade of C or better in both MATH 2326 and MATH 3300, or student group.

MATH 3345. NUMERICAL ANALYSIS AND COMPUTER APPLICATIONS. 3 Hours.
Numerical solutions of nonlinear equations, numerical integration and differentiation, polynomial interpolation, solutions of linear systems, and an introduction to spline functions. Prerequisite: C or better in MATH 2326, and C or better in one of MATH 3330 or MATH 3319, or student group.

MATH 4093. UNDERGRADUATE RESEARCH. 0 Hours.
Undergraduate research experiences under supervision of faculty. Students are expected to disseminate research findings by poster or oral presentations in meetings or conferences. Students are also expected to participate in other activities as directed by the grant-funded Research Program Director.

MATH 4150. SEMINAR IN MATHEMATICAL BIOLOGY. 1 Hour.
Formulation and definition of interdisciplinary research problems in Mathematical Biology, the formulation and execution of strategies of solution, and the presentation of results. Research under faculty supervision and mentorship involving collaboration within a small group. Prerequisite: Consent of the instructor.

MATH 4180. ORAL COMMUNICATION OF MATHEMATICS. 1 Hour.
This course trains students in giving effective oral presentations of mathematics and topics involving mathematics. Students will give presentations to the class and evaluate the presentations of their classmates. Topics may be chosen from mathematics and science journals at a level suitable for undergraduates, from books and articles on the history and development of mathematics, or from previous course material.

MATH 4191. SPECIAL TOPICS IN MATHEMATICS. 1 Hour.
Special topics in mathematics are assigned to individuals or small groups. Faculty members closely supervise the projects and assign library reference material. Small groups will hold seminars at suitable intervals. May be repeated for credit. Prerequisite: senior standing and written permission of the instructor and department chair.

MATH 4291. SPECIAL TOPICS IN MATHEMATICS. 2 Hours.
Special topics in mathematics are assigned to individuals or small groups. Faculty members closely supervise the projects and assign library reference material. Small groups will hold seminars at suitable intervals. May be repeated for credit. Prerequisite: senior standing and written permission of the instructor & department chair.

MATH 4303. INTRODUCTION TO TOPOLOGY. 3 Hours.
A first course in topology from the axiomatic point of view. Prerequisite: C or better in MATH 3335.

MATH 4311. STOCHASTIC MODELS AND SIMULATION. 3 Hours.
A study of processes, whose outcomes are governed by chance, through a combination of lectures and computer lab sessions. Experiments include random number generation, coin tossing and other games of chance, random walks, Markov Chains, Poisson processes, birth-death processes, branching processes, and Brownian Motion. A foundation for modeling random phenomena in sciences, engineering and business. Prerequisite: C or better in MATH 2326 and knowledge of basic probability (MATH 3313/STATS 3313 or MATH 3351/BIOL 3351 or equivalent), or consent of instructor, or student group.

MATH 4312. ACTUARIAL RISK ANALYSIS. 3 Hours.
Fundamentals of actuarial science concerning risk theory based on probability. Topics include: utility theory, principles of premium calculations, collective and individual risk models, ruin theory, classical Lundberg's Model. Prerequisite: C or better in MATH 3313/STATS 3313.

MATH 4313. MATHEMATICAL STATISTICS. 3 Hours.
A continuation of MATH 3313. Random sampling and sampling distributions, estimation of unknown parameters and main properties of estimators, confidence intervals for unknown parameters, testing of hypotheses. Prerequisite: C or better in MATH 3313 or STATS 3313.

MATH 4314. ADVANCED DISCRETE MATHEMATICS. 3 Hours.
Finite automata, Turing machines, formal languages, graph theory, combinatorial optimization, complexity of algorithms, P versus NP, and decidable versus undecidable problems. Prerequisite: C or better in MATH 3314.

MATH 4315. MATHEMATICAL FINANCE. 3 Hours.
Option pricing based on geometric Brownian motion. Pricing contracts via arbitrage. The Black-Scholes formula and the delta hedging strategy. Call Option on dividend paying securities. European and American Put Options. Valuations by expected Utility and Portfolio Selection Problem. Value at Risk and conditional Value at Risk. The Capital Assets Pricing Model. Prerequisite: MATH 3313 or STATS 3313 or equivalent.

MATH 4320. ADVANCED DIFFERENTIAL EQUATIONS. 3 Hours.
The existence and properties of solution of differential equations. Prerequisite: C or better in MATH 3318 or MATH 3319.

MATH 4321. ABSTRACT ALGEBRA II. 3 Hours.
Rings and field theory, including polynomial rings and field extensions. Prerequisite: C or better in MATH 3321.

MATH 4322. INTRODUCTION TO COMPLEX VARIABLES. 3 Hours.
An introduction to the theory of functions of a complex variable and also an introduction to applications including uses of the residue theory, contour integration and conformal mapping. Prerequisite: C or better in MATH 2326, or student group.

MATH 4324. INTRODUCTION TO PARTIAL DIFFERENTIAL EQUATIONS. 3 Hours.
Methods of solutions of selected elliptic, parabolic, and hyperbolic partial differential equations with reference to physical applications. Prerequisite: C or better in MATH 3318 or MATH 3319.

MATH 4330. ADVANCED LINEAR ALGEBRA. 3 Hours.
Eigenvalues, eigenvectors, generalized eigenvectors, minimal/characteristic polynomial, Jordan normal/canonical form, companion matrix and rational canonical form, inner products, adjoint of a linear map, positive-definite operators and isometries, polar decomposition and singular-value decomposition, exponential of a matrix and applications to differential equations, least squares and curve fitting, bilinear and quadratic forms, dual spaces and transpose of a matrix, quotient spaces, multilinear maps, tensor products. Prerequisite: MATH 3330 or consent of instructor.

MATH 4334. ADVANCED MULTIVARIABLE CALCULUS. 3 Hours.
Topics include properties of limits of mappings, continuity of mappings, derivatives of mappings, and integrals of mappings from n-dimensional Euclidean space to m-dimensional Euclidean space. Prerequisite: C or better in MATH 3335, and MATH 3330.

MATH 4335. ANALYSIS II. 3 Hours.
Differentiation, integration, and selected topics in sequences and series of functions and metric spaces. Prerequisite: C or better in MATH 3335.

MATH 4345. NUMERICAL ANALYSIS & COMPUTER APPLICATIONS II. 3 Hours.
Numerical solutions for ordinary differential equations, boundary value problems, minimizations of multivariate functions, and methods of least squares. Prerequisite: C or better in MATH 3345.

MATH 4350. PRECALCULUS FOR MID-LEVEL MATHEMATICS TEACHERS. 3 Hours.
This course serves to bridge the gap between algebra and calculus for middle level teachers. It will develop a firm understanding of the concept of function, how to graphically represent various functions, analyze their behavior and create new functions from old. Functions will be used to model real-life situations. The course will focus on the essential elements of precalculus, as given by the TEKS. It will develop the foundations for functions and explore functions as a unifying theme. This includes transformations, inverses, and solving equations. These foundational ideas will be explored and applied to specific functions, including exponential, logarithmic, power, polynomial, rational, and trigonometric functions. There will be an emphasis on multiple representations of mathematical ideas: verbal, concrete, pictorial, tabular, symbolic and graphical. Throughout, the mathematical connections between precalculus and school mathematics will be highlighted. Prerequisite: C or better in MATH 1302/1402, MATH 1308, MATH 1330, MATH 1331 and MATH 1332. This course does not count toward a degree in mathematics.

MATH 4351. CALCULUS FOR MID-LEVEL MATHEMATICS TEACHERS. 3 Hours.
This course serves to introduce the basic concepts of calculus to middle level teachers. The primary goal is to help teachers develop a fundamental understanding of the key mathematical ideas in calculus in order to broaden their mathematical perspective and gain insight into the topics in the middle level curriculum which are related and foundational to its development. Participants will develop conceptual knowledge of the processes of differentiation and integration, and understanding of their applications and an understanding of the relationship between the two processes. Prerequisite: C or better in MATH 4350. This course does not count toward a degree in mathematics.

MATH 4381. MATHEMATICS RESEARCH. 3 Hours.
Formulation and definition of research problems, the formulation and execution of strategies of solution, and the presentation of results. Prerequisite: consent of instructor. Recommendation by other faculty encouraged.

MATH 4391. SPECIAL TOPICS IN MATHEMATICS. 3 Hours.
Special topics in mathematics are assigned to individuals or small groups. Faculty members closely supervise the projects and assign library reference material. Small groups will hold seminars at suitable intervals. May be repeated for credit. Prerequisite: senior standing and written permission of the instructor & department chair.

MATH 4392. ADVANCED TOPICS IN MATHEMATICS. 3 Hours.
Varies from semester to semester. New developments in mathematics, in-depth study of a topic not covered in other courses, or a special faculty expertise made available to undergraduates. May be repeated for credit as topic varies. Prerequisite: permission of instructor.

MATH 4393. HONORS THESIS/SENIOR PROJECT. 3 Hours.
Required of all students in the University Honors College. During the senior year the student must complete a thesis or a project under the direction of a faculty member in the math department. Prerequisite: enrollment in the University Honors College and written permission of the instructor and chair.

MATH 4394. UNDERGRADUATE RESEARCH EXPERIENCES. 3 Hours.
Research under faculty supervision and mentorship involving collaboration within a small group. The topic varies from semester to semester, is determined by the faculty teaching the course, and is announced in advance. The course promotes active learning based on inquiry, development of higher-order thinking skills, and meaningful scientific research. Prerequisite: consent of instructor.

MATH 5190. INTERNSHIP FOR MATHEMATICAL SCIENCES. 1 Hour.
Practical experiences in the mathematical sciences. May be repeated for credit when the content changes. Prerequisite: Successful completion of 18 graduate credit hours in the program of study and in good academic standing (i.e. graduate GPA 3.0/4.0 or higher).

MATH 5191. SEMINAR FOR TEACHING ASSISTANTS. 1 Hour.
This course is mandatory for all mathematics graduate teaching assistants. Students will be instructed on classroom procedures and effective teaching strategies and will be required to deliver teaching demonstrations under the supervision of mathematics faculty. The purpose is to enhance students' capacity to facilitate mathematics learning in a variety of settings. Admittance to this course is restricted to Math TAs.

MATH 5300. INTRODUCTION TO SCIENTIFIC COMPUTING. 3 Hours.
Introduction to scientific computing utilizing algorithmic languages and operating environment such as Fortran, MATLAB, C, and C++ and UNIX (LINUX) operating system. Prerequisite: consent of the instructor.

MATH 5302. FUNDAMENTALS OF MATHEMATICAL SCIENCES I. 3 Hours.
Matrices and operators, linear spaces, multivariable calculus, dynamical systems, applications. Prerequisites: MATH 3318 and MATH 3330 or consent of the instructor.

MATH 5303. FUNDAMENTALS OF MATHEMATICAL SCIENCES II. 3 Hours.
Wave propagation, potential theory, complex variables, transform techniques, perturbation techniques, diffusion, applications. Prerequisite: MATH 5302 or consent of the instructor.

MATH 5304. GENERAL TOPOLOGY. 3 Hours.
Introduction to fundamentals of general topology. Topics include product spaces, the Tychonoff theorem, Tietze's Extension theorem, and metrization theorems. Prerequisite: MATH 4304 or MATH 4335.

MATH 5305. STATISTICAL METHODS. 3 Hours.
Topics include descriptive statistics, numeracy, and report writing; basic principles of experimental design and analysis; regression analysis; data analysis using the SAS package. Prerequisite: consent of the instructor.

MATH 5307. MATHEMATICAL ANALYSIS I. 3 Hours.
Elements of topology and the real number system, sequences in metric spaces, limits and continuity of functions, differentiation, the Riemann integral, infinite series, and sequences and series of functions. Prerequisite: MATH 4335 or consent of Graduate Advisor.

MATH 5308. MATHEMATICAL ANALYSIS II. 3 Hours.
Analysis in Rn, limits, continuity, Jacobian, extremum problems, multiple integrals, sequences and series of functions, Lebesgue integral. Prerequisite: MATH 5307 or consent of Graduate Advisor.

MATH 5310. MATHEMATICAL GAME THEORY. 3 Hours.
Two person null sum games. Bimatrix games and Nash equilibrium points. Noncooperative games, existence theorem. Cooperative games, core, Shapley value, the nucleolus. Cost allocation. Market games. Simple games and voting. Prerequisite: MATH 3330.

MATH 5311. APPLIED PROBABILITY AND STOCHASTIC PROCESSES. 3 Hours.
Topics include conditional expectations, law of large numbers and central limit theorem, stochastic processes, including Poisson, renewal, birth-death, and Brownian motion. Prerequisite: MATH 3313 or equivalent.

MATH 5312. MATHEMATICAL STATISTICS I. 3 Hours.
Random variables and their expectations, some special distributions, moment generating functions, transformations of bivariate random variables, sampling distribution of statistics, Central Limit Theorem, confidence intervals, maximum likelihood estimation, introduction to hypothesis testing, maximum likelihood tests. Prerequisite: MATH 3335 or consent of instructor.

MATH 5313. MATHEMATICAL STATISTICS II. 3 Hours.
Multivariate distributions, consistency and limiting distributions, Rao-Cramer lower bound and efficiency, sufficiency and completeness, most powerful tests, uniformly most powerful tests, likelihood ratio test, the sequential probability ratio test, minimax and classification procedures. Prerequisite: MATH 5312/STATS 5312.

MATH 5314. EXPERIMENTAL DESIGN. 3 Hours.
This course covers the classical theory and methods of experimental design, including randomization, blocking, one-way and factorial treatment structures, confounding, statistical models, analysis of variance tables and multiple comparisons procedures. Prerequisite: MATH 5305/STATS 5305 or MATH 5355/STATS 5355 or permission of instructor.

MATH 5315. GRAPH THEORY. 3 Hours.
Algorithms for problems on graphs. Trees, spanning trees, connectedness, fundamental circuits. Eulerian graphs and Hamiltonian graphs. Graphs and vector spaces, matrices of a graph. Covering and coloring. Flows. Prerequisite: MATH 3314.

MATH 5316. COMBINATORIAL OPTIMIZATION. 3 Hours.
Shortest paths. Minimum weight spanning trees and matroids. Matchings and optimal assignment. Connectivity. Flows in networks, applications. Prerequisite: MATH 3314.

MATH 5317. REAL ANALYSIS. 3 Hours.
Sigma-fields, measures, measurable functions, convergence in measure and almost everywhere, integration, Fatou's Lemma, Lebesgue-dominated convergence, signed measures, Radon-Nikodym Theorem, product measures, Fubini's Theorem. Prerequisite: Math 5307 or consent of the Graduate Advisor.

MATH 5318. FUNDAMENTALS OF STOCHASTIC ANALYSIS. 3 Hours.
General properties of stochastic processes, processes with independent increments, martingales, limit theorems including invariance principle, Markov processes, stochastic integral, stochastic differential. Prerequisite: Math 5317 or consent of the instructor.

MATH 5319. PROBABILITY THEORY. 3 Hours.
Probability spaces, random variables, filtrations, conditional expectations, martingales, strong law of large numbers, ergodic theorem, central limit theorem, Brownian motion and its properties. Prerequisite: MATH 5317.

MATH 5320. ORDINARY DIFFERENTIAL EQUATIONS. 3 Hours.
Fundamentals of the theory of systems of ordinary differential equations: existence, uniqueness, and continuous dependence of solutions on data; linear equations, stability theory and its applications, periodic and oscillatory solutions. Prerequisite: MATH 5307 and MATH 5333.

MATH 5321. APPLIED PARTIAL DIFFERENTIAL EQUATIONS. 3 Hours.
General first order equations. Basic linear theory for elliptic, hyperbolic, and parabolic second order equations, including existence and uniqueness for initial and boundary value problems. Prerequisites: MATH 5307 and MATH 5333.

MATH 5322. COMPLEX VARIABLES I. 3 Hours.
Fundamental theory of analytic functions, residues, conformal mapping and applications. Prerequisite: MATH 5307.

MATH 5325. ALGEBRAIC NUMBER THEORY. 3 Hours.
Field extensions, number fields and number rings, ramification theory, class groups, elliptic curves and their group structure, applications to Fermat's last theorem. Prerequisite: MATH 3321.

MATH 5326. ALGEBRAIC TOPOLOGY. 3 Hours.
Basics of topology, Fundamental groups, covering spaces, Van Kampen's Theorem, categories and functors, singular homology, relative homology, Mayer-Vietoris sequence, cohomology, cup products, the cohomology ring of a space, CW complexes. Prerequisites: MATH 3321, MATH 3335.

MATH 5327. FUNCTIONAL ANALYSIS I. 3 Hours.
Introduction to Hilbert and Banach spaces: Hahn-Banach, Banach-Steinhaus, and closed graph theorems. Riesz representation theorem and bounded linear operators in Hilbert space. Prerequisite: MATH 5317 or consent of the instructor.

MATH 5328. FUNCTIONAL ANALYSIS II. 3 Hours.
The theory of distributions and Sobolev spaces, with applications to differential equations. Compact operators and Fredholm theory. Spectral theory for unbounded operators. Prerequisite: MATH 5327.

MATH 5329. HOMOLOGICAL ALGEBRA. 3 Hours.
Projective and injective modules, projective and injective resolutions, Hom and tensor, the language of category theory, derived functors, Ext and Tor, complexes.

MATH 5330. ALGEBRAIC GEOMETRY. 3 Hours.
Theory of ideals in polynomial rings, Nullstellensatz, Hilbert's basis theorem, computation in polynomial rings, affine and projective varieties, singular and smooth points on varieties. Prerequisite: MATH 4321.

MATH 5331. ABSTRACT ALGEBRA I. 3 Hours.
Fundamental topics on groups, rings and modules that may include: abelian groups; dihedral groups; groups of permutations; normal subgroups; quotient groups; group actions; Lagrange's Theorem; Cayley's Theorem; Sylow's Theorems; factorization in commutative rings; localization in commutative rings; quotient rings; quotient modules; isomorphism theorems. Prerequisite: permission from instructor.

MATH 5332. ABSTRACT ALGEBRA II. 3 Hours.
Fundamental topics that may include: modules; chain conditions, noetherian rings and modules, artinian rings; Wedderburn's Theorem; localization with Ore conditions; Maschke's Theorem; special classes of rings such as regular algebras, Cohen-Macaulay rings, Gorenstein rings, universal enveloping algebras. Prerequisite: MATH 5331 or permission from instructor.

MATH 5333. LINEAR ALGEBRA AND MATRICES. 3 Hours.
Vector spaces, their sums, linear (in)dependence, bases, linear maps and their matrices, change of basis, inner-products, adjoints, diagonalization, eigenvectors and generalized eigenvectors, eigenvalues, Jordan form, characteristic and minimal polynomials, dual vector spaces, bilinear and quadratic forms. Prerequisite: MATH 3330 or consent of instructor.

MATH 5334. DIFFERENTIAL GEOMETRY. 3 Hours.
Introduction to the theory of curves and surfaces in three dimensional Euclidean space. Prerequisite: MATH 4334 or MATH 4335.

MATH 5336. CONCEPTS AND TECHNIQUES IN NUMBER THEORY. 3 Hours.
Topics include mathematical induction, fundamental theorem or arithmetic, inequalities, special sequences and sums, divisibility properties, greatest common divisor, division and Euclidean algorithm, properties of congruence and Diophantine equations.

MATH 5337. CONCEPTS AND TECHNIQUES IN CALCULUS. 3 Hours.
Topics studied include limits, continuity, differentiation, integration, numerical approximations, applications and Taylor series.

MATH 5338. NUMERICAL ANALYSIS I. 3 Hours.
Solution of equations including linear and nonlinear systems, interpolation and approximation, spline, numerical differentiation and quadrature. Prerequisite: MATH 2425 or consent of the instructor.

MATH 5339. NUMERICAL ANALYSIS II. 3 Hours.
Rigorous treatment of numerical aspects of linear algebra and numerical solution of ordinary differential equations, boundary value problems, introduction to numerical solution of partial differential equations. Prerequisite: MATH 5338 or consent of the instructor.

MATH 5340. DISCRETE MATHEMATICS FOR PROBLEM SOLVING. 3 Hours.
Topics may include functions, mathematical induction, principles of counting, combinatorics, sequences and recurrence relations, finite graph theory, and elementary game theory.

MATH 5341. MODERN GEOMETRY. 3 Hours.
Topics include Euclidean and non-Euclidean geometries with an emphasis on comparing intrinsic and extrinsic characteristics of geodesics and the resulting geometrical implications.

MATH 5342. CONCEPTS AND TECHNIQUES IN ALGEBRA. 3 Hours.
A study of algebra as described in the K-12 research literature and connections to algebraic structures. Topics include algebra as the study of functions and function relationships, algebra as the study of multiple representations with an emphasis on graphs, tables, and formulae, algebra as generalized arithmetic and quantitative reasoning, and algebra as a language.

MATH 5343. CONCEPTS AND TECHNIQUES IN PROBABILITY AND STATISTICS. 3 Hours.
Consideration of (1) exploring data: descriptive statistics of situations involving one and two variables; (2) anticipating patterns: probability and simulation; (3) design of experiments and planning a study; (4) statistical inference: confirming models. Use of a graphing calculator and other appropriate technology.

MATH 5344. MATHEMATICS-SPECIFIC TECHNOLOGIES. 3 Hours.
Focus on use of current mathematics-specific technologies for enhancing mathematical understanding and mathematics teaching. May include use of Geometer's Sketchpad, Fathom, graphing calculators and computer algebra systems.

MATH 5345. HISTORICAL APPROACH TO REAL ANALYSIS. 3 Hours.
A historical treatment of real analysis that explores motivations for the early definitions and theorems in analysis. Topics may include Fourier's introduction of trigonometric series and the issues it created for mathematicians of the early 19th century, Cauchy's efforts toward establishing a firm foundation for calculus, and Dirichlet's proof of the validity of the Fourier series expansion. Prerequisite: MATH 5337 or consent of the instructor.

MATH 5346. CONCEPTS AND TECHNIQUES IN PROBLEM SOLVING. 3 Hours.
A study of the application of various heuristics and general problem strategies in mathematics, with application to the teaching and learning of secondary school and college-level mathematics. Topics include analyzing, classifying, and modifying tasks, assessment of problem solving, and implementing problem solving in the classroom. Assignments require interaction in secondary school or college field settings.

MATH 5347. CONCEPTS AND TECHNIQUES IN MATHEMATICAL MODELING WITH APPLICATIONS. 3 Hours.
Topics studied include algebraic, graphical, geometrical and numerical techniques to model and solve applied problems.

MATH 5348. ADVANCED ALGEBRA IN SECONDARY SCHOOL MATHEMATICS. 3 Hours.
Major concepts of second-year algebra applied to the teaching and learning of secondary school mathematics. Topics include relations, algebraic, tabular, verbal and geometric representations of functions, transformations, including applications involving systems of equations and inequalities.

MATH 5350. APPLIED MATHEMATICS I. 3 Hours.
Development of models arising in the natural sciences and in engineering. Emphasis will be on the mathematical techniques and theory needed to analyze such models; these include aspects of the theory of differential and integral equations, boundary value problems, theory of distributions and transforms. Prerequisites: MATH 5307 and MATH 5333.

MATH 5351. APPLIED MATHEMATICS II. 3 Hours.
Continuation of MATH 5350; models arising in the physical sciences whose analysis includes such topics as the theory of operators in a Hilbert space, variational principles, branching theory, perturbation and stability analysis. Prerequisite: MATH 5350.

MATH 5352. CONCEPTS AND TECHNIQUES IN PRECALCULUS. 3 Hours.
Topics include functions (transcendental, inverse, parametric, polar, transformations), asymptotic behavior, conics, sequences, complex numbers.

MATH 5353. APPLIED LINEAR MODELS. 3 Hours.
The course covers, at an operational level, three topics: 1) the univariate linear model, including a self-contained review of the relevant distribution theory, basic inference methods, several parameterizations for experimental design and covariate-adjustment models and applications, and power calculation; 2) the multivariate linear model, including basic inference (e.g. the four forms of test criteria and simultaneous methods), applications to repeated measures experiments and power calculation; and 3) the univariate mixed model, including a discussion of the likelihood function and its maximization, approximate likelihood inference, and applications to complex experimental designs, missing data, unbalanced data, time series observations, variance component estimation, random effects estimation, power calculation and a comparison of the mixed model's capabilities relative to those of the classical multivariate model. Knowledge of the SAS package is required. Prerequisite: MATH 5358/STATS 5358 (Regression Analysis) or equivalent.

MATH 5354. CATEGORICAL DATA ANALYSIS. 3 Hours.
This course covers classical methods for analyzing categorical data from a variety of response/factor structures (univariate or multivariate responses, with or without multivariate factors), based on several different statistical rationales (weighted least squares, maximum likelihood and randomization-based). Included are logistic regression, multiple logit analysis, mean scores analysis, observer agreement analysis, association measures, methods for complex experimental designs with categorical responses and Poisson regression. The classical log-linear model for the association structure of multivariate responses is briefly reviewed. Randomization-based inference (e.g. Mantel-Haenzel) is discussed as well. The necessary distribution theory (multinomial, asymptotics of weighted least squares and maximum likelihood) are discussed at an operational level. Knowledge of the SAS package is required. Prerequisite: MATH 5358, or MATH 5305, or IE 5318 or by consent of instructor.

MATH 5355. STATISTICAL THEORY FOR RESEARCH WORKERS. 3 Hours.
Designed for graduate students not majoring in mathematics. Topics include basic probability theory, distributions of random variables, point estimation, interval estimation, testing hypotheses, regression, and an introduction to analysis of variance. Graduate credit not given to math majors. Prerequisite: calculus MATH 1426/MATH 2425/MATH 2326 or permission of instructor.

MATH 5356. APPLIED MULTIVARIATE STATISTICAL ANALYSIS. 3 Hours.
Statistical analysis for data collected in several variables, topics including sampling from multivariate normal distribution, Hotelling's T'2, multivariate analysis of variance, discriminant analysis, principal components, and factor analysis. Prerequisite: MATH 5312/STATS 5312 or consent of instructor.

MATH 5357. SAMPLE SURVEYS. 3 Hours.
A comprehensive account of sampling theory and methods, illustrations to show methodology and practice, simple random sampling, stratified random sample, ratio estimates, regression estimates, systematic sampling, cluster sampling, and nonsampling errors. Prerequisite: MATH 5312/STATS 5312 or consent of instructor.

MATH 5358. REGRESSION ANALYSIS. 3 Hours.
A comprehensive course including multiple linear regression, non-linear regression and logistic regression. Emphasis is on modeling, inference, diagnostics and application to real data sets. The course begins by developing a toolbox of methods via a sequence of guided homework assignments. It culminates with projects based on consulting-level data analysis problems involving stratification, covariate adjustment and messy data sets. Some knowledge of the SAS package is required. Prerequisites: MATH 5312/STATS 5312 or MATH 5305/STATS 5305 with a B or better or permission of the instructor.

MATH 5359. SURVIVAL ANALYSIS. 3 Hours.
This course covers analysis of lifetime data with applications in engineering and biomedical research. Topics may include survival function, hazard function, cumulative hazard function, parametric distributions to model lifetime data, censoring, Kaplan-Meier estimator, testing for survival times for two or more groups, Cox proportional hazards model (both fixed and time dependent covariate), parametric regression models, regression diagnostics, accelerated failure time models, sample size determination, extensive use of R statistical software. Prerequisites: MATH 5305/STATS 5305 or MATH 5312/STATS 5312 or permission of instructor.

MATH 5361. APPLIED CALCULUS OF VARIATION. 3 Hours.
Functionals, variation, extremization, Euler's equation, direct and indirect approximation methods; applications to mechanics and control theory. Prerequisite: MATH 5302.

MATH 5362. MATHEMATICS OF LINEAR PROGRAMMING. 3 Hours.
The simplex method and the revised simplex method. Linear algebra for polyhedra and polytopes. Duality theory. Sensitivity analysis. Applications to transportation problems, network flow problems, matrix-games and scheduling problems. Integer programming. Quadratic programming. Prerequisite: MATH 3330.

MATH 5363. OSCILLATIONS AND WAVES. 3 Hours.
Development of methods and results related to phenomena in nature that exhibit oscillatory motion; mathematical techniques include Fourier series, ordinary and partial differential equations, and the theory of almost periodic functions. Prerequisite: MATH 3318.

MATH 5364. INTRODUCTION TO MATHEMATICAL CONTROL THEORY. 3 Hours.
Systems in science, engineering, and economics and their mathematical description by means of functional equations (ordinary, partial, integral, delay-type). Basic properties of various classes of systems: observability, controllability, stability, and oscillating systems; optimal control problems and applications. Prerequisite: MATH 3318 or MATH 4320.

MATH 5365. BIOMATHEMATICS. 3 Hours.
Mathematical techniques used in modeling such as perturbation theory, dimensional analysis, Fourier analysis, and differential equations. Applications to morphogenetics, population dynamics, compartmental systems, and chemical kinetics.

MATH 5366. INTRODUCTION TO NEURAL AND COGNITIVE MODELING. 3 Hours.
Principles of neural network modeling; application of these principles to the simulation of cognitive processes in both brains and machines; models of associative learning, pattern recognition, and classification. Prerequisite: consent of instructor.

MATH 5370. PROBLEM SOLVING IN K-8 MATHEMATICS. 3 Hours.
A study of the nature and aspects of problem solving in mathematics, with application to the teaching and learning of K-8 mathematics. Topics include deconstructing and modifying tasks, assessment of problem solving, and the roles of representation, conjecture & proof, and technology in problem solving. Assignments require interaction in K-8 field settings. Prerequisite: graduate standing.

MATH 5371. APPLIED NUMERICAL LINEAR ALGEBRA. 3 Hours.
Numerical solutions of linear algebraic systems, least squares problems, and eigenvalue problems; LU and QR decompositions, Schur and Singular Value decompositions, Gaussian elimination, QR algorithm, and Krylov subspace iterations for large and sparse linear algebra problems. Prerequisites: MATH 3330 or consent of the instructor.

MATH 5372. OPTIMIZATION METHODS & NUMERICAL SOLUTIONS OF NONLINEAR EQUATIONS. 3 Hours.
Unconstrained and constrained optimization, solutions of nonlinear system of equations; Newton and quasi-Newton methods, secant methods and variations, nonlinear least squares problems. Prerequisite: consent of the instructor.

MATH 5373. NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS. 3 Hours.
Numerical methods for approximating solutions of initial value problems, boundary value problems, including linear multistep methods, Runge-Kutta methods, shooting methods. Prerequisite: MATH 5300, MATH 3319 or consent of instructor.

MATH 5374. NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS. 3 Hours.
Numerical methods for elliptic, parabolic, hyperbolic, mixed, and systems of partial differential equations; finite difference methods, finite element methods, spectral methods. Prerequisite: MATH 5373 or consent of instructor.

MATH 5375. CONSTRUCTING WHOLE NUMBER ANDOPERATIONS IN K-8 MATHEMATICS. 3 Hours.
A study of the interaction between the structure of place-value numeration systems and the nature of the four arithmetic operations. The development of traditional and alternative computational arithmetic algorithms from conceptual and concrete models for operations, viewed through the lens of alternative numeration systems and research on children's mathematical thinking. Assignments require interaction in K-8 field settings. Prerequisite: graduate standing.

MATH 5376. CONSTRUCTING RATIONAL NUMBERAND OPERATIONS IN K-8 MATH. 3 Hours.
The meanings and representations of rational numbers, and the development of computations on rational numbers from algorithms for whole numbers, including concrete models for operations on fractions and decimals. Discussion of research on the learning and teaching of operations on rational numbers. Also, divisibility tests and factoring. Assignments require interaction in K-8 field settings. Prerequisite: MATH 5375.

MATH 5377. ALGEBRAIC THINKING IN K-8 MATHEMATICS. 3 Hours.
A study of the practice of making and justifying generalizations in K-8 mathematics, including field properties of operations, modular arithmetic (with applications to odd/even), relations and equivalence relations, the introduction and use of variables and unknowns, and the influence of representations on the form of mathematical arguments. Assignments require interaction in K-8 field settings. Prerequisite: MATH 5375.

MATH 5378. GEOMETRY CONCEPTS IN K-8 MATHEMATICS. 3 Hours.
Major concepts of geometry applied to the teaching and learning of K-8 mathematics. Topics include dimension, development of definitions, meanings of angle, geometric comparison relations, notions of center, and non-Euclidean geometries. Assignments require interaction in K-8 field settings. Prerequisite: graduate standing.

MATH 5379. MEASUREMENT CONCEPTS IN K-8 MATHEMATICS. 3 Hours.
The development of measurement concepts as applied to the teaching and learning of K-8 mathematics. Topics include the development and properties of standard and nonstandard units, notions of size, decomposing space, relationships between boundaries and interiors, the algebra of units, measuring time, and notions of heaviness. Assignments require interaction in K-8 field settings. Prerequisite: graduate standing.

MATH 5380. SEMINAR. 3 Hours.
Current topics in mathematics, may be repeated for credit twice. Prerequisite: consent of instructor.

MATH 5391. SPECIAL TOPICS IN MATHEMATICS. 3 Hours.
Topics in mathematics assigned individual students or small groups. Faculty members closely supervise the students in their research and study. In areas where there are only three hours offered, the special topics may be used by students to continue their study in the same area. Graded P/F/R. Prerequisite: permission of instructor.

MATH 5392. SELECTED TOPICS IN MATHEMATICS. 3 Hours.
May vary from semester to semester depending upon need and interest of the students. May be repeated for credit. Prerequisite: permission of Graduate Advisor.

MATH 5395. SPECIAL PROJECT. 3 Hours.
Graded P/F/R. Prerequisite: permission of Graduate Advisor.

MATH 5398. THESIS. 3 Hours.
MATH 5398 Graded R/F only; MATH 5698 graded P/F/R. Prerequisite: permission of Graduate Advisor.

MATH 5399. RESEARCH IN MATHEMATICS. 3 Hours.
Faculty directed individual study and research. May be repeated for credit. Graded P/F/R/W only. Prerequisite: permission of instructor.

MATH 5698. THESIS. 6 Hours.
Graded P/F/R. Prerequisite: permission of Graduate Advisor.

MATH 5699. RESEARCH IN MATHEMATICS. 6 Hours.
Faculty directed individual study and research. May be repeated for credit. Graded P/F/R/W only. Prerequisite: permission of instructor.

MATH 5999. RESEARCH IN MATHEMATICS. 9 Hours.
Faculty directed individual study and research. May be repeated for credit. Graded P/F/R/W only. Prerequisite: permission of instructor.

MATH 6180. SEMINAR FOR PROFESSIONAL DEVELOPMENT OF PhD STUDENTS IN SPECIAL PROJECTS. 1 Hour.
This seminar class is for Ph.D. students enrolled in special University projects. Topics include a survey of new Math, Science, Technology and Engineering advancements, Ph.D. students professional development and mentoring. Prerequisite: Prior approval of Project Director.

MATH 6310. FOUNDATION OF DATA SCIENCES. 3 Hours.
Basic knowledge and computational methods in data sciences, select topics in norms, semidefinite matrix, nonnegative matrix, Cholesky decomposition, QR decompositions, linear system, least squares problem, eigenvalue and singular value decompositions, low rank approximation, nonnegative matrix factorization, introduction to simplex method, KKT conditions for optimizations, Krylov subspace methods, and applications. Prerequisite: MATH 3330 or consent of the instructor.

MATH 6311. OPTIMIZATION ON BIG DATA. 3 Hours.
Introduction to big data analysis; real world applications of data science; linear system solutions; linear programming; duality theory; convex sets; convex functions; optimality conditions; unconstrained optimization; constraint optimization; conjugate direction methods; alternating direction method of multipliers; classification/regression models and algorithms; dimensionality reduction for visualization; projects on real data. Prerequisite: MATH 3330 or consent of the instructor.

MATH 6312. DATA MINING. 3 Hours.
The course focuses on topics including but not limited to: linear methods in regression, linear methods in classification, model assessment and selection, regularized models, splines, generalized additive models, model averaging, ensemble learning, support vector machines, neural networks, probabilistic graphical models, cluster analysis, dimension reduction techniques, and multidimensional scaling. Prerequisite: MATH 5305/STATS 5305 or MATH 5312/STATS 5312 or permission of instructor. Basic programming skills are preferred.

MATH 6313. TOPICS IN PROBABILITY AND STATISTICS. 3 Hours.
May be repeated for credit when the content changes.

MATH 6353. GENERALIZED LINEAR MODELS. 3 Hours.
This course covers modern methods for analyzing Bernoulli, multinomial and count data. It begins with a development of generalized linear model theory, including the exponential family, link function and maximum likelihood. Second is a discussion of the case of models for independent observations. Next is a discussion of models for repeated measures, based on quasi-likelihood methods. These include models (such as Markov chains) for categorical time series. Next is a treatment of models with random effects. Finally is a discussion of methods for handling missing data. Knowledge of the SAS package is required. Prerequisites: MATH 5358/STATS 5358 (Regression Analysis) and preferably MATH 5313/STATS 5313. (Students without 5313 can still succeed but must deal with the slightly higher mathematical level of this course.).

MATH 6356. TIME SERIES ANALYSIS. 3 Hours.
This course covers classical methods of time series analysis, for both the time and frequency domains. For covariance stationary series, these include ARIMA modeling and spectral analysis. For nonstationary series, they include methods for detrending and filtering. Also included is a treatment of multivariate series, as well as a discussion of the Kalman filter state-space model. Knowledge of the SAS package is required. Prerequisites: MATH 5358/STATS 5358 (Regression Analysis) and MATH 5313/STATS 5313.

MATH 6357. NONPARAMETRIC STATISTICS. 3 Hours.
This is a survey of classical nonparametric methods for inference in standard observational settings (one-sample, two-sample, k-samples and the univariate linear model), and includes a development of U-statistics, rank statistics and their asymptotic distribution theory. The mathematical level is fairly high. Prerequisite: MATH 5313/STATS 5313.

MATH 6390. BAYESIAN DATA ANALYSIS. 3 Hours.
Introduces the Bayesian framework to statistical inference and describes effective approaches for Bayesian modeling and computation. Prerequisite: Mathematical Statistic; statistical computing.

MATH 6391. SPECIAL TOPICS IN MATHEMATICS. 3 Hours.
Faculty directed individual study and research. May be repeated for credit when the content changes.

MATH 6399. DISSERTATION. 3 Hours.
Prerequisite: admission to candidacy for the Doctor of Philosophy degree in mathematics.

MATH 6699. DISSERTATION. 6 Hours.
Prerequisite: admission to candidacy for the Doctor of Philosophy degree in mathematics.

MATH 6999. DISSERTATION. 9 Hours.
Prerequisite: admission to candidacy for the Doctor of Philosophy degree in mathematics.

MATH 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

STATS 1308. ELEMENTARY STATISTICAL ANALYSIS. 3 Hours.
Topics may include collection, analysis, presentation, and interpretation of data. Analysis includes descriptive statistics, probability, relationships between variables and graphs, elementary statistical models, hypothesis testing, inference, estimation, correlation, regression and confidence intervals. The use of mathematical software and calculators is required. See course syllabus for details.

STATS 3302. MULTIVARIATE STATISTICAL METHODS. 3 Hours.
Topics in multivariate data analysis with applications in various areas of interest, including multiple regression, analysis of experimental designs, covariate adjustment, non-linear regression and the use of standard multivariate statistical packages. Offered as MATH 3302 and STATS 3302; credit will be granted in only one department. Prerequisite: C or better in MATH 3313 or STATS 3313 or MATH 3316 or STATS 3316 or MATH 3351 or BIOL 3351 or consent of the instructor.

STATS 3313. INTRODUCTION TO PROBABILITY. 3 Hours.
Basic concepts in probability, random variables, probability distributions, functions of random variables, moment generating functions, central limit theorem and its role in statistics, joint probability functions and joint probability density functions, joint cumulative distribution functions, conditional and marginal probability distributions, covariance and correlation coefficients, transformation and order statistics. Offered as MATH 3313 and STATS 3313; credit will be granted in only one department. Prerequisite: C or better in MATH 2326, or student group.

STATS 3316. STATISTICAL INFERENCE. 3 Hours.
A comprehensive study of basic data analysis, focused on reasoning process of statistical investigations from asking question and collecting data to analyzing data and drawing inferences. Topics include exploratory data analysis, sampling, sampling distribution, estimation, hypothesis tests, regression, and ANOVA, with an emphasis on applications of these techniques using statistical software. Offered as MATH 3316 and STATS 3316; credit will be granted in only one department. Prerequisite: C or better in 6 hours from the following: MATH 1302, MATH 1308, MATH 1322, MATH 1323, MATH 1330, MATH 1331, MATH 1332, MATH 1402, MATH 1421, MATH 1426, MATH 2425, MATH 2326, MATH 3300, MATH 3307, MATH 3314, MATH 3319, or MATH 3330; HONR-SC 1426, HONR-SC 2425, or student group.

STATS 4311. STOCHASTIC MODELS AND SIMULATION. 3 Hours.
A study of processes, whose outcomes are governed by chance, through a combination of lectures and computer lab sessions. Experiments include random number generation, coin tossing and other games of chance, random walks, Markov Chains, Poisson processes, birth-death processes, branching processes, and Brownian Motion. A foundation for modeling random phenomena in sciences, engineering and business. Prerequisite: C or better in MATH 2326 and knowledge of basic probability (MATH 3313/STATS 3313 or MATH 3351/BIOL 3351 or equivalent), or consent of instructor, or student group.

STATS 4313. MATHEMATICAL STATISTICS. 3 Hours.
A continuation of MATH 3313. Random sampling and sampling distributions, estimation of unknown parameters and main properties of estimators, confidence intervals for unknown parameters, testing of hypotheses. Prerequisite: C or better in MATH 3313 or STATS 3313.

STATS 5305. STATISTICAL METHODS. 3 Hours.
Topics include descriptive statistics, numeracy, and report writing; basic principles of experimental design and analysis; regression analysis; data analysis using the SAS package. Prerequisite: consent of the instructor.

STATS 5312. MATHEMATICAL STATISTICS I. 3 Hours.
Random variables and their expectations, some special distributions, moment generating functions, transformations of bivariate random variables, sampling distribution of statistics, Central Limit Theorem, confidence intervals, maximum likelihood estimation, introduction to hypothesis testing, maximum likelihood tests. Prerequisite: MATH 3335 or consent of instructor.

STATS 5313. MATHEMATICAL STATISTICS II. 3 Hours.
Multivariate distributions, consistency and limiting distributions, Rao-Cramer lower bound and efficiency, sufficiency and completeness, most powerful tests, uniformly most powerful tests, likelihood ratio test, the sequential probability ratio test, minimax and classification procedures. Prerequisite: MATH 5312/STATS 5312.

STATS 5314. EXPERIMENTAL DESIGN. 3 Hours.
This course covers the classical theory and methods of experimental design, including randomization, blocking, one-way and factorial treatment structures, confounding, statistical models, analysis of variance tables and multiple comparisons procedures. Prerequisite: MATH 5305/STATS 5305 or MATH 5355/STATS 5355 or permission of instructor.

STATS 5353. APPLIED LINEAR MODELS. 3 Hours.
The course covers, at an operational level, three topics: 1) the univariate linear model, including a self-contained review of the relevant distribution theory, basic inference methods, several parameterizations for experimental design and covariate-adjustment models and applications, and power calculation; 2) the multivariate linear model, including basic inference (e.g. the four forms of test criteria and simultaneous methods), applications to repeated measures experiments and power calculation; and 3) the univariate mixed model, including a discussion of the likelihood function and its maximization, approximate likelihood inference, and applications to complex experimental designs, missing data, unbalanced data, time series observations, variance component estimation, random effects estimation, power calculation and a comparison of the mixed model's capabilities relative to those of the classical multivariate model. Knowledge of the SAS package is required. Prerequisite: MATH 5358/STATS 5358 (Regression Analysis) or equivalent.

STATS 5354. CATEGORICAL DATA ANALYSIS. 3 Hours.
This course covers classical methods for analyzing categorical data from a variety of response/factor structures (univariate or multivariate responses, with or without multivariate factors), based on several different statistical rationales (weighted least squares, maximum likelihood and randomization-based). Included are logistic regression, multiple logit analysis, mean scores analysis, observer agreement analysis, association measures, methods for complex experimental designs with categorical responses and Poisson regression. The classical log-linear model for the association structure of multivariate responses is briefly reviewed. Randomization-based inference (e.g. Mantel-Haenzel) is discussed as well. The necessary distribution theory (multinomial, asymptotics of weighted least squares and maximum likelihood) are discussed at an operational level. Knowledge of the SAS package is required. Prerequisite: MATH 5358, or MATH 5305, or IE 5318 or by consent of instructor.

STATS 5355. STATISTICAL THEORY FOR RESEARCH WORKERS. 3 Hours.
Designed for graduate students not majoring in mathematics. Topics include basic probability theory, distributions of random variables, point estimation, interval estimation, testing hypotheses, regression, and an introduction to analysis of variance. Graduate credit not given to math majors. Prerequisite: calculus MATH 1426/MATH 2425/MATH 2326 or permission of instructor.

STATS 5356. APPLIED MULTIVARIATE STATISTICAL ANALYSIS. 3 Hours.
Statistical analysis for data collected in several variables, topics including sampling from multivariate normal distribution, Hotelling's T'2, multivariate analysis of variance, discriminant analysis, principal components, and factor analysis. Prerequisite: MATH 5312/STATS 5312 or consent of instructor.

STATS 5357. SAMPLE SURVEYS. 3 Hours.
A comprehensive account of sampling theory and methods, illustrations to show methodology and practice, simple random sampling, stratified random sample, ratio estimates, regression estimates, systematic sampling, cluster sampling, and nonsampling errors. Prerequisite: MATH 5312/STATS 5312 or consent of instructor.

STATS 5358. REGRESSION ANALYSIS. 3 Hours.
A comprehensive course including multiple linear regression, non-linear regression and logistic regression. Emphasis is on modeling, inference, diagnostics and application to real data sets. The course begins by developing a toolbox of methods via a sequence of guided homework assignments. It culminates with projects based on consulting-level data analysis problems involving stratification, covariate adjustment and messy data sets. Some knowledge of the SAS package is required. Prerequisites: MATH 5312/STATS 5312 or MATH 5305/STATS 5305 with a B or better or permission of the instructor.

STATS 5359. SURVIVAL ANALYSIS. 3 Hours.
This course covers analysis of lifetime data with applications in engineering and biomedical research. Topics may include survival function, hazard function, cumulative hazard function, parametric distributions to model lifetime data, censoring, Kaplan-Meier estimator, testing for survival times for two or more groups, Cox proportional hazards model (both fixed and time dependent covariate), parametric regression models, regression diagnostics, accelerated failure time models, sample size determination, extensive use of R statistical software. Prerequisites: MATH 5305/STATS 5305 or MATH 5312/STATS 5312 or permission of instructor.

STATS 6353. GENERALIZED LINEAR MODELS. 3 Hours.
This course covers modern methods for analyzing Bernoulli, multinomial and count data. It begins with a development of generalized linear model theory, including the exponential family, link function and maximum likelihood. Second is a discussion of the case of models for independent observations. Next is a discussion of models for repeated measures, based on quasi-likelihood methods. These include models (such as Markov chains) for categorical time series. Next is a treatment of models with random effects. Finally is a discussion of methods for handling missing data. Knowledge of the SAS package is required. Prerequisites: MATH 5358/STATS 5358 (Regression Analysis) and preferably MATH 5313/STATS 5313. (Students without 5313 can still succeed but must deal with the slightly higher mathematical level of this course.).

STATS 6356. TIME SERIES ANALYSIS. 3 Hours.
This course covers classical methods of time series analysis, for both the time and frequency domains. For covariance stationary series, these include ARIMA modeling and spectral analysis. For nonstationary series, they include methods for detrending and filtering. Also included is a treatment of multivariate series, as well as a discussion of the Kalman filter state-space model. Knowledge of the SAS package is required. Prerequisites: MATH 5358/STATS 5358 (Regression Analysis) and MATH 5313/STATS 5313.

STATS 6357. NONPARAMETRIC STATISTICS. 3 Hours.
This is a survey of classical nonparametric methods for inference in standard observational settings (one-sample, two-sample, k-samples and the univariate linear model), and includes a development of U-statistics, rank statistics and their asymptotic distribution theory. The mathematical level is fairly high. Prerequisite: MATH 5313/STATS 5313.

STATS 6390. BAYESIAN DATA ANALYSIS. 3 Hours.
Introduces the Bayesian framework to statistical inference and describes effective approaches for Bayesian modeling and computation. Prerequisite: Mathematical Statistic; statistical computing.

Mathematics - Graduate

Programs

DOCTORAL DEGREE

Mathematics PhD

- Mathematics PhD (Data Science, BS Entry) (p. 1693)
- Mathematics PhD (Data Science, MS Entry) (p. 1695)
- Mathematics PhD (General Math, BS Entry) (p. 1697)
- Mathematics PhD (General Math, MS Entry) (p. 1700)
- Mathematics PhD (General Statistics, BS Entry) (p. 1702)
- Mathematics PhD (General Statistics, MS Entry) (p. 1704)

MASTER'S DEGREES

- Mathematics MA (p. 1706)
- Mathematics MS (p. 1709)

CERTIFICATE

- Applied Statistics Graduate Certificate (p. 1711)

Doctor of Philosophy in Mathematics (Data Science, BS Entry)

About This Program

The Doctor of Philosophy degree in Mathematics provides a program of study that may be tailored to meet the needs of those interested in applied or academic careers. This program allows students to pursue topics ranging from traditional mathematics studies to applied mathematical problems in engineering and sciences.

A dynamic program leading to the Doctor of Philosophy in Mathematics with a Data Science emphasis will aim at both real and demonstrated competency on the part of the student over material from various branches of mathematics.

The nature of the dissertation will range from research in mathematics to the discovery and testing of mathematical models for analyzing given problems in engineering and sciences and in locating and developing mathematical and computational techniques for deducing the properties of these models as to solve these problems effectively and efficiently. Such dissertations will be concerned with research problems from pure mathematics, applied mathematics, mathematics education and statistics.

Competencies

1. Upon graduation, students will have mastered advanced topics in various branches of mathematics, with a focus on data science.
2. Upon graduation, students will be capable of conducting independent and original research, developing and testing mathematical models for real-world problems in engineering and sciences, and applying mathematical theories and computational techniques to solve complex issues.
3. Upon graduation, students will be adept at using mathematical models to analyze real-world problems and effectively teaching and communicating complex concepts.
4. Through the completion of this program, students will be equipped to develop professional ethics and practices in research, manage research projects including data collection, analysis, and interpretation, and be well-prepared for careers in academia, applied mathematics, engineering, and related scientific fields.

Admissions Criteria

UNCONDITIONAL ADMISSION

For unconditional admission a student must meet the following requirements:

1. A bachelor's degree in mathematics or in a closely related field.
2. A minimum GPA of 3.00 on the 4.00 scale in undergraduate course work, as calculated by the UT Arlington Graduate School.

3. A minimum of 350 on the verbal part and 700 on the quantitative part of the Graduate Record Examination (GRE) if taken prior to August 2011. Minimum of 143 on the verbal and 155 on the quantitative portions of the GRE if taken after August 2011.
4. For an applicant whose native language is not English, a minimum score of 550 on the Test of English as a Foreign Language (or a minimum score of 213 on a computer-based test, or a minimum score of 79 on an internet-based test) or a minimum score of 40 on the Test of Spoken English.
5. At least three letters of recommendation from people familiar with the applicant's academic work and/or professional work.

Applicants who do not satisfy requirement 2 and/or 3 above may be considered for an unconditional admission if a further review of their undergraduate transcript(s), recommendation letters, correspondence or direct interactions with mathematics faculty, and statement of professional or research interests indicates that they are qualified to enter the BS to PhD program without deficiency.

If an applicant does not meet a majority of standards for an unconditional admission outlined above, he/she may be considered for a probationary admission after a careful examination of his/her application materials. A probationary admission requires that the applicant receive grades of B or better in the first 12 hours of graduate course work at UT Arlington.

DENIAL OF ADMISSION

An applicant may be denied admission if he/she has less than satisfactory performance on a majority of the admission criteria described above.

DEFERRED DECISION

A deferred decision may be granted when the applicant's file is incomplete or when a denial on his/her admission is not appropriate. An applicant who is unable to supply all required documentation prior to the admission deadline but who otherwise appears to have met admission requirements may be granted provisional admission.

SCHOLARSHIPS AND FELLOWSHIPS

Students who are unconditionally admitted or admitted on probation will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the fall semester, must have a GPA of 3.0 in the last 60 undergraduate credit hours plus any graduate credit hours as calculated by the Graduate School, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain the fellowship.

Curriculum

Mathematics Specialization		
MATH 5307	MATHEMATICAL ANALYSIS I	3
MATH 5317	REAL ANALYSIS	3
MATH 5322	COMPLEX VARIABLES I	3
MATH 5327	FUNCTIONAL ANALYSIS I	3
MATH 5333	LINEAR ALGEBRA AND MATRICES	3
MATH 5338	NUMERICAL ANALYSIS I	3
Computer Science Specialization		
CSE 5301	DATA ANALYSIS & MODELING TECHNIQUES	3
CSE 5311	DESIGN AND ANALYSIS OF ALGORITHMS	3
CSE 5334	DATA MINING	3
In addition to the MATH/CSE core requirements, the student is required to take two area-related courses in MATH or CSE, chosen in consultation with their advisor.		6
Additional Electives		
Select 12 hours in MATH courses numbered 5300 or above in consultation with advisor.		12
Dissertation		
Select at least 9 hours from the following: [1]		9
MATH 6399	DISSERTATION	
MATH 6699	DISSERTATION	
MATH 6999	DISSERTATION	
MATH 7399	DOCTORAL DEGREE COMPLETION	
Total Hours		**54**

[1] Doctoral students must enroll in MATH 6699,MATH 6999, or MATH 7399 in the semester in which the dissertation is defended. Students typically enroll in one these courses, defend, and apply for graduation in the same term. MATH 7399 may only be taken once.

Program Completion

MILESTONES

Th BS-entry PhD plan typically requires 4-5 years of full-time study to complete.

Students must complete a preliminary examinations, diagnostic evaluation, and comprehensive examination. ~~examination~~

After passing the comprehensive examination students will enroll in dissertation hours until, in the judgement of the student's dissertation committee, the dissertation is ready to defend.

Students may apply to receive a master's degree in passing after completing the requirements stated in the catalog.

Doctor of Philosophy in Mathematics (Data Science, MS Entry)

About This Program

The Doctor of Philosophy degree in Mathematics provides a program of study that may be tailored to meet the needs of those interested in applied or academic careers. This program allows students to pursue topics ranging from traditional mathematics studies to applied mathematical problems in engineering and sciences.

A dynamic program leading to the Doctor of Philosophy in Mathematics with a Data Science emphasis will aim at both real and demonstrated competency on the part of the student over material from various branches of mathematics.

The nature of the dissertation will range from research in mathematics to the discovery and testing of mathematical models for analyzing given problems in engineering and sciences and in locating and developing mathematical and computational techniques for deducing the properties of these models as to solve these problems effectively and efficiently. Such dissertations will be concerned with research problems from pure mathematics, applied mathematics, mathematics education and statistics.

Competencies

1. Upon graduation, students will have mastered advanced topics in various branches of mathematics, with a focus on data science.
2. Upon graduation, students will be capable of conducting independent and original research, developing and testing mathematical models for real-world problems in engineering and sciences, and applying mathematical theories and computational techniques to solve complex issues.
3. Upon graduation, students will also be adept at using mathematical models to analyze real-world problems and effectively teaching and communicating complex concepts.
4. After completion of the program, students will be equipped to develop professional ethics and practices in research, manage research projects including data collection, analysis, and interpretation, and be well-prepared for careers in academia, applied mathematics, engineering, and related scientific fields.

Admissions Criteria

UNCONDITIONAL ADMISSION

For unconditional admission a student must meet the following requirements:

1. A master's degree in mathematics or in a closely related field.
2. A minimum GPA of 3.00 on the 4.00 scale in undergraduate course work, as calculated by the UT Arlington Graduate School.
3. A minimum of 350 on the verbal part and 700 on the quantitative part of the Graduate Record Examination (GRE) if taken prior to August 2011. Minimum of 143 on the verbal and 155 on the quantitative portions of the GRE if taken after August 2011.
4. For an applicant whose native language is not English, a minimum score of 550 on the Test of English as a Foreign Language (or a minimum score of 213 on a computer-based test, or a minimum score of 79 on an internet-based test) or a minimum score of 40 on the Test of Spoken English.
5. At least three letters of recommendation from people familiar with the applicant's academic work and/or professional work.

Applicants who do not satisfy requirement 2 and/or 3 above may be considered for an unconditional admission if a further review of their undergraduate transcript(s), recommendation letters, correspondence or direct interactions with mathematics faculty, and statement of professional or research interests indicates that they are qualified to enter the BS to PhD program without deficiency.

If an applicant does not meet a majority of standards for an unconditional admission outlined above, he/she may be considered for a probationary admission after a careful examination of his/her application materials. A probationary admission requires that the applicant receive grades of B or better in the first 12 hours of graduate course work at UT Arlington.

DENIAL OF ADMISSION

An applicant may be denied admission if he/she has less than satisfactory performance on a majority of the admission criteria described above.

DEFERRED DECISION

A deferred decision may be granted when the applicant's file is incomplete or when a denial on his/her admission is not appropriate. An applicant who is unable to supply all required documentation prior to the admission deadline but who otherwise appears to have met admission requirements may be granted provisional admission.

SCHOLARSHIPS AND FELLOWSHIPS

Students who are unconditionally admitted or admitted on probation will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the fall semester, must have a GPA of 3.0 in the last 60 undergraduate credit hours plus any graduate credit hours as calculated by the Graduate School, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain the fellowship.

Curriculum

MATH 5317	REAL ANALYSIS	3
MATH 5322	COMPLEX VARIABLES I	3
MATH 5327	FUNCTIONAL ANALYSIS I	3
MATH 5338	NUMERICAL ANALYSIS I	3
CSE 5301	DATA ANALYSIS & MODELING TECHNIQUES	3
CSE 5311	DESIGN AND ANALYSIS OF ALGORITHMS	3
CSE 5334	DATA MINING	3
In addition to the MATH/CSE core requirements, the student is required to take two area-related courses in MATH or CSE, chosen in consultation with their advisor.		6
Dissertation		
Select at least 9 hours from the following:		9

MATH 6399	DISSERTATION
MATH 6699	DISSERTATION
MATH 6999	DISSERTATION
MATH 7399	DOCTORAL DEGREE COMPLETION
Total Hours	**36**

Program Completion

MILESTONES

Th MS-entry PhD plan typically requires 3-4 years of full-time study to complete.

Students must complete a preliminary examinations, ~~examination,~~ diagnostic evaluation, and comprehensive examination. ~~examination~~

After passing the comprehensive examination students will enroll in dissertation hours until, in the judgement of the student's dissertation committee, the dissertation is ready to defend.

Students may apply to receive a master's degree in passing after completing the requirements stated in the catalog.

Doctor of Philosophy in Mathematics (General Math, BS Entry)

About This Program

The Doctor of Philosophy degree in Mathematics provides a program of study that may be tailored to meet the needs of those interested in applied or academic careers. This program allows students to pursue topics ranging from traditional mathematics studies to applied mathematical problems in engineering and sciences.

A dynamic program leading to the Doctor of Philosophy degree in the mathematics will aim at both real and demonstrated competency on the part of the student over material from various branches of mathematics.

The nature of the dissertation will range from research in mathematics to the discovery and testing of mathematical models for analyzing given problems in engineering and sciences and in locating and developing mathematical and computational techniques for deducing the properties of these models

as to solve these problems effectively and efficiently. Such dissertations will be concerned with research problems from pure mathematics, applied mathematics, mathematics education and statistics.

Competencies

1. Upon graduation, students will have mastered advanced topics in various branches of mathematics, including pure and applied mathematics.
2. Upon graduation, students will be capable of conducting independent and original research, developing and testing mathematical models for real-world problems in engineering and sciences, and applying mathematical theories and computational techniques to solve complex issues.
3. Upon graduation, students will also be adept at using mathematical models to analyze real-world problems and effectively teaching and communicating complex concepts.
4. Upon completion of the program, students will be equipped to develop professional ethics and practices in research, manage research projects including data collection, analysis, and interpretation, and be well-prepared for careers in academia, applied mathematics, engineering, and related scientific fields.

Admissions Criteria

UNCONDITIONAL ADMISSION

For unconditional admission a student must meet the following requirements:

1. A bachelor's degree in mathematics or in a closely related field.
2. A minimum GPA of 3.00 on the 4.00 scale in undergraduate course work, as calculated by the UT Arlington Graduate School.
3. A minimum of 350 on the verbal part and 700 on the quantitative part of the Graduate Record Examination (GRE) if taken prior to August 2011. Minimum of 143 on the verbal and 155 on the quantitative portions of the GRE if taken after August 2011.
4. For an applicant whose native language is not English, a minimum score of 550 on the Test of English as a Foreign Language (or a minimum score of 213 on a computer-based test, or a minimum score of 79 on an internet-based test) or a minimum score of 40 on the Test of Spoken English.
5. At least three letters of recommendation from people familiar with the applicant's academic work and/or professional work.

Applicants who do not satisfy requirement 2 and/or 3 above may be considered for an unconditional admission if a further review of their undergraduate transcript(s), recommendation letters, correspondence or direct interactions with mathematics faculty, and statement of professional or research interests indicates that they are qualified to enter the BS Entry track without deficiency.

PROBATIONARY ADMISSION

If an applicant does not meet a majority of standards for an unconditional admission outlined above, he/she may be considered for a probationary admission after a careful examination of his/her application materials. A probationary admission requires that the applicant receive grades of B or better in the first 12 hours of graduate course work at UT Arlington.

DENIAL OF ADMISSION

An applicant may be denied admission if he/she has less than satisfactory performance on a majority of the admission criteria described above.

DEFERRED DECISION

A deferred decision may be granted when the applicant's file is incomplete or when a denial on his/her admission is not appropriate. An applicant who is unable to supply all required documentation prior to the admission deadline but who otherwise appears to have met admission requirements may be granted provisional admission.

SCHOLARSHIPS AND FELLOWSHIPS

Students who are unconditionally admitted or admitted on probation will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the fall semester, must have a GPA of 3.0 in the last 60 undergraduate credit hours plus any graduate credit hours as calculated by the Graduate School, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain the fellowship.

Four area-related courses, chosen in consultation with their advisor.		12
Specialization		
Select 12 hours in MATH courses numbered 5300 or above in consultation with advisor.		12
Dissertation		
Complete at least 9 hours in the following. Students will enroll in dissertation hours after completing the comprehensive exam until the dissertation is ready to defend. [1]		9
MATH 6399	DISSERTATION	
MATH 6699	DISSERTATION	
MATH 6999	DISSERTATION	
MATH 7399	DOCTORAL DEGREE COMPLETION	
Total Hours		**54**

[1] Doctoral students must enroll in MATH 6699, MATH 6999, or MATH 7399 in the semester in which the dissertation is defended. Students typically enroll in one these courses, defend, and apply for graduation in the same term. MATH 7399 may only be taken once.

Program Completion

MILESTONES

Th BS-entry PhD plan typically requires 4-5 years of full-time study to complete.

Students must complete a preliminary examinations, diagnostic evaluation, and comprehensive examination.

After passing the comprehensive examination students will enroll in dissertation hours until, in the judgement of the student's dissertation committee, the dissertation is ready to defend.

Students may apply to receive a master's degree in passing after completing the requirements stated in the catalog.

Master of Arts in Mathematics

About This Program

The Master of Arts in Mathematics is designed to extend undergraduate mathematics experiences in the area of specialized mathematics content for secondary school and early college mathematics teaching. The program focuses on enhancing mathematics teaching through innovative preparation in topics grounded in secondary school and early college mathematics from an advanced standpoint. The program embraces a philosophy of teaching and learning mathematics that is consistent with the landmark *Standards* documents produced by the National Council of Teachers of Mathematics. This degree can provide considerable value to high school teachers wishing to teach dual credit courses or teach at a community college, or for teachers wishing to obtain an advanced degree that relates to and genuinely benefits their classrooms.

Competencies

1. Upon completion, students will have deepened their mathematical knowledge for teaching by focusing on advanced mathematical concepts that underlie and connect to the secondary school and early college mathematics curriculum.
2. Upon completion, students will have productive beliefs of themselves as mathematics problem solvers and of their students as mathematics learners.
3. Upon completion, students will be able to interpret and evaluate mathematical instructional activities and approaches according to their mathematical and pedagogical features.

Admissions Criteria

UNCONDITIONAL ADMISSION

For unconditional admission a student must meet items 1-3 or 3-5.

1. A BS or BA degree with at least 24 hours of mathematics coursework with a GPA of at least 3.0, as calculated by the Graduate School on a 4.0 scale.

2. Minimum of 146 on the verbal and 148 on the quantitative portions of the GRE if taken after August 2011. Minimum of 400 on the verbal and 600 on the quantitative portions of the Graduate Record Examination (GRE) if taken prior to August 2011.
3. Three favorable letters of recommendation from people familiar with the applicant's academic work and/or professional work.
4. A BS or BA. degree with a GPA of at least 3.0, as calculated by Graduate Admissions on a 4.0 scale.
5. Certified to teach mathematics at the Secondary Level (Secondary Mathematics Certification).

Applicants who do not satisfy requirements 1 or 2 above may be considered for unconditional admission if further review of their undergraduate transcript, recommendation letters, correspondence or direct interactions with mathematics faculty, and statement of professional or research interests indicates that they are qualified to enter the Master's Program without deficiency.

PROBATIONARY ADMISSION

If an applicant does not meet a majority of standards for unconditional admission outlined above, they may be considered for probationary admission after careful examination of their application materials. Probationary admission requires that the applicant receive a B or better in the first 12 hours of graduate coursework at UT Arlington.

DENIAL OF ADMISSION

Applicants may be denied admission if they have less than satisfactory performance on a majority of the admission criteria described above.

DEFERRED AND PROVISIONAL ADMISSION

A deferred decision may be granted when a file is incomplete or when a denied decision is not appropriate. An applicant unable to supply all required documentation prior to the admission deadline, but who otherwise appears to meet admission requirements, may be granted provisional admission.

Curriculum

Foundations		
MATH 5341	MODERN GEOMETRY	3
MATH 5342	CONCEPTS AND TECHNIQUES IN ALGEBRA	3
MATH 5343	CONCEPTS AND TECHNIQUES IN PROBABILITY AND STATISTICS	3
MATH 5344	MATHEMATICS-SPECIFIC TECHNOLOGIES	3
MATH 5345	HISTORICAL APPROACH TO REAL ANALYSIS	3
MATH 5346	CONCEPTS AND TECHNIQUES IN PROBLEM SOLVING	3
Completion Options		
Select Thesis-Substitute or Non-Thesis Option		15-18
Thesis-Substitute Option		15
MATH 5395	SPECIAL PROJECT (Individual, Director-Approved Research)	
Select 12 hours of Math graduate courses (excluding courses numbered 5375-5379).		
Non-Thesis Option		18
Select 18 hours of Math graduate courses (excluding courses numbered 5375-5379)		
Total Hours		**33-36**

Program Completion

Students in the thesis-substitute plan must pass a final Master's exam, which consists of a formal presentation and discussion of the student's project to a committee of faculty.

Master of Science Degree in General Mathematics

About This Program

The Department of Mathematics offers master's degree programs in mathematics with concentrations in General Mathematics, Applied Mathematics, Computational Mathematics, Data Science, Mathematics Education, Pure Mathematics, and Statistics. All students are to use the thesis plan, thesis-substitute plan, or non-thesis plan.

The objectives of the UT Arlington Mathematics Department's graduate program are:

- Develop the students' ability to do independent research and prepare them for more advanced studies in mathematics.
- Provide advanced training and preparation for professional careers as mathematicians, mathematics teachers, and those employed in engineering, scientific and business fields.

Graduate work will be offered in algebra, complex and real variables, data science, differential equations, functional analysis, geometry, mathematics education, numerical analysis, probability, statistics and topology.

Competencies

1. Upon graduation, students will be equipped to solve complex mathematical problems in various mathematical fields.
2. Upon completion, students will have demonstrated the application of mathematical theories to real-world problems.
3. Upon graduation, students will be able to teach and communicate mathematical concepts effectively, and be prepared for careers in mathematics, teaching, and related fields.

Admissions Criteria

UNCONDITIONAL ADMISSION

For unconditional admission, a student must meet the following requirements:

1. A BA or BS degree in mathematics or closely related field.
2. An overall GPA in the final 60 hours of coursework of a 3.0 or better, as calculated by the Graduate School, on a 4.0 scale.
3. Minimum of 350 on the verbal and 650 on the quantitative portions of the Graduate Record Examination (GRE) if taken prior to August 2011. Minimum of 143 on the verbal and 151 on the quantitative portions of the GRE if taken after August 2011.
4. For applicants whose native language is not English, a minimum score of 550 on the Test of English as a Foreign Language (or a minimum score of 213 on a computer-based test, or a minimum score of 79 on an internet-based test) or a minimum score of 40 on the Test of Spoken English.
5. Three favorable letters of recommendation from people familiar with the applicant's academic work.

Applicants who do not satisfy requirements 2 or 3 above may be considered for unconditional admission if further review of their undergraduate transcript, recommendation letters, correspondence or direct interactions with mathematics faculty, and statement of professional or research interests indicates that they are qualified to enter the Master's Program without deficiency.

PROBATIONARY ADMISSION

If an applicant does not meet a majority of standards for unconditional admission outlined above, they may be considered for probationary admission after careful examination of their application materials. Probationary admission requires that the applicant receive a B or better in the first 12 hours of graduate coursework at UT Arlington.

Students who are unconditionally admitted or admitted on probation will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the fall semester, must have a GPA of 3.0 in the last 60 undergraduate credit hours plus any graduate credit hours as calculated by the Graduate School, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain the fellowship.

DENIAL OF ADMISSION

Applicants may be denied admission if they have less than satisfactory performance on a majority of the admission criteria described above.

DEFERRED ADMISSION

A deferred decision may be granted when a file is incomplete or when a denied decision is not appropriate. An applicant unable to supply all required documentation prior to the admission deadline, but who otherwise appears to meet admission requirements, may be granted provisional admission.

Curriculum

Foundations		
MATH 5307	MATHEMATICAL ANALYSIS I	3
MATH 5333	LINEAR ALGEBRA AND MATRICES	3
Concentration Foundations		
Select a concentration:		15
General Mathematics		
MATH 5317	REAL ANALYSIS	
MATH 5322	COMPLEX VARIABLES I	
MATH 5327	FUNCTIONAL ANALYSIS I	
MATH 5331	ABSTRACT ALGEBRA I	
MATH 5338	NUMERICAL ANALYSIS I	
Applied Mathematics		
MATH 5300	INTRODUCTION TO SCIENTIFIC COMPUTING	
Select four of the following:		
MATH 5350	APPLIED MATHEMATICS I	
MATH 5351	APPLIED MATHEMATICS II	
MATH 5320	ORDINARY DIFFERENTIAL EQUATIONS	
MATH 5321	APPLIED PARTIAL DIFFERENTIAL EQUATIONS	
Or an area-related graduate course chosen in consultation with the student's advisor.		
Computational Mathematics		
MATH 5300	INTRODUCTION TO SCIENTIFIC COMPUTING	
MATH 5338	NUMERICAL ANALYSIS I	
MATH 5339	NUMERICAL ANALYSIS II	
MATH 5371	APPLIED NUMERICAL LINEAR ALGEBRA	
or MATH 5373	NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS	
Or an area-related graduate course chosen in consultation with the student's advisor.		
Data Science		
MATH 5300	INTRODUCTION TO SCIENTIFIC COMPUTING	
MATH 5305	STATISTICAL METHODS	
MATH 5371	APPLIED NUMERICAL LINEAR ALGEBRA	
or MATH 6310	FOUNDATION OF DATA SCIENCES	
Select two of the following:		
MATH 5312	MATHEMATICAL STATISTICS I	
MATH 5338	NUMERICAL ANALYSIS I (OR AN AREA-RELATED COURSE CHOSEN IN CONSULATION WITH THE STUDENT'S ADVISOR)	
MATH 6311	OPTIMIZATION ON BIG DATA	

MATH 6312	DATA MINING	
Mathematics Education		
MATH 5300	INTRODUCTION TO SCIENTIFIC COMPUTING	
MATH 5305	STATISTICAL METHODS	
Select three of the following:		
MATH 5341	MODERN GEOMETRY	
MATH 5342	CONCEPTS AND TECHNIQUES IN ALGEBRA	
MATH 5344	MATHEMATICS-SPECIFIC TECHNOLOGIES	
MATH 5345	HISTORICAL APPROACH TO REAL ANALYSIS	
MATH 5346	CONCEPTS AND TECHNIQUES IN PROBLEM SOLVING	
Pure Mathematics		
MATH 5322	COMPLEX VARIABLES I	
MATH 5331	ABSTRACT ALGEBRA I	
Select three from the following:		
MATH 5304	GENERAL TOPOLOGY	
MATH 5326	ALGEBRAIC TOPOLOGY	
MATH 5329	HOMOLOGICAL ALGEBRA	
MATH 5330	ALGEBRAIC GEOMETRY	
MATH 5332	ABSTRACT ALGEBRA II	
MATH 5334	DIFFERENTIAL GEOMETRY	
OR select 3 from the following:		
MATH 5300	INTRODUCTION TO SCIENTIFIC COMPUTING	
MATH 5304	GENERAL TOPOLOGY	
MATH 5317	REAL ANALYSIS	
MATH 5321	APPLIED PARTIAL DIFFERENTIAL EQUATIONS	
MATH 5327	FUNCTIONAL ANALYSIS I	
MATH 5334	DIFFERENTIAL GEOMETRY	
Statistics		
MATH 5300	INTRODUCTION TO SCIENTIFIC COMPUTING	
MATH 5305	STATISTICAL METHODS	
MATH 5312	MATHEMATICAL STATISTICS I	
MATH 5313	MATHEMATICAL STATISTICS II	
Select one of the following:		
MATH 5356	APPLIED MULTIVARIATE STATISTICAL ANALYSIS	
MATH 5357	SAMPLE SURVEYS	
MATH 5358	REGRESSION ANALYSIS	
Thesis, Thesis Substitute, or Non-Thesis Option		**9-15**
For the thesis option select:		9
6 hours in MATH 5398 or MATH 5698.		
At least 3 hours of additional electives. [2]		
For the thesis-substitute option select:		12
MATH 5395	SPECIAL PROJECT	
At least 9 hours of additional electives. [2]		
For the non-thesis option select:		15
At least 15 hours of additional electives approved by the graduate advisor. [2]		
Total Hours		**30-36**

1 Core requirements can also be fulfilled by completing core requirements in the PhD (BS Entry) program.

2 Electives may not be chosen from MATH 5336, MATH 5337, MATH 5340, MATH 5341, MATH 5342, MATH 5343, MATH 5344, MATH 5345, MATH 5346, MATH 5347, MATH 5348, MATH 5352, MATH 5370, MATH 5375, MATH 5376, MATH 5377, MATH 5378, MATH 5379. However, students in the Mathematics Education thesis or thesis-substitute track may choose three hours from MATH 5336, 5337, 5340-5348,5352, 5370, 5375-5379. Students in the Mathematics Education non-thesis track may choose six hours from MATH 5336, 5337, 5340-5348,5352, 5370, 5375-5379. Students in the Computational Mathematics track may choose three approved hours of electives in science and/or engineering. Elective

courses for pure-mathematics track must be chosen from MATH 5300, MATH 5304, MATH 5317, MATH 5321, MATH 5326, MATH 5327, MATH 5329, MATH 5330, MATH 5332, MATH 5334, MATH 5380, or MATH 5392 courses offered in the pure-mathematics track.

Program Completion

Students in thesis degree plan or thesis-substitute plan must pass a final Master's examination.

Post-Baccaulaureate Certifiate in Applied Statistics

About This Program

The Certificate in Applied Statistics offers individuals with an undergraduate degree an opportunity to receive graduate instruction in applied statistics as a means of maintaining and enhancing their professional development. The certificate program will provide coursework in statistics to an individual whose undergraduate major was outside the area of statistics. Since the requirements for the certificate are substantially less than those for the Master's Degree in Mathematics with a concentration in Statistics, the certificate can be earned in a much shorter time span. When applicable, the courses taken in the certificate program can also be used to satisfy a Master of Science in Mathematics degree requirement at UTA and other institutions. Consult with the graduate advisor for advice on graduate course transfer.

Competencies

1. Upon graduation, students will be able to identify, formulate, and solve a wide range of statistical problems.
2. Students will be able to apply appropriate methodologies, interpret data within context and effectively communicate their findings to technical and non-technical audiences.
3. Students will be able to tackle real-world challenges across diverse domains such as science, industry, government, and healthcare using analytical and computation skills

Admissions Criteria

1. A bachelor's degree in mathematics or closely related field.
2. An overall GPA in the final 60 hours of coursework of a 3.0 or better, as calculated by the Graduate School, on a 4.0 scale.

3. Minimum of 350 on the verbal and 650 on the quantitative portions of the Graduate Record Examination (GRE) if taken prior to August 2011. Minimum of 143 on the verbal and 151 on the quantitative portions of the GRE if taken after August 2011.
4. For applicants whose native language is not English, a minimum score of 550 on the Test of English as a Foreign Language (or a minimum score of 213 on a computer-based test, or a minimum score of 79 on an internet-based test) or a minimum score of 40 on the Test of Spoken English.
5. Three favorable letters of recommendation from people familiar with the applicant's academic work.

Applicants who do not satisfy requirements 2 or 3 above may be considered for unconditional admission if further review of their undergraduate transcript, recommendation letters, correspondence or direct interactions with mathematics faculty, and statement of professional or research interests indicates that they are qualified to enter the Master's Program without deficiency.

If an applicant does not meet a majority of standards for unconditional admission outlined above, they may be considered for probationary admission after careful examination of their application materials. Probationary admission requires that the applicant receive a B or better in the first 12 hours of graduate coursework at UT Arlington.

Students who are unconditionally admitted or admitted on probation will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the fall semester, must have a GPA of 3.0 in the last 60 undergraduate credit hours plus any graduate credit hours as calculated by the Graduate School, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain the fellowship.

Applicants may be denied admission if they have less than satisfactory performance on a majority of the admission criteria described above.

A deferred decision may be granted when a file is incomplete or when a denied decision is not appropriate. An applicant unable to supply all required documentation prior to the admission deadline, but who otherwise appears to meet admission requirements, may be granted provisional admission.

Curriculum

Foundations		
STATS 5312	MATHEMATICAL STATISTICS I	3
STATS 5313	MATHEMATICAL STATISTICS II	3
Electives		
Select three from the following:		9
STATS 5305	STATISTICAL METHODS	
MATH 5354	CATEGORICAL DATA ANALYSIS	
STATS 5358	REGRESSION ANALYSIS	
MATH 5359	SURVIVAL ANALYSIS	
MATH 5392	SELECTED TOPICS IN MATHEMATICS (When topic is Statistical Quality Control)	
MATH 5392	SELECTED TOPICS IN MATHEMATICS (When topic is Statistical Methods in Clinical Research)	
MATH 6390	BAYESIAN DATA ANALYSIS	

Program Completion

Upon completion of the 15 hours of graduate courses with a minimum GPA of 3.0, the student is awarded the Certificate in Applied Statistics. The expected time to completion is 1 to 2 years. The time limit for completion of the certificate program is 6 years.

Mathematics - Undergraduate

Programs

BACCALAUREATE DEGREES

- Mathematics BA (p. 1714)
- Mathematics BS (p. 1717)
- Mathematics BS (Actuarial Science) (p. 1719)
- Mathematics BS (Data Science) (p. 1722)
- Mathematics BS (Industrial and Applied Math) (p. 1725)
- Mathematics BS (Pure Math) (p. 1727)
- Mathematics BS (Second Major) (p. 1729)
- Mathematics BS (Statistics (p. 1730))
- Mathematics BS (Teaching Certification) (p. 1731)

FAST TRACK

- Mathematics BS to MS Fast Track (p. 1733)

MINOR

- Mathematics Minor (p. 1736)

Policies

FIRST-TIME ADMISSION

Students who wish to apply for major status in mathematics must first complete the University and College of Science requirements and the specific requirements of the Department of Mathematics listed below.

- Overall GPA of 2.25;
- Minimum GPA of 2.25 in at least nine hours of mathematics courses in residence at the level of MATH 1426 or above, excluding capstone mathematics courses specifically for prospective middle or secondary grades mathematics teachers;
- At least six hours from the science or computer science courses listed in the mathematics degree plans; and
- Twelve hours of courses of the University core curriculum in disciplines other than science and mathematics.

Students currently enrolled at the University may qualify to change their major to mathematics by meeting the requirements listed above.

SATISFACTORY ACADEMIC STANDARD

Majors whose overall GPA or GPA in major courses falls below 2.25 will be required to change their major.

To re-enter as a mathematics major, the student must meet the requirements listed in the First-time Admissions Requirements section.

NON-CREDIT COURSES

The following courses will not be counted for credit toward a bachelor's degree in mathematics:

MATH 1301	CONTEMPORARY MATHEMATICS	3
MATH 1302	COLLEGE ALGEBRA	3
MATH 1308	ELEMENTARY STATISTICAL ANALYSIS	3
MATH 1315	COLLEGE ALGEBRA FOR ECONOMICS & BUSINESS ANALYSIS	3
MATH 1316	MATHEMATICS FOR ECONOMICS AND BUSINESS ANALYSIS	3
MATH 1330	ARITHMETICAL PROBLEM SOLVING	3
MATH 1331	GEOMETRICAL INFERENCE AND REASONING	3
MATH 1332	FUNCTIONS, DATA, AND APPLICATIONS	3
MATH 1402	COLLEGE ALGEBRA	4
MATH 4350	PRECALCULUS FOR MID-LEVEL MATHEMATICS TEACHERS	3
MATH 4351	CALCULUS FOR MID-LEVEL MATHEMATICS TEACHERS	3

Capstone mathematics courses specifically for prospective secondary grades mathematics teachers can be counted for credit only by those pursuing a BS with Secondary Teaching Certification.

MATH COURSE REGISTRATION

Students may not be "pre-enrolled" in mathematics courses while prerequisite courses at another institution are pending grades. Only UT Arlington credits may be used for pre-enrollment purposes.

Canvas grades (or other learning-management system grades) may not be used as proof of completion for a prerequisite course. Students must submit either an official transcript to the registrar's office, or submit a transcript with a letter grade for the prerequisite course to the undergraduate mathematics advisor in order to be enrolled in a mathematics course. If a student is submitting the transcript via email, the email must be sent from their UTA email address.

Bachelor of Arts Degree in Mathematics

About This Program

The Bachelor of Arts in Mathematics is intended for those students seeking a traditional liberal arts education with an emphasis on mathematics.

Competencies

1. The student will gain knowledge and skills in a wide range of mathematical fields, including abstract algebra, analysis, and statistics.
2. The student will gain a strong background in a foreign language appropriate to the field of mathematics.
3. The student will gain knowledge and understanding of definitions and theorems on abstract mathematical concepts.
4. The student will gain knowledge and skills in solving problems and writing proofs about abstract mathematical concepts.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
ENGL 1302	RHETORIC AND COMPOSITION II	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For Language, Philosophy & Culture select one of the following (pre-requisites are included in BA Foundations below):)		
FREN 2314	INTERMEDIATE FRENCH II	
GERM 2314	INTERMEDIATE GERMAN II	
SPAN 2314	INTERMEDIATE SPANISH II	
RUSS 2314	INTERMEDIATE RUSSIAN II	
For Life & Physical Science select one of the following sequences:		
BIOL 1441 & BIOL 1442	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY and BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	

GEOL 1301 & GEOL 1302	EARTH SYSTEMS and EARTH HISTORY	
CHEM 1441 & CHEM 1442	GENERAL CHEMISTRY I and GENERAL CHEMISTRY II	
PHYS 1443 & PHYS 1444	GENERAL TECHNICAL PHYSICS I and GENERAL TECHNICAL PHYSICS II	
Mathematics BA Foundations		
Additional hours required in core from Calculus core sequence above.		2
UNIV 1101	CAREER PREPARATION AND STUDENT SUCCESS	1
or UNIV 1131	STUDENT SUCCESS	
Complete a 1441 & 1442 & 2313 sequence in French, German, Spanish, or Russian.		11
Select one course from Life & Physical Science approved for the core and not previously taken.		4
Select one of the following in computer programming:		3
CSE 1310	INTRODUCTION TO COMPUTERS & PROGRAMMING	
DATA 3401	PYTHON FOR DATA SCIENCE 1	
MAE 2360	NUMERICAL ANALYSIS & PROGRAMMING	
Mathematics Specialization		
MATH 2326	CALCULUS III	3
MATH 3300	INTRODUCTION TO PROOFS (satisfies Oral Communication Competency)	3
MATH 3316	STATISTICAL INFERENCE	3
MATH 3318	DIFFERENTIAL EQUATIONS	3
MATH 3321	ABSTRACT ALGEBRA I	3
MATH 3330	INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES	3
MATH 3335	ANALYSIS I	3
MATH 3345	NUMERICAL ANALYSIS AND COMPUTER APPLICATIONS	3
Advanced Mathematics Electives		
Select 9 hours in MATH courses numbered 3301 or above, except for capstone mathematics courses specifically for prospective middle or secondary grades mathematics teachers.		9
Select any two from separate groups:		6
Group 1		
MATH 4321	ABSTRACT ALGEBRA II	
Group 2		
MATH 4334	ADVANCED MULTIVARIABLE CALCULUS	
MATH 4335	ANALYSIS II	
Group 3		
MATH 4311	STOCHASTIC MODELS AND SIMULATION	
MATH 4312	ACTUARIAL RISK ANALYSIS	
MATH 4313	MATHEMATICAL STATISTICS	
MATH 4314	ADVANCED DISCRETE MATHEMATICS	
MATH 4324	INTRODUCTION TO PARTIAL DIFFERENTIAL EQUATIONS	
MATH 4330	ADVANCED LINEAR ALGEBRA	
MATH 4345	NUMERICAL ANALYSIS & COMPUTER APPLICATIONS II	
Minor		18
Total Hours		**120**

Capstone mathematics courses specifically for prospective middle grade mathematics teachers do not count toward a degree in mathematics. Capstone mathematics courses for secondary mathematics teachers will count only for those working on the BS in Mathematics with Secondary Teaching Pathway.

Bachelor of Science Degree in Mathematics

About This Program

The Bachelor of Science in Mathematics is a flexible option primarily intended for students wishing to pursue graduate work in mathematics.

Competencies

1. The student will gain knowledge and skills in a wide range of mathematical fields, including abstract algebra, analysis, and statistics.
2. The student will a gain a deep knowledge of mathematics that will prepare them for graduate school.
3. The student will gain knowledge and understanding of definitions and theorems on abstract mathematical concepts.
4. The student will gain knowledge and skills in solving problems and writing proofs about abstract mathematical concepts.

Bachelor of Science in Mathematics (Financial-Actuarial Science)

About This Program

The Bachelor of Science in Mathematics Actuarial Science option is intended for students interested in careers involving various applications of mathematics to the world of business.

Competencies

1. On completion, students will be able to effectively study for and do well on the Probability Exam given by the Society of Actuaries (SOA).
2. On completion, students will be able to effectively study for and do well on the Financial Mathematics exam given by the SOA.
3. On completion, students will be able to effectively study for and do well on the Validation by Educational Experience (VEE) Courses required by the SOA.
4. On completion, students will be able to competitively apply for internships in the actuarial field.

Admissions Criteria

FIRST-TIME ADMISSION

Students who wish to apply for major status in mathematics must first complete the University and College of Science requirements and the specific requirements of the Department of Mathematics listed below.

- Overall GPA of 2.25;
- Minimum GPA of 2.25 in at least nine hours of mathematics courses in residence at the level of MATH 1426 or above, excluding capstone mathematics courses specifically for prospective middle or secondary grades mathematics teachers;

- At least six hours from the science or computer science courses listed in the mathematics degree plans; and
- Twelve hours of courses of the University core curriculum in disciplines other than science and mathematics.

Students currently enrolled at the University may qualify to change their major to mathematics by meeting the requirements listed above.

MAINTAINING ACADEMIC STANDING

Majors whose overall GPA or GPA in major courses falls below 2.25 will be required to change their major.

To re-enter as a mathematics major, the student must meet the requirements listed in the First-time Admission section.

Curriculum Requirements

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
Mathematics		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For Life and Physical Science select one of the follwoing sequences:		
BIOL 1441 & BIOL 1442	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY and BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	
CHEM 1441 & CHEM 1442	GENERAL CHEMISTRY I and GENERAL CHEMISTRY II	
GEOL 1301 & GEOL 1302	EARTH SYSTEMS and EARTH HISTORY	
PHYS 1443 & PHYS 1444	GENERAL TECHNICAL PHYSICS I and GENERAL TECHNICAL PHYSICS II	
For Social and Behavioral Sciences select:		
ECON 2305	PRINCIPLES OF MACROECONOMICS	
Mathematics BS Foundations		
UNIV 1101	CAREER PREPARATION AND STUDENT SUCCESS	1
or UNIV 1131	STUDENT SUCCESS	
Additional hours from Mathematics courses required in the core.		2
Select an additional two-course sequence from the general education core Life and Physical Sciences list.		6
Select one of the following computer science courses:		3
CSE 1310	INTRODUCTION TO COMPUTERS & PROGRAMMING	
DATA 3401	PYTHON FOR DATA SCIENCE 1	
MAE 2360	NUMERICAL ANALYSIS & PROGRAMMING	
Specialization		
MATH 2326	CALCULUS III	3
MATH 3300	INTRODUCTION TO PROOFS (satisfies Oral Communication Competency)	3
MATH 3302	MULTIVARIATE STATISTICAL METHODS	3
MATH 3313	INTRODUCTION TO PROBABILITY	3
MATH 3316	STATISTICAL INFERENCE	3
MATH 3318	DIFFERENTIAL EQUATIONS	3
MATH 3321	ABSTRACT ALGEBRA I	3
MATH 3330	INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES	3
MATH 3335	ANALYSIS I	3
MATH 3345	NUMERICAL ANALYSIS AND COMPUTER APPLICATIONS	3
MATH 4313	MATHEMATICAL STATISTICS	3
ECON 2306	PRINCIPLES OF MICROECONOMICS	3
ACCT 2301	PRINCIPLES OF ACCOUNTING I	3

ACCT 2302	PRINCIPLES OF ACCOUNTING II	3
Select one mathematics course numbered 3301 or above.		3
Select two of the following:		6
MATH 4311	STOCHASTIC MODELS AND SIMULATION	
MATH 4312	ACTUARIAL RISK ANALYSIS	
MATH 4315	MATHEMATICAL FINANCE	
Select one of the following:		3
MATH 4321	ABSTRACT ALGEBRA II	
MATH 4334	ADVANCED MULTIVARIABLE CALCULUS	
MATH 4335	ANALYSIS II	
Select four of the following:		12
FINA 3313	BUSINESS FINANCE	
FINA 3315	INVESTMENTS	
FINA 3317	FINANCIAL INSTITUTIONS AND MARKETS	
FINA 4318	PORTFOLIO MANAGEMENT AND SECURITY ANALYSIS	
FINA 4319	FINANCIAL DERIVATIVES	
Any FINA course numberd 3300 to 3399.		
Total Hours		**120**

[1] Except for capstone mathematics courses specifically for prospective middle grades or secondary grades mathematics teachers.

VEE Certification and Associate of the Society of Actuaries (ASA) Requirements (https://www.uta.edu/academics/schools-colleges/science/departments/mathematics/degree-programs/undergraduate/actuarial-science/)

First Year

First Semester	Hours	Second Semester	Hours
MATH 1426	4	MATH 2425	4
Life and Physical Science (Additional Science Requirement)	3-4	MATH 3316	3

Bachelor of Science in Mathematics (Data Science)

About This Program

The Bachelor of Science in Mathematics with an emphasis on Data Science provides a mathematics major with the interdisciplinary skills to derive insights in science and business from big data.

Competencies

1. The student will gain knowledge and skills in mathematics and data science that will prepare them for jobs and careers in data science.
2. The student will a gain knowledge and skills in mathematics and data science that will prepare them for graduate school in data science.
3. The student will gain interdisciplinary skills for deriving insights in science and business from big data.
4. The student will gain knowledge and skills in a wide range of mathematical fields, including abstract algebra, analysis, and statistics.
5. The student will gain knowledge and understanding of definitions and theorems on abstract mathematical concepts.
6. The student will gain knowledge and skills in solving problems and writing proofs about abstract mathematical concepts.

Curriculum

Foundations	
General Core Requirements (p. 46)	42
Students must complete specific courses within certain core areas	
For Communication, select:	

ENGL 1301	RHETORIC AND COMPOSITION I	
For Mathematics, select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
Select one of the following Life & Physical Sciences sequences:		
BIOL 1441 & BIOL 1442	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY and BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION

Bachelor of Sicence in Mathematics (Industrial and Applied Math)

About This Program

The Bachelor of Science in Mathematics with an emphasis on Industrial and Applied Mathematics prepares students for careers as mathematicians in the emerging high-tech industries. This option is for students seeking immediate employment after graduation. Additional coursework may be required for admission to graduate school.

Competencies

1. The student will gain knowledge and skills in industrial and applied mathematics and that will prepare them for jobs and careers as mathematicians in emerging high-tech industries.
2. The student will gain knowledge and skills in a wide range of mathematical fields, including abstract algebra, analysis, and statistics.
3. The student will gain knowledge and understanding of definitions and theorems on abstract mathematical concepts.
4. The student will gain knowledge and skills in solving problems and writing proofs about abstract mathematical concepts.

Bachelor of Science in Mathematics (Pure Mathematics)

About This Program

The Bachelor of Science in Mathematics with an emphasis on Pure Mathematics is intended primarily for students wishing to pursue graduate work in mathematics.

Competencies

1. The student will gain knowledge and skills in mathematics that is both broad and deep, providing a strong preparation for graduate school.
2. The student will gain knowledge and skills in a wide range of mathematical fields, including abstract algebra, analysis, and statistics.
3. The student will gain knowledge and understanding of definitions and theorems on abstract mathematical concepts.
4. The student will gain knowledge and skills in solving problems and writing proofs about abstract mathematical concepts.

Curriculum

Foundations

Bachelor of Science Degree in Mathematics (Second Major)

About This Program

A student who satisfies the requirements for any other baccalaureate degree qualifies for having mathematics named as a second major upon completion of this program.

Competencies

1. The student will gain additional knowledge and skills in mathematics beyond the requirements for a minor.
2. The student will gain foundational knowledge in abstract algebra, analysis, statistics, differential equations, and linear algebra.

Curriculum

Mathematics Specialization		
MATH 3300	INTRODUCTION TO PROOFS	3
MATH 3316	STATISTICAL INFERENCE	3
MATH 3318	DIFFERENTIAL EQUATIONS	3
MATH 3321	ABSTRACT ALGEBRA I	3
MATH 3330	INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES	3
MATH 3335	ANALYSIS I	3
Select one of the following:		3
MATH 4321	ABSTRACT ALGEBRA II	
MATH 4335	ANALYSIS II	
MATH 4334	ADVANCED MULTIVARIABLE CALCULUS	
Additional Advanced Hours		
Select one of the following pairs of courses:		6
MATH 3313 & MATH 4311	INTRODUCTION TO PROBABILITY and STOCHASTIC MODELS AND SIMULATION	
MATH 3313 & MATH 4312	INTRODUCTION TO PROBABILITY and ACTUARIAL RISK ANALYSIS	
MATH 3313 & MATH 4313	INTRODUCTION TO PROBABILITY and MATHEMATICAL STATISTICS	
MATH 3314 & MATH 4314	DISCRETE MATHEMATICS and ADVANCED DISCRETE MATHEMATICS	
MATH 3345 & MATH 4330	NUMERICAL ANALYSIS AND COMPUTER APPLICATIONS and ADVANCED LINEAR ALGEBRA	

MATH 4324 & MATH 4322	INTRODUCTION TO PARTIAL DIFFERENTIAL EQUATIONS and INTRODUCTION TO COMPLEX VARIABLES	
Total Hours		**27**

Advising Resources

First-time-in-college students should plan to speak to the math advisor when starting their second year. Transfer students should contact the math advisor after acceptance at UTA to create a degree plan and enroll in classes.

Bachelor of Science in Mathematics (Statistics)

About This Program

The Bachelor of Science in Mathematics with an emphasis on Statistics provides students with the skills to derive and apply statistical insights in science and business.

Competencies

1. The student will gain knowledge and skills that will prepare them for jobs and careers that use statistics in science and business.
2. The student will a gain knowledge and skills in mathematics and statistics that will prepare them for graduate school in statistics.
3. The student will gain knowledge and skills in a wide range of mathematical fields, including abstract algebra, analysis, and statistics.
4. The student will gain knowledge and understanding of definitions and theorems on abstract mathematical concepts.
5. The student will gain knowledge and skills in solving problems and writing proofs about abstract mathematical concepts.

For Life & Physical Sciences select one of these sequences:		
BIOL 1441 & BIOL 1442	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY and BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	
CHEM 1441 & CHEM 1442	GENERAL CHEMISTRY I and GENERAL CHEMISTRY II	
GEOL 1301 & GEOL 1302	EARTH SYSTEMS and EARTH HISTORY	
PHYS 1443 & PHYS 1444	GENERAL TECHNICAL PHYSICS I and GENERAL TECHNICAL PHYSICS II	
Mathematics Foundations		
Additional hours required in core from Calculus core sequence.		2

UNIV 1131	STUDENT SUCCESS	1
or UNIV 1101	CAREER PREPARATION AND STUDENT SUCCESS	
DATA 3401	PYTHON FOR DATA SCIENCE 1	4
Select two courses in Life & Physical Science approved for the core and not previously taken.		6
Additional hours to bring total to 120.		2
Mathematics Specialization		
MATH 2326	CALCULUS III	3
MATH 3300	INTRODUCTION TO PROOFS (satisfies Oral Communication Competency)	3
MATH 3302	MULTIVARIATE STATISTICAL METHODS	3
MATH 3313	INTRODUCTION TO PROBABILITY	3
MATH 3316	STATISTICAL INFERENCE	3
MATH 3318	DIFFERENTIAL EQUATIONS	3
MATH 3321	ABSTRACT ALGEBRA I	3
MATH 3330	INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES	3
MATH 3335	ANALYSIS I	3
MATH 3345	NUMERICAL ANALYSIS AND COMPUTER APPLICATIONS	3
MATH 4311	STOCHASTIC MODELS AND SIMULATION	3
MATH 4313	MATHEMATICAL STATISTICS	3
BSTAT 3321	INTERMEDIATE STATISTICS FOR BUSINESS ANALYTICS	3
Select addtional advanced hours in Math, except for capstone mathematics courses specifically for prospective middle or secondary grades mathematics teachers		21
Select one of the following:		3
MATH 4321	ABSTRACT ALGEBRA II	
MATH 4335	ANALYSIS II	
MATH 4334	ADVANCED MULTIVARIABLE CALCULUS	
Total Hours		**120**

Advising Resources

First-time-in-college students should plan to speak to the math advisor when starting their second year. Transfer students should contact the math advisor after acceptance at UTA to create a degree plan and enroll in classes.

Bachelor of Science in Mathematics (Teaching Certification)

About This Program

The Bachelor of Science in Mathematics with Teaching Certification is intended for students desiring to teach mathematics at the secondary school level. It is offered in coordination with UT Arlington's UTeach program.

Students interested in this pathway should consult an UTeach advisor to understand current certification requirements.

Competencies

1. The student will gain knowledge and skills in a wide range of mathematical fields, including abstract algebra, analysis, and statistics.
2. The student will gain the knowledge and skills to teach mathematics at the secondary level.

3. The student will gain knowledge and understanding of definitions and theorems on abstract mathematical concepts.
4. The student will gain knowledge and skills in solving problems and writing proofs about abstract mathematical concepts.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses within certain core areas		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Life & Physical Science select one sequence from the following:		
PHYS 1443 & PHYS 1444	GENERAL TECHNICAL PHYSICS I and GENERAL TECHNICAL PHYSICS II	
CHEM 1441 & CHEM 1442	GENERAL CHEMISTRY I and GENERAL CHEMISTRY II	
BIOL 1441 & BIOL 1442	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY and BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	
GEOL 1301 & GEOL 1302	EARTH SYSTEMS and EARTH HISTORY	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
Mathematics Foundations		
Additional hours required in core from Calculus core sequence.		2
Select one additional science course from the list above or one that uses a course in this list as a prerequisite.		3
UNIV 1131	STUDENT SUCCESS	1
PHIL 2314	PERSPECTIVES ON SCIENCE AND MATHEMATICS	3
Select one of the following in computer programming:		3
DATA 3401	PYTHON FOR DATA SCIENCE 1	
CSE 1310	INTRODUCTION TO COMPUTERS & PROGRAMMING	
MAE 2360	NUMERICAL ANALYSIS & PROGRAMMING	
Four hours in Modern or Classical Languages or course(s) closely related to the major.		4
Mathematics Specialization		
MATH 2326	CALCULUS III	3
MATH 2330	FUNCTIONS AND MODELING	3
MATH 3300	INTRODUCTION TO PROOFS (satisfies Oral Communication Competency)	3
MATH 3301	FOUNDATIONS OF GEOMETRY	3
MATH 3307	ELEMENTARY NUMBER THEORY	3
MATH 3314	DISCRETE MATHEMATICS	3
MATH 3316	STATISTICAL INFERENCE	3
MATH 3321	ABSTRACT ALGEBRA I	3
MATH 3330	INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES	3
MATH 3335	ANALYSIS I	3
Select any two from separate groups:		6
Group 1		
MATH 4321	ABSTRACT ALGEBRA II	
Group 2		
MATH 4334	ADVANCED MULTIVARIABLE CALCULUS	
MATH 4335	ANALYSIS II	
Group 3		
MATH 4311	STOCHASTIC MODELS AND SIMULATION	
MATH 4312	ACTUARIAL RISK ANALYSIS	
MATH 4313	MATHEMATICAL STATISTICS	

MATH 4314	ADVANCED DISCRETE MATHEMATICS	
MATH 4324	INTRODUCTION TO PARTIAL DIFFERENTIAL EQUATIONS	
MATH 4330	ADVANCED LINEAR ALGEBRA	
MATH 4345	NUMERICAL ANALYSIS & COMPUTER APPLICATIONS II	
Select 3 additional hours in MATH courses numbered 3302 or above (except MATH 4350 and MATH 4351).		3
Education Specialization		
SCIE 1201	STEP 1: INQUIRY APPROACHES TO TEACHING	2
SCIE 1202	STEP 2: INQUIRY-BASED LESSON DESIGN	2
SCIE 4331	KNOWING AND LEARNING IN STEM	3
SCIE 4332	CLASSROOM INTERACTIONS	3
SCIE 4333	MULTIPLE TEACHING PRACTICES	3
Select one from the following:		3
BIOL 4343	RESEARCH METHODS - UTEACH	
CHEM 4343	RESEARCH METHODS - UTEACH	
GEOL 4343	RESEARCH METHODS - UTEACH	
PHYS 4343	RESEARCH METHODS - UTEACH	
SCIE 4607	CAPSTONE TEACHING EXPERIENCE FOR STEM SECONDARY GRADES	6
SCIE 4107	CAPSTONE TEACHING EXPERIENCE SEMINAR	1
Total Hours		**120**

MATH SEQUENCES

All students seeking a bachelor's degree in mathematics must take at least two mathematics sequences. A sequence is defined as a 3300-level course followed by a 4300-level course in the same general area of mathematics. Each of the two sequences must build from distinct 3300-level courses.

It is strongly recommended that mathematics majors take MATH 3330 INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES and MATH 3300 INTRODUCTION TO PROOFS as early as possible, since these courses are prerequisites for many other 3000/4000-level courses. It is suggested to take MATH 3330 simultaneously with Calculus III. Mathematics majors must pass MATH 3300 before attempting the required courses MATH 3321 ABSTRACT ALGEBRA I and MATH 3335 ANALYSIS I. It is strongly recommended that mathematics majors with little or no computer programming experience satisfy the computer programming requirement as early as possible with CSE 1310 INTRODUCTION TO COMPUTERS & PROGRAMMING, CSE 1311 INTRODUCTION TO PROGRAMMING FOR ENGINEERS, CSE 1320 INTERMEDIATE PROGRAMMING, CSE 1325 OBJECT-ORIENTED PROGRAMMING, or MAE 2360 NUMERICAL ANALYSIS & PROGRAMMING.

Advising Resources

First-time-in-college students should plan to speak to the math advisor when starting their second year. Transfer students should contact the math advisor after acceptance at UTA to create a degree plan and enroll in classes.

Bachelor of Science Degree in Mathematics to Master of Science Degree in Mathematics Fast Track

About This Program

The BS to MS Fast Track in Mathematics allows students to complete both a Bachelor's degree and a master's degree in mathematics within five years. Students fulfill the BS concentration in pure mathematics where three of the courses are at the graduate level. Students may then transition directly into the master's program with a concentration in general mathematics (thesis option) to complete both degrees in five years.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Mathematics BS (p. 1717)

Mathematics MS (General Math)

Admissions Criteria

For admission as an undergraduate, students should:

- Be within 30 SCH of graduation.
- Have completed 30 SCH at UTA.
- Have earned a GPA of 3.3 or better overall and 3.3 or better in their MATH courses.
- Have completed the following three courses, each with a minimum grade of B:
  - MATH 3300 INTRODUCTION TO PROOFS
  - MATH 3321 ABSTRACT ALGEBRA I
  - MATH 3335 ANALYSIS I

For automatic admission to the graduate program, students should also have completed 9 SCH of required graduate courses from the list below, each with a minimum grade of B. These courses will count for both the undergraduate and the graduate degree.

- MATH 5307 MATHEMATICAL ANALYSIS I
- MATH 5333 LINEAR ALGEBRA AND MATRICES
- MATH 5317 REAL ANALYSIS
- MATH 5322 COMPLEX VARIABLES I
- MATH 5331 ABSTRACT ALGEBRA I
- MATH 5338 NUMERICAL ANALYSIS I

Curriculum

BS Foundations		
Complete General Core and Mathematics Foundations per catalog.		54
Mathematics BS Pure Math Specialization		
MATH 2326	CALCULUS III	3
MATH 3300	INTRODUCTION TO PROOFS (satisfies Oral Communication Competency) [1]	3
MATH 3316	STATISTICAL INFERENCE	3
MATH 3318	DIFFERENTIAL EQUATIONS	3
MATH 3321	ABSTRACT ALGEBRA I [1]	3
MATH 3330	INTRODUCTION TO LINEAR ALGEBRA AND VECTOR SPACES	3

Minor in Mathematics

About This Program

Engineering majors seeking a math minor should refer to the College of Engineering section of this catalog for the requirements for the engineering math minor.

Students in non-engineering majors may minor in mathematics by taking 18 hours of mathematics courses with an average GPA in mathematics courses of 2.0, and with at least nine hours of 3000/4000 level courses. The courses that may be counted toward a math minor are MATH 1426 and above, except for capstone mathematics courses specifically for prospective middle or secondary grades mathematics teachers. Nine hours of the minor must be taken in residence.

Competencies

1. The student will gain additional knowledge and skills in mathematics to complement and support their work in their major.

Curriculum

Select 9 hours from all MATH courses (MATH 1426 and above) excluding capstone courses for middle and secondary grade teachers.	9
Select 9 hours of advanced-level (3000/4000-level) MATH courses excluding capstone courses for middle and secondary grade teachers.	9
Total Hours	**18**

EXCEPTIONS:

- MATH 3313is prohibited for BSCPE and BSIE majors.
- MATH 3318 and MATH 3319 are prohibited for BSME and BSAE majors.
- Only one of MATH 3319 or MATH 3330 3330 may be counted toward the minor.
- Only one of MATH 3318 or MATH 3319 may be counted toward the minor.

Advising Resources

First-time-in-college students should plan to speak to the math advisor when starting their second year. Transfer students should contact the math advisor after acceptance at UTA to create a degree plan and enroll in classes.

Physics

Department Overview

The UTA Department of Physics will prepare you for a rewarding career with our innovative education and world-class research programs. These programs are led by faculty and conducted in top-notch facilities, which equip students for careers in industrial, government, or academic research and leadership. Our specialized undergraduate degree programs offer an excellent foundation in physics, and our graduate programs provide advanced training in a collaborative research environment. UTA holds the Carnegie Classification's highest rating: R1 Doctoral Universities—very high research activity. Research and education go hand-in-hand and all students are encouraged to become active in research early in their academic careers.

COURSES

PHYS 1181. PROBLEMS IN MECHANICS. 1 Hour.
Primarily an independent study course involving problem-solving in general technical mechanics. The objective is to prepare the student whose background in physics is of a non-technical nature to do advanced study in curricula requiring technical physics. This course in combination with PHYS 1441 shall serve as an equivalent to PHYS 1443. Prerequisite: MATH 1426 and a grade of B or better in PHYS 1441. Department consent may be granted to take this course with Physics B AP score of 4 or 5.

PHYS 1182. PROBLEMS IN ELECTRICITY AND MAGNETISM. 1 Hour.
Primarily an independent study course involving problem-solving in general technical electricity and magnetism. The objective is to prepare the student whose background in physics is of a non-technical nature to do advanced study in curricula requiring technical physics. This course in combination with PHYS 1442 shall serve as an equivalent to PHYS 1444. Prerequisite: MATH 2425 and a grade of B or better in PHYS 1442. Department consent may be granted to take this course with Physics B AP score of 4 or 5.

PHYS 1188. SPECIAL PROBLEMS IN GENERAL PHYSICS. 1 Hour.
Primarily laboratory work and/or problem-solving in general technical physics. Prerequisite: PHYS 1441 or PHYS 1443 lecture credit equivalent or PHYS 1442 or PHYS 1444 lecture credit equivalent.

PHYS 1288. SPECIAL PROBLEMS IN GENERAL PHYSICS. 2 Hours.
Primarily laboratory work and/or problem-solving in general technical physics. Prerequisite: PHYS 1441 and PHYS 1442 lecture credit equivalent or PHYS 1443 and PHYS 1444 lecture credit equivalent.

PHYS 1300. INTRODUCTION TO MUSICAL ACOUSTICS. 3 Hours.
An introduction, for the music major, to the nature of periodic motion and its relation to music, characteristics of sound waves, sources of sound used in music, musical scales and temperament, mechanics of hearing, recording and reproduction of sound. May not be used to satisfy any of the requirements for a degree in physics.

PHYS 1301. PHYSICS FOR NON SPECIALISTS I. 3 Hours. (TCCN = PHYS 1305)
PHYS 1301 and 1302 constitute a one-year introductory course for liberal arts and business majors. How physics plays a role in everyday life; explanations of how things work. Helps develop analytical thinking. The first semester explains motion and forces and heat.

PHYS 1302. PHYSICS FOR NON SPECIALISTS II. 3 Hours. (TCCN = PHYS 1307)
Follows PHYS 1301 and explains sound, light, electricity and magnetism. Prerequisite: PHYS 1301 or permission from instructor.

PHYS 1351. ENERGY AND ENVIRONMENT. 3 Hours.
This course explores the fundamental laws of nature and natural processes related to energy production, transport, storage, and uses. The objective of this course is to provide students with an in-depth understanding of the Physics of Energy and its relation to the Earth Environment. The course is designed for non-science major students with two one-hour lectures (or one two-hour lecture) and one 2-hour laboratory per week.

PHYS 1441. GENERAL COLLEGE PHYSICS I. 4 Hours. (TCCN = PHYS 1401)
The first half of a one-year, non-calculus introductory physics course taken by pre-medical, pre-dental, biology and architectural majors and others. The study of mechanics, elasticity, fluids, heat and waves is supplemented by laboratory experiments. Familiarity with high school algebra and trigonometry is required.

PHYS 1442. GENERAL COLLEGE PHYSICS II. 4 Hours. (TCCN = PHYS 1402)
The second half of a one-year, non-calculus introductory physics course. Subject matter includes electricity and magnetism, light and optics, and modern physics. Prerequisite: PHYS 1441 or equivalent, or permission of instructor or student group.

PHYS 1443. GENERAL TECHNICAL PHYSICS I. 4 Hours. (TCCN = PHYS 2425)
The first half of a one-year technical course. Required for many science and engineering majors, exceeds premedical requirement. The study of physical phenomena in the fields of mechanics, heat, and waves. Concurrent enrollment in MATH 1426 (per prerequisite) is not recommended if no prior background in calculus. Prerequisite: MATH 1426 or consent of instructor.

PHYS 1444. GENERAL TECHNICAL PHYSICS II. 4 Hours. (TCCN = PHYS 2426)
The second half of a one-year technical course. The study of physical phenomena including electricity, magnetism, circuit theory, light, and optics. Prerequisites: PHYS 1443 or equivalent and MATH 2425 or concurrent enrollment.

PHYS 2311. MATHEMATICAL METHODS OF PHYSICS. 3 Hours.
Harmonic oscillators, waves, vector description of particles and fields, coordinate transformations, eigenvalue problems, and systems of linear equations. Prerequisites: PHYS 1444 or equivalent and MATH 2425.

PHYS 2315. INTRODUCTORY ASTROPHYSICS. 3 Hours.
This course introduces Science and Engineering majors to astrophysics. Subject matter includes the solar system, stellar properties and evolution, the Milky Way galaxy, normal and active galaxies, and cosmology. Prerequisite: PHYS 1444 or permission of the instructor.

PHYS 2321. COMPUTATIONAL PHYSICS. 3 Hours.
Development of computational techniques, including simulation, through applications to physical problems. A survey of topics including the multi-body problem, celestial mechanics, scattering, chaos, percolation, fractals, random processes, Fourier techniques in wave phenomena, Monte Carlo methods, and image reconstruction techniques. Prerequisite: PHYS 1444 or equivalent.

PHYS 3183. MODERN PHYSICS LABORATORY. 1 Hour.
Supplements the topics covered in PHYS 3313. Prerequisite: PHYS 3313 or concurrent enrollment.

PHYS 3313. INTRODUCTION TO MODERN PHYSICS. 3 Hours.
A brief introduction to the theories of quantum mechanics and statistical mechanics followed by a survey of atomic physics, conductors, semiconductors and modern electronic devices, nuclear and sub-nuclear physics. Prerequisites: PHYS 1444 or equivalent and MATH 2425.

PHYS 3315. ASTROPHYSICS AND COSMOLOGY. 3 Hours.
Diverse concepts in theoretical physics are applied to a wide range of astrophysical problems. Topics include stellar properties, spectra, evolution, radiation transport, nuclear reactions, degenerate matter, orbital mechanics, galactic dynamics, introductory general relativity and cosmology. Prerequisite: PHYS 3313 and MATH 3318 or MATH 3319.

PHYS 3316. ASTROBIOLOGY I. 3 Hours.
This is an interdisciplinary course between astrophysics, biology and geology. Topics include properties of life, origin and evolution of life on Earth, terrestrial geology and habitability, environmental forcings, extremophiles, mass extinctions, meteorites, searches for life in the solar system. Offered as BIOL 3316, GEOL 3316 and PHYS 3316; credit will be granted only once. Prerequisite: PHYS 1441 & PHYS 1442 or equivalent and PHYS 2315 or PHYS 3315, or permission from instructor. Prerequisites for Biology majors: PHYS 1441 & PHYS 1442 or equivalent.

PHYS 3321. INTERMEDIATE ELECTRICITY AND MAGNETISM. 3 Hours.
Vector algebra and vector calculus applied to electrostatics, magnetostatics, the study of dielectric materials, and boundary value problems. Prerequisite: PHYS 2311 and MATH 3318 or MATH 3319.

PHYS 3341. INTRODUCTION TO BIOLOGICAL PHYSICS. 3 Hours.
This course will cover four parts: Part I - History of Biological Physics and the general introduction of Cell biology; Part II - Physics of Biomaterials including polymer Physics; DNA & RNA; Protein Structures, Functions and Physics; Part III - Physics of life genetics including molecular motors, ATP functions, Photosynthesis and Physics of genetic regulations; and Part IV - Physics of biological detection including Physics of Radiation diagnosis; Optical Imaging; Magnetic Resonance Imaging and Ultrasound imaging. Prerequisite: PHYS 1442 or PHYS 1444 or equivalent.

PHYS 3342. INTRODUCTION TO NANO-BIO PHYSICS. 3 Hours.
The objective of this course is to provide students with an in-depth understanding of the physics of nanotechnology and its biological applications. The course is composed of two parts: nanoparticle physics and nano-bio physics. In the first part, the physics of nanotechnology will be introduced. The second part is the biological applications of nanotechnology, for which the focus will be on how to understand the physics of these applications. The understanding of the physical objectives for these applications will be helpful for the exploration of nano-biotechnology. Key advances from the recent literature will be reviewed and introduced to students as supplemental topics. Prerequisite: PHYS 1442 or PHYS 1444 or equivalent.

PHYS 3358. ASTROBIOLOGY II. 3 Hours.
This is an interdisciplinary course between astrophysics, biology and geology. Topics include basic properties of life, habitability of Earth, studies of possible life regarding Mars, Europa & Titan, space missions, exoplanets and exomoons, stellar habitable zones, multistellar systems, exoEarths, biomarkers, SETI, Fermi paradox, Drake equation, cosmology. Offered as BIOL 3358, GEOL 3358, and PHYS 3358; credit will be granted only once. Prerequisite: PHYS 1441 & PHYS 1442 or equivalent and PHYS 2315 or PHYS 3315, or permission from instructor. Prerequisites for Biology majors: PHYS 1441 & PHYS 1442 or equivalent. Note that Astrobiology I is strongly recommended to students to be taken prior to Astrobiology II, but is not a prerequisite.

PHYS 3360. PHYSICS OF THE HUMAN BODY. 3 Hours.
This course will explore the fundamental laws and natural processes related to the mechanics, fluid dynamics, optics, and biophysics of the human body. It is designed for kinesiology pre-health, biology and nursing students seeking to understand the foundations and biophysical principles of human life. Note that Kinesiology students seeking to apply to science based graduate programs are advised to take PHYS 1441 and PHYS 1442 so the prerequisite requirement of these courses will not preclude the students for whom PHYS 3360 is intended from taking the course. Prerequisite: PHYS 1441.

PHYS 3366. SPECIAL TOPICS IN PRE-COLLEGE PHYSICAL SCIENCE INSTRUCTION. 3 Hours.
A laboratory oriented curriculum for teaching physical science and/or physics is developed and experienced. The developed curriculum is particularly appropriate for pre-college instruction. May be repeated for credit as the subject matter changes, but not more than six hours credit may be accumulated. Prerequisite: junior standing, six hours of science, three hours of education, and consent of the instructor.

PHYS 3445. OPTICS. 4 Hours.
Fundamental principles of physical and geometric optics, absorption and scattering, Planck's quantum theory of radiation, diffraction, interference, light sources, and spectra. Prerequisites: PHYS 1444 or equivalent and MATH 2425.

PHYS 3446. NUCLEAR AND PARTICLE PHYSICS. 4 Hours.
The study of atomic nuclei and the fundamental constituents of matter. Topics include nuclear structure, radioactivity, nuclear reactions, fission, fusion, particles and their interactions, the standard model of particle physics, experimental methods, accelerators, and examples from current research topics. Prerequisite: PHYS 3313.

PHYS 3455. ELECTRONICS. 4 Hours.
A study of electronic components and quantum devices and their application to circuits and instrumentation. Prerequisites: PHYS 3313 and MATH 2425.

PHYS 4081. UNDERGRADUATE RESEARCH IN PHYSICS. 0 Hours.
Independent research conducted on a selected topic under the supervision of a member of the Physics faculty. This course may be repeated. This is a non-credit course so cannot be used to meet degree requirements. Prerequisite: Permission of instructor.

PHYS 4117. INDIVIDUAL LEARNING BY SEMINAR. 1 Hour.
Individual instruction on using the seminar as a model of learning current topics in physics. An individual report is required. Prerequisite: 18 hours of physics and senior standing.

PHYS 4171. ADVANCED OPTICS LABORATORY. 1 Hour.
Special laboratory projects in advanced optics. Prerequisite: PHYS 3445 or permission of the instructor.

PHYS 4181. SPECIAL PROBLEMS. 1 Hour.
Selected projects in research or teaching laboratories, which may be repeated in any order for a total credit not to exceed four hours, unless authorized by the undergraduate advisor. Prerequisite: Permission from instructor and Physics undergraduate advisor.

PHYS 4185. ADVANCED ELECTRICITY AND MAGNETISM LABORATORY. 1 Hour.
Supplements the topics covered in PHYS 3321 and PHYS 4324. Prerequisite: PHYS 4324 or concurrent enrollment.

PHYS 4191. SPECIAL TOPICS IN PHYSICS. 1 Hour.
Selected topics arranged on an individual basis, which may be repeated with permission from instructor and Physics undergraduate advisor. Prerequisite: as determined for topic or permission from instructor.

PHYS 4271. ADVANCED OPTICS LAB. 2 Hours.
Special laboratory projects in advanced optics. Prerequisite: PHYS 3445 or permission of the instructor.

PHYS 4281. SPECIAL PROBLEMS. 2 Hours.
Selected projects in research or teaching laboratories, which may be repeated in any order for a total credit not to exceed four hours, unless authorized by the undergraduate advisor. Prerequisite: permission from the instructor and the Physics undergraduate advisor.

PHYS 4291. SPECIAL TOPICS. 2 Hours.
Selected topics arranged on an individual basis, which may be repeated with permission from instructor and Physics undergraduate advisor. Prerequisite: as determined for topic or permission from instructor.

PHYS 4315. THERMODYNAMICS AND STATISTICAL MECHANICS. 3 Hours.
Topics in classical thermodynamics include the laws of thermodynamics, Gibbs' and Helmholtz's free energies, the Maxwell relations, heat capacities, entropy change calculations, phase and chemical changes. Statistical mechanics centers on the partition function and its applications, such as the entropy of an ideal gas, the Maxwell velocity distribution, the heat capacity of a solid, photon statistics, and blackbody radiation. Fermi-Dirac and Bose-Einstein statistics. Prerequisite: PHYS 3313 and MATH 2326 or permission of the instructor.

PHYS 4319. ADVANCED MECHANICS. 3 Hours.
Coupled oscillators, central forces, Lagrange's equations, Hamilton's canonical equations, the moment of inertia tensor, and the application of Euler's angles to rotational motion. Prerequisite: PHYS 2311, PHYS 3321, and MATH 3318 or MATH 3319, or permission of the instructor.

PHYS 4324. ADVANCED ELECTRICITY AND MAGNETISM. 3 Hours.
Electromagnetic phenomena based on Maxwell's equations and particle-field interactions. Prerequisite: PHYS 3321 or permission of the instructor.

PHYS 4325. SOLID STATE PHYSICS. 3 Hours.
Classification of crystalline solids and elastic and thermal properties, electric and magnetic properties, and electronic properties of solids. An introduction to current research problems. Prerequisite: PHYS 4315 or permission of the instructor.

PHYS 4326. INTRODUCTION TO QUANTUM MECHANICS. 3 Hours.
Schrodinger equation and implications, the free particle, the one-electron atom, the potential barrier, and perturbation theory. Prerequisite: PHYS 3313, MATH 3318 or MATH 3319, or permission of the instructor.

PHYS 4327. INTRODUCTION TO QUANTUM MECHANICS II. 3 Hours.
This is a continuation of Introduction to Quantum Mechanics (PHYS 4326). The topics that will be covered will include: time-independent perturbation theory for non-degenerate states, degenerate perturbation theory, atoms with one or two electrons and molecules, Fermi and Bose gases, time-dependent perturbation theory, scattering theory, and introduction to relativistic quantum mechanics. Prerequisite: PHYS 4326 or permission from instructor.

PHYS 4343. RESEARCH METHODS - UTEACH. 3 Hours.
The purpose of this course is to present UTeach students with the tools scientists use to solve scientific problems. These tools enable scientists to develop new knowledge and insights, the most important of which are eventually presented in textbooks and taught in more conventional science classes. These tools include: design of experiments to answer scientific questions; use of statistics to interpret experimental results and deal with sampling errors; mathematical modeling of scientific phenomena; finding and reading articles in the current scientific literature; applying scientific arguments in matters of social importance; writing scientific papers; reviewing scientific papers; oral presentation of scientific work; use of probes and computers to gather and analyze data; ethical treatment of human subjects; laboratory safety. Research Methods is primarily a laboratory course, and most of these topics are developed in connection with 4 independent inquiries UTeach students design and carry out. Written inquiries will be evaluated as examples of scientific writing. Prerequisite: C or better in SCIE 1201 or SCIE 1334 or concurrent enrollment; junior or senior standing.

PHYS 4391. SPECIAL TOPICS. 3 Hours.
Selected topics arranged on an individual basis, which may be repeated with permission from instructor and Physics undergraduate advisor. Prerequisite: as determined for topic or permission from instructor.

PHYS 4392. MEDICAL PHYSICS 1. 3 Hours.
The study of the basic physics behind ionizing radiation therapy, radiation generation modalities, dose calculation, treatment planning, and modern radiation therapeutic techniques. Prerequisite: PHYS 1443, PHYS 1444, PHYS 2311 and MATH 3318 or MATH 3319.

PHYS 4393. HONORS THESIS IN PHYSICS. 3 Hours.
Required of all students in the University Honors College. During the senior year the honors physics major will perform a research project under the direction of a Physics Department faculty member.

PHYS 5193. READINGS IN PHYSICS. 1 Hour.
PHYS 5193 is structured to allow graduate students to delve into specific areas of physics that align with their research interests or academic goals. This course may be repeated. The course typically involves: Independent Reading: Students select and study advanced physics literature, including research papers, reviews, and textbooks, to gain a comprehensive understanding of a particular topic. Faculty Supervision: A faculty member guides the student through the reading material, providing insights, clarifying complex concepts, and ensuring academic rigor. Critical Analysis: Students are expected to critically analyze the material, identifying key arguments, methodologies, and conclusions. Synthesis and Reporting: The culmination of the course often involves the student synthesizing their findings into a written report or presentation, demonstrating their grasp of the subject matter.

PHYS 5194. RESEARCH IN PHYSICS. 1 Hour.
Conference course with laboratory. May be repeated for credit. In PHYS 5194, students collaborate with faculty advisors to identify research topics, develop methodologies, and conduct experiments or theoretical analyses. The course emphasizes the development of research skills, critical thinking, and scientific communication. Students are expected to contribute to ongoing research initiatives or initiate independent projects that align with their academic interests and career goals.

PHYS 5294. RESEARCH IN PHYSICS. 2 Hours.
Conference course with laboratory. May be repeated for credit. PHYS 5294 allows students to apply theoretical knowledge to practical research endeavors, fostering skills essential for a career in physics research. Students may work on experimental, theoretical, or computational projects, contributing to ongoing research initiatives or developing independent studies. The course emphasizes the development of research methodologies, critical analysis, and scientific communication.

PHYS 5305. CHAOS AND NONLINEAR DYNAMICS. 3 Hours.
Introduction to basic principles and concepts of chaos theory and their applications in diverse fields of research. Topics include chaotic and non-chaotic systems, stability analysis and attractors, bifurcation theory, routes to chaos and universality in chaos, iterated maps, Lyapunov exponents, fractal dimensions, multifractals, hamiltonian chaos, quantum chaos, controlling chaos, self-organized systems, and theory of complexity.

PHYS 5306. CLASSICAL MECHANICS. 3 Hours.
General principles of analytical mechanics, the kinematics of rigid bodies, canonical transformation, Hamilton-Jacobi theory. The course emphasizes analytical methods and provides a foundational understanding essential for various fields in physics and engineering.

PHYS 5307. QUANTUM MECHANICS I. 3 Hours.
PHYS 5307 provides a rigorous introduction to the principles and mathematical formulations of quantum mechanics. The course encompasses the following key topics: Matrix Formulation: Understanding quantum states and observables through linear algebra and operator theory. Theory of Radiation: Exploring the interaction between matter and electromagnetic radiation, including emission and absorption processes. Angular Momentum: Analyzing the quantization of angular momentum and its implications in atomic and molecular systems. Perturbation Methods: Applying approximation techniques to solve complex quantum systems that cannot be addressed exactly.

PHYS 5308. QUANTUM MECHANICS II. 3 Hours.
PHYS 5308 focuses on the following key topics: Approximate Methods: Exploration of techniques such as time-independent and time-dependent perturbation theory, and the variational method, which are essential for analyzing systems where exact solutions are unattainable. Symmetry and Unitary Groups: Study of the role of symmetry in quantum mechanics, including the application of group theory and unitary transformations to understand conservation laws and selection rules. Scattering Theory: Introduction to the principles of quantum scattering, including partial wave analysis and the Born approximation, which are fundamental in understanding interactions at the quantum level. Prerequisite: PHYS 5307.

PHYS 5309. ELECTROMAGNETIC THEORY I. 3 Hours.
PHYS 5309 covers the following key topics: Boundary Value Problems in Electrostatics: Techniques for solving problems involving electric fields in various configurations. Boundary Value Problems in Magnetostatics: Analysis of magnetic fields in static conditions and their boundary conditions. Maxwell's Equations: Comprehensive study of the fundamental equations governing electromagnetism, including their derivation and applications.

PHYS 5310. STATISTICAL MECHANICS. 3 Hours.
PHYS 5310 delves into the theoretical foundations of statistical mechanics, focusing on the statistical description of systems composed of a large number of particles. Key topics typically include: Ensemble Theory: Microcanonical, canonical, and grand canonical ensembles. Classical and Quantum Statistics: Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac distributions. Partition Functions: Calculation and applications to thermodynamic quantities. Applications: Ideal gases, blackbody radiation, and phase transitions. This course also covers Fundamental principles of statistical mechanics, Liouville theorem, entropy, Fermi-Dirac distribution, Bose-Einstein distribution, Einstein condensation, density matrix, quantum statistical mechanics, kinetic methods, and transport theory.

PHYS 5311. MATHEMATICAL METHODS IN PHYSICS I. 3 Hours.
PHYS 5311 provides students with a comprehensive understanding of mathematical tools essential for advanced studies in physics. The course emphasizes both algebraic structures and analytical techniques, preparing students to tackle complex problems in various areas of physics. Material covered includes algebraic and analytical methods used in modern physics. Algebra: matrices, groups, and tensors, with application to quantum mechanics, the solid state, and special relativity. Analysis: vector calculus, ordinary and partial differential equations, with applications to electromagnetic and seismic wave propagation.

PHYS 5312. MATHEMATICAL METHODS IN PHYSICS II. 3 Hours.
Continuation of PHYS 5311 with a selection from the following topics. Algebra: matrix representations of the symmetric and point groups of solid state physics, matrix representations of the continuous groups O(3), SU(2), SU(3), SL(2,C), general covariance. Analysis: further study of analytic functions, Cauchy's theorem, Green's function techniques, orthogonal functions, integral equations. Prerequisite: PHYS 5311.

PHYS 5313. ELECTROMAGNETIC THEORY II. 3 Hours.
PHYS 5313 emphasizes a modern tensorial approach to classical electrodynamics, covering the following key topics of classical electrodynamics such as: force on and field of a moving charge, derivation and application of 4-vector potential, Maxwell's equations in tensor form, field momentum and radiation. Prerequisite: PHYS 5309.

PHYS 5314. ADVANCED OPTICS. 3 Hours.
The curriculum of PHYS 5314 encompasses a range of advanced topics in optics, including: Electromagnetic Wave Equations: Study of the fundamental equations governing the behavior of electromagnetic waves. University Catalog - UT Arlington+1UTA CDN+1 Theory of Diffraction: Analysis of how waves bend around obstacles and openings, with applications to optical systems. Radiation Scattering and Dispersion: Examination of how light interacts with matter, including the spreading of light into its component colors. Coherence and Laser Optics: Exploration of the properties of coherent light sources, such as lasers, and their applications. Additional Advanced Topics: Discussion of current and emerging areas of interest in the field of optics.

PHYS 5315. SOLID STATE I. 3 Hours.
PHYS 5315 covers the following key topics: Crystal Structure: Examination of the geometric arrangement of atoms in solids, including unit cells, lattice types, and symmetry operations. Lattice Vibrations: Study of phonons and their role in the thermal and electrical properties of materials. Thermal Properties: Analysis of heat capacity, thermal expansion, and thermal conductivity in solids. Band Theory of Solids: Introduction to electronic band structures, including the formation of energy bands and their implications for electrical conductivity.

PHYS 5316. SOLID STATE II. 3 Hours.
Course focuses on the advanced physical properties of crystalline solids. It builds upon the foundational concepts introduced in PHYS 5315 (Solid State I), delving deeper into the electrical, magnetic, and optical phenomena that govern solid-state systems. PHYS 5316 explores the following key topics: Electrical Properties of Crystalline Solids: Study of charge transport mechanisms, conductivity, and the role of band structures in determining electrical behavior. University Catalog - UT Arlington+2University Catalog - UT Arlington+2University Catalog - UT Arlington+2 Magnetic Properties: Examination of magnetic ordering, susceptibility, and the interaction of magnetic fields with solid materials. Magnetic Resonance: Introduction to techniques such as Nuclear Magnetic Resonance (NMR) and Electron Spin Resonance (ESR), and their applications in probing material properties. Optical Phenomena: Analysis of light-matter interactions, including absorption, reflection, and emission processes in solids. Prerequisite: PHYS 5315.

PHYS 5317. STATISTICAL MECHANICS II. 3 Hours.
PHYS 5317 explores a range of topics that are central to understanding critical phenomena and non-equilibrium systems. Key areas of study include: Fluctuations and Critical Phenomena: Examination of how small changes at the microscopic level can lead to significant macroscopic effects near critical points. The Ising Model: Study of this mathematical model to understand phase transitions and magnetic properties of materials. The Master Equation: Analysis of time evolution in systems with probabilistic transitions between states. Transport in Solids: Investigation of how particles, energy, and other physical quantities move through solid materials. Chaos: Exploration of deterministic systems that exhibit unpredictable behavior due to sensitivity to initial conditions. Prerequisite: PHYS 5310.

PHYS 5319. MATHEMATICAL METHODS IN PHYSICS III. 3 Hours.
PHYS 5319 covers a range of topics in numerical and computational methods, including: Numerical Differentiation and Integration: Techniques for approximating derivatives and integrals, crucial for analyzing physical systems. Interpolation and Extrapolation: Methods for estimating values within and beyond the range of known data points. Solving Differential and Integral Equations: Numerical approaches to tackle ordinary and partial differential equations, as well as integral equations commonly encountered in physics. Statistical Analysis: Application of statistical methods to interpret and analyze physical data. Scientific Computing Libraries: Utilization of specialized software libraries to facilitate complex computations. Artificial Intelligence Programming: Introduction to AI techniques relevant to physical problem-solving.

PHYS 5320. QUANTUM MECHANICS III. 3 Hours.
PHYS 5320 offers an in-depth study of: Quantum Theory of Radiation: Exploring the interaction between matter and electromagnetic radiation, including emission and absorption processes. Relativistic Quantum Equations: Studying equations that merge quantum mechanics with special relativity, such as the Dirac and Klein-Gordon equations. Elements of Quantum Field Theory: Introducing the framework that treats particles as excited states of underlying fields, fundamental in understanding particle physics. Symmetries and Gauge Theories: Analyzing how symmetries lead to conservation laws and exploring gauge theories that form the basis of fundamental interactions. Prerequisite: PHYS 5308 and PHYS 5312.

PHYS 5325. INTRODUCTION TO ELEMENTARY PARTICLES I. 3 Hours.
PHYS 5325 introduces students to the fundamental constituents of matter and the fundamental forces of nature. Key topics include: Overview of Particles and Forces: Understanding the basic building blocks of matter and the interactions between them. Particle Detectors and Accelerators: Exploring the tools and technologies used to detect and study elementary particles. Invariance Principles and Conservation Laws: Examining the symmetries and conservation laws that govern particle interactions. The Standard Model: Studying the theoretical framework that describes the electromagnetic, weak, and strong nuclear interactions. Electromagnetic, Weak, Strong, and Unified Interactions: Analyzing the fundamental forces and their unification.

PHYS 5326. INTRODUCTION TO ELEMENTARY PARTICLE PHYSICS II. 3 Hours.
PHYS 5326 focuses on advanced topics in particle physics, including: Systematics of the Quark Model: An in-depth exploration of quark classifications, their properties, and how they combine to form hadrons. Fundamental Interactions of Elementary Particles: A detailed study of the four fundamental forces-gravitational, electromagnetic, weak, and strong-and their roles in particle interactions. Spin and Relativistic Kinematics: Examination of particle spin, angular momentum, and the principles of relativistic motion as they apply to high-energy particles. Dirac Equation: Analysis of the Dirac equation's formulation and its significance in describing fermions and predicting antimatter. Standard Electroweak Model: Understanding the unification of electromagnetic and weak interactions within the Standard Model framework. Prerequisite: PHYS 5325.

PHYS 5328. SURFACE PHYSICS. 3 Hours.
PHYS 5328 delves into the following key areas: Experimental and Theoretical Methods: Techniques for analyzing solid surfaces, including various spectroscopy and microscopy methods. Geometric and Electronic Structures: Study of the arrangement of atoms and electronic states at the surfaces of metals and semiconductors. Reduced Dimensionality Systems: Investigation of surfaces as two-dimensional systems, which exhibit unique physical properties compared to their bulk counterparts. Adsorption Phenomena: Examination of how atoms and molecules adhere to surfaces, influencing surface chemistry and catalysis. Thin Film Growth: Understanding the processes involved in the formation of thin films, which are essential in various technological applications.

PHYS 5330. PHYSICS OF SEMICONDUCTOR PROCESSING AND CHARACTERIZATION. 3 Hours.
This course provides an in-depth exploration of the physical principles underlying semiconductor fabrication processes and the techniques used for material and device characterization. It is designed to equip students with both theoretical knowledge and practical skills relevant to the semiconductor industry and research. Selection from the following topics: physics of crystal growth, lattice defects, impurity diffusion, ion-implantation, thin film growth and plasma etching. Physics of characterization techniques utilizing resistivity, carrier mobility and lifetimes, electrons, x-rays, ions, Rutherford backscattering, neutron activation analysis, positron annihilation spectroscopy, deep-level transient spectroscopy.

PHYS 5381. MECHANICS & HEAT FOR TEACHERS. 3 Hours.
This course is intended for students who wish to achieve a higher level of knowledge and effectiveness in fundamental physics (not available for M.S. or Ph.D. credit in Physics). Topics include: Newton's Laws of Motion: Understanding the principles governing the motion of objects and their applications. Gravitation and Planetary Motion: Exploring the laws of universal gravitation and the mechanics of celestial bodies. Thermal and Statistical Physics: Examining the fundamental laws of thermodynamics and the statistical behaviors of systems. Oscillatory Motion, Waves, and Sound: Analyzing periodic motions, wave propagation, and acoustic phenomena.

PHYS 5382. ELECTROMAGNETISM FOR TEACHERS. 3 Hours.
This course is intended for students who wish to achieve a higher level of knowledge and effectiveness in fundamental physics (not available for M.S. or Ph.D. credit in Physics). Topics include: 1) Static charges, current flow, electric and magnetic fields; 2) simple DC/AC electrical circuits including examples from household circuit and practical electronic devices; 3) light and optics including examples such as cameras, microscopes and telescopes. Replaceable experiments will be demonstrated throughout the course.

PHYS 5383. MODERN PHYSICS FOR TEACHERS. 3 Hours.
This course is intended for students who wish to achieve a higher level of knowledge and effectiveness in fundamental physics (not available for M.S. or Ph.D. credit in Physics). Topics include: 1) Introduction to special relativity and quantum theory; 2) light and radiation; 3) applications to modern electrical devices; 4) nuclear and particle physics.

PHYS 5385. PHYSICS LAB TECHNIQUES FOR TEACHERS. 3 Hours.
This course is intended for students who wish to achieve a higher level of knowledge and effectiveness in fundamental physics (not available for M.S. or Ph.D. credit in Physics). Experiments demonstrating various topics are covered. Experiments include gravitational acceleration heat flow, harmonic motion, sound, electric magnetic fields, electric circuits, optic, x-rays and nuclear radiation.

PHYS 5391. SPECIAL TOPICS IN PHYSICS. 3 Hours.
Topics in physics, particularly from areas in which active research is being conducted, are assigned to individuals or small groups for intensive investigations. May be repeated for credit.

PHYS 5392. MEDICAL PHYSICS 2. 3 Hours.
This course is the second part of Medical Physics, which involves in depth learning of clinic medical imaging modalities, such as X-ray computed tomography (CT), magnetic resonance imaging (MRI), ultrasound, and nuclear medicine (gamma imaging, single photon emission computed tomography (SPECT) and positron emission tomography (PET)). Prerequisite: MATH 3318 or MATH 3319, PHYS 4392.

PHYS 5393. READINGS IN PHYSICS. 3 Hours.
Conference course. May be repeated for credit.

PHYS 5394. RESEARCH IN PHYSICS. 3 Hours.
Conference course with laboratory. May be repeated for credit.

PHYS 5398. THESIS. 3 Hours.

PHYS 5694. RESEARCH IN PHYSICS. 6 Hours.
Conference course with laboratory. May be repeated for credit.

PHYS 5698. THESIS. 6 Hours.

PHYS 6301. METHODS OF APPLIED PHYSICS I--ELECTRONICS. 3 Hours.
The analysis and design of electronic circuits for use in the laboratory. Transistors and integrated circuits in analog instrumentation. Digital logic. Information theory and signal processing.

PHYS 6302. METHODS OF APPLIED PHYSICS II--COMPUTERS IN PHYSICS. 3 Hours.
Applications of computers in physics. Acquisition and analysis of experimental data. Vector and parallel processing, image processing, simulation.

PHYS 6303. METHODS OF APPLIED PHYSICS III--SPECTROSCOPY. 3 Hours.
The principles (interactions, cross-sections, elastic and inelastic scattering, diffraction, coherence), the methodologies (sources, detectors, visualization), and applications (structure, dynamics, composition, excitations) of neutral and charged particle spectroscopies to condensed matter physics and materials science.

PHYS 6304. APPLIED PHYSICS INTERNSHIP. 3 Hours.
Applied physics and engineering research and training in industry or other science or engineering departments of U.T. Arlington or other institutions requiring applied physicists. Faculty supervision and submission of technical progress reports required.

PHYS 6391. SELECTED TOPICS IN APPLIED PHYSICS. 3 Hours.
Topics chosen from research areas in the Department of Physics or at one of the institutions or corporations participating in the traineeship program in applied physics; emphasis on industrial and engineering applications. May be repeated for credit.

PHYS 6399. DISSERTATION. 3 Hours.

PHYS 6604. APPLIED PHYSICS INTERNSHIP. 6 Hours.
Applied physics and engineering research and training in industry or other science or engineering departments of U.T. Arlington or other institutions requiring applied physicists. Faculty supervision and submission of technical progress reports required.

PHYS 6699. DISSERTATION. 6 Hours.

PHYS 6904. APPLIED PHYSICS INTERNSHIP. 9 Hours.
Applied physics and engineering research and training in industry or other science or engineering departments of U.T. Arlington or other institutions requiring applied physicists. Faculty supervision and submission of technical progress reports required.

PHYS 6999. DISSERTATION. 9 Hours.

PHYS 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

Doctor of Philosophy in Physics and Applied Physics

About This Program

The Doctor of Philosophy in Physics and Applied Physics combines the traditional elements of a science doctoral program with courses in specifically applied topics. It is designed to produce highly trained professionals with a broad perspective of the subject which may prepare them equally well for careers in academia or government or industry. Current research in the department is predominantly in the areas of condensed matter physics, medical biophysics, astrophysics, space physics, and high-energy and nuclear physics.

Competencies

1. PhD graduates will demonstrate a comprehensive and in-depth understanding of physics, particularly in the area of their dissertation research and related subfields.
2. PhD graduates will demonstrate advanced proficiency in experimental and/or theoretical methods. This includes, as relevant to their research, the use of specialized instrumentation, computational tools, advanced theoretical frameworks, and other techniques central to their area of study.
3. PhD graduates will be able to communicate complex physics concepts and original research findings clearly and effectively to both expert audiences in the field and the broader scientific community.
4. PhD graduates will be capable of independently formulating research questions, developing testable hypotheses, designing and conducting investigations, and critically evaluating results within the framework of scientific inquiry.

Admissions Criteria

UNCONDITIONAL ADMISSION

For unconditional admission to the Doctor of Philosophy program, an applicant must have a bachelor's degree in physics or a closely related field and satisfy the general admission requirements of the University, including a minimum graduate coursework GPA of 3.0 on a 4.0 scale, as calculated by Graduate Admissions and favorable letters of recommendation from individuals able to assess the applicant's potential for success in a PhD program. In addition, the applicant should have minimal GRE scores of 143 in Verbal and 151 in Quantitative.

Applicants not meeting the minimum requirements of the department or the University for either program may still be considered for unconditional acceptance if other information in their application indicates a reasonable probability of success in graduate studies in physics.

PROBATIONARY ADMISSION

If an applicant does not meet a majority of standards for unconditional admission outlined above, they may be considered for probationary admission after careful examination of their application materials. Probationary admission requires that the applicant receive a B or better in their first 12 hours of graduate coursework at UT Arlington.

DEFERRED AND PROVISIONAL ADMISSION

A deferred application decision may be granted when a file is incomplete or when a denied decision is not appropriate. An applicant unable to supply all required documentation prior to the admission deadline but who otherwise appears to meet admission requirements may be granted provisional admission.

DENIAL OF ADMISSION

A candidate may be denied admission if he or she have less than satisfactory performance on the admission criteria described above.

SCHOLARSHIPS AND FELLOWSHIPS

Students who are admitted will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the Fall semester, must have a GPA of 3.0 in their last 60 undergraduate credit hours plus any graduate credit hours as calculated by the Graduate School, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain their fellowships.

Curriculum

Foundations		
Select 39 hours from the following under the guidance of the supervising committee:		39
Traditional Core		
PHYS 5306	CLASSICAL MECHANICS	
PHYS 5307	QUANTUM MECHANICS I	
PHYS 5308	QUANTUM MECHANICS II	
PHYS 5309	ELECTROMAGNETIC THEORY I	
PHYS 5313	ELECTROMAGNETIC THEORY II	
PHYS 5310	STATISTICAL MECHANICS	
PHYS 5311	MATHEMATICAL METHODS IN PHYSICS I	
PHYS 5312	MATHEMATICAL METHODS IN PHYSICS II

Master of Science in Physics

About This Program

The Master of Science in Physics is designed to give the student advanced training in all fundamental areas of physics through formal courses and the options of some degree of specialization or participation in original research in one of a variety of projects directed by the faculty.

The objectives of the Master of Science in Physics degree include:

1. developing the individual’s ability to do independent research,
2. preparing students for more advanced study in Physics and
3. providing advanced training to those employed in technical and business areas in which Physics at the master's level is necessary for efficient performance.

Competencies

1. Program graduates will have a broad knowledge of Physics both inside and outside of their chosen area of specialization.
2. Program graduates will have a general knowledge of how physics research is performed and the Physics literature related to their thesis project in the case when the thesis option is selected.
3. Program graduates will be able to communicate scientific concepts and findings in oral presentations to others in their field as well as to the general scientific community.
4. Program graduates will be able to communicate scientific concepts and findings in writing with others in their field as well as the general scientific community.
5. Program graduates will be able to articulate the skills and knowledge they have gained and apply them to future career or educational goals.

Admissions Criteria

UNCONDITIONAL ADMISSION

For unconditional admission to the Master of Science in Physics, the candidate must satisfy the general admission requirements of the University, including a minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by Graduate Admissions and favorable letters of recommendation from individuals able to assess the applicant's potential for success in a Masters program. In addition, the candidate should have satisfactorily completed at least 24 undergraduate hours of advanced physics and supporting courses and should have minimal GRE scores of 143 in Verbal and 151 in Quantitative.

Applicants not meeting the minimum requirements of the department or the University for either program may still be considered for unconditional acceptance if other information in their application indicates a reasonable probability of success in graduate studies in physics.

PROBATIONARY ADMISSION

If an applicant does not meet a majority of standards for unconditional admission outlined above, they may be considered for probationary admission after careful examination of their application materials. Probationary admission requires that the applicant receive a B or better in their first 12 hours of graduate coursework at UT Arlington.

DEFERRED AND PROVISIONAL ADMISSION

A deferred application decision may be granted when a file is incomplete or when a denied decision is not appropriate. An applicant unable to supply all required documentation prior to the admission deadline but who otherwise appears to meet admission requirements may be granted provisional admission.

DENIAL OF ADMISSION

A candidate may be denied admission if he or she have less than satisfactory performance on the admission criteria described above.

SCHOLARSHIPS AND FELLOWSHIPS

Students who are admitted will be eligible for available scholarship and/or fellowship support. Award of scholarships or fellowships will be based on consideration of the same criteria utilized in admission decisions. To be eligible, candidates must be new students coming to UT Arlington in the Fall semester, must have a GPA of 3.0 in their last 60 undergraduate credit hours plus any graduate credit hours as calculated by Graduate Admissions, and must be enrolled in a minimum of 6 hours of coursework in both long semesters to retain their fellowships.

Curriculum

THESIS OPTION

Foundations		
Select 18 hours of 5000/6000 PHYS courses in consultation with the Graduate Advisor.		18
Select 6 hours of 5000/6000 level courses in physics, mathematics, chemistry, data sciences, earth & environmental sciences, biology, or engineering approved by the Graduate Advisor.		6
Thesis		
Complete 6 hours in the following:		6
PHYS 5398	THESIS	

PHYS 5698	THESIS	
Total Hours		**30**

NON-THESIS OPTION

Foundations	
Select 27 hours of 5000/6000 PHYS courses in consultation with the Graduate Advisor.	27
Select 9 hours of 5000/6000 level courses in physics, mathematics, chemistry, data sciences, earth & environmental sciences, biology, or engineering approved by the Graduate Advisor.	9
Total Hours	**36**

Non-thesis students are required to pass an oral comprehensive exam in the last semester.

Bachelor of Art in Physics

About This Program

The Bachelor of Arts degree in Physics is intended for students who seek a broader education while retaining a firm foundation in Physics.

Physics majors are encouraged to participate in research projects for course credit or financial reward under faculty guidance. This allows undergraduate students to gain hands-on experience in a variety of research disciplines, including astrophysics, biophysics, computational physics, high-energy physics, medical physics, optics, space physics, and theoretical and experimental condensed matter physics.

Competencies

1. Program graduates will have a solid understanding of core physics principles, including mechanics, thermodynamics, electromagnetism, and quantum mechanics. Additionally, students will develop a strong foundation in calculus, differential equations, and linear algebra.
2. Program graduates will be able to demonstrate analytical reasoning, mathematical proficiency, and communication skills.
3. Program graduates will be able to apply physics principles to solve complex problems, both open-ended and structured.
4. Program graduates will gain critical thinking skills by analyzing data, interpreting results, and evaluating different approaches.
5. Program graduates will gain effective communication skills that are essential for clearly explaining complex scientific concepts, both orally and in writing.
6. Program graduates will acquire skills to analyze and interpret data from experiments and observations.

Admissions Criteria

Students considering a Physics major should schedule an appointment with the undergraduate advisor in Physics to discuss admissions criteria and degree options.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students are required to complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Life & Physical Sciences select:		
PHYS 1443 & PHYS 1444	GENERAL TECHNICAL PHYSICS I and GENERAL TECHNICAL PHYSICS II	
For Mathematics select:		
MATH 1426 & MATH 2425	CALCULUS I and CALCULUS II	
For US history select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Physics Foundations		
Additional hours required in core.		4
Communication competence satisfied by PHYS 4117		
Select one of the following for Computer Science:		3
CSE 1311	INTRODUCTION TO PROGRAMMING FOR ENGINEERS	
PHYS 2321	COMPUTATIONAL PHYSICS	
MATH 3345	NUMERICAL ANALYSIS AND COMPUTER APPLICATIONS	
Another suitable course approved by a Physics undergraduate advisor or the chair of the Department of Physics		
Select two courses for majors offered in the departments of Biology, Chemistry & Biochemistry, and/or Earth & Environmental Sciences.		8
MATH 2326	CALCULUS III	3
MATH 3319	DIFFERENTIAL EQUATIONS & LINEAR ALGEBRA	3
or MATH 3318	DIFFERENTIAL EQUATIONS	
Select 4 hours in Modern or Classical Languages.		4
Physics Specialization		
PHYS 2311	MATHEMATICAL METHODS OF PHYSICS	3
PHYS 3313	INTRODUCTION TO MODERN PHYSICS	3
PHYS 3183	MODERN PHYSICS LABORATORY	1
PHYS 3321	INTERMEDIATE ELECTRICITY AND MAGNETISM	3
PHYS 4117	INDIVIDUAL LEARNING BY SEMINAR	1

PHYS 4315	THERMODYNAMICS AND STATISTICAL MECHANICS	3
PHYS 4326	INTRODUCTION TO QUANTUM MECHANICS	3
Select 3-4 PHYS courses approved by Physics undergraduate advisor and/or chair of the Department of Physics.		11
Electives and Minor		
Select a minor of 18 hours in consulation with an adivsor.		18
Select electives sufficient to complete 120 hours; 36 hours must be completed at the 3000/4000 level.		7
Total Hours		**120**

SUGGESTED COURSE SEQUENCE

Details of a personal course sequence should be made with the guidance of the Physics undergraduate advisor, particularly since many courses in Physics are not offered every semester. For all entering freshmen, it is important to begin the mathematics sequence, starting with MATH 1426 CALCULUS I, in the first semester.

First Year

First Semester	Hours	Second Semester	Hours
MATH 1426	4	PHYS 1443	4
ENGL 1301	3	MATH 2425	4
BIOL, CHEM, or GEOL course for majors	4	ENGL 1302	3
HIST 1301	3	HIST 1302	3
	14		**14**

Second Year

First Semester	Hours	Second Semester	Hours
PHYS 1444	4	PHYS 2311	3
MATH 2326	3	PHYS 3313	3
MATH 3319 or 3318	3	PHYS 3183	1
Minor course	3	BIOL, CHEM, or GEOL course for majors	4
Creative Arts	3	Minor course	3
	16		**14**

Third Year

First Semester	Hours	Second Semester	Hours
PHYS 3321	3	Approved PHYS elective	4
Minor course	3	Minor course	3
Modern/Classical language course	4	Computer Science course	3
Approved PHYS elective	4	POLS 2312	3
POLS 2311	3	Social & Behavoiral Science	3
	17		**16**

Fourth Year

First Semester	Hours	Second Semester	Hours
PHYS 4315	3	PHYS 4117	1
PHYS 4326	3	Approved PHYS elective	3
Minor course	3	Foundational Component Area	3
Language. Philosophy, and Culture	3	Minor course	3
General Elective	3	General Elective(s)	4
	15		**14**

Total Hours: 120

Bachelor of Science in Physics

About This Program

The Bachelor of Science in Physics with Engineering Emphasis allows students to augment a rigorous training in Physics with the choice of a minor in a suitable engineering discipline. Thus, students combine a theoretical understanding of the basic physical theories with a practical, more detailed understanding given in the College of Engineering. Such a combination would be a bonus for employment in the engineering-type professions often chosen by Physics majors.

Physics majors are encouraged to participate in research projects under faculty guidance for course credit or financial reward. This way, undergraduate students can gain hands-on experience in various research disciplines, including astrophysics, biophysics, computational physics, high-energy physics, medical physics, optics, space physics, and theoretical and experimental condensed matter physics.

Competencies

1. Program graduates will be able identify, formulate, and solve complex engineering problems using physics, mathematics, and engineering principles.
2. Program graduates will be able to communicating technical information, to both technical and non-technical audiences, through written reports, presentations, and other means.
3. Program graduate will be able to work effectively in teams and to collaborate with others to achieve goals and objectives.
4. Program graduates will be capable of developing and conducting experiments, analyzing data, and drawing conclusions using engineering judgment.
5. Program graduates will be able to use computational tools and data analysis techniques to find physics and engineering based solutions to real world problems.
6. Program graduates will be able to demonstrate a solid understanding of mathematics and physics principles.
7. Graduates will be able to articulate the skills and knowledge they have gained and apply them to future career, employment, or educational goals.
8. Program graduates will be able to recognize and apply ethical considerations in engineering situations, understanding the impact of engineering solutions on society and the environment.

Admissions Criteria

Students considering a Physics major should schedule an appointment with the undergraduate advisor in Physics to discuss admissions criteria and degree options.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II

Bachelor of Science in Physics (Mathematics Teaching Certification)

About This Program

Bachelor of Science in Physics provides students with a rigorous training in Physics, which is designed to prepare for a career in science, technology, and/or engineering research. When combined with the required UTeach education courses, the Bachelor of Science program is also appropriate for students who are interested in becoming schoolteachers.

Physics majors are encouraged to participate in research projects under faculty guidance for course credit or financial reward. In this way, undergraduate students have the choice of gaining hands-on experience from a variety of research disciplines, including astrophysics, biophysics, computational physics, high energy physics, medical physics, optics, space physics, and theoretical and experimental condensed matter physics.

Competencies

1. Program graduates will gain in-depth knowledge and a strong foundation in physics principles and mathematical concepts.
2. Program graduates will be able to guide students through the scientific investigation process.
3. Program graduates will acquire skills to clearly explain complex physical and mathematical concepts to students of varying learning styles.
4. Program graduates will be able to demonstrate various teaching methods, including lectures, problem-based and hands-on activities.
5. Program graduates will be able to develop engaging, well-structured lesson plans that cater to diverse student needs.
6. Program graduates will acquire skills and knowledge to evaluate student learning through various methods and provide constructive feedback.
7. Program graduates will acquire skills and knowledge to foster a collaborative learning environment among students.
8. Program graduates will be able to articulate the skills and knowledge they have gained and apply them to future career, employment, or educational goals.

Admissions Criteria

Students considering a Physics major should schedule an appointment with the undergraduate advisor in Physics to discuss admissions criteria and degree options.

Bachelor of Science in Physics (Medical School Preparation)

About This Program

Bachelor of Science in Physics with Medical School Preparation offers a broad background in fundamental science and strong problem-solving ability of a Physics degree, as well as specific Biology and Chemistry medical school requirements. The combination of skills developed in this program is designed to provide the intellectual foundation necessary for excellence in research and the practice of medicine.

Physics majors are encouraged to participate in research projects under faculty guidance for course credit or financial reward. This way, undergraduate students can gain hands-on experience in various research disciplines, including astrophysics, biophysics, computational physics, high-energy physics, medical physics, optics, space physics, and theoretical and experimental condensed matter physics.

Specifically, the UTA Medical Physics BS curriculum includes foundational courses in physics, mathematics, and biology and specialized courses in medical imaging, radiation therapy, and radiation safety. The curriculum may also include practical experience through laboratories.

Competencies

1. Program graduates will gain a strong understanding of fundamental physics and biology concepts and in-depth knowledge in chosen areas of specialization.
2. Program graduates will be able to contribute to advancing medical physics by conducting research, developing new techniques, and evaluating existing technologies.
3. Program graduates can analyze complex data, solve problems, and make evidence-based decisions to optimize patient care.
4. Program graduates will develop communication and collaborative teamwork skills.
5. Program graduates will develop foundational knowledge and skills to provide expert advice on the safe and effective use of physical principles in medical applications.

Admissions Criteria

Students considering a Physics major should schedule an appointment with the undergraduate advisor in Physics to discuss admissions criteria and degree options.

Curriculum

Foundations		
General Core Requirements (p. 46)		42

Bachelor of Science in Physics (Science Teaching Certification)

About This Program

Bachelor of Science in Physics provides students with a rigorous training in Physics, which is designed to prepare students for a career in science, technology, and/or engineering research. When combined with the required UTeach education courses, the Bachelor of Science program is also appropriate for students who are interested in becoming schoolteachers.

Physics majors are encouraged to participate in research projects under faculty guidance for course credit or financial reward. In this way, undergraduate students have the choice of gaining hands-on experience from a variety of research disciplines, including astrophysics, biophysics, computational physics, high-energy physics, medical physics, optics, space physics, and theoretical and experimental condensed matter physics.

Competencies

1. Program graduates will gain in-depth knowledge and a strong foundation in physics principles and concepts, which is essential.
2. Program graduates will be able to guide students through the scientific investigation process.
3. Program graduates will acquire skills to clearly explain complex physics concepts to students of varying learning styles.
4. Program graduates will demonstrate familiarity with various teaching methods, including lectures, problem-based and hands-on activities.
5. Program graduates will be able to develop engaging, well-structured lesson plans that cater to diverse student needs.
6. Program graduates will acquire skills and knowledge to evaluate student learning through various methods and provide constructive feedback.
7. Program graduates will acquire skills and knowledge to adjust teaching methods and strategies to address unexpected challenges.
8. Program graduates will acquire skills and knowledge to foster a collaborative learning environment among students.
9. Program graduates will be able to articulate the skills and knowledge they have gained and apply them to future career, employment, or educational goals.

Admissions Criteria

Students considering a Physics major should schedule an appointment with the undergraduate advisor in Physics to discuss admissions criteria and degree options.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Life & Physical Science select:		
PHYS 1443 & PHYS 1444	GENERAL TECHNICAL PHYSICS I and GENERAL TECHNICAL PHYSICS II	
For Mathematics select:		
MATH 1426 & MATH 2425	CALCULUS I and CALCULUS II	
For US History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
Physics Foundations		
Additional hours required in core.		4
Communication Competence - satisfied by PHYS 4117		
Select one of the following for Computer Science:		3
CSE 1311	INTRODUCTION TO PROGRAMMING FOR ENGINEERS	
PHYS 2321	COMPUTATIONAL PHYSICS	
MATH 3345	NUMERICAL ANALYSIS AND COMPUTER APPLICATIONS	
Any CSE course numbered 3401 or higher.		
Another suitable course approved by UTeach advisor or chair of the Department of Physics.		
MATH 2326	CALCULUS III	3
MATH 3319	DIFFERENTIAL EQUATIONS & LINEAR ALGEBRA	3
Teacher Certification		
SCIE 1201	STEP 1: INQUIRY APPROACHES TO TEACHING	2
SCIE 1202	STEP 2: INQUIRY-BASED LESSON DESIGN	2
SCIE 4107	CAPSTONE TEACHING EXPERIENCE SEMINAR	1
SCIE 4607	CAPSTONE TEACHING EXPERIENCE FOR STEM SECONDARY GRADES	6
EDUC 4331	KNOWING AND LEARNING IN MATH AND SCIENCE	3
EDUC 4332	CLASSROOM INTERACTIONS	3
EDUC 4333	MULTIPLE TEACHING PRACTICES IN MATH AND SCIENCE	3
PHIL 2314	PERSPECTIVES ON SCIENCE AND MATHEMATICS	3

Physics Specialization		
PHYS 2311	MATHEMATICAL METHODS OF PHYSICS	3
PHYS 3313	INTRODUCTION TO MODERN PHYSICS	3
PHYS 3183	MODERN PHYSICS LABORATORY	1
PHYS 3321	INTERMEDIATE ELECTRICITY AND MAGNETISM	3
PHYS 4117	INDIVIDUAL LEARNING BY SEMINAR	1
PHYS 4315	THERMODYNAMICS AND STATISTICAL MECHANICS	3
PHYS 4319	ADVANCED MECHANICS	3
PHYS 4326	INTRODUCTION TO QUANTUM MECHANICS	3
PHYS 4391	SPECIAL TOPICS	3
Select 6 hours of PHYS electives approved by a UTeach advisor or the Department of Physics chair.		6
Minor and Electives		
Chemistry Minor		20
CHEM 1441	GENERAL CHEMISTRY I	
CHEM 1442	GENERAL CHEMISTRY II	
CHEM 2335	QUANTITATIVE CHEMISTRY	
CHEM 2285	QUANTITATIVE CHEMISTRY LABORATORY	
CHEM 3315	INTRODUCTION TO BIOPHYSICAL CHEMISTRY	
CHEM 3321	PHYSICAL CHEMISTRY I	
CHEM 3181	PHYSICAL CHEMISTRY I LABORATORY	
Select electives sufficient to bring total hours to 120, with 36 hours at the 3000/4000-level.		
Total Hours		**127**

SUGGESTED COURSE SEQUENCE

Details of a personal course sequence should be made with the guidance of the Physics undergraduate advisor, particularly since many courses in Physics are not offered every semester. Consultation with the Health Professions advisor is also encouraged. For all entering freshmen, it is important to begin the mathematics sequence, starting with MATH 1426 CALCULUS I, in the first semester.

First Year

First Semester	Hours	Second Semester	Hours
MATH 1426	4	PHYS 1444	4
CHEM 1441	4	MATH 2425	4
ENGL 1301	3	ENGL 1302	3
HIST 1301	3	HIST 1302	3
SCIE 1201	2	SCIE 1202	2
	16		**16**

Second Year

First Semester	Hours	Second Semester	Hours
PHYS 1444	4	PHYS 2311	3
MATH 2326	3	PHYS 3313	3
MATH 3319 or 3318	3	PHYS 3183	1
CHEM 1442	4	CHEM 2335	3
EDUC 4331	3	CHEM 2285	2
		EDUC 4332	3
	17		**15**

Third Year

First Semester	Hours	Second Semester	Hours
PHYS 3321	3	PHYS 4391	3
CHEM 3315	3	Approved PHYS elective	3
Computer Science course	3-4	POLS 2312	3
POLS 2311	3	Creative Arts core course	3
PHIL 2314	3	Social & Behavioral Science core course	3
	15-16		**15**

Fourth Year

First Semester	Hours	Second Semester	Hours
PHYS 4315	3	PHYS 4117	1
PHYS 4326	3	PHYS 4319	3

Approved PHYS course	3	Foundational Component Area core course	3
CHEM 3321	3	Language, Philosophy & Culture core course.	3
CHEM 3181	1	SCIE 4107	1
EDUC 4333	3	SCIE 4607	6
	16		**17**

Total Hours: 127-128

Bachelor of Science in Physics (Second Major)

About This Program

Students who satisfy the requirements for any other baccalaureate degree qualify to have Physics named as a second major upon completion of program requirements.

Physics majors are encouraged to participate in research projects for course credit or financial reward under faculty guidance. In this way, undergraduate students can gain hands-on experience from various research disciplines, including astrophysics, biophysics, computational physics, high-energy physics, medical physics, optics, space physics, and theoretical and experimental condensed matter physics.

Competencies

1. Graduates will gain a strong understanding of fundamental physics concepts like mechanics, electromagnetism, quantum mechanics, and thermodynamics, and in-depth knowledge in chosen areas of specialization within physics, such as condensed matter physics, astrophysics, or particle physics.
2. Graduates will gain the ability to apply mathematical tools and computational methods to solve complex physics problems.
3. Graduates will develop experimental skills and competence in designing and conducting experiments, analyzing data, and reporting findings.
4. Graduates will develop the ability to undertake independent research, including literature reviews, methodology development, data analysis, and scientific communication.
5. Graduates will develop critical thinking and problem-solving skills by analyzing complex physical systems, formulating precise scientific questions, and applying appropriate theoretical and experimental methods to find effective solutions.
6. Graduates will develop the ability to clearly and effectively communicate scientific information both verbally and in writing.
7. Graduates will develop analytical skills to understand complex concepts, interpret data, and construct logical arguments.
8. Graduates will gain proficiency in using appropriate software and programming languages for data analysis and computational modeling.
9. Graduates will be able to articulate the skills and knowledge they have gained and apply them to future career, employment, or educational goals.

Curriculum

PHYS 1443	GENERAL TECHNICAL PHYSICS I	4
PHYS 1444	GENERAL TECHNICAL PHYSICS II	4
PHYS 2311	MATHEMATICAL METHODS OF PHYSICS	3
PHYS 3313	INTRODUCTION TO MODERN PHYSICS	3
PHYS 3321	INTERMEDIATE ELECTRICITY AND MAGNETISM	3
PHYS 4326	INTRODUCTION TO QUANTUM MECHANICS	3

Select 17 hours of PHYS electives approved by a Physics undergraduate advisor or department chair.	17
Total Hours	**37**

BS in Physics to MS or ME in Materials Science and Engineering Fast Track

About This Program

Bachelor of Science in Physics to Master of Science or Master of Engineering in Materials Science and Engineering Fast Track enables outstanding senior undergraduate physics students to receive dual undergraduate and graduate course credit for six or nine hours of coursework. These designated graduate courses satisfy both bachelor's and master's degree requirements if they are completed within the last 15 hours of the undergraduate degree program. Students should refer to the Materials Science and Engineering section of the graduate catalog for detailed requirements of a master's degree in Materials Science and Engineering. This program presentation includes both undergraduate and graduate requirements. The undergraduate degree will be conferred immediately upon completion of the undergraduate degree requirements.

ASSOCIATED PROGRAMS

For detailed information about the programs associated with this Fast Track, refer to their individual degree pages.

Physics BS (p. 1750)

Materials Science and Engineering ME (p. 793)

Materials Science and Engineering MS (p. 796)

Admissions Criteria

An interested undergraduate student should apply to the program when within 30 hours of completing the Physics BS. The student must have completed at least 30 hours at UT Arlington, achieving a GPA of a least 3.0 in those courses, and have an overall GPA of 3.0 or better in all college courses. Additionally, the student must meet the following requirements.

- Complete PHYS 3313 and PHYS 3321 with a minimum GPA of 3.3 in these courses, and a grade of B or better in each course.

For automatic admission to the graduate program the student must meet the following requirements.

- Complete MSE 5300 and two of the following: any MSE graduate course, PHYS 5307, PHYS 5328, or PHYS 5330.
- Earn B or better in all graduate courses intended for both undergraduate and graduate credit.
- Maintain UTA undergraduate cumulative GPA of 3.0 or above.

Curriculum

Physics BS Foundations		
Complete the Physics BS foundations per catalog.		73
Physics Specialiation		
PHYS 2311	MATHEMATICAL METHODS OF PHYSICS	3
PHYS 3313	INTRODUCTION TO MODERN PHYSICS [1]	3
PHYS 3183	MODERN PHYSICS LABORATORY	1
PHYS 3321	INTERMEDIATE ELECTRICITY AND MAGNETISM [1]	3

PHYS 4117	INDIVIDUAL LEARNING BY SEMINAR	1
PHYS 4315	THERMODYNAMICS AND STATISTICAL MECHANICS	3
PHYS 4319	ADVANCED MECHANICS	3
PHYS 4324	ADVANCED ELECTRICITY AND MAGNETISM	3
PHYS 4326	INTRODUCTION TO QUANTUM MECHANICS	3
Select 14 hours of PHYS electives approved by an undergraduate advisor or the chair of the Department of Physics		14
MSE 5330	CORROSION SCIENCE AND ENGINEERING [2]	3
Select 2 from the following: [2]		6
Any MSE graduate course.		
PHYS 5307	QUANTUM MECHANICS I	
PHYS 5328	SURFACE PHYSICS	
PHYS 5330	PHYSICS OF SEMICONDUCTOR PROCESSING AND CHARACTERIZATION	
Masters programs in Material Science and Engineering		
Complete requirements for Master of Science or Master of Engineering in Material Science and Engineering per catalog.		21
Total Hours		**140**

[1] For admission to the fast track, students must complete these with a minimum cumulative GPA of 3.3 and a grade of B or better in each course.
[2] These course will count for both undergraduate and graduate degrees.

Program Completion

CONTINUATION

If at any time an undergraduate fast track student falls below the 3.000 GPA requirements or earns a grade below B in a graduate course intended for both undergraduate and graduate credit, the student will be obliged to leave the program immediately and will not be allowed to take additional graduate courses as an undergraduate. If a student does not complete at least two graduate courses with B or better, any graduate credits earned with a grade of C or better will be applied only to the undergraduate degree. Graduate courses used for credit in the undergraduate program cannot be applied towards a graduate degree.

BENEFITS

A student who successfully completes the BS fast track will be automatically admitted to graduate study. The student will not be required to take the Graduate Record Examination, complete an application for graduate admission, or pay an application fee. For more details about the specifics of the fast track program, contact the undergraduate advisor or graduate advisor.

COURSE ENROLLMENT CLEARANCE

Students must obtain clearance each semester from the graduate advisor and undergraduate advisor for all graduate courses that will be used to satisfy undergraduate degree requirements.

TIME LIMIT TO BEGIN GRADUATE STUDIES

A student may take off one long semester plus a summer after receiving the undergraduate degree before starting as a graduate student. An application for graduate admission must be completed and approved before post-baccalaureate studies can begin. A student returning after a longer delay will have to apply as a regular student, completing a full application, paying all fees and meeting all admission requirements.

Minor in Astronomy

About This Program

The Astronomy Minor introduces Science (non-Physics) majors to the scientific study of the universe, from planets and stars to galaxies and cosmology. Students gain a conceptual understanding of celestial phenomena and experience with basic observational methods.

Competencies

1. Graduates will demonstrate a broad understanding of key astronomical concepts, including the structure and behavior of celestial bodies, the life cycles of stars, and the large-scale structure of the universe.
2. Graduates will be able to explain how astronomers gather and interpret data, including familiarity with telescopes, imaging techniques, and key observational tools used to study space.
3. Graduates will be able to analyze and interpret basic astronomical data, think critically about scientific models of the universe, and assess evidence-based explanations of natural phenomena.

Curriculum

Minor in Astrophysics

About This Program

The Minor in Astrophysics provides Science (Non#Physics) and Engineering Majors with a calculus-based, foundation in astrophysical concepts, including the structure and evolution of stars, galaxies, and the universe.

Competencies

1. Program graduates will be able to demonstrate knowledge of key concepts such as stellar evolution, galactic dynamics, and cosmology, grounded in the fundamental principles of physics.
2. Graduates will be able to use physics-based models and quantitative methods to analyze and interpret a wide range of astrophysical systems.
3. Graduates will be able to demonstrate a knowledge of how observational techniques and data from multi-wavelength tools are used in the development of astrophysical models.

Curriculum

Foundations		
PHYS 1443	GENERAL TECHNICAL PHYSICS I	4
PHYS 1444	GENERAL TECHNICAL PHYSICS II	4
PHYS 2315	INTRODUCTORY ASTROPHYSICS	3
PHYS 3315	ASTROPHYSICS AND COSMOLOGY	3
Electives		
Select 4 hours from the following:		4
PHYS 3313	INTRODUCTION TO MODERN PHYSICS	
PHYS 3316	ASTROBIOLOGY I	
PHYS 3445	OPTICS	
PHYS 3446	NUCLEAR AND PARTICLE PHYSICS	
Special problems course approved by advisor (PHYS 4181, PHYS 4281 - with Astronomy research faculty)		
Special topics course approved by advisor (PHYS 4191, PHYS 4291, PHYS 4391 - when a suitable topic is offered)		
Total Hours		**18**

Transfer students must complete a minimum of 9 hours at UTA, 6 of which must be 3000/4000-level. A 2.0 GPA is required for coursework in the minor

Minor in Physics

About This Program

The Minor in Physics requires a minimum of 18 credit hours (including a minimum of 6 hours at the 3000/4000 level). Transfer students must complete at least 9 hours at UTA, 6 of which must be at the 3000/4000 level. A 2.0 GPA is required for coursework in the minor.

Competencies

1. Conceptual understanding of fundamental physics topics: Graduates will be able to demonstrate a solid conceptual understanding of fundamental physics topics, including dynamics, relativity, electromagnetism, quantum mechanics, statistical mechanics, and optics.
2. Analytical skills and critical thinking: Graduates will be able to develop critical thinking and problem-solving skills by analyzing complex physical systems, formulating precise scientific questions, and applying appropriate theoretical and experimental methods to find effective solutions.
3. Experimental and computational skills: Graduates will be able to demonstrate knowledge of experimental techniques and computational paradigms.
4. Graduates will be able to articulate the skills and knowledge they have gained and apply them to future career, employment, or educational goals.

Psychology

Department Overview

The Department of Psychology offers innovative undergraduate and graduate programs that prepare students for careers in research, industry, and academia. All programs combine rigorous scientific training with real-world application, emphasizing both basic and applied psychology. Undergraduate students gain a strong foundation in the principles that shape thought, emotion, and behavior, equipping them for careers in healthcare, social services, business, law, and many more. Graduate students can pursue an MS in Industrial/Organizational Psychology or a PhD in Experimental Psychology, with doctoral specializations in behavioral neuroscience, health, industrial/organizational, and cognitive sciences.

Address: 313 Life Science Bldg

COURSES

PSYC 1315. INTRODUCTION TO PSYCHOLOGY. 3 Hours. (TCCN = PSYC 2301)
The fundamental methods and content of scientific psychology. Concentration on the understanding of basic principles.

PSYC 2300. STATISTICS IN PSYCHOLOGY. 3 Hours.
This course covers descriptive and inferential statistics used in psychological research and assessment. It includes measurement, characteristics of distributions; measures of central tendency and variability; transformed scores; correlation and regression; probability theory; and hypotheses testing and inference. PSYC 2300 and PSYC 3300 can be taken concurrently. Prerequisite: PSYC 1315, and MATH 1301, MATH 1302, MATH 1315, or MATH 1402 (or equivalent).

PSYC 2315. STUDENT SUCCESS IN PSYCHOLOGY. 3 Hours.
This is a learning community course that will provide an environment for new students to build the knowledge, skills and abilities that will aid them academically, personally, and professionally. The course will help teach and develop students' critical thinking, problem-solving, and analytical skills to support successful academic achievement. The course will also focus on students' personal growth to support school-life balance challenges and future professional objectives. Required for psychology majors. Prerequisite: PSYC_UNIV, PSYC__INT, PSYCBA, or PSYCBS plan code.

PSYC 2317. BASIC CONCEPTS IN HUMAN SEXUALITY. 3 Hours. (TCCN = PSYC 2306)
The physiological, psychological, and sociological aspects of human sexuality. Offered as BIOL 2317, HEED 2317, PSYC 2317, and GWSS 2317. Credit will be granted for one of these courses only. Students seeking certification in Health Education must enroll in HEED 2317. Students seeking credit toward their science requirement must enroll in BIOL 2317. May not be used for biology grade point calculation or biology credit toward a BS degree in biology, microbiology, medical technology, psychology, or sociology.

PSYC 3200. EXPERIENCING RESEARCH IN PSYCHOLOGY. 2 Hours.
This is a practical, project-based course that focuses on laboratory and field experience in designing, conducting, and reporting psychology research. It includes all stages of the research process including the formulation of research hypotheses, review and evaluation of published literature, choice of research design and measurement variables, data collection and analysis, and presentation of results in oral and written reports. Prerequisite: PSYC 2300 and PSYC 3300.

PSYC 3300. RESEARCH METHODS IN PSYCHOLOGY. 3 Hours.
This course covers experimental designs and research methodologies commonly used in the field of psychology. It includes strategies for identifying meaningful hypothesis, conducting literature reviews, implementing research practices, and interpreting and evaluating statistical conclusions and empirical research findings. Challenges related to sociocultural factors will also be analyzed. PSYC 2300 and PSYC 3300 can be taken concurrently.

PSYC 3301. PSYCHOLOGY OF HUMAN RELATIONS. 3 Hours.
Workplace applications of topics including person perception, social influence, group processes and dynamics, interpersonal relations, teamwork, leadership, workplace discrimination, diversity, stress, and burnout.

PSYC 3302. BUSINESS PSYCHOLOGY. 3 Hours.
A survey of the fields of industrial and organizational psychology, focusing on the application of psychological theory to understanding and solving problems in the workplace. Topics include recruitment, employee selection and training, the effects of attitudes, motivation, group dynamics and leadership, job satisfaction, productivity and morale.

PSYC 3303. DRUGS AND BEHAVIOR. 3 Hours.
A survey of the psychoactive agents, their therapeutic uses, and social abuses. Alcohol, nicotine, caffeine, narcotics, hallucinogens, stimulants, and tranquilizers. Offered as BIOL 3303, HEED 3303, and PSYC 3303; credit will be granted only once. May not be used for biology grade point calculation or biology credit toward a B.S. degree in biology, microbiology, or medical technology. Students seeking certification in health education must enroll in HEED 3303.

PSYC 3304. ANALYSIS & MANAGEMENT OF BEHAVIOR. 3 Hours.
Behavioral control techniques for remediation and prevention of problem behaviors and for optimization of normal behaviors in real life settings. Contrasting therapeutic approaches, the ethics of behavior control, and the impact of behaviorism on society. Prerequisite: PSYC 1315 or permission of the instructor.

PSYC 3305. PSYCHOLOGY OF EMPLOYEE TRAINING. 3 Hours.
An introduction to theories, research, and techniques related to training needs analysis, program design and delivery, and training evaluation in organizational settings.

PSYC 3306. PSYCHOLOGY OF CREATIVITY AND CREATIVE THINKING. 3 Hours.
Research and theory relevant to the traits, attitudes, and abilities which are related to creative functioning with emphasis on the conceptual-cognitive components of creative formation and problem solving. Methods of stimulating creative behavior in individuals and in groups. Relevant research findings provide the substance of the course. Prerequisite: PSYC 1315.

PSYC 3310. DEVELOPMENTAL PSYCHOLOGY. 3 Hours.
Human development and growth from conception through old age, concerned with the physical, behavioral, and social aspects. Prerequisite: PSYC 1315.

PSYC 3312. SOCIAL & PERSONALITY DEVELOPMENT. 3 Hours.
A review of psychological theory and research on age trends and individuals differences in personality and social development. Topics include emotional development, aggression, identity and achievement, attachment, gender role development, and familial and extrafamilial influences on development. Prerequisite: PSYC 1315.

PSYC 3313. CULTURAL STUDIES IN PSYCHOLOGY. 3 Hours.
This course explores the critical concepts of culture, cultural identity, and ethnicity and examines their role in shaping human behavior and cognition. These issues will be approached from different psychological perspectives including clinical, developmental, social, health, and cognitive psychology. Students will learn to define, explain, and evaluate the influence that culture has on psychological processes and social interactions. Through the study of multicultural research, multimedia presentations, and class discussions, students will gain cultural awareness enabling them to critically assess research on multicultural topics. Prerequisite: PSYC 1315.

PSYC 3314. PSYCHOLOGY OF PERSONALITY. 3 Hours.
A broad survey of major theories, assessment methods, and representative research in the field of personality. The theoretical approaches considered include the psychoanalytic, neo-Freudian, trait, biological, humanistic, behavioral social/learning, and cognitive approaches. Prerequisite: PSYC 1315.

PSYC 3315. SOCIAL PSYCHOLOGY. 3 Hours.
The theories and research dealing with individual behavior in the social environment. Social influence processes, interpersonal attraction, group behavior, aggression, conformity, and attitude formation and change. Prerequisite: PSYC 1315.

PSYC 3317. INTRODUCTION TO CLINICAL AND COUNSELING PSYCHOLOGY. 3 Hours.
The student is introduced to psychodiagnostic procedures and the basic approaches of counseling and psychotherapy. Prerequisite: PSYC 1315.

PSYC 3318. ABNORMAL PSYCHOLOGY. 3 Hours.
Major forms of psychopathology. Classification, etiology, and treatment of major disorders. Prerequisite: PSYC 1315.

PSYC 3319. PSYCHOLOGY OF ADOLESCENCE. 3 Hours.
A topical study of adolescent behavioral and psychological development with emphasis on theory, methods of inquiry, and practical implications. Prerequisite: PSYC 1315.

PSYC 3320. BEHAVIOR AND MOTIVATION. 3 Hours.
Theory and research involving relation of motivation and emotion to learning theory, social behavior, personality, and development. Prerequisite: PSYC 1315.

PSYC 3322. BRAIN AND BEHAVIOR. 3 Hours.
An introduction to the anatomical structures and physiological processes that determine behavior. Topics include the acquisition and processing of sensory information, the neural control of movement, and the biological bases of complex behaviors (such as learning, memory, sex, language, and addiction), as well as the basic functioning of the nervous system. Offered as BIOL 3322 and PSYC 3322. Credit will be granted only once. BIOL 3322 prerequisite: BIOL 1441, BIOL 1442. PSYC 3322 prerequisite: BIOL 1441 or PSYC 1315.

PSYC 3325. DATA SCIENCE IN PSYCHOLOGY. 3 Hours.
This course is a survey of the benefits and challenges of data science in psychological research. The course includes discussions on advances in data collection and analysis, the applications and career opportunities within various psychology disciplines, and the best practices concerning ethics, privacy, security, and responsible conduct of research. Statistical concepts and techniques will be introduced using simple computing tools, such as Excel or code from programming languages, such as Python. Prerequisite: PSYC 2300 (or equivalent).

PSYC 3326. ANIMAL BEHAVIOR. 3 Hours.
A survey of research and theory comparing behavior at various phyletic levels. Offered as BIOL 3326 and PSYC 3326. Credit will be granted for only one of these courses. Prerequisite: BIOL 1441, BIOL 1442.

PSYC 3334. COGNITIVE PROCESSES. 3 Hours.
Current theory and research in cognitive processes such as memory, information processing, concept formation, and problem solving. Prerequisite: PSYC 1315.

PSYC 3356. EVOLUTIONARY PSYCHOLOGY. 3 Hours.
A consideration of how evolution has influenced social, cognitive and developmental processes in humans. Comparisons between humans and other species, and between different human cultures will be included. Topics such as mate selection, marriage and family practices, child rearing, social relations, language, thinking, neuropsychology, learning and related topics will be considered. Methods of gathering data and theory about evolutionary processes will be stressed. Prerequisite: PSYC 1315.

PSYC 3357. CYBERPSYCHOLOGY BASIC CONCEPTS. 3 Hours.
Cyberpsychology is a branch of psychology that studies the way people interact with technology and the impacts of technology on the way people feel, think, and behave both online and offline. This course provides a broad survey of the impacts of digital media (e.g., social media) on people's perception, learning, motivation, and decision making. Theories from neuroscience (e.g., large-scale networks), evolution (e.g., evolutionary mismatch), social (e.g., identity fusion), and health (e.g., anxiety) are incorporated for understanding the basic guiding principles of human behavior in the digital environment. Offered as PSYC 3357 and PSYC 5346.

PSYC 3358. CYBERPSYCHOLOGY APPLICATIONS. 3 Hours.
This is a project-based course that focuses on developing and testing digital interventions based on persuasion theories. Course topics include persuasion research, associative learning, consumer behavior, emotional and motivational strategies, social media, mental health, personality, social engineering, and political activism. This course is designed to introduce psychological vulnerabilities to technologically savvy students with hopes of aspiring them to invent technologies that improve the quality of life. Offered as PSYC 3358 and PSYC 5347.

PSYC 3359. POLITICAL PSYCHOLOGY FOR THE INTERNET. 3 Hours.
This course provides a comprehensive review of the psychology of political behavior on digital platforms. The course covers the foundational approaches to political psychology, including the evolutionary, personality, and developmental roots of political attitudes, to contemporary challenges to governance, including populism, hate speech, conspiracy beliefs, inequality, climate change, and terrorism. This course will focus on the application of psychological factors (affect, emotions, heuristics) that influence political behavior (voting, attitudes, beliefs) with emphasis on internet-mediated political strategies. Offered as PSYC 3359 and PSYC 5349.

PSYC 3360. CAREERS IN PSYCHOLOGY. 3 Hours.
This course explores the wide range of career opportunities available to psychology students. Through a combination of lectures, guest speakers, case studies, and practical assignments, students will gain insight into the diverse fields within psychology including clinical, counseling, industrial-organizational, cognitive, health, and neuroscience. The course will cover key topics such as graduate school options and preparations, career tracks and opportunities, and job search strategies. A key component will be on building career readiness through networking, resume development, and interview preparation for both academic and applied careers. Required for psychology majors. Prerequisite: Grade of "C" or better in PSYC 1315 and PSYC 2315. PSYC_UNIV, PSYC__INT, PSYCBA, and PSYCBS plan codes.

PSYC 4081. VOLUNTEER RESEARCH IN PSYCHOLOGY. 0 Hours.
Volunteer research hours (0 credit hours) Participation in a group research project on a selected topic as designated by the directing professor. Maybe repeated. Intended for advanced undergraduate majors. Prerequisite: Instructor permission; other prerequisites may be implemented at the discretion of each individual laboratory research mentor.

PSYC 4161. READINGS IN PSYCHOLOGY. 1 Hour.
Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper as arranged. Prerequisite: permission of the instructor.

PSYC 4181. RESEARCH IN PSYCHOLOGY. 1 Hour.
Research problems arranged on an individual basis, to be conducted by the student, and written in publishable journal format. Prerequisite: permission of the instructor.

PSYC 4191. UNDERGRADUATE TEACHING EXPERIENCE. 1 Hour.
Teaching effectively requires mastering the content of your discipline, but also numerous other skills. This course will prepare undergraduate students to be challenging, inspiring, engaging teachers and/or communicators of psychological topics by providing hands-on experience as teaching assistants. Prerequisite: Students must complete Introduction to Psychology (PSYC 1315) and PSYC 4391 (Undergraduate Teaching Experience) before enrolling in this course. Students must have a minimum GPA of 3.5 and be a psychology major (other majors may be approved with instructor permission). Students must have earned a B or better in the class for which they will serve as a TA and instructor approval is required.

PSYC 4261. READINGS IN PSYCHOLOGY. 2 Hours.
Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper as arranged. Prerequisite: permission of the instructor.

PSYC 4281. RESEARCH IN PSYCHOLOGY. 2 Hours.
Research problems arranged on an individual basis, to be conducted by the student, and written in publishable journal format. Prerequisite: permission of the instructor.

PSYC 4291. UNDERGRADUATE TEACHING EXPERIENCE. 2 Hours.
Teaching effectively requires mastering the content of your discipline, but also numerous other skills. This course will prepare undergraduate students to be challenging, inspiring, engaging teachers and/or communicators of psychological topics by providing hands-on experience as teaching assistants. Prerequisite: Students must complete Introduction to Psychology (PSYC 1315) and PSYC 4391 (Undergraduate Teaching Experience) before enrolling in this course. Students must have a minimum GPA of 3.5 and be a psychology major (other majors may be approved with instructor permission). Students must have earned a B or better in the class for which they will serve as a TA and instructor approval is required.

PSYC 4301. PRINCIPLES OF NEUROSCIENCE. 3 Hours.
An in depth understanding of the mechanisms underlying the function of the nervous system. Topics include cellular mechanisms of neural communication, neuroanatomy and neurophysiology of sensory, motor, and autonomic systems, cellular mechanisms of learning and memory, and neuropathological conditions that contribute to neurological disorders. Course offered as BIOL 4301 and PSYC 4301. Credit will be granted only once. Prerequisite: PSYC 3322 (BIOL 3322) or permission of instructor.

PSYC 4309. NEUROPHARMACOLOGY. 3 Hours.
A survey of how drugs affect the nervous system. General topics will include cellular and molecular foundations of neuropharmacology, receptors and modulation of neural signaling. The specific role of neurotransmitter systems (i.e. acetylcholine, dopamine, norepinephrine, serotonin, and opiate) will be explored. Offered as BIOL 4309 and PSYC 4309; credit will be granted only once. Prerequisite: one or more of the following courses or permission of instructor: BIOL 1441 or PSYC 3322/BIOL 3322 or BIOL 3301.

PSYC 4315. HORMONES AND BEHAVIOR. 3 Hours.
A study of the interaction between hormones and behavior. Specific topics covered include; examination of the hormonal influences on sex determination, reproductive behaviors, parental behavior, dominance and aggression, responses to stressful stimuli, homeostasis, and learning and memory. This course uses a comparative approach and draws examples of neuroendocrine function from throughout the animal kingdom including fish, birds, reptiles, and mammals (including humans). Offered as PSYC 4315 and BIOL 4315. Credit will be granted only once. Prerequisite: PSYC 3322/ BIOL 3322 or BIOL 1441 or BIOL 3301.

PSYC 4327. BEHAVIORAL GENETICS. 3 Hours.
Genetic influences on behavioral phenotypes. Research strategies, quantitative methods, and pharmacogenetic approaches to the brain; sociality and altruism; the personality, emotionality and intelligence; psychopathology; chromosomal abnormalities; forensic implications of genetic counseling. Offered as BIOL 4327 and PSYC 4327; credit will be granted only once. Students seeking credit toward the science requirement must enroll in BIOL 4327. Prerequisite: PSYC 1315 or BIOL 1441.

PSYC 4332. THEORIES OF HUMAN LEARNING AND MEMORY. 3 Hours.
A comprehensive survey of theories and research concerning basic learning and memory processes and their application to a variety of areas, e.g., eyewitness memory, false memory syndrome, autobiographical memory, memory decline in aging. Theoretical and background perspectives include associative mechanism, information processing approaches, and neurophysiological bases for encoding, storage, and retrieval. Prerequisite: PSYC 1315, and Junior Standing.

PSYC 4334. SENSATION AND PERCEPTION. 3 Hours.
An introduction to the study of the human senses and higher order perceptual processes. Data gathered from psychophysical research and studies of the nervous system in both humans and other animals will be discussed. The course will review the mechanisms and principles of operation of vision, hearing, touch, taste and smell. Prerequisite: Grade of "C" or better in PSYC 3322 or BIOL 3322.

PSYC 4335. COGNITIVE DEVELOPMENT. 3 Hours.
Theories and phenomena concerning development of all aspects of human cognition across the life span. Prerequisite: C or better in PSYC 3300.

PSYC 4338. COGNITIVE NEUROSCIENCE. 3 Hours.
Theory and research on the relationship between the brain and human cognition. Normal functioning and comparisons between normal and disordered states (e.g., Alzheimer's disease, amnesia, localized brain injury, age changes). Prerequisite: PSYC 4332 or PSYC 3334.

PSYC 4339. PSYCHOLOGY OF JUDGMENT AND CHOICE. 3 Hours.
Research and theory on the errors of intuitive judgment and how formal decision methods improve choices. Prerequisite: C or better in PSYC 2300.

PSYC 4357. HEALTH PSYCHOLOGY. 3 Hours.
This course provides a broad introduction to health psychology and its interface with the medical world. The course provides a balanced presentation of the important issues in the field, as well as specific content topics that are especially relevant today to better understand health and illness. Offered as BIOL 4357, HEED 4357, and PSYC 4357. Students seeking science requirement credit must enroll in BIOL 4357; students seeking Certification in Health must enroll in HEED 4357. Prerequisite: PSYC 1315 or BIOL 1333 or BIOL 1441 or BIOL 2457; junior standing recommended.

PSYC 4359. SELECTED TOPICS IN PSYCHOLOGY. 3 Hours.
Topics pertinent to the field of psychology. Topic, format, and prerequisites to be determined by the instructor. May be repeated for credit as different topics are offered. Prerequisite: to be determined by the instructor.

PSYC 4361. READINGS IN PSYCHOLOGY. 3 Hours.
Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper as arranged. Prerequisite: permission of the instructor.

PSYC 4381. RESEARCH IN PSYCHOLOGY. 3 Hours.
Research problems arranged on an individual basis, to be conducted by the student, and written in publishable journal format. Prerequisite: permission of the instructor.

PSYC 4391. FOUNDATIONS OF UNDERGRADUATE TEACHING EXPERIENCE. 3 Hours.
Teaching effectively requires mastering the content of your discipline, but also numerous other skills. This course will prepare undergraduate students to be challenging, inspiring, engaging teachers and/or communicators of psychological topics by covering important professional issues, including: planning a syllabus, structuring a lecture, navigating class discussions, communicating effectively with different types of classes, responding to student input, dealing with classroom incivilities, responding to student assignments, using technology, and responding to student work. This course will also assist students through the process of teaching as learning through addressing cognitive theories underlying the learning process. Prerequisite: Students must complete Introduction to Psychology (PSYC 1315) before enrolling in this course. Students must have a minimum GPA of 3.5 and be a psychology major (other majors may be approved with instructor permission). Students must have earned a B or better in the class for which they will serve as a TA and instructor approval is required.

PSYC 4398. HONORS THESIS. 3 Hours.
Students may take this course only at the invitation of the department. Consists of a research project of a type and level which would be publishable in one of the psychological journals. Particular emphasis is placed on independent work by the student. Prerequisite: departmental invitation.

PSYC 4410. ADVANCED TOPICS IN DEVELOPMENTAL PSYCHOLOGY. 4 Hours.
This course will cover current topics in Developmental Psychology using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Developmental Psychology. Completion of the course is essential for students who are interested in pursuing a career in Developmental Psychology research. Prerequisites: C or better in PSYC 2300, PSYC 3200, PSYC 3300, and PSYC 3310.

PSYC 4411. ADVANCED TOPICS IN PERSONALITY. 4 Hours.
This course will cover current topics in Personality using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Personality. Completion of the course is essential for students who are interested in pursuing a career in Personality research. Prerequisites: C or better in PSYC 2300, PSYC 3200, PSYC 3300, and PSYC 3314.

PSYC 4412. ADVANCED TOPICS IN SOCIAL PSYCHOLOGY. 4 Hours.
This course will cover current topics in Social Psychology using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Social Psychology. Completion of the course is essential for students who are interested in pursuing a career in Social Psychology research. Prerequisites: C or better in PSYC 2300, PSYC 3200, PSYC 3300, and PSYC 3315.

PSYC 4415. INTERNSHIP IN PSYCHOLOGY. 4 Hours.
Provides the student with an opportunity to apply academic experience to practical situations by serving for a specified number of hours as participant-observer in an off-campus activity. The activity will be reflected in the title on the transcript. Internships must be arranged with an internship supervisor and/or faculty member in the semester prior to enrolling for this course. Prerequisite: C or better in PSYC 2300 and PSYC 3300, and a minimum 3.2 Psychology GPA.

PSYC 4420. EXPERIMENTAL ANALYSIS OF BEHAVIOR. 4 Hours.
A laboratory course examining basic principles of behavior control and analysis with single animals and automated testing apparatus. Emphasis is placed on individualized, self-paced instruction and creative experimentation. Prerequisite: C or better in either PSYC 3304 or PSYC 4310. C or better in PSYC 2300, PSYC 3200, PSYC 3300, and PSYC 3304.

PSYC 4421. ADVANCED TOPICS IN NEUROSCIENCE. 4 Hours.
This course will cover current topics in Neuroscience using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Neuroscience. Completion of the course is essential for students who are interested in pursuing a career in Neuroscience research. Offered as BIOL 4421 or PSYC 4421. Credit will be granted only once. Junior standing recommended. Prerequisites: C or better in BIOL 3322 or PSYC 3322 required.

PSYC 4430. ADVANCED TOPICS IN CLINICAL COUNSELING. 4 Hours.
This course will cover current topics in Clinical and Counseling using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Clinical and Counseling. Completion of the course is essential for students who are interested in pursuing a career in Clinical and Counseling research. Prerequisite: PSYC 3317; PSYC 3318; C or better in PSYC 2300, PSYC 3200, and PSYC 3300.

PSYC 4431. ADVANCED TOPICS IN COGNITIVE SCIENCE. 4 Hours.
This course will cover current topics in Cognitive Psychology using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Cognitive Psychology. Completion of the course is essential for students who are interested in pursuing a career in Cognitive l Psychology research. May be repeated for credit as specific topics vary. Prerequisite: C or better in PSYC 2300, PSYC 3200, PSYC 3300, and PSYC 3334.

PSYC 4432. ADVANCED TOPICS IN HEALTH. 4 Hours.
This course will cover current topics in Health Psychology using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Health Psychology. Completion of the course is essential for students who are interested in pursuing a career in Health Psychology research. May be repeated for credit as specific topics vary. Prerequisite: C or better in PSYC 2300, PSYC 3200, PSYC 3300, and PSYC 4357.

PSYC 4433. ADVANCED TOPICS IN INDUSTRIAL/ORGANIZATIONAL PSYCHOLOGY. 4 Hours.
Develop a thorough understanding of the fundamental concepts, methods, and principles associated with Industrial/Organizational Psychology and the scientific research process by reading, questioning, and thoroughly understanding empirical, peer-reviewed research in I/O Psychology as well as practical application through the development of tools used for analyzing jobs, measuring job performance, and predicting job candidates' success. Prerequisite: A grade of "C" or better in PSYC 1315, PSYC 2300, PSYC 3300, PSYC 3200, PSYC 3302.

PSYC 5110. PROFESSIONAL DEVELOPMENT. 1 Hour.
The philosophy and methods of conducting a university class for undergraduates are examined. Specific tips and suggestions for managing course materials, lectures, audiovisual aids, grading, etc. will be presented. The role of the university instructor as a researcher as well as a teacher will be elaborated. Specific topics will include the ethics and regulation of research, service as a journal referee, corresponding with peers, participating in a research team, manuscript preparation, presentation at professional conferences, and submitting material for publication. Prerequisite: admission to the graduate program in psychology or permission of the instructor. Graded F, P. Prerequisite: Admission to the graduate program in psychology or permission of the instructor.

PSYC 5127. INDUSTRIAL AND ORGANIZATIONAL INTERNSHIP. 1 Hour.
This course is preparation for and supervision of internship activities in an organization or organizations in an area related to area of interest or training. No credit will be given for previous experience or activities. Course may be repeated for credit. Prerequisite: Consent of instructor.

PSYC 5151. READINGS IN PSYCHOLOGY. 1 Hour.
Independent readings under the supervision of an individual faculty member. Students wishing to conduct research should sign up for PSYC 5191, PSYC 5291, or PSYC 5391. May be repeated for credit with consent of the Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 5191. RESEARCH IN PSYCHOLOGY. 1 Hour.
Independent research under the supervision of an individual faculty member; may be repeated for credit with consent of Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 5227. INDUSTRIAL AND ORGANIZATIONAL INTERNSHIP. 2 Hours.
This course is preparation for and supervision of internship activities in an organization or organizations in an area related to area of interest or training. No credit will be given for previous experience or activities. Course may be repeated for credit. Prerequisite: Consent of instructor.

PSYC 5251. READINGS IN PSYCHOLOGY. 2 Hours.
Independent readings under the supervision of an individual faculty member. Students wishing to conduct research should sign up for PSYC 5191, PSYC 5291, or PSYC 5391. May be repeated for credit with consent of the Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 5291. RESEARCH IN PSYCHOLOGY. 2 Hours.
Independent research under the supervision of an individual faculty member; may be repeated for credit with consent of Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 5307. RESEARCH METHODS. 3 Hours.
This course considers basic and advanced aspects of methodology used in psychological research, including experimental design, methodologies that combine disciplinary approaches (e.g., biomedical, behavioral, and field and laboratory approaches).

PSYC 5309. HEALTH PSYCHOLOGY. 3 Hours.
A survey of current theory and research in health psychology, including basic research in health and behavior, biobehavioral contributions to illness and disability, and fundamental relationships among the brain, bodily function, and behavior that may affect health and well-being. It will also include clinical and translational topics including patient interventions in medically-ill populations, pain management, and disease prevention.

PSYC 5310. DATA SCIENCE IN PSYCHOLOGY. 3 Hours.
To live in the modern world is to leave digital data traces that provide insights into an individual's habits, choices, social networks, interests, and a range of personal identity markers (such as political views). The rapid growth of this data presents researchers with new avenues to evaluate and understand human cognition and human behavior, while simultaneously raising concerns of privacy, bias, and ethics. For researchers in psychology, "big data" also provides an additional methodological angle to complement existing research methodologies. This course surveys data science approaches to research, focusing on implications and opportunities in psychology. Topics include collecting, accessing, and analyzing data, as well as the tools and technologies commonly used in processing human-generated data. The course will also introduce construct creation where data is used to model and predict cognitive constructs and anticipate changes to those constructs. Additional emphasis will be on the skills needed by individual researchers as well as the broader implications of wearables and immersive environments (such as VR and AR) that capture psychophysiological data on the future of research in psychology.

PSYC 5313. COGNITIVE PSYCHOLOGY. 3 Hours.
Surveys current experimental and clinical research and theory relating the brain and cognition. Emphasizes selected areas i.e., perception, attention, memory, language, and thinking.

PSYC 5321. PERSONALITY PSYCHOLOGY. 3 Hours.
A survey of contemporary topics in personality psychology, including personality assessment, strategies for studying personality, temporal stability and cross-situational consistency in behavior, and personality influence on social behavior.

PSYC 5322. SOCIAL PSYCHOLOGY. 3 Hours.
A survey of contemporary topics in social psychology, including interpersonal attraction, altruism and aggression, attribution and social cognition, social influence, group dynamics, and social motivation.

PSYC 5323. GROUP PROCESSES. 3 Hours.
Survey of the major topics in group dynamics. Among the issues covered will be performance, motivation, goal setting, decision-making, creativity, social influence, memory, leadership, teamwork, and collective behavior.

PSYC 5324. APPLIED RESEARCH DESIGN. 3 Hours.
Basic aspects of organizational research methods will be covered including: research ethics, the scientific method, inductive and deductive reasoning, research questions, hypotheses, study designs, manipulation of variables, and various measures and methods used in organizational research. The history of Industrial and Organizational research will also be covered.

PSYC 5325. ORGANIZATIONAL BEHAVIOR. 3 Hours.
Survey of theory and research related to human behavior in organizations. Topics include job performance, motivation, job satisfaction, organizational commitment, work stress, organizational justice, leadership, groups and teams, and organizational theory.

PSYC 5326. EMPLOYEE SELECTION. 3 Hours.
Principles and techniques of employee selection, placement, and classification will be examined. Job analysis and competency modeling will be covered with a focus on the legal aspects of selection and promotion. The use of various methods and measures of job relevant individual differences will be examined within the context of predicting performance criteria.

PSYC 5327. INDUSTRIAL AND ORGANIZATIONAL INTERNSHIP. 3 Hours.
This course is preparation for and supervision of internship activities in an organization or organizations in an area related to area of interest or training. No credit will be given for previous experience or activities. Course may be repeated for credit. Prerequisite: consent of instructor.

PSYC 5328. EMPLOYEE ATTITUDES AND BEHAVIORS. 3 Hours.
Theory and research concerning the determinants, consequences,and measurement of job satisfaction and related constructs such as involvement, commitment and work motivation will be covered. Attitudes, opinions, and beliefs will be examined in relation to the behavioral intentions of individuals at work. Organizational interventions designed to improve and enhance employee motivation, attitudes and behaviors will be evaluated.

PSYC 5329. PERFORMANCE MANAGEMENT SYSTEMS. 3 Hours.
Principles and techniques of the performance appraisal and feedback process will be covered. Different sources of performance information will be evaluated. Mentoring and procedures for communicating performance evaluation information and improving job performance via development and training will be examined. Theories and techniques used to design, conduct, and evaluate training programs will be evaluated.

PSYC 5330. ADVANCE EMPLOYEE TRAINING AND DEVELOPMENT. 3 Hours.
Theoretical advancements, empirical research findings, and practical applications of psychological concepts related to employee training and development. This course focuses on the entirety of the employee training process, including topics and issues related to training needs analysis, program design and implementation, and the evaluation of training effectiveness.

PSYC 5331. PERCEPTION AND ATTENTION. 3 Hours.
Survey of methods and findings dealing with perception; emphasis will be upon behavioral rather than physiological considerations; particular topics include signal detection theory, form and pattern recognition, and attentional mechanisms.

PSYC 5333. BEHAVIORAL NEUROSCIENCE. 3 Hours.
A survey of biological and physical processes underlying behavior. Emphasis on neural, hormonal, and genetic determinants of behavior. Topics include regulatory behaviors, reward and nociceptive systems, differentiation and sociosexual behaviors, limbic and cortical functions.

PSYC 5334. HUMAN PHYSIOLOGY. 3 Hours.
This course will provide a comprehensive review of the human physiology that is categorized in 15 sections and 84 chapters. Some of them will be covered by different courses, such as Neuroscience, Immunology, and Endocrinology. Students are expected to learn how the human body works and what the underlying mechanisms that control the physiological responses are. In case of damage to these systems, what will happen to the body as a whole and what will be the impact on behaviors?.

PSYC 5337. ANIMAL COGNITION AND BEHAVIOR. 3 Hours.
A survey of theory and data on how animals learn and represent the world and the evolutionary processes that influence their individual and social behavior.

PSYC 5341. DECISION MAKING. 3 Hours.
Factors that influence categorical and numerical judgments, choices, and preference decisions. Comparison of human decision behavior with various quantitative theories.

PSYC 5342. LEADERSHIP IN ORGANIZATIONS. 3 Hours.
This course focuses on leadership theory and the applicability to modern organizations. Various approach to studying and understanding leadership, as well as the evolution of leadership theory over time will be discussion. Discussed approaches will include trait, situational, skill, contextual, style, cultural, and emerging theories of leadership. Additionally, this course will focus on designing effective leadership development programs.

PSYC 5345. HUMAN LEARNING AND MEMORY. 3 Hours.
Survey of current approaches to the study of human learning and memory.

PSYC 5346. CYBERPSYCHOLOGY BASIC CONCEPTS. 3 Hours.
Cyberpsychology is a branch of psychology that studies the way people interact with technology and the impacts of technology on the way people feel, think, and behave both online and offline. This course provides a broad survey of the impacts of digital media (e.g., social media) on people's perception, learning, motivation, and decision making. Theories from neuroscience (e.g., large-scale networks), evolution (e.g., evolutionary mismatch), social (e.g., identity fusion), and health (e.g., anxiety) are incorporated for understanding the basic guiding principles of human behavior in the digital environment. Offered as PSYC 3357 and PSYC 5346.

PSYC 5347. CYBERPSYCHOLOGY APPLICATIONS. 3 Hours.
This is a project-based course that focuses on developing and testing digital interventions based on persuasion theories. Course topics include persuasion research, associative learning, consumer behavior, emotional and motivational strategies, social media, mental health, personality, social engineering, and political activism. This course is designed to introduce psychological vulnerabilities to technologically savvy students with hopes of aspiring them to invent technologies that improve the quality of life. Offered as PSYC 3358 and PSYC 5347.

PSYC 5349. POLITICAL PSYCHOLOGY FOR THE INTERNET. 3 Hours.
This course provides a comprehensive review of the psychology of political behavior on digital platforms. The course covers the foundational approaches to political psychology, including the evolutionary, personality, and developmental roots of political attitudes, to contemporary challenges to governance, including populism, hate speech, conspiracy beliefs, inequality, climate change, and terrorism. This course will focus on the application of psychological factors (affect, emotions, heuristics) that influence political behavior (voting, attitudes, beliefs) with emphasis on internet-mediated political strategies. Offered as PSYC 3359 and PSYC 5349.

PSYC 5351. READINGS IN PSYCHOLOGY. 3 Hours.
Independent readings under the supervision of an individual faculty member. Students wishing to conduct research should sign up for PSYC 5191, PSYC 5291, or PSYC 5391. May be repeated for credit with consent of the Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 5389. CONTEMPORARY PROBLEMS IN PSYCHOLOGY. 3 Hours.
Topics vary. May be repeated for credit with consent of Graduate Advisor.

PSYC 5391. RESEARCH IN PSYCHOLOGY. 3 Hours.
Independent research under the supervision of an individual faculty member; may be repeated for credit with consent of Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 5405. ADVANCED STATISTICS I. 4 Hours.
Basic descriptive and inferential statistics used in psychological research.

PSYC 5407. MULTIVARIATE DATA ANALYSIS. 4 Hours.
Statistical aspects of complex experimental designs used in psychological research. Prerequisite: PSYC 5405.

PSYC 5600. ADVANCED RESEARCH. 6 Hours.
Supervised research. May be repeated for credit. Graded P/F/R. Prerequisite: permission of instructor.

PSYC 5698. THESIS. 6 Hours.
Graded P/F/R. Can only be taken up to 4 times. Prerequisite: 12 hours of advanced psychology and an approved thesis proposal.

PSYC 6101. GRADUATE STUDENT SEMINAR. 1 Hour.
Our primary focus in this seminar will be to discuss contemporary topics in science that are of interest to the area and discuss research in progress from different students and faculty in the area. Each week, a student (or faculty member) will give a talk on ongoing research they are conducting, a research proposal idea, practice conference presentation, an interesting paper that just came out, etc. The purpose is to get practice speaking and discussing research, while also receiving important feedback on research ideas from other students and faculty in the department. This is also a way to foster interdisciplinary collaborations within the department. This course will also be tied to the monthly Departmental Colloquium Series where we invite select speakers out to give a talk (including job talks), which could be proposed by the class, and then voted on by the colloquium committee members. The attendance is required. Reasonable conflict of schedule is acceptable, but not exceeding 20% of the time.

PSYC 6191. RESEARCH IN PSYCHOLOGY. 1 Hour.
Independent research under the supervision of an individual faculty member; may be repeated for credit with consent of Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 6291. RESEARCH IN PSYCHOLOGY. 2 Hours.
Independent research under the supervision of an individual faculty member; may be repeated for credit with consent of Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 6300. SEMINAR IN PSYCHOLOGY. 3 Hours.
Offered each semester. Topics vary. May be repeated for credit. Prerequisite: consent of instructor.

PSYC 6318. SOCIAL AND PERSONALITY DEVELOPMENT. 3 Hours.
Theory and research on social and emotional development with an emphasis on the interaction between individual needs and abilities and societal expectations and demands.

PSYC 6320. NEUROPHARMACOLOGY. 3 Hours.
Survey of the basis of behavioral pharmacology including mechanisms and theories of drug actions, techniques and strategies of research, common psychoactive drugs, and the uses of drugs in clinical practice.

PSYC 6335. ANIMAL BEHAVIOR. 3 Hours.
Phylogenetic approach to some basic problems in behavior, with special emphasis on unlearned behavior.

PSYC 6336. COMPARATIVE PSYCHOLOGY. 3 Hours.
Theory and data about all aspects of behavior stressing similarities and differences across species.

PSYC 6338. NEURAL AND COGNITIVE MODELING. 3 Hours.
Principles of neural network and dynamical systems modeling; application of these principles to the simulation of cognitive processes in both brains and machines; models of associative learning, pattern recognition and classification, and individual and group behavior. Prerequisite: consent of instructor.

PSYC 6346. EVOLUTIONARY PSYCHOLOGY. 3 Hours.
Evolutionary processes influence behavior and thinking of humans and nonhuman species. Sociosexual behavior, aggression, cognition, and information processing from an evolutionary perspective will be among the topics covered.

PSYC 6347. ENVIRONMENTAL PSYCHOLOGY. 3 Hours.
Survey of the current literature on the impact of various features of the physical environment on human behavior. Topics covered include crowding, privacy, territoriality, personal space, noise, the natural environment, residential, educational and work environments, urban and community design, and pollution and resource management. Designed to be of interest to graduate students in architecture, urban affairs, environmental science and engineering, geology, sociology, as well as those in psychology.

PSYC 6349. PSYCHOMETRIC THEORY. 3 Hours.
Introduction to test construction. Topics include reliability theory, test validation, and item analysis. Prerequisite: C or better in PSYC 5405 and PSYC 5407.

PSYC 6391. RESEARCH IN PSYCHOLOGY. 3 Hours.
Independent research under the supervision of an individual faculty member; may be repeated for credit with consent of Graduate Advisor. Graded P/F/R. Prerequisite: consent of the instructor.

PSYC 6399. DISSERTATION. 3 Hours.
Graded R/F. Prerequisite: approved dissertation proposal.

PSYC 6699. DISSERTATION. 6 Hours.
Graded R/F/P/W. Prerequisite: approved dissertation proposal.

PSYC 6999. DISSERTATION. 9 Hours.
Graded P/F/R. Prerequisite: approved dissertation proposal.

PSYC 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

Psychology - Graduate

Programs

DOCTORAL DEGREE

- Experimental Psychology PhD (Health/Neurosciences) (p. 1776)
- Experimental Psychology PhD (Psychological Sciences BS Entry) (p. 1783)

MASTER'S DEGREE

- Industrial/Organizational Psychology MS (p. 1789)

Research Involvement-Since the Department of Psychology believes that graduate training should involve the student continuously in the research process, students are encouraged to make personal contacts by letter or e-mail with faculty members of their choice. A description of the faculty and their areas of research may be obtained by consulting the department Web page at www.uta.edu/psychology (http://www.uta.edu/psychology/) or by writing to or calling the department at 817.272.2281. Every effort will be made to assign the incoming student to a faculty member of choice, but priority is given to those who have discussed their placement in advance.

Deadline for Financial Aid Applications-Students who wish to be considered for assistantships should have their applications and departmental forms sent to The University of Texas at Arlington by December 1 for the fall Semester.

Doctor or Philosophy in General Experimental Psychology (Health/Neuroscience)

About This Program

The Doctor of Philosophy in Psychology requires distinguished accomplishments in both scholarship and original research as well as a deep understanding of the strategic role of thoughtful research in the development of an empirical science. Although the student must meet the minimum requirements of a planned course of study, the ultimate basis for conferring the degree must be the demonstrated ability to do independent and creative work and the exhibition of a profound grasp of the subject matter of the field.

The specialization in Health/Neuroscience Psychology is designed to train researchers in health/neuroscience and behavior, working at the cutting-edge of interdisciplinary, biomedical and bio-behavioral investigation in areas such as pain, addiction, stress, psycho-immunology, memory, cancer and aging. Most research activity is based on the neurophysiological, bio-behavioral, or biopsychosocial model of health and illness.

Competencies

1. Ability to Apply Research: graduates will demonstrate their advanced skills in translating psychological theory and research into everyday life applications.
2. Critical Thinking Skills: graduates will be proficient in critically evaluating the adequacy of scientific research in psychology.
3. Knowledge of Psychology: graduates will demonstrate their knowledge of psychological theory and research.

Admissions Criteria

There are no fixed criteria for admission to the PhD programs in Psychology; many aspects of the student's application inform our admission decisions, but a complete application package **on or before December 1** is highly recommended to ensure a timely review of the student file.

There are, though, some standard requirements. A student is expected to have successfully completed the appropriate work prior to admission, including an undergraduate BA or BS degree. The Department of Psychology strongly encourages undergraduate courses in statistics and experimental methods. In addition, the Office of Graduate Studies requires a minimum grade point average of 3.0 in undergraduate work for unconditional admission to the program. Graduate coursework will also be reviewed for those who are applying to a degree-bound or direct PhD program, if any. For those applying to the direct PhD program already having earned or will earn a master's degree, a minimum of 28-30 graduate hours with a GPA of 3.0 or better as calculated by the Graduate School is typically required.

Qualified applicants are admitted once a year in Fall terms only and must be degree-seeking. Non-Fall/non-degree seeking applicants will be asked to submit the update/reactivation form (https://common.forms.uta.edu/view.php?id=2626) to have their file reviewed for the applicable Fall semester. Only Fall-intended degree-seeking applications will be reviewed. The application portal will open in September. Selected candidates are typically notified in the April to May time frame; however, this time frame is subject to change.

ADMISSIONS FOCUS

Graduate admissions committees are subcommittees of the Graduate Studies Committee. Each specialization (i.e., Psychological Sciences, Health/Neuroscience, I/O) will convene an admissions committee to make recommendations to the Graduate Studies Committee regarding advisors of applicants. Each is composed of faculty representatives from the specialization, as well as the graduate advisor and the Department Chairperson. Admissions decisions are based on interpretation of indicators of potential success in the program. Committees consider several factors in admissions decisions:

Grade point average

Most candidates for admissions present averages greater than 3.2. We do, however, examine the applicant's coursework as evidence of research interest. Positive indicators of success in our program include greater than average work in biological and physical sciences, mathematics and psychology. In similar fashion, evidence of research experience is viewed as a predictor of future research potential.

Verbal and quantitative GRE scores

Submission of verbal and quantitative GRE scores is required unless otherwise noted. High GRE scores are viewed positively, but lower GRE scores need not exclude a candidate who shows positive indicators in other areas. We do not require the GRE Subject Test in Psychology.

Language-based tests

If applicable, submission of language-based tests for applicants who do not have a U.S.-based degree is required. An applicant whose native language is not English must demonstrate a sufficient level of skill with the English language to assure success in graduate studies. Applicants are expected to submit a score of at least 6.5 on the IELTS, or achieve a minimum TOEFL iBT total score of 79. Further, when the TOEFL iBT is taken, sectional scores of at least 22 on the writing section, 21 on the speaking section, 20 on the reading section, and 16 on the listening section are preferred. It should be noted that admission to our graduate program is limited and competitive. Meeting the minimum admission requirements does not guarantee acceptance, and the program may give preference to students with higher scores. Only scores submitted directly by ETS or IELTS to UT Arlington are acceptable.

English proficiency for graduate teaching assistants

Before being appointed to an assistantship at UT Arlington, a student whose native language is not English must demonstrate acceptable skill with spoken English. An applicant who is a non-native speaker of English must submit a TOEFL iBT score of at least 23, or a score of at least 7 on the Speaking section of the IELTS, or take and pass the UTA Developmental English course to meet this requirement. The English proficiency requirement will be waived for non-native speakers of English who possess a bachelor's degree from an accredited U.S. institution.

Letters of reference

A minimum of three reference letters is required. These are important insofar as they offer evidence of commitment to research, the ability to think independently, critically and creativity, and to integrate knowledge. Letters also provide additional information about a candidate's experience and interests.

Personal statement

The personal statement is required and is meant to be specific concerning the applicant's career goals/interests regarding our program. The statement will be examined for evidence of the appropriateness of the candidate to the program. It should contain information about the student's intended specialization and preferred faculty mentor.

Completion of a master's degree. Successful completion of a master's degree in another department may be viewed positively even when the degree was received in an area outside of psychology. In this latter case, some conditions in terms of make-up (or deficiency) coursework may be specified.

Admission steps:

a. Submit your application via ApplyUTA (https://www.uta.edu/apply/) by your applicable program priority date to ensure timely processing/review of your file.

- Applications will not be reviewed by Graduate Admissions until the application fee is received. Once in “GCOM” or "GCUT" (complete) status by Graduate Admissions, your file will be sent to our department for review. Until the appropriate transcripts and test scores are received, you will be in “GCLI” (incomplete) status. Only “GCOM” or "GCUT" files are reviewed by our department. You can monitor your status via your MyMav account.
- Please note that the “Academic Goals Essay” on the application itself is optional; however, our department requires all applicants to submit the “Personal Statement” separately as described above, which will be reviewed by the faculty. If an exact copy of the academic goals essay is submitted as the personal statement, the applicant will be required to submit a new personal statement.

b. Submit official transcripts (https://www.uta.edu/admissions/apply/submitting-transcripts/) from all 4-year institutions attended.

- Monitor your MyMav account “to-do list” for submission requirements/updates.

c. If applicable, submit official GRE (https://www.ets.org/praxis/) scores. Only scores submitted by ETS directly to UTA are acceptable.

- While there are no minimum GRE sectional requirements, a standard of 300 or higher GRE total has been positive indicator of our most successful students as have average scores of 150 or higher for both quantitative and verbal sections.

d. If applicable, submit official English Language Test (https://www.uta.edu/admissions/apply/international-graduate/) scores as determined by Graduate Admissions. Only scores submitted directly by ETS or IELTS to UTA are acceptable.

e. Email the completed Departmental Summary Sheet (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/summary-sheet-07092021.ashx) in PDF format (Last Name, First Name, UTA ID number if known or Program of Interest_DptSS) to psychologydepartment@uta.edu.

f. Submit a minimum of 3 reference letters via SLATE or directly to psychologydepartment@uta.edu, preferably from professors or employers. NOTE: To submit reference letters directly to our email, it is the applicant’s responsibility to contact their recommenders and have them follow the instructions below:

- Letter writers can email the Recommendation Request Form (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/recommendation-form-2022-fillable.ashx) in PDF format (Recommender Name: Student Name, Program of Interest) to psychologydepartment@uta.edu along with an official letter on letterhead. It is preferred by faculty to submit both the Recommendation Request Form and a letter; however, it is also acceptable to submit only a letter or the form.

g. Email the Personal Statement in PDF format (Last Name, First Name, UTA ID number if known or Program of Interest PS) to psychologydepartment@uta.edu. There is no page limit. Past applicants have submitted personal statements that are 2 to 3 pages long.

- The personal statement is separate from the “Academic Goals Essay” on the application. While it is understood that there may be some overlap, the personal statement should be more in-depth, detailing laboratory field or applied interests, career plans, and research experience, as well as a discussion of how our graduate psychology program can serve to further your interests and plans. Ph.D. applicants should be sure to include information about the intended specialization and preferred faculty mentor. Ph.D. applicants are strongly encouraged to contact the specific faculty member of interest prior to or during the application process.
- NOTE: To improve your chances of admission, it is in your best interest to list only ONE faculty mentor to indicate a singular/specific focus in your area of research. Listing multiple mentors can imply a lack of focus in career goals and academic purpose. You may, however, provide an updated personal statement if your research interests have changed or if updating your file.
- Please include a cover page with your personal statement that includes your name, UTA ID number, program of interest, and preferred faculty mentor. Your last name and page numbers should be on the header.

h. Check your application status on the Graduate Admissions Application Status Website (https://www.uta.edu/admissions/apply/application-status/).

- The to-do lists in your Mymav account will be updated as the appropriate transcripts, test scores, and departmental materials are received.

ADMISSION STATUS

As noted in the Graduate Catalog, there are several categories of admission in addition to unconditional admission to the Graduate Program in Psychology.

Unconditional Admission

An applicant who meets all requirements is normally considered for unconditional admission.

Probationary Admission

If an applicant does not evidence a majority of the positive indicators for the unconditional admission described above, they may, after careful examination of their application materials be given probationary admission. Probationary admission requires that the new student receive a 3.0 (B average) GPA or better in the first 9-12 hours of graduate course work at UT Arlington.

Deferred Admission

A deferred decision may be granted when a file is incomplete or when denial of admission is not currently appropriate.

Provisional Admission

An applicant unable to supply all documentation (including certified transcripts, GRE scores, letters of reference, and personal statement) prior to the admission deadline, but otherwise appears to meet admission requirements, may be granted provisional admission.

Denial of Admission

Applicants whose records in the aggregate do not show sufficient positive indications of potential success will be denied admission. Please note that not all "qualified" applicants are admitted. Successful admission depends upon the competitiveness of the applicant pool, the number of positions available, and the applicant's fit with the current research interests of the faculty.

ELIGIBILITY FOR ASSISTANTSHIPS/FELLOWSHIPS

Ph.D. students who wish to be considered for an assistantship should have their application and Department forms sent in by **December 1** for the Fall Semester. Students unconditionally admitted to the program are eligible for scholarship and fellowship support. We currently have no funding available for the master's programs.

The criteria applied will be the same as those applied to admission decisions. To be eligible, candidates typically must: (1) be a new student; (2) have a GPA of 3.0 or higher in their last 60 undergraduate credit hours, plus any graduate credit hours as calculated by the Office of Graduate Studies; and (3) be enrolled in a minimum of 9 hours of course work in both long semesters (6 hours in the Summer) to retain their fellowships. Assistantship assignments are made by the Department Chairperson in consultation with the Associate Chair and the Graduate Advisors. Students may be eligible for other forms of support. Please refer to the Office of Graduate Studies for further information under Financial Aid Resources (https://www.uta.edu/academics/schools-colleges/gradschool/funding/).

UT ARLINGTON GRADUATES

GRE Requirements

Submission of verbal, quantitative and analytical writing GRE scores is required of **all** applicants unless otherwise indicated, including UT Arlington alumni, with the exception of "Facilitated Admission" (see below).

Facilitated Admission of Outstanding UT Arlington Undergraduates

Students with extraordinarily strong undergraduate records at UT Arlington may receive advanced admission to the Ph.D. program without having to pass through the normal application process. The following conditions must be met in order to qualify for advanced admission of outstanding undergraduates:

UT Arlington Bachelor's Degree

The student must have graduated from a commensurate bachelor's degree program at UT Arlington no more than one academic year prior to the semester for which admission to a graduate program is sought. A commensurate bachelor's degree program is one that is a normal feeder program for the master's degree or doctoral degree-bound program to which the student seeks admission. Undergraduate students in their final year of study are also eligible; in such cases, facilitated admission is a conditional upon a successful completion of the bachelor's degree.

Satisfactory GPA

The student's GPA must equal or exceed 3.5 in each of the following calculations:

- The grade-point average in the last 60 hours of study as calculated in the Office of Graduate Studies for admission purposes.
- All work completed at UTA to date.

The student's record will be assessed for strengths relevant to success in the program. All prospective facilitated admission applicants must also submit a personal statement and two (2) reference letters with the understanding that submitting the facilitated admission form does not guarantee admission into the program; all facilitated admission applicant's will be reviewed by committee the same as applicants applying via regular application.

Students who are accepted via facilitated admission will be admitted directly to graduate school without completing the application for admission, submitting an application evaluation charge, or taking the GRE. Students who believe they qualify for this program should contact the appropriate Graduate Advisor in the Department of Psychology.

CURRENT MASTER OF INDUSTRIAL/ORGANIZATIONAL PSYCHOLOGY STUDENTS

Students currently enrolled in the Master of I/O Psychology program who wish to be considered for admission into a Ph.D. program must submit the Change of Program form for either Psychological Sciences or Health/Neuroscience and must follow the formal admission procedures as stated previously. Students must meet the criteria for admission to the Ph.D. program which will be determined, in part, by the scholarly achievements accomplished as well as the fit between the student and faculty mentor.

MASTER'S IN PASSING

Students who are applying to the Ph.D. program without having earned a master's degree can apply as a degree-bound student and earn a master's in passing as a required milestone while working toward their Ph.D. This will include foundational and core courses from our degree plan as well as 6 hours of thesis and 3 hours of research to earn the master's.

Curriculum Requirements

Foundations		
Complete the following with the first 24 hours of study.		
PSYC 5110	PROFESSIONAL DEVELOPMENT	1
PSYC 5405	ADVANCED STATISTICS I	4
PSYC 5407	MULTIVARIATE DATA ANALYSIS	4
PSYC 5307	RESEARCH METHODS	3
or PSYC 5324	APPLIED RESEARCH DESIGN	
PSYC 5333	BEHAVIORAL NEUROSCIENCE	3
or PSYC 5334	HUMAN PHYSIOLOGY	
PSYC 5313	COGNITIVE PSYCHOLOGY	3
PSYC 5322	SOCIAL PSYCHOLOGY	3
PSYC 5342	LEADERSHIP IN ORGANIZATIONS	3
PSYC 5391	RESEARCH IN PSYCHOLOGY (*Or a combination of 5191/5291 or 5600)	3
PSYC 6101	GRADUATE STUDENT SEMINAR (Take until ABD)	1
Electives		
Select four from the following:		12
PSYC 6300	SEMINAR IN PSYCHOLOGY	
PSYC 5334	HUMAN PHYSIOLOGY	
PSYC 5333	BEHAVIORAL NEUROSCIENCE	
PSYC 5321	PERSONALITY PSYCHOLOGY	
PSYC 5345	HUMAN LEARNING AND MEMORY	
PSYC 6320	NEUROPHARMACOLOGY	
PSYC 5323	GROUP PROCESSES	
PSYC 6318	SOCIAL AND PERSONALITY DEVELOPMENT	
PSYC 5309	HEALTH PSYCHOLOGY	
Any course approved by the Graduate Advisor (e.g., a graduate course in statistics, genetics, immunology, endocrinology, or other specialized biomedical topic available at UT Southwestern or another UT Arlington department).		
In consultation with advisor, select additional hours sufficient to bring total to 81.		
Research Component		
Select one of the following:		6
PSYC 5698	THESIS (Students seeking the MS in passing should select this option.)	
PSYC 5600	ADVANCED RESEARCH	

Complete 9 disseration hours.		
PSYC 6999	DISSERTATION	9
or PSYC 6399	DISSERTATION	
or PSYC 6699	DISSERTATION	
or PSYC 7399	DOCTORAL DEGREE COMPLETION	

Students with prior graduate work may waive hours from any of the above requirements (except dissertation hours) by a written request to the Graduate Studies Committee. The request should include a syllabus or other documentation showing that a prior course and one of our required courses are equivalent. Students should discuss course equivalency with the professor(s) who teaches the course(s) in question before submitting the request.

Students are expected to maintain a GPA at or above 3.0 to ensure the successful completion of the program. A grade of D is not considered to be acceptable at the doctoral level and if earned, the student risks being dropped from the program. Grades of C have been found to slow down adequate academic progress and should not be taken lightly. All students are expected to consult their faculty mentors if such grades are earned to see how the GPA can be improved.

Psychology recommends the following plan of study:

First Year

First Semester	Hours	Second Semester	Hours
Advanced Statistics I	4	Multivariate Data Analysis	4
Required Core Course	3	Required Core Course	3
Professional Development	1	Readings and Research/ Graduate Student Seminar	2
Research and Reading	1		
	9		**9**

Second Year

First Semester	Hours	Second Semester	Hours
Required Core Course and Research Methods	6	Thesis OR Electives	6
Research and Readings/Graduate Student Seminar	3	Research and Readings/ Graduate Student Seminar	3
	9		**9**

Third Year

First Semester	Hours	Second Semester	Hours
Research and Readings/Graduate Student Seminar	6	Research and Readings/ Graduate Student Seminar	6
Elective	3	Elective	3
	9		**9**

Fourth Year

First Semester	Hours	Second Semester	Hours
Advanced Research OR Research and Readings/Graduate Student Seminar	6	Advanced Research OR Research and Readings/ Graduate Student Seminar	6
Elective OR Research and Readings/Graduate Student Seminar	3	Elective OR Research and Readings/Graduate Student Seminar	3
	9		**9**

Fifth Year

First Semester	Hours	Second Semester	Hours
Dissertation	6	Dissertation	3
	6		**3**

Total Hours: 81

Note: This is based on a 5-year program of study. Students may adjust the speed at which milestones are achieved by adding 4th year courses earlier.

A doctoral student must pay non-resident tuition beginning the first long semester (Fall or Spring) in which a) the student has been enrolled previously as a graduate student for 14 or more long semesters, AND b) the student has accumulated more than 99 semester credit hours of graduate study at any Texas state university. Students exceeding both limits will not be eligible for assistantships supported by state funds.

Program Completion

RESEARCH REQUIREMENTS

Research requirements include general expectations of student involvement in research throughout their graduate career as well as specific milestones that must be accomplished in order, including:

Holistic Diagnostic Exam (Qualifying Examination)

A holistic diagnostic exam will occur at the end of the student's first year in the doctoral program with a public Research Progress Symposium (RPS) presentation. Following their RPS presentation, students will submit to their advisory committee a First Year Portfolio demonstrating their performance in five core doctoral student performance areas. The advisory committee will evaluate this portfolio and bring a recommendation to the graduate faculty for final discussion and evaluation. Students must be scored as "meets expectations" or "exceeds expectations" in all performance areas to pass the Holistic Diagnostic Exam.

Master's Thesis or Equivalency Paper

Progress toward the PhD degree requires the completion of a master's degree in a specialization in psychology or a "master's equivalency paper".

Dissertation Proposal (Comprehensive Exam)

Students who pass their diagnostic examinations may continue in the PhD program after having a dissertation proposal approved by their dissertation supervising committee. The committee is formed by the student in consultation with his or her major advisor and the Graduate Advisor, and consists of at least five members, at least three of whom are from the psychology graduate faculty (additional members are optional). The oral presentation of the dissertation proposal satisfies the University requirement that a graduate student must take and pass a "comprehensive examination". This is the final step for the student to be admitted to candidacy for the PhD degree. The dissertation project is then carried out as approved, or as modified with prior approval of the committee members, and the dissertation is written. When a student has completed a draft of the dissertation that the primary mentor deems appropriate for his or her committee, a date for the oral defense is scheduled, and written drafts must be provided to committee members at least two weeks before this date.

Dissertation Defense

The PhD final oral examination (i.e., the Dissertation Defense) is conducted by the dissertation committee in a meeting that is open to any member of the University community and to guests. The first part of the examination is an oral presentation of the research and its findings. The second part is a closed examination and consists of specific detailed questions about the dissertation. Both the oral defense and the written dissertation must be passed.

For more details about the program's research requirements and student milestones, you are encouraged to refer to the psychology department's current Graduate Student Handbook (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/graduate-handbook-2024_2025.ashx).

Advising Resources

Prospective applicants for the Master of Science in Industrial/Organizational Psychology are welcome to reach out to the faculty MSIO program advisor for information regarding our graduate program. Current master students should reach out to have their intended courses approved for the upcoming semester.

Prospective applicants for the PHD in Experimental Psychology (psychological sciences) are welcome to reach out to the faculty program advisor for Experimental Psychology for information regarding our graduate program.

Prospective applicants for the PHD in Experimental Psychology (Health/Neuroscience concentration) are welcome to reach out to the faculty program advisor for Health/Neuroscience for information regarding our graduate program.

Doctor or Philosophy in General Experimental Psychology (Psychological Sciences BS Entry)

About This Program

The Doctor of Philosophy in Psychology requires distinguished accomplishments in both scholarship and original research as well as a deep understanding of the strategic role of thoughtful research in the development of an empirical science. Although the student must meet the minimum requirements of a planned course of study, the ultimate basis for conferring the degree must be the demonstrated ability to do independent and creative work and the exhibition of a profound grasp of the subject matter of the field.

The specialization in Psychological Sciences allows students to work in a general experimental context while specializing in one of several areas (e.g., cognitive, social, developmental, personality, industrial/organizational, etc.)

Competencies

1. Ability to Apply Research: graduates will demonstrate their advanced skills in translating psychological theory and research into everyday life applications.
2. Critical Thinking Skills: graduates will be proficient in critically evaluating the adequacy of scientific research in psychology.
3. Knowledge of Psychology: graduates will demonstrate their knowledge of psychological theory and research.

Admissions Criteria

There are no fixed criteria for admission to the PhD programs in Psychology; many aspects of the student's application inform our admission decisions, but a complete application package **on or before December 1** is highly recommended to ensure a timely review of the student file.

There are, though, some standard requirements. A student is expected to have successfully completed the appropriate work prior to admission, including an undergraduate BA or BS degree. The Department of Psychology strongly encourages undergraduate courses in statistics and experimental methods. In addition, the Office of Graduate Studies requires a minimum grade point average of 3.0 in undergraduate work for unconditional admission to the program. Graduate coursework will also be reviewed for those who are applying to a degree-bound or direct PhD program, if any. For those applying to the direct PhD program already having earned or will earn a master's degree, a minimum of 28-30 graduate hours with a GPA of 3.0 or better as calculated by the Graduate School is typically required.

Qualified applicants are admitted once a year in Fall terms only and must be degree-seeking. Non-Fall/non-degree seeking applicants will be asked to submit the update/reactivation form (https://common.forms.uta.edu/view.php?id=2626) to have their file reviewed for the applicable Fall semester. Only Fall-intended degree-seeking applications will be reviewed. The application portal will open in September. Selected candidates are typically notified in the April to May time frame; however, this time frame is subject to change.

ADMISSIONS FOCUS

Graduate admissions committees are subcommittees of the Graduate Studies Committee. Each specialization (i.e., Psychological Sciences, Health/ Neuroscience, I/O) will convene an admissions committee to make recommendations to the Graduate Studies Committee regarding advisors of applicants. Each is composed of faculty representatives from the specialization, as well as the graduate advisor and the Department Chairperson. Admissions decisions are based on interpretation of indicators of potential success in the program. Committees consider several factors in admissions decisions:

Grade point average

Most candidates for admissions present averages greater than 3.2. We do, however, examine the applicant's coursework as evidence of research interest. Positive indicators of success in our program include greater than average work in biological and physical sciences, mathematics and psychology. In similar fashion, evidence of research experience is viewed as a predictor of future research potential.

Verbal and quantitative GRE scores

Submission of verbal and quantitative GRE scores is required unless otherwise noted. High GRE scores are viewed positively, but lower GRE scores need not exclude a candidate who shows positive indicators in other areas. We do not require the GRE Subject Test in Psychology.

Language-based tests

If applicable, submission of language-based tests for applicants who do not have a U.S.-based degree is required. An applicant whose native language is not English must demonstrate a sufficient level of skill with the English language to assure success in graduate studies. Applicants are expected to submit a score of at least 6.5 on the IELTS, or achieve a minimum TOEFL iBT total score of 79. Further, when the TOEFL iBT is taken, sectional scores of at least 22 on the writing section, 21 on the speaking section, 20 on the reading section, and 16 on the listening section are preferred. It should be noted that admission to our graduate program is limited and competitive. Meeting the minimum admission requirements does not guarantee acceptance, and the program may give preference to students with higher scores. Only scores submitted directly by ETS or IELTS to UT Arlington are acceptable.

English proficiency for graduate teaching assistants

Before being appointed to an assistantship at UT Arlington, a student whose native language is not English must demonstrate acceptable skill with spoken English. An applicant who is a non-native speaker of English must submit a TOEFL iBT score of at least 23, or a score of at least 7 on the Speaking section of the IELTS, or take and pass the UTA Developmental English course to meet this requirement. The English proficiency requirement will be waived for non-native speakers of English who possess a bachelor's degree from an accredited U.S. institution.

Letters of reference

A minimum of three reference letters is required. These are important insofar as they offer evidence of commitment to research, the ability to think independently, critically and creativity, and to integrate knowledge. Letters also provide additional information about a candidate's experience and interests.

Personal statement

The personal statement is required and is meant to be specific concerning the applicant's career goals/interests regarding our program. The statement will be examined for evidence of the appropriateness of the candidate to the program. It should contain information about the student's intended specialization and preferred faculty mentor.

Completion of a master's degree. Successful completion of a master's degree in another department may be viewed positively even when the degree was received in an area outside of psychology. In this latter case, some conditions in terms of make-up (or deficiency) coursework may be specified.

Admission steps:

1. Submit your application via ApplyUTA (https://www.uta.edu/apply/) by your applicable program priority date to ensure timely processing/review of your file.
   - Applications will not be reviewed by Graduate Admissions until the application fee is received. Once in “GCOM” or "GCUT" (complete) status by Graduate Admissions, your file will be sent to our department for review. Until the appropriate transcripts and test scores are received, you will be in “GCLI” (incomplete) status. Only “GCOM” or "GCUT" files are reviewed by our department. You can monitor your status via your MyMav account.
   - Please note that the “Academic Goals Essay” on the application itself is optional; however, our department requires all applicants to submit the “Personal Statement” separately as described above, which will be reviewed by the faculty. If an exact copy of the academic goals essay is submitted as the personal statement, the applicant will be required to submit a new personal statement.
2. Submit official transcripts (https://www.uta.edu/admissions/apply/submitting-transcripts/) from all 4-year institutions attended.
   - Monitor your MyMav account “to-do list” for submission requirements/updates.
3. If applicable, submit official GRE (https://www.ets.org/praxis/) scores. Only scores submitted by ETS directly to UTA are acceptable.
   - While there are no minimum GRE sectional requirements, a standard of 300 or higher GRE total has been positive indicator of our most successful students, as have average scores of 150 or higher for both quantitative and verbal sections.
4. If applicable, submit official English Language Test (https://www.uta.edu/admissions/apply/international-graduate/) scores as determined by Graduate Admissions. Only scores submitted directly by ETS or IELTS to UTA are acceptable.
5. Email the completed Departmental Summary Sheet (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/summary-sheet-07092021.ashx) in PDF format (Last Name, First Name, UTA ID number if known or Program of Interest_DptSS) to psychologydepartment@uta.edu.
6. Submit a minimum of 3 reference letters via SLATE or directly to psychologydepartment@uta.edu, preferably from professors or employers. NOTE: To submit reference letters directly to our email, it is the applicant’s responsibility to contact their letter writers and have them follow the instructions below.

- Letter writers can email the Recommendation Request Form (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/recommendation-form-2022-fillable.ashx) in PDF format (Recommender Name: Student Name, Program of Interest) to psychologydepartment@uta.edu along with an official letter on letterhead. It is preferred by faculty to submit both the Recommendation Request Form and a letter; however, it is also acceptable to submit only a letter or the form.

7. Email the Personal Statement in PDF format (Last Name, First Name, UTA ID number if known or Program of Interest PS) to psychologydepartment@uta.edu. There is no page limit. Past applicants have submitted personal statements that are 2 to 3 pages long.
   - The personal statement is separate from the “Academic Goals Essay” on the application. While it is understood that there may be some overlap, the personal statement should be more in-depth, detailing laboratory field or applied interests, career plans, and research experience, as well as a discussion of how our graduate psychology program can serve to further your interests and plans. Ph.D. applicants should be sure to include information about the intended specialization and preferred faculty mentor. Ph.D. applicants are strongly encouraged to contact the specific faculty member of interest prior to or during the application process.
   - NOTE: To improve your chances of admission, it is in your best interest to list only ONE faculty mentor to indicate a singular/specific focus in your area of research. Listing multiple mentors can imply a lack of focus in career goals and academic purpose. You may, however, provide an updated personal statement if your research interests have changed or if updating your file.
   - Please include a cover page with your personal statement that includes your name, UTA ID number, program of interest, and preferred faculty mentor. Your last name and page numbers should be on the header.
8. Check your application status on the Graduate Admissions Application Status Website (https://www.uta.edu/admissions/apply/application-status/).
   - The to-do lists in your Mymav account will be updated as the appropriate transcripts, test scores, and departmental materials are received.

ADMISSION STATUS

As noted in the Graduate Catalog, there are several categories of admission in addition to unconditional admission to the Graduate Program in Psychology.

Unconditional Admission

An applicant who meets all requirements is normally considered for unconditional admission.

Probationary Admission

If an applicant does not evidence a majority of the positive indicators for the unconditional admission described above, they may, after careful examination of their application materials, be given probationary admission. Probationary admission requires that the new student receive a 3.0 (B average) GPA or better in the first 9-12 hours of graduate course work at UT Arlington.

Deferred Admission

A deferred decision may be granted when a file is incomplete or when denial of admission is not currently appropriate.

Provisional Admission

An applicant unable to supply all documentation (including certified transcripts, GRE scores, letters of reference, and personal statement) prior to the admission deadline, but otherwise appears to meet admission requirements, may be granted provisional admission.

Denial of Admission

Applicants whose records in the aggregate do not show sufficient positive indications of potential success will be denied admission. Please note that not all "qualified" applicants are admitted. Successful admission depends upon the competitiveness of the applicant pool, the number of positions available, and the applicant's fit with the current research interests of the faculty.

ELIGIBILITY FOR ASSISTANTSHIPS/FELLOWSHIPS

Ph.D. students who wish to be considered for an assistantship should have their application and Department forms sent in by **December 1** for the Fall Semester. Students unconditionally admitted to the program are eligible for scholarship and fellowship support. We currently have no funding available for the master's programs.

The criteria applied will be the same as those applied to admission decisions. To be eligible, candidates typically must: (1) be a new student; (2) have a GPA of 3.0 or higher in their last 60 undergraduate credit hours, plus any graduate credit hours as calculated by the Office of Graduate Studies; and (3) be enrolled in a minimum of 9 hours of course work in both long semesters (6 hours in the Summer) to retain their fellowships. Assistantship assignments are made by the Department Chairperson in consultation with the Associate Chair and the Graduate Advisors. Students may be eligible for other forms of support. Please refer to the Office of Graduate Studies for further information under Financial Aid Resources (https://www.uta.edu/academics/schools-colleges/gradschool/funding/).

UT ARLINGTON GRADUATES

GRE Requirements

Submission of verbal, quantitative and analytical writing GRE scores is required of all applicants unless otherwise indicated, including UT Arlington alumni, with the exception of "Facilitated Admission" (see below).

Facilitated Admission of Outstanding UT Arlington Undergraduates

Students with extraordinarily strong undergraduate records at UT Arlington may receive advanced admission to the PhD program without having to pass through the normal application process. The following conditions must be met in order to qualify for advanced admission of outstanding undergraduates:

UT Arlington Bachelor's Degree

The student must have graduated from a commensurate bachelor's degree program at UT Arlington no more than one academic year prior to the semester for which admission to a graduate program is sought. A commensurate bachelor's degree program is one that is a normal feeder program for the master's degree or doctoral degree-bound program to which the student seeks admission. Undergraduate students in their final year of study are also eligible; in such cases, facilitated admission is conditional upon a successful completion of the bachelor's degree.

Satisfactory GPA

The student's GPA must equal or exceed 3.5 in each of the following calculations:

- The grade-point average in the last 60 hours of study as calculated in the Office of Graduate Studies for admission purposes.
- All work completed at UTA to date.

The student's record will be assessed for strengths relevant to success in the program. All prospective facilitated admission applicants must also submit a personal statement and two (2) reference letters with the understanding that submitting the facilitated admission form does not guarantee admission into the program; all facilitated admission applicant's will be reviewed by committee the same as applicants applying via regular application.

Students who are accepted via facilitated admission will be admitted directly to graduate school without completing the application for admission, submitting an application evaluation charge, or taking the GRE. Students who believe they qualify for this program should contact the appropriate Graduate Advisor in the Department of Psychology.

CURRENT MASTER OF INDUSTRIAL/ORGANIZATIONAL PSYCHOLOGY STUDENTS

Students currently enrolled in the Master of I/O Psychology program who wish to be considered for admission into a Ph.D. program must submit the Change of Program form for either Psychological Sciences or Health/Neuroscience and must follow the formal admission procedures as stated previously. Students must meet the criteria for admission to the Ph.D. program which will be determined, in part, by the scholarly achievements accomplished as well as the fit between the student and faculty mentor.

MASTER'S IN PASSING

Students who are applying to the Ph.D. program without having earned a master's degree can apply as a degree-bound student and earn a master's in passing as a required milestone while working toward their Ph.D. This will include foundational and core courses from our degree plan as well as 6 hours of thesis and 3 hours of research to earn the master's.

Curriculum

Foundations		
Complete the following with the first 24 hours of study.		
PSYC 5110	PROFESSIONAL DEVELOPMENT	1
PSYC 5405	ADVANCED STATISTICS I	4
PSYC 5407	MULTIVARIATE DATA ANALYSIS	4
PSYC 5307	RESEARCH METHODS	3
or PSYC 5324	APPLIED RESEARCH DESIGN	
PSYC 5333	BEHAVIORAL NEUROSCIENCE	3
or PSYC 5334	HUMAN PHYSIOLOGY	
PSYC 5313	COGNITIVE PSYCHOLOGY	3
PSYC 5322	SOCIAL PSYCHOLOGY	3
PSYC 5342	LEADERSHIP IN ORGANIZATIONS	3
PSYC 5391	RESEARCH IN PSYCHOLOGY (*Or a combination of 5191/5291 or 5600)	3
PSYC 6101	GRADUATE STUDENT SEMINAR (Take until ABD)	1
Electives		
Select four from the following:		12

PSYC 6300	SEMINAR IN PSYCHOLOGY	
PSYC 5334	HUMAN PHYSIOLOGY	
PSYC 5333	BEHAVIORAL NEUROSCIENCE	
PSYC 5321	PERSONALITY PSYCHOLOGY	
PSYC 5345	HUMAN LEARNING AND MEMORY	
PSYC 6320	NEUROPHARMACOLOGY	
PSYC 5323	GROUP PROCESSES	
PSYC 6318	SOCIAL AND PERSONALITY DEVELOPMENT	
PSYC 5309	HEALTH PSYCHOLOGY	
Any course approved by the Graduate Advisor (e.g., a graduate course in statistics, genetics, immunology, endocrinology, or other specialized biomedical topic available at UT Southwestern or another UT Arlington department).		
In consultation with advisor, select additional hours sufficient to bring total to 81.		
Research Component		
Select one of the following:		6
PSYC 5698	THESIS (Students seeking the MS in passing should select this option.)	
PSYC 5600	ADVANCED RESEARCH	
Complete 9 disseration hours.		
PSYC 6999	DISSERTATION	9
or PSYC 6399	DISSERTATION	
or PSYC 6699	DISSERTATION	
or PSYC 7399	DOCTORAL DEGREE COMPLETION	

Students with prior graduate work may waive hours from any of the above requirements (except dissertation hours) by a written request to the Graduate Studies Committee. The request should include a syllabus or other documentation showing that a prior course and one of our required courses are equivalent. Students should discuss course equivalency with the professor(s) who teaches the course(s) in question before submitting the request.

Students are expected to maintain a GPA at or above 3.0 to ensure the successful completion of the program. A grade of D is not considered to be acceptable at the doctoral level and if earned, the student risks being dropped from the program. Grades of C have been found to slow down adequate academic progress and should not be taken lightly. All students are expected to consult their faculty mentors if such grades are earned to see how the GPA can be improved.

Psychology recommends the following plan of study:

First Year

First Semester	Hours	Second Semester	Hours
Advanced Statistics I	4	Multivariate Data Analysis	4
Required Core Course	3	Required Core Course	3
Professional Development	1	Readings and Research/ Graduate Student Seminar	2
Graduate Student Seminar	1		
	9		**9**

Second Year

First Semester	Hours	Second Semester	Hours
Required Core Course and Research Methods	6	Thesis OR Electives	6
Research and Readings/Graduate Student Seminar	3	Research and Readings/ Graduate Student Seminar	3
	9		**9**

Third Year

First Semester	Hours	Second Semester	Hours
Research and Readings/Graduate Student Seminar	6	Research and Readings/ Graduate Student Seminar	6
Elective	3	Elective	3
	9		**9**

Fourth Year

First Semester	Hours	Second Semester	Hours
Advanced Research OR Research and Readings/Graduate Student Seminar	6	Advanced Research OR Research and Readings/ Graduate Student Seminar	6

Elective OR Research and Readings/Graduate Student Seminar		3	Elective OR Research and Readings/Graduate Student Seminar	3
		9		**9**
Fifth Year				
First Semester	**Hours**		**Second Semester**	**Hours**
Dissertation		6	Dissertation	3
		6		**3**

Total Hours: 81

Note: This is based on a 5-year program of study. Students may adjust the speed at which milestones are achieved by adding 4th year courses earlier.

A doctoral student must pay non-resident tuition beginning the first long semester (Fall or Spring) in which a) the student has been enrolled previously as a graduate student for 14 or more long semesters, AND b) the student has accumulated more than 99 semester credit hours of graduate study at any Texas state university. Students exceeding both limits will not be eligible for assistantships supported by state funds.

Program Completion

RESEARCH REQUIREMENTS

Research requirements include general expectations of student involvement in research throughout their graduate career as well as specific milestones that must be accomplished in order, including:

Holistic Diagnostic Exam (Qualifying Examination)

A holistic diagnostic exam will occur at the end of the student's first year in the doctoral program with a public Research Progress Symposium (RPS) presentation. Following their RPS presentation, students will submit to their advisory committee a First Year Portfolio demonstrating their performance in five core doctoral student performance areas. The advisory committee will evaluate this portfolio and bring a recommendation to the graduate faculty for final discussion and evaluation. Students must be scored as "meets expectations" or "exceeds expectations" in all performance areas to pass the Holistic Diagnostic Exam.

Master's Thesis or Equivalency Paper

Progress toward the PhD degree requires the completion of a master's degree in a specialization in psychology or a "master's equivalency paper".

Dissertation Proposal (Comprehensive Exam)

Students who pass their diagnostic examinations may continue in the PhD program after having a dissertation proposal approved by their dissertation supervising committee. The committee is formed by the student in consultation with his or her major advisor and the Graduate Advisor, and consists of at least five members, at least three of whom are from the psychology graduate faculty (additional members are optional).

The oral presentation of the dissertation proposal satisfies the University requirement that a graduate student must take and pass a "comprehensive examination". This is the final step for the student to be admitted to candidacy for the PhD degree.

The dissertation project is then carried out as approved, or as modified with prior approval of the committee members, and the dissertation is written. When a student has completed a draft of the dissertation that the primary mentor deems appropriate for his or her committee, a date for the oral defense is scheduled, and written drafts must be provided to committee members at least two weeks before this date.

Dissertation Defense

The PhD final oral examination (i.e., the Dissertation Defense) is conducted by the dissertation committee in a meeting that is open to any member of the University community and to guests. The first part of the examination is an oral presentation of the research and its findings. The second part is a closed examination and consists of specific detailed questions about the dissertation. Both the oral defense and the written dissertation must be passed.

For more details about the program's research requirements and student milestones, you are encouraged to refer to the psychology department's current Graduate Student Handbook (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/graduate-handbook-2024_2025.ashx).

Advising Resources

Prospective applicants for the Master of Science in Industrial/Organizational Psychology are welcome to reach out to the faculty MSIO program advisor for information regarding our graduate program. Current master students should reach out to have their intended courses approved for the upcoming semester.

Prospective applicants for the PHD in Experimental Psychology (psychological sciences) are welcome to reach out to the faculty program advisor for Experimental Psychology for information regarding our graduate program.

Prospective applicants for the PHD in Experimental Psychology (Health/Neuroscience concentration) are welcome to reach out to the faculty program advisor for Health/Neuroscience for information regarding our graduate program.

Master of Science in Industrial/Organizational Psychology

About this Program

Industrial and Organizational (I/O) Psychology is the scientific study of people in organizations. Both research and application are important to successfully translate scientific knowledge to improve workplaces. Thus, our program emphasizes the scientist-practitioner model, the approach recommended by the leading professional organization in the discipline, the Society for Industrial and Organizational Psychology (SIOP). The program and curriculum are designed for students who intend to pursue an applied, professional career as practitioners in the field. Our program offers both a thesis (41 hours) and a non-thesis (38 hours) option; however, all students enter the program under the non-thesis option. The decision to change to a thesis option will be made on a case-by-case basis and will be based on the student's aptitude and career focus, as well as on the fit between the student and the faculty mentor. Whether the thesis or non-thesis option is chosen, all students earn a Master of Science in I/O Psychology and will therefore be required to conduct research and develop practical skills related to I/O psychology. Students are also required to complete 400 hours of an outside internship and their thesis or non-thesis option (capstone project) at the end of their second year.

Competencies

1. Ability to Apply Research: graduates will demonstrate their advanced skills in translating psychological theory and research into everyday life applications.
2. Critical Thinking Skills: graduates will be proficient in critically evaluating the adequacy of scientific research in psychology.
3. Knowledge of Psychology: graduates will demonstrate their knowledge of psychological theory and research.

Admissions Criteria

There are no fixed criteria for admission to the MS. Many aspects of the student's application inform our admission decisions, but a complete application package submitted **on or before December 15** is highly recommended to ensure a timely review of the student file.

There are, though, some standard requirements. A student is expected to have successfully completed the appropriate work prior to admission, including an undergraduate BA or BS degree. The Office of Graduate Studies requires a minimum grade point average of 3.0 in undergraduate work for unconditional admission to the program. The Department of Psychology strongly encourages undergraduate courses in statistics and experimental methods prior to admission.

Qualified applicants are admitted once a year in Fall terms only and must be degree-seeking. Non-Fall/non-degree seeking applicants will be asked to submit the update/reactivation form (https://common.forms.uta.edu/view.php?id=2626) to have their file reviewed for the applicable Fall semester. Only

Fall-intended degree-seeking applications will be reviewed. The application portal will open in September. Selected candidates are typically notified during the April to May time frame; however, this time frame is subject to change.

Admission steps:

1. Submit your application via ApplyUTA (https://www.uta.edu/apply/) by your applicable program priority date to ensure timely processing/review of your file.
   - Applications will not be reviewed by Graduate Admissions until the application fee is received. Once in “GCOM” or "GCUT" (complete) status by Graduate Admissions, your file will be sent to our department for review. Until the appropriate transcripts and test scores are received, you will be in “GCLI” (incomplete) status. Only “GCOM” or "GCUT" files are reviewed by our department. You can monitor your status via your MyMav account.
2. Submit official transcripts (https://www.uta.edu/admissions/apply/submitting-transcripts/) from all 4-year institutions attended.
   - Monitor your MyMav account “to-do list” for submission requirements/updates.
3. If applicable, submit official GRE (https://www.ets.org/praxis/) scores. Only scores submitted by ETS directly to UTA are acceptable.
   - While there are no minimum GRE sectional requirements, a standard of 300 or higher GRE total has been positive indicator our of most successful students as have average scores of 150 or higher for both quantitative and verbal sections.
4. If applicable, submit official English Language Test (https://www.uta.edu/admissions/apply/international-graduate/) scores as determined by Graduate Admissions.
5. Email the completed Departmental Summary Sheet (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/summary-sheet-07092021.ashx) in PDF format (Last Name, First Name, UTA ID number if known or Program of Interest DptSS) to psychologydepartment@uta.edu.
6. Submit a minimum of 3 reference letters via SLATE or directly to psychologydepartment@uta.edu, preferably from professors or employers. NOTE: To submit reference letters directly to our email, it is applicant’s responsibility to contact their recommenders and have them follow the instructions below.
   - Letter writers can email the Recommendation Request Form (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/recommendation-form-2022-fillable.ashx) in PDF format (Recommender Name: Student Name, Program of Interest) to psychologydepartment@uta.edu along with an official letter on letterhead. It is preferred by faculty to submit both the Recommendation Request Form and a letter; however, it is also acceptable to submit only a letter or the form.
7. Email the Personal Statement in PDF format (Last Name, First Name, UTA ID number if known or Program of Interest PS) to psychologydepartment@uta.edu. There is no page limit. Past applicants have submitted personal statements that are 2 to 3 pages long.
   - Please include a cover page with your Personal Statement that includes your name, UTA ID number, and Program of Interest. Your last name and page numbers should be on the header.
8. Check your application status on the Graduate Admissions Application Status Website (https://www.uta.edu/admissions/apply/application-status/).
   - Your to-do lists in Mymav account will be updated as the appropriate transcripts, test scores, and departmental materials are received.

ADMISSIONS FOCUS

The I/O MS Graduate Admissions Committee is composed of the I/O faculty and is a subcommittee of the Graduate Studies Committee. The admissions committee will review and give serious consideration to all application materials. This includes the application, departmental summary sheet, undergraduate GPA, graduate GPA (if applicable), applicant’s personal statement, letters of reference and college transcripts. Applications from students whose undergraduate major is not psychology will also be considered. In such cases, the student’s personal statement should emphasize the basis for switching educational tracks and should highlight why an I/O psychology degree is desired. Previous, relevant work experience may also be considered in such cases. Admissions decisions are based on interpretation of indicators of potential success in the program. The following points are generally considered:

1. **Grade Point Average.** Most candidates for admissions present averages greater than 3.2. Positive indicators of success in our program include greater than average work in psychology, mathematics and/or business. Candidates should demonstrate academic strengths in statistics and research methods (GPA of at least 3.2 in both areas).
2. **Verbal and Quantitative GRE scores**. Submission of verbal and quantitative GRE scores is required unless otherwise noted. High GRE scores are viewed positively, but lower GRE scores need not exclude a candidate who shows positive indicators in other areas. We do not require the GRE Subject Test in Psychology.
3. **Language-Based Tests.** If applicable, submission of language-based tests for applicants who do not have a U.S.-based degree is required. An applicant whose native language is not English must demonstrate a sufficient level of skill with the English language to assure success in graduate studies. This requirement will be waived for non-native speakers of English who possess a bachelor’s degree from an accredited U.S. institution. Applicants are expected to submit a minimum score of 6.5 on the IELTS, or a minimum TOEFL IBT total score of 79. When the TOEFL IBT is taken, sectional scores of at least 22 on the Writing section, 21 on the Speaking section, 20 on the Reading section, and 16 on the Listening section are preferred. Meeting the TOEFL IBT and IELTS minimum admission requirements does not guarantee acceptance, and the admissions committee may give preference to students with higher scores. Only scores submitted directly by ETS or IELTS to UTA are acceptable.
4. **Letters of Reference**. A minimum of three reference letters is required. These are important insofar as they offer an assessment of past observed behavior in the classroom, workplace, and/or laboratory including observations of independent, critical and creative thinking as well as evidence that I/O is the appropriate career path. Letters also provide additional information about a candidate's experience and interests.

5. **Personal Statement.** The personal statement is required and will be examined for evidence of the appropriateness of the candidate to the program. MS applicants are not required to list/include preferred faculty mentors. The personal statement is separate from the “Academic Goals Essay” on the application. While it is understood that there may be some overlap, the personal statement should be more in-depth, detailing laboratory, field or applied interests, career plans, and research experience, as well as a discussion of how our I/O graduate program can serve to further your interests and plans. If an exact copy of the academic goals statements is submitted as the personal statement, the applicant will be required to submit a new personal statement.

Department assistantships and fellowships are not currently available for students in the I/O Psychology MS program. Students in the program may be eligible for scholarships, loans, or may find paid internship opportunities with local businesses.

ADMISSION STATUS

Unconditional Admission

An applicant who meets all requirements is normally considered for unconditional admission.

Probationary Admission

If an applicant does not evidence a majority of the positive indicators for the unconditional admission described above, they may, after careful examination of their application materials be given probationary admission. Probationary admission requires that the new student receive a 3.0 (B average) GPA or better in the first 9-12 hours of graduate course work at UT Arlington.

Deferred Admission

A deferred decision may be granted when a file is incomplete or when denial of admission is not currently appropriate.

Provisional Admission

An applicant unable to supply all documentation (including certified transcripts, GRE scores, letters of reference, and personal statement) prior to the admission deadline, but otherwise appears to meet admission requirements, may be granted provisional admission.

Denial of Admission

Applicants whose records in the aggregate do not show sufficient positive indications of potential success will be denied admission. Please note that not all "qualified" applicants are admitted. Successful admission depends upon, among other things, the competitiveness of the applicant pool and the number of positions available in the cohort.

UT Arlington Graduates

GRE Requirements

Submission of verbal, quantitative and analytical writing GRE score is **required** of *all* applicants unless otherwise indicated, including UT Arlington alumni, with the exception of "Facilitated Admission".

Facilitated Admission of Outstanding UT Arlington Undergraduates

Students with extraordinarily strong undergraduate records at UT Arlington may receive advanced admission to the program without having to pass through the normal application process. Qualified students will be able to gain admission without completing a formal application or paying application fees. The following conditions must be met in order to qualify for advanced admission of outstanding undergraduates:

1. The student must have graduated from a commensurate bachelor's degree program at UT Arlington no more than one academic year prior to the semester for which admission to a graduate program is sought. A commensurate bachelor's degree program is on that is a normal feeder program for the master's degree or doctoral degree-bound program to which the student seeks admission. Undergraduate students in their final year of study are also eligible; in such cases, facilitated admission is a conditional upon a successful completion of the bachelor's degree.
2. The student's GPA must equal or exceed 3.5 in each of the following calculations:
   a. The grade-point average in the last 60 hours of study as calculated in the Office of Graduate Studies for admission purposes.
   b. All work completed at UTA to date.
3. The student's record will be assessed for strengths relevant to success in the program. All prospective facilitated admission applicants must also submit a personal statement and two (2) reference letters with the understanding that submitting the facilitated admission form does not guarantee admission into the program; all facilitated admission applicants will be reviewed by committee the same as applicants applying via regular application.

Students who are accepted via facilitated admission will be admitted directly to graduate school without completing the application for admission, submitting an application evaluation charge, or taking the GRE. Students who believe they qualify for this program should contact the appropriate Graduate Advisor in the Department of Psychology.

For additional information about the I/O MS program, you are encouraged to refer to the psychology department's website (https://www.uta.edu/academics/schools-colleges/science/departments/psychology/) and current Graduate Student Handbook (https://catalog.uta.edu/science/psychology/graduate/io-psych-ms/chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/graduate/forms-and-resources/graduate-handbook-2024_2025.ashx).

Psychology - Undergraduate Programs

Programs

BACHELOR OF ARTS DEGREES

- Psychology BA (p. 1794)
- Psychology BA (Life Sciences Teaching Certification) (p. 1798)

BACHELOR OF SCIENCE DEGREES

- Psychology BS (p. 1801)
- Psychology BS (Mathematics Teaching Certification) (p. 1804)

MINORS

- Clinical Health Psychology Minor (p. 1807)
- General Psychology Minor (p. 1810)

- Neuroscience Minor (p. 1808)
- Organizational Science Minor (p. 1809)

Policies

UNIV 1101 & UNIV 1131

All transfer students are required to enroll in a 1-credit hour career preparation course, UNIV 1101 or UNIV-SC 1101. Transfer students need to take this course before the end of the first year at UTA unless they meet any of the following criteria:

- Non-degree seeking status
- Post-baccalaureate status
- Have an equivalent Transfer course

All entering freshman are required to enroll in a 1-credit hour college adjustment course, UNIV 1131.

ACCEPTANCE TO THE MAJOR IN PSYCHOLOGY

Students who wish to apply for major status in psychology must first meet the University and College of Science requirements for admission to major status and the specific requirements of the Department of Psychology listed below.

- Overall and Psychology GPA of at least 2.25.
- To be changed to full major you must first complete PSYC 2300, PSYC 3200 and PSYC 3300 with a C or better in each course.

ACADEMIC PROBATION (COLLEGE OF SCIENCE)

Majors whose overall GPA or GPA in major courses falls below 2.25 will be placed on probation and must consult with the Department Advisor prior to enrolling in additional courses.

ADMISSION TO UPPER-LEVEL LABORATORY COURSES

To enroll in Advanced Topic courses such as PSYC 4410, PSYC 4411, PSYC 4412, PSYC 4415, PSYC 4420, PSYC 4421,PSYC 4430, PSYC 4431, and PSYC 4432, the student must make a C or better in both PSYC 2300,PSYC 3200 and PSYC 3300 or equivalent courses and must have completed the associated upper-division lecture course.

DISTINGUISHED SCHOLARS IN PSYCHOLOGY

The Department of Psychology offers a Distinguished Scholars program in psychology. This program is intended to provide students with the opportunity for intellectual and professional development that will take them beyond the requirements of the basic B.A. or B.S. degrees. Thus, the program serves to promote and acknowledge the special achievements of participating students.

To qualify, the student must have completed 30 hours with a grade point average of 3.0 or better in residence at UT Arlington, including 10 hours in psychology, with a minimum grade point average of 3.5 or better. The student does background reading and designs a study with a faculty sponsor in PSYC 4361, then performs the research project and writes an honors thesis in PSYC 4398. In most cases, the six hours of Distinguished Scholar credit will not increase the total hours necessary to complete the B.A. or B.S. degree.

Qualified students or students who believe they may qualify should contact the undergraduate advisor as soon as possible after completing PSYC 3300.

Bachelor of Arts in Psychology

About This Program

The Bachelor of Arts in Psychology is for those who wish to obtain a broad liberal arts education with a concentration in psychology. It is also a preparation for graduate studies in psychology and many other fields.

Competencies

1. Communication: upon completion, students will be able to develop and articulate ideas clearly and effectively across all mediums, including but not limited to written, oral, and digital communication.
2. Critical thinking: upon completion, students will be able to analyze issues, make decisions, and overcome problems by using sound reasoning in order to form a strategy, decision, or opinion.
3. Professionalism: upon completion, students will be able to display effective work habits, high integrity, and ethical behavior. Possess the ability to demonstrate skills confidently and apply talents to achieve professional success.
4. Human connection and interaction: upon completion, students will be able to establish and maintain constructive and cooperative working relationships with others.

5. Knowledge and application of psychology: upon completion, students will possess a foundational knowledge of psychological theory and concepts to critically evaluate the adequacy of scientific research and translate those concepts into everyday life applications.

Admissions Requirements

Students who wish to apply for major status in psychology must first meet the University and College of Science requirements (p. 1531) for admission to major status and the specific requirements of the Department of Psychology listed below.

Overall and Psychology GPA of at least 2.25. To be changed to full major you must first complete PSYC 2300 (https://catalog.uta.edu/search/?P=PSYC%202300), PSYC 3200 (https://catalog.uta.edu/search/?P=PSYC%203200) and PSYC 3300 (https://catalog.uta.edu/search/?P=PSYC%203300) with a C or better in each course.

ADMISSION TO UPPER-LEVEL LABORATORY COURSES

To enroll in the Advanced Topic courses the student must make a C or better in PSYC 2300 (https://catalog.uta.edu/search/?P=PSYC%202300), PSYC 3200 (https://catalog.uta.edu/search/?P=PSYC%203200) and PSYC 3300 (https://catalog.uta.edu/search/?P=PSYC%203300) or equivalent courses and must have completed the associated upper-division lecture course.

- Advanced Topic courses: PSYC 4410 (https://catalog.uta.edu/search/?P=PSYC%204410), PSYC 4411 (https://catalog.uta.edu/search/?P=PSYC%204411), PSYC 4412 (https://catalog.uta.edu/search/?P=PSYC%204412), PSYC 4415 (https://catalog.uta.edu/search/?P=PSYC%204415), PSYC 4420 (https://catalog.uta.edu/search/?P=PSYC%204420), PSYC 4421 (https://catalog.uta.edu/search/?P=PSYC%204421),PSYC 4430 (https://catalog.uta.edu/search/?P=PSYC%204430), PSYC 4431 (https://catalog.uta.edu/search/?P=PSYC%204431), PSYC 4432, (https://catalog.uta.edu/search/?P=PSYC%204432) PSYC 4433 (https://catalog.uta.edu/coursedescriptions/psyc/).

Curriculum

A Bachelor of Arts in Psychology can be achieved by completing a minor in a different discipline or by completing 18 hours of Psychology electives. Please consult with the Psychology undergraduate advisor before choosing one of these options.

Foundations		
General Core Requirements (p. 46)		42
Students are required to complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
& ENGL 1302	and RHETORIC AND COMPOSITION II	
For Life & Physical Science select one of the following sequences:		
BIOL 1333	BIOLOGY FOR NON-SCIENCE MAJORS: CELLS AND DISEASE	
& BIOL 1334	and BIOLOGY FOR NON-SCIENCE MAJORS: LIFE ON EARTH	
BIOL 1441	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY	
& BIOL 1442	and BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	
For Mathematics select:		
MATH 1302	COLLEGE ALGEBRA [1]	
or MATH 1402	COLLEGE ALGEBRA	
MATH 1308	ELEMENTARY STATISTICAL ANALYSIS	
Psychology Foundations		
In consultation with academic advisor, select additional courses in Life & Physical Sciences sufficent to bring total hours to 11 (including courses taken in core).		5
PSYC 2315	STUDENT SUCCESS IN PSYCHOLOGY	3
PSYC 3360	CAREERS IN PSYCHOLOGY	3
Select one of the following in computer competency:		3
CSE 1310	INTRODUCTION TO COMPUTERS & PROGRAMMING	
INSY 2303	INTRODUCTION TO M.I.S. AND DATA PROCESSING	
An equivalent course approved by academic advisor		
Select one of the following in oral communication:		3
COMS 1301	FUNDAMENTALS OF PUBLIC SPEAKING	
COMS 2302	PROFESSIONAL AND TECHNICAL COMMUNICATION FOR SCIENCE AND ENGINEERING	
COMS 2305	BUSINESS AND PROFESSIONAL COMMUNICATION	
An equivalent three hour course approved by academic advisor		
Psychology Specialization		

PSYC 1315	INTRODUCTION TO PSYCHOLOGY	3
PSYC 2300	STATISTICS IN PSYCHOLOGY	3
PSYC 3300	RESEARCH METHODS IN PSYCHOLOGY	3
PSYC 3200	EXPERIENCING RESEARCH IN PSYCHOLOGY	2
Required Core Lectures		
PSYC 3315	SOCIAL PSYCHOLOGY	3
PSYC 3322	BRAIN AND BEHAVIOR	3
PSYC 3334	COGNITIVE PROCESSES	3
PSYC 3302	BUSINESS PSYCHOLOGY	3
Lecture Groups		
Select one three-hour lecture course from each group.		
Group I (Social/General Psych)		3
PSYC 2317	BASIC CONCEPTS IN HUMAN SEXUALITY	
PSYC 3303	DRUGS AND BEHAVIOR	
PSYC 3314	PSYCHOLOGY OF PERSONALITY	
PSYC 3325	DATA SCIENCE IN PSYCHOLOGY	
PSYC 3357	CYBERPSYCHOLOGY BASIC CONCEPTS	
PSYC 3358	CYBERPSYCHOLOGY APPLICATIONS	
PSYC 3359	POLITICAL PSYCHOLOGY FOR THE INTERNET	
PSYC 4339	PSYCHOLOGY OF JUDGMENT AND CHOICE	
PSYC 4359	SELECTED TOPICS IN PSYCHOLOGY	
Group II (Cognitive/Neuroscience Psych)		3
PSYC 3304	ANALYSIS & MANAGEMENT OF BEHAVIOR	
PSYC 3320	BEHAVIOR AND MOTIVATION	
PSYC 3326	ANIMAL BEHAVIOR	
PSYC 3356	EVOLUTIONARY PSYCHOLOGY	
PSYC 4301	PRINCIPLES OF NEUROSCIENCE	
PSYC 4309	NEUROPHARMACOLOGY	
PSYC 4315	HORMONES AND BEHAVIOR	
PSYC 4327	BEHAVIORAL GENETICS	
PSYC 4332	THEORIES OF HUMAN LEARNING AND MEMORY	
PSYC 4334	SENSATION AND PERCEPTION	
PSYC 4335	COGNITIVE DEVELOPMENT	
PSYC 4338	COGNITIVE NEUROSCIENCE	
Group III (Clincal/Developmental Psych)		3
PSYC 3310	DEVELOPMENTAL PSYCHOLOGY	
PSYC 3312	SOCIAL & PERSONALITY DEVELOPMENT	
PSYC 3317	INTRODUCTION TO CLINICAL AND COUNSELING PSYCHOLOGY	
PSYC 3318	ABNORMAL PSYCHOLOGY	
PSYC 3319	PSYCHOLOGY OF ADOLESCENCE	
PSYC 4357	HEALTH PSYCHOLOGY	
Group IV (Business Psych)		3
PSYC 3301	PSYCHOLOGY OF HUMAN RELATIONS	
PSYC 3305	PSYCHOLOGY OF EMPLOYEE TRAINING	
PSYC 3306	PSYCHOLOGY OF CREATIVITY AND CREATIVE THINKING	
Advanced Topics course		
Select one four-hour advanced topics course from either Group I, II, III, or IV:		4
Group I		
PSYC 4411	ADVANCED TOPICS IN PERSONALITY	
PSYC 4412	ADVANCED TOPICS IN SOCIAL PSYCHOLOGY	
Group II		
PSYC 4420	EXPERIMENTAL ANALYSIS OF BEHAVIOR	

PSYC 4421	ADVANCED TOPICS IN NEUROSCIENCE	
PSYC 4431	ADVANCED TOPICS IN COGNITIVE SCIENCE	
Group III		
PSYC 4410	ADVANCED TOPICS IN DEVELOPMENTAL PSYCHOLOGY	
PSYC 4415	INTERNSHIP IN PSYCHOLOGY	
PSYC 4430	ADVANCED TOPICS IN CLINICAL COUNSELING	
PSYC 4432	ADVANCED TOPICS IN HEALTH	
Group IV		
PSYC 4433	ADVANCED TOPICS IN INDUSTRIAL/ORGANIZATIONAL PSYCHOLOGY	
Minor or Psychology Electives		
Select a minor of 18 hours in a discipline other than Psychology or 18 total hours of Psychology electives.		18
Electives		
Select sufficient hours to complete the 120 required for the degree.		4
Total Hours		**120**

[1] Prerequisites may add hours to the total required for the degree.

SUGGESTED COURSE SEQUENCE

First Year

First Semester	Hours	Second Semester	Hours
PSYC 1315	3	ENGL 1302	3
PSYC 2315	3	MATH 1308	3
BIOL 1333 or 1441	3 - 4	HIST 1301	3
ENGL 1301	3	PSYC 3360	3
MATH 1402 or 1302	4	BIOL 1334 or 1442	3-4
	16-17		**15-16**

Second Year

First Semester	Hours	Second Semester	Hours
PSYC 2300	3	PSYC 3300	3
Creative Arts Course	3	Minor Course	3
HIST 1302	3	PSYC 3334	3
Group I Adv Psych Lecture	3	POLS 2311	3
INSY 2303	3	PSYC 3301	3
PSYC 3315	3		
	18		**15**

Third Year

First Semester	Hours	Second Semester	Hours
Minor Course	3	Minor Course	3

Bachelor of Science in Psychology

About This Program

The Bachelor of Science in Psychology is intended for those students preparing for work and study in fields requiring more mathematics and sciences. It is also suitable for pre-medical and pre-dental students. Students preparing for study in the health professions including medicine, dentistry, pharmacology, optometry, occupational therapy, and veterinary medicine should also be advised by the Health Professions Advisor in order to meet the requirements of the corresponding professional schools.

Competencies

1. Communication: upon completion, students will be able to develop and articulate ideas clearly and effectively across all mediums, including but not limited to written, oral, and digital communication.
2. Critical thinking: upon completion, students will be able to analyze issues, make decisions, and overcome problems by using sound reasoning in order to form a strategy, decision, or opinion.
3. Professionalism: upon completion, students will be able to display effective work habits, high integrity, and ethical behavior. Possess the ability to demonstrate skills confidently and apply talents to achieve professional success.
4. Human connection and interaction: upon completion, students will be able to establish and maintain constructive and cooperative working relationships with others.
5. Knowledge and application of psychology: upon completion, students will possess a foundational knowledge of psychological theory and concepts to critically evaluate the adequacy of scientific research and translate those concepts into everyday life applications.

Admissions Requirements

Students who wish to apply for major status in psychology must first meet the University and College of Science requirements (p. 1531) for admission to major status and the specific requirements of the Department of Psychology listed below.

Overall and Psychology GPA of at least 2.25. To be changed to full major you must first complete PSYC 2300 (https://catalog.uta.edu/search/?P=PSYC%202300), PSYC 3200 (https://catalog.uta.edu/search/?P=PSYC%203200) and PSYC 3300 (https://catalog.uta.edu/search/?P=PSYC%203300) with a C or better in each course.

ADMISSION TO UPPER-LEVEL LABORATORY COURSES

To enroll in the Advanced Topic courses the student must make a C or better in both PSYC 2300 (https://catalog.uta.edu/search/?P=PSYC%202300),PSYC 3200 (https://catalog.uta.edu/search/?P=PSYC%203200) and PSYC 3300 (https://catalog.uta.edu/search/?P=PSYC%203300) or equivalent courses and must have completed the associated upper-division lecture course.

Advanced Topic courses: PSYC 4410 (https://catalog.uta.edu/search/?P=PSYC%204410), PSYC 4411 (https://catalog.uta.edu/search/?P=PSYC%204411), PSYC 4412 (https://catalog.uta.edu/search/?P=PSYC%204412), PSYC 4415 (https://catalog.uta.edu/search/?P=PSYC%204415), PSYC 4420 (https://catalog.uta.edu/search/?P=PSYC%204420), PSYC 4421 (https://catalog.uta.edu/search/?P=PSYC%204421),PSYC 4430 (https://catalog.uta.edu/search/?P=PSYC%204430), PSYC 4431 (https://catalog.uta.edu/search/?P=PSYC%204431), PSYC 4432, (https://catalog.uta.edu/search/?P=PSYC%204432) PSYC 4433 (https://catalog.uta.edu/coursedescriptions/psyc/).

Curriculum

A Bachelor of Science in Psychology can be achieved by completing a minor in a different discipline or by completing 18 hours of Psychology electives. Please consult with the Psychology undergraduate advisor before choosing one of these options.

WEB:

Psychology Advising (https://www.uta.edu/academics/schools-colleges/science/departments/psychology/advising/)

Bachelor of Science in Psychology with Teaching Certification in Mathematics (Grades 7-12)

About This Program

Bachelor of Science in Psychology with Teaching Certification in Mathematics (Grades 7-12) is intended for those students preparing for work and study in fields requiring more mathematics and sciences. It is also suitable for pre-medical and pre-dental students. Students preparing for study in the health professions including medicine, dentistry, pharmacology, optometry, occupational therapy, and veterinary medicine should also be advised by the Health Professions Advisor in order to meet the requirements of the corresponding professional schools.

Competencies

1. Upon completion, students will demonstrate critical thinking skills and be familiar with the major concepts, theories, and historical trends in psychology.
2. Upon completion, students will be able to design, conduct, analyze, and interpret empirical research addressing psychological questions.
3. Upon completion, students will have a clear understanding of fundamental concepts in a breadth of topics in mathematics.
4. Upon completion, students will be familiar with effective pedagogical practices and be prepared to teach mathematics at the secondary level.

Admissions Criteria

Students who wish to apply for major status in psychology must first meet the University and College of Science requirements for admission to major status and the specific requirements of the Department of Psychology listed below.

Overall and Psychology GPA of at least 2.25. To be changed to full major you must first complete PSYC 2300 (https://catalog.uta.edu/search/?P=PSYC%202300), PSYC 3200 (https://catalog.uta.edu/search/?P=PSYC%203200) and PSYC 3300 (https://catalog.uta.edu/search/?P=PSYC%203300) with a C or better in each course.

ADMISSION TO UPPER-LEVEL LABORATORY COURSES

To enroll in the Advanced Topic courses the student must make a C or better in both PSYC 2300 (https://catalog.uta.edu/search/?P=PSYC%202300),PSYC 3200 (https://catalog.uta.edu/search/?P=PSYC%203200) and PSYC 3300 (https://catalog.uta.edu/search/?P=PSYC%203300) or equivalent courses and must have completed the associated upper-division lecture course.

Advanced Topic courses: PSYC 4410 (https://catalog.uta.edu/search/?P=PSYC%204410), PSYC 4411 (https://catalog.uta.edu/search/?P=PSYC%204411), PSYC 4412 (https://catalog.uta.edu/search/?P=PSYC%204412), PSYC 4415 (https://catalog.uta.edu/search/?P=PSYC%204415), PSYC 4420 (https://catalog.uta.edu/search/?P=PSYC%204420), PSYC 4421 (https://catalog.uta.edu/search/?P=PSYC%204421),PSYC 4430 (https://catalog.uta.edu/search/?P=PSYC%204430), PSYC 4431 (https://catalog.uta.edu/search/?P=PSYC%204431), PSYC 4432, (https://catalog.uta.edu/search/?P=PSYC%204432) PSYC 4433 (https://catalog.uta.edu/coursedescriptions/psyc/).

Curriculum

A Bachelor of Science in Psychology can be achieved by completing a minor in a different discipline or by completing 18 hours of Psychology electives. Please consult with the Psychology undergraduate advisor before choosing one of these options.

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses in certain core areas.		
For Communication select:		
ENGL 1301 & ENGL 1302	RHETORIC AND COMPOSITION I and RHETORIC AND COMPOSITION II	
For Life & Physical Science select:		
BIOL 1441 & BIOL 1442	BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY and BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION	
For Mathematics select:		
MATH 1426	CALCULUS I	
MATH 2425	CALCULUS II	
For Social and Behavioral Sciences, select:		
PSYC 1315	INTRODUCTION TO PSYCHOLOGY	
For Foundational Component Area Option select 1 from the following:		
CHEM 1441	GENERAL CHEMISTRY I	
CHEM 1442	GENERAL CHEMISTRY II	
GEOL 1301	EARTH SYSTEMS	
GEOL 1302	EARTH HISTORY	
PHYS 1441	GENERAL COLLEGE PHYSICS I	
PHYS 1442	GENERAL COLLEGE PHYSICS II	
PHYS 1443	GENERAL TECHNICAL PHYSICS I	
PHYS 1444	GENERAL TECHNICAL PHYSICS II	
Psychology Foundations		
Additional hours in math and science required in general education core.		4
PSYC 2315	STUDENT SUCCESS IN PSYCHOLOGY	3
PSYC 3360	CAREERS IN PSYCHOLOGY	3
For computer literacy select:		
SCIE 4331	KNOWING AND LEARNING IN STEM	3
Psychology Specialization		
PSYC 2300	STATISTICS IN PSYCHOLOGY	3
PSYC 3300	RESEARCH METHODS IN PSYCHOLOGY	3
PSYC 3200	EXPERIENCING RESEARCH IN PSYCHOLOGY	2
Core Lectures		
PSYC 3315	SOCIAL PSYCHOLOGY	3
PSYC 3322	BRAIN AND BEHAVIOR	3
PSYC 3334	COGNITIVE PROCESSES	3
PSYC 3302	BUSINESS PSYCHOLOGY	3
Lecture Groups		
Select one three-hour lecture course from each of the following groups:		
Group I		3
PSYC 2317	BASIC CONCEPTS IN HUMAN SEXUALITY	
PSYC 3303	DRUGS AND BEHAVIOR	
PSYC 3314	PSYCHOLOGY OF PERSONALITY	
PSYC 3325	DATA SCIENCE IN PSYCHOLOGY	
PSYC 3357	CYBERPSYCHOLOGY BASIC CONCEPTS	
PSYC 3358	CYBERPSYCHOLOGY APPLICATIONS	
PSYC 3359	POLITICAL PSYCHOLOGY FOR THE INTERNET	
PSYC 4339	PSYCHOLOGY OF JUDGMENT AND CHOICE	

PSYC 4359	SELECTED TOPICS IN PSYCHOLOGY	
Group II		3
PSYC 3304	ANALYSIS & MANAGEMENT OF BEHAVIOR	
PSYC 3320	BEHAVIOR AND MOTIVATION	
PSYC 3326	ANIMAL BEHAVIOR	
PSYC 3356	EVOLUTIONARY PSYCHOLOGY	
PSYC 4301	PRINCIPLES OF NEUROSCIENCE	
PSYC 4309	NEUROPHARMACOLOGY	
PSYC 4315	HORMONES AND BEHAVIOR	
PSYC 4327	BEHAVIORAL GENETICS	
PSYC 4332	THEORIES OF HUMAN LEARNING AND MEMORY	
PSYC 4334	SENSATION AND PERCEPTION	
PSYC 4335	COGNITIVE DEVELOPMENT	
PSYC 4338	COGNITIVE NEUROSCIENCE	
Group III		3
PSYC 3310	DEVELOPMENTAL PSYCHOLOGY	
PSYC 3312	SOCIAL & PERSONALITY DEVELOPMENT	
PSYC 3317	INTRODUCTION TO CLINICAL AND COUNSELING PSYCHOLOGY	
PSYC 3318	ABNORMAL PSYCHOLOGY	
PSYC 3319	PSYCHOLOGY OF ADOLESCENCE	
PSYC 4357	HEALTH PSYCHOLOGY	
Group IV		3
PSYC 3301	PSYCHOLOGY OF HUMAN RELATIONS	
PSYC 3305	PSYCHOLOGY OF EMPLOYEE TRAINING	
PSYC 3306	PSYCHOLOGY OF CREATIVITY AND CREATIVE THINKING	
Advanced Topics Course		
Select one of the following:		4
PSYC 4410	ADVANCED TOPICS IN DEVELOPMENTAL PSYCHOLOGY	
PSYC 4411	ADVANCED TOPICS IN PERSONALITY	
PSYC 4412	ADVANCED TOPICS IN SOCIAL PSYCHOLOGY	
PSYC 4420	EXPERIMENTAL ANALYSIS OF BEHAVIOR	
PSYC 4421	ADVANCED TOPICS IN NEUROSCIENCE	
PSYC 4415	INTERNSHIP IN PSYCHOLOGY	
PSYC 4430	ADVANCED TOPICS IN CLINICAL COUNSELING	
PSYC 4431	ADVANCED TOPICS IN COGNITIVE SCIENCE	
PSYC 4432	ADVANCED TOPICS IN HEALTH	
Teaching Component		
SCIE 1334	STEP 1 & 2 COMBO: INQUIRY APPROACHES TO TEACHING & LESSON DESIGN	3
SCIE 4332	CLASSROOM INTERACTIONS	3
PHIL 2314	PERSPECTIVES ON SCIENCE AND MATHEMATICS	3
SCIE 4333	MULTIPLE TEACHING PRACTICES	3
SCIE 4607	CAPSTONE TEACHING EXPERIENCE FOR STEM SECONDARY GRADES	6
SCIE 4107	CAPSTONE TEACHING EXPERIENCE SEMINAR	1
Mathematics Minor		
MATH 2330	FUNCTIONS AND MODELING	3
MATH 3301	FOUNDATIONS OF GEOMETRY	3
MATH 3307	ELEMENTARY NUMBER THEORY	3
MATH 3314	DISCRETE MATHEMATICS	3
Total Hours		**122**

Minor in Clinical Health Psychology

About This Program

The Clinical Health Psychology Minor provides students with a foundational understanding of psychological principles and their application specifically related to mental and physical health. Courses offer insights into human development, mental health disorders, and the role of genetics in behavior, preparing students for careers in psychology, healthcare, or research.

The Clinical Health Psychology minor comprises 18 credit hours or more in Psychology (PSYC) courses. A 2.0-grade point average (calculated only by the PSYC courses taken in residency) must be maintained in the minor. To request a minor be added to your degree plan, please complete the minor request form (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/undergraduate/minors/clinical-health-psychology-minor02172022.ashx?revision=2c3cd3f6-5ddf-4bbb-8585-c95bc852f280) and seek approval from your academic advisor.

Competencies

1. Upon completion, students will demonstrate a foundational understanding of psychological principles and their application to mental and physical health.

Curriculum

Foundations		
PSYC 1315	INTRODUCTION TO PSYCHOLOGY	3
Specialization		
Select 15 hours from the following, all of which have a prerequisite of PSYC 1315 with a C or better:		15
PSYC 3304	ANALYSIS & MANAGEMENT OF BEHAVIOR	
PSYC 3310	DEVELOPMENTAL PSYCHOLOGY	
PSYC 3312	SOCIAL & PERSONALITY DEVELOPMENT	
PSYC 3314	PSYCHOLOGY OF PERSONALITY	
PSYC 3317	INTRODUCTION TO CLINICAL AND COUNSELING PSYCHOLOGY	
PSYC 3318	ABNORMAL PSYCHOLOGY

Minor in Neuroscience

About This Program

The Neuroscience Minor offers an in-depth study of the biological and psychological mechanisms that shape behavior, blending topics such as neural anatomy and physiology, sensory and motor systems, cognitive processes, learning and memory, and the effects of drugs on the nervous system. This minor equips students with a comprehensive understanding of the brain and behavior, making it an ideal choice for those interested in the intricate workings of the nervous system and its role in human behavior.

The Neuroscience Minor comprises 18 credit hours or more in Psychology (PSYC) courses. A 2.0 grade point average (*calculated only by the PSYC courses you take in residency*) must be maintained in the minor. To request that a minor be added to your degree plan, please complete the minor request form (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/undergraduate/minors/neuroscience-psychology-minor02172022.ashx?revision=cb143bc0-7d14-4f3d-b146-8d3fe46b2730) and seek approval from your academic advisor.

Competencies

1. Upon completion, students will demonstrate understanding of the biological and psychological mechanisms that shape behavior, including neural anatomy and physiology, sensory and motor systems, cognitive processes, learning and memory, and the effects of drugs on the nervous system.

Minor in Organizational Science

About This Program

The Organizational Science Minor explores the application of psychological principles to workplace dynamics, focusing on topics such as leadership, teamwork, diversity, motivation, employee training, and the influence of personality and social behavior on organizational effectiveness. It integrates theories and research on interpersonal relationships, group processes, and workplace well-being to prepare students for solving real-world challenges in organizational settings.

The Organizational Science Minor comprises 18 credit hours or more in Psychology (PSYC) courses. A 2.0-grade point average (calculated only by the PSYC courses taken in residency) must be maintained in the minor. To request a minor be added to your degree plan, please complete the minor request form (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/undergraduate/minors/organizational-sciences-psychology-minor02172022.ashx?revision=ecb3ff23-5d69-4133-8295-e30be09d0a55) and seek approval from your academic advisor.

Competencies

1. Upon completion, students will be able to apply psychological principles to workplace dynamics, focusing on topics such as leadership, teamwork, diversity, motivation, employee training, and the influence of personality and social behavior on organizational effectiveness.

Minor in Psychology

About This Program

The Minor in General Psychology provides students the opportunity to deepen their understanding of foundational concepts and broaden their knowledge across various areas of the field. This minor can complement virtually any field of study and is particularly valuable in careers such as business, healthcare, education, law, and social services, where understanding human behavior is key to success. Additionally, it provides a strong base for those considering graduate studies in psychology or related disciplines, making it a beneficial choice for both personal growth and professional development.

The Psychology Minor comprises 18 credit hours or more in Psychology (PSYC) courses. 9 of the 18 hours must be completed at UT Arlington. Six of the 9 hours must be 3000-4000 level. A 2.0 grade point average (calculated only by the PSYC courses you take in residency) must be maintained in the minor. To request a minor be added to your degree plan, please complete the minor request form (https://cdn.web.uta.edu/-/media/project/website/science/psychology/documents/degree-programs/undergraduate/minors/general-psych-minor02172022.ashx?revision=0c43d798-a730-4051-92fb-ca942afb86cb) and seek approval from your academic advisor.

Competencies

1. Upon completion, students will demonstrate an understanding of foundational concepts in psychology.
2. Upon completion, students will demonstrate awareness of the various areas comprised in the discipline.

School of Social Work

Overview

The School of Social Work (SSW) strives to educate leaders to create community partnerships for promoting a just society. The School promotes the highest standards of integrity and excellence in research, teaching and service, and creates collaborative scholarly and educational opportunities for students and the community, with the goal of achieving a just society. The SSW has identified several broad program objectives: engaging in evidence-informed research, teaching and practice, preparing students to assume leadership roles and activities in the local community and beyond, and to conduct community-based research to address complex and pressing social issues at the local, national and global levels.

The SSW offers a Bachelor and Master of Social Work, both accredited by the Council on Social Work Education (CSWE). A Doctorate of Philosophy is also offered in Social Work; the SSW's PhD program is a member of the Group for the Advancement of Doctoral Education in Social Work (GADE).

Contact Information

For additional information not found within these catalog pages, students may refer to the website or contact the School of Social Work directly.

COURSES

SOCW 1331. SOCIAL WORK PROFESSIONALISM. 3 Hours.
Equips students with skills and resources to prepare for academic and professional success. Empowers diverse students to identify their individual needs, reflect on opportunities for growth, determine what resources and self-care strategies are appropriate, recognize the faculty role in their development, and formulate a plan for an actively engaged and enriched experience from campus to career. Each class section has a Peer Academic Leader (PAL), who are students who have already taken the course and assist as a discussion leader for the class under the supervision of the instructor. This course is reserved exclusively for students planning to major in Social Work (e.g., BSW-Intended status) who are freshmen; this will be taken concurrently with UNIV 1131. This course or SOCW 3300 is required for admission to the BSW major.

SOCW 1350. SPECIAL ISSUES IN SOCIAL WORK. 3 Hours.
Relevant social work topics generated and explored in depth according to student and professional needs. The topic will be determined prior to registration. We sometimes transfer in 1000 level courses and need a generic 1000 level for allocation.

SOCW 2302. HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT. 3 Hours.
Exploration of behavioral and social science knowledge of human behavior and development of diverse persons through the life course. Examines major systems in society: individual, group, family, and community; and the diversity of ethnicity, race, class, sexual orientation, and culture. This course is required for Social Work Practicum Instruction and Seminar I (SOCW 4951). This course satisfies the University of Texas at Arlington core curriculum requirement in Social and Behavioral Sciences. For students seeking the BSW major who are Field of Study complete in Social Work, this course is not required.

SOCW 2325. INTRODUCTION TO STATISTICS FOR SOCIAL WORK AND THE SOCIAL SCIENCES. 3 Hours.
This course is designed to enhance students' skills as research consumers and in performing research and statistical analyses in social work and the social sciences. This course teaches analytical methods that permit social workers to explore and understand the effects of individual differences on the impact of treatments and the success of interventions between various ethnic and cultural groups, gender identities, across the life span, and through different socio-economic levels. Included in the course are descriptive statistical procedures including measures of central tendency, variability, shape and distribution along with associations between two variables. In addition, inferential statistics are covered including estimation and hypothesis testing.

SOCW 2350. SPECIAL ISSUES IN SOCIAL WORK. 3 Hours.
Relevant social work topics generated and explored in depth according to student and professional needs. The topic will be determined prior to registration.

SOCW 2361. INTRODUCTION TO SOCIAL WORK. 3 Hours. (TCCN = SOCW 2361)
An overview of the social work profession, its fields of practice, methods of social intervention, its historical context, and its relationship to the social welfare system. This course is open to all students and satisfies the requirement for Social and Behavioral Sciences in the core curriculum. This course is required for the Bachelor of Social Work (BSW) program.

SOCW 3300. SOCIAL WORK PROFESSIONALISM AND STUDENT SUCCESS. 3 Hours.
Equips students with skills and resources to prepare for academic and professional success. Empowers diverse students to identify their individual needs, reflect on opportunities for growth, determine what resources and self-care strategies are appropriate, recognize the faculty role in their development, and formulate a plan for an actively engaged and enriched experience from campus to career. Each class section has a Peer Academic Leader (PAL), who are students who have already taken the course and assist as a discussion leader for the class under the supervision of the instructor. This course is reserved exclusively for students planning to major in Social Work (e.g., BSW-Intended status) who have transferred from another institution; this fulfills the university requirement for UNIV 1101. This course or SOCW 1231 is required for admission to the BSW major. Co-requisite: SOCW 2361.

SOCW 3301. THEORIES OF HUMAN BEHAVIOR. 3 Hours.
This course explores, within the context of a strengths and empowerment perspective, theories of human behavior. For social work majors, it is strongly recommended that SOCW 2302 be taken before this course. Offered as AAST 3301 and SOCW 3301; credit will be granted in only one department. This course is required for Social Work Field Instruction and Seminar I (SOCW 4951).

SOCW 3303. SOCIAL WELFARE POLICY AND SERVICES. 3 Hours.
Examines how social goals are met by social welfare institutions. Conceptual schemes are developed for analyzing the structure of social welfare institutions and evaluating social welfare sub-systems. The social work profession is also examined in the context of the evolution and function of the contemporary American social welfare system. This course is required for Social Work Field Instruction and Seminar II (SOCW 4952).

SOCW 3305. SOCIAL WORK PRACTICE I. 3 Hours.
This course is designed to promote a critical evaluation of the history and philosophy of social work and its value base as well as teach basic practice concepts including cultural humility, interviewing, communication, and problem-solving to use with diverse individuals, families, and groups across practice settings. Students will be able to make connections between social work's historical roots and present-day social work practice and demonstrate understanding of what they bring to practice as individuals and how that may support or hinder their work with diverse individuals, families, and groups. This course is required for admission to the Bachelor of Social Work (BSW) program. Co-requisite: SOCW 2311 or SOCW 2361.

SOCW 3306. SOCIAL WORK PRACTICE III: MACRO PRACTICE. 3 Hours.
Examines generalist community and administrative practice roles and includes the perspectives of historical inequities and social injustice and the impact on communities and diverse groups, strengths, empowerment, evidence-based practice, and global practice along with the values of social justice, diversity, and participation. Specific attention is given to assessing community assets and needs. Prerequisite: SOCW 1231 OR SOCW 3300, SOCW 2361, SOCW 3305, SOCW 3307, and MATH 1308 or SOCW 2325 or other equivalent statistics course approved by the Director of Undergraduate Programs.

SOCW 3307. DIVERSE POPULATIONS. 3 Hours.
Introduction to theoretical, practical, and policy issues related to diverse populations. Historical, political, and socioeconomic forces are examined that maintain discriminatory and oppressive values, attitudes, and behaviors in society in diverse populations and in all levels of organizational behavior. This course is required for admission to the Bachelor of Social Work (BSW) program. Offered as AAST 3317, SOCW 3307 and MAS 3319; credit will be granted in only one department.

SOCW 3308. SOCIAL WORK RESEARCH METHODS. 3 Hours.
This course is designed to provide students with the fundamental skills to understand, use, and conduct research to advance the knowledge base of the social work profession and assess the effectiveness of social work interventions in generalist social work practice. The course addresses elements of the research process, quantitative and qualitative methods, research ethics, and approaches to data analysis. Particular attention will be given to the role of research with populations-at-risk, social and economic justice, and cultural diversity. Prerequisite: SOCW 1231 OR SOCW 3300, SOCW 3305, SOCW 3307, and MATH 1308 or SOCW 2325 or other equivalent statistics course approved by the Director of Undergraduate Programs.

SOCW 3309. SOCIAL WORK PRACTICE II. 3 Hours.
Theories and methodologies of social work assessment, case management, and other generalist intervention at the individual, family, and group levels in diverse settings through the lens of intersectionality of race, gender, sexuality, age educational level and other aspects of identity. Prerequisite: SOCW 1231 OR SOCW 3300, SOCW 2361, SOCW 3305, SOCW 3307, and MATH 1308 or SOCW 2325 or other equivalent statistics course approved by the Director of Undergraduate Programs.

SOCW 3310. ENVIRONMENTAL JUSTICE & GREEN SOCIAL WORK. 3 Hours.
This course examines how a variety of vulnerable or marginalized populations are impacted by environmental injustices, and explores ways that social service professionals can solve environmental justice issues on the micro, mezzo and macro level. Students will explore how issues such as climate change, extreme weather events and environmental toxins intersect with health, mental health, children & youth, older adults, indigenous populations, food deserts, climate-forced migration, international conflict, environmental racism, and more and examine solutions including ecotherapy, climate policy, and community organizing. This course is also offered at the Master's level as SOCW 5310. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level.

SOCW 3312. DISABILITY & SOCIAL WORK. 3 Hours.
Examines major themes in disability and social work. Topics include basic understandings of disability, lived experiences of people with disabilities, legal and policy perspectives, working with adults and children with a variety of disabilities, history of disability policy and disability rights, disability advocacy, and resources in the community, among others. Offered as DS 3312 and SOCW 3312; credit will only be granted in one department.

SOCW 3314. THE LATINA EXPERIENCE. 3 Hours.
A course on the social, cultural, and economic experiences of Latina and Latin American origin women in the United States. Offered as MAS 3314, SOCI 3314, SOCW 3314, GWSS 3314, and AAST 3321. Credit will be granted in only one department.

SOCW 3315. INTRODUCTION TO SUBSTANCE USE DISORDERS. 3 Hours.
This is an entry-level course that provides foundation-level social work students with the fundamental concepts of Substance Use Disorders (SUD) and the addictive process. Students will examine the prevalence and characteristics of substance use disorders and the impact of such disorders on the individual, family, and the community. Theories of addiction and application of these theories will be examined. Students will develop conceptual knowledge and self-awareness concerning the etiology of addiction, assessment strategies, and wellness strategies for facilitating optimal development and preventing SUD. The course will cover the prevalence of SUD varies among ethnic and cultural groups, between men and women, across the life span, and through different socio-economic levels. This course is taught as SOCW 3315 and SUT 3315. Credit will be granted only once.

SOCW 3318. SCREENING, ASSESSMENT, & ENGAGEMENT. 3 Hours.
Introduces screening and diagnostic instruments and techniques appropriate for determining whether a substance use disorder might exist. Explores the therapeutic alliance and practice engagement techniques taking into account intersections of race, gender, sexuality, age, educational level, and other aspects of identity. Students learn to assess suicide risk and a client's readiness for change. Students learn to diagnose substance use disorders and recognize intoxication, withdrawal, substance, and medication induced disorders. Offered as SUT 3318 and SOCW 3318. Credit will be granted only once. Prerequisite: Prerequisite OR Corequisite: SUT 3315 or SOCW 3315.

SOCW 3319. TREATMENT PLANNING, COLLABORATION & REFERRAL. 3 Hours.
This course addresses the clinical application of the biopsychosocial assessment in the development of a treatment plan. Potential treatment issues will be identified and a client-specific problem list will be developed. Individualized treatment goals will be established in collaboration with diverse clients. Client objectives and clinical interventions will also be developed. This course explores dynamics of the therapeutic alliance, and clinician-client collaboration within the context of a strengths and empowerment-based perspective. The student will gain insight into and an appreciation of collaboration, consultation, and referral throughout the continuum of care. Offered as SUT 3319 and SOCW 3319. Credit will be granted only once. Prerequisite: SOCW 3318 or SUT 3318.

SOCW 3320. U.S. IMMIGRATION POLICY AND THE AMERICAN DREAM. 3 Hours.
This course focuses on diverse ethnic and racial identities in America through the examination of immigration to the United States, past and present, and the evolution of U.S. immigration policy. Topics include U.S. attitudes and policy responses to European, Asian, and Latin American immigration and to the incorporation of the descendants of African slaves and Native Americans. Emphasis on the decline of the melting pot idea and the incorporation of recent immigrants. Offered as MAS 3320, AAST 3319, and SOCW 3320. Credit will be granted only once.

SOCW 3321. SUBSTANCE USE TREATMENT. 3 Hours.
This course is the culmination of the fundamentals of substance use disorders, treatment planning, collaboration and referral, and substance use treatment. Students will learn and acquire the special skills necessary to assist individuals, families, and groups through the sequela of substance use and addiction. Focus on cognitive-behavioral therapy, motivational interviewing, 12-step programs, nutrition and exercise, meditation, and other alternative treatment options. Students will study treatment modalities that consider the social, cultural, and economic influences that shape the client's world view and substance use experience. Offered as SUT 3321 and SOCW 3321. Credit will be granted only once. Prerequisite: Prerequisite or corequisite: SUT 3319 or SOCW 3319.

SOCW 4191. CONFERENCE COURSE. 1 Hour.
Topics assigned on an individual basis covering personal research or study in designated areas. Prerequisite: Permission of the Director.

SOCW 4291. CONFERENCE COURSE. 2 Hours.
Topics assigned on an individual basis covering personal research or study in designated areas. Prerequisite: Permission of the Director.

SOCW 4310. SOCIAL WORK WITH CHILDREN AND FAMILIES. 3 Hours.
A critical examination of social policies, research, and practices impacting at-risk children and families in child welfare, child mental health, and school settings. Emphasis is placed on the role of the social work practitioner in enhancing the well-being of children and families in contemporary society. Prerequisite: SOCW 2302, SOCW 3301, and SOCW 3309.

SOCW 4314. INTIMATE PARTNER VIOLENCE. 3 Hours.
This course covers interdisciplinary theoretical frameworks for understanding and addressing intimate partner violence in diverse relationships, including critical feminism, psychological, and sociological models, as well as prevention and intervention practices that reflect a stance of cultural and critical humility. This course is also offered at the Master's level as SOCW 5314. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level.

SOCW 4335. AGING IN AMERICAN SOCIETY. 3 Hours.
This course presents the major theories of aging, in the United States and across cultures, and explores the diverse factors of aging through the lens of intersectionality taking into account intersections of race, gender, sexuality, educational level and other aspects of identity. It includes various perspectives including psychological, biological, sociological, and spiritual. Students will examine current social and economic issues impacting older adults, such as aging & healthcare policy, living arrangements, caregiving, technology, and sexuality. Theories are integrated into practice thus providing students a sound foundation for social work practice with diverse older adults. Students who receive credit for this course in the undergraduate program (SOCW 4335) may not repeat the course at the Master's level (SOCW 5335). Prerequisite: SOCW 2302, SOCW 3301, and SOCW 3307.

SOCW 4344. HEALTH INSURANCE AND ACCESS TO CARE. 3 Hours.
Explores the history and underlying philosophy of managed care in health and social services, reviews interdisciplinary approaches and principles for understanding and critiquing health care systems, and covers current trends and practice issues. Assesses the potential for conflict between social work values and managed care systems. Builds skills for advancing health equity through administrative roles in managed care settings. This is offered at the MSW level as SOCW 5344. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level.

SOCW 4350. SPECIAL ISSUES IN SOCIAL WORK. 3 Hours.
Relevant social work topics generated and explored in depth according to student and professional needs. The topic will be determined prior to registration. Prerequisite: Permission of the Director.

SOCW 4364. PERSONAL RELATIONSHIPS. 3 Hours.
Explores theoretical and empirical data on diverse personal relationships at the follow stages of relationship: initiation, maintenance, and termination. Identifies areas for intervention. Also offered as SOCW 5364 in the MSW program. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level. Prerequisite: SOCW 3301, SOCW 2302, and SOCW 3307. Co-requisite: Social Work Practice II (SOCW 3309 [formerly 3304]).

SOCW 4366. SEMINAR IN WOMEN'S ISSUES. 3 Hours.
Explores women's issues in human behavior theory, practice theory, and policy. Using an intersectional lens, the historical, political, and socioeconomic forces that maintain sexism among diverse groups are discussed. Environmental influences are examined in relation to social justice, social work values, knowledge, and skills. This course is also offered as SOCW 5366 in the MSW program. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level. Prerequisite: SOCW 3301, and SOCW 3307. Co-requisite: Social Work Practice II (SOCW 3309).

SOCW 4370. SOCIAL WORK IN THE SCHOOLS. 3 Hours.
The purpose of this course is to provide an overview of the various social work-related theoretical perspectives, models, and programs for intervention with diverse children and their families in the school setting. This includes skills in assessment, prevention, and intervention in providing services to students that are marginalized for numerous reasons including race, gender, skin color, religion, immigrant status, disability, sexual orientation, and socioeconomic status among other factors. Students will learn to use intervention skills that address each level of the ecosystem's perspective in schools. This is offered at the Master's level as SOCW 5370. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level. Prerequisite: SOCW 3309.

SOCW 4371. INEQUITIES AND INCARCERATION. 3 Hours.
This course surveys mass incarceration in the U.S. criminal justice system as a racialized and classist system of control. First, this course will contextualize the US criminal justice system, both historically and through global comparisons. Then students will be introduced to four broad content areas: entering the criminal justice system (school-to-prison pipeline and policing), who is detained (demographics and common mental health and substance use issues) and what they experience in detention (including covid-19 in jails and prisons), experiences and problems encountered when returning citizens reenter society, and trends in criminal justice reform advocacy (including problem-solving courts and advocacy efforts such as Black Lives Matter). Finally, the course considers the social work grand challenge of smart decarceration as a path towards reform specific to social workers. Also offered as SOCW 5371 in the MSW program. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level.

SOCW 4391. CONFERENCE COURSE. 3 Hours.
Topics assigned on an individual basis covering personal research or study in designated areas. Prerequisite: Permission of the Director.

SOCW 4451. SOCIAL WORK FIELD SEMINAR I. 4 Hours.
Students will spend three hours a week in a seminar course to reflect and integrate social work knowledge, theory, and skills learned over the course of the program that they are applying in their field placement. Students will discuss and reflect on their direct practice and macro practice experiences, how the Code of Ethics is applied at their agencies, what evidence-based best practices are utilized at their agencies, and how the planned change process is implemented at their agencies with their fellow students and Field Liaisons. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 4452. SOCIAL WORK FIELD SEMINAR II. 4 Hours.
Students will spend three hours a week in a seminar course to reflect and integrate social work knowledge, theory, and skills learned over the course of the program that they are applying in their field placement. Students will discuss and reflect on their direct practice and macro practice experiences, how the Code of Ethics is applied at their agencies, what evidence-based best practices are utilized at their agencies, and how the planned change process is implemented at their agencies with their fellow students and Field Liaisons. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 4455. SOCIAL WORK FIELD SEMINAR BLOCK PART 1. 4 Hours.
Students will spend three hours a week in a seminar course to reflect and integrate social work knowledge, theory, and skills learned over the course of the program that they are applying in their field placement. Students will discuss and reflect on their direct practice and macro practice experiences, how the Code of Ethics is applied at their agencies, what evidence-based best practices are utilized at their agencies, and how the planned change process is implemented at their agencies with their fellow students and Field Liaisons. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 4456. SOCIAL WORK FIELD SEMINAR BLOCK PART 2. 4 Hours.
Students will spend three hours a week in a seminar course to reflect and integrate social work knowledge, theory, and skills learned over the course of the program that they are applying in their field placement. Students will discuss and reflect on their direct practice and macro practice experiences, how the Code of Ethics is applied at their agencies, what evidence-based best practices are utilized at their agencies, and how the planned change process is implemented at their agencies with their fellow students and Field Liaisons. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 4551. SOCIAL WORK PRACTICUM INSTRUCTION I. 5 Hours.
Students will complete a minimum of 200 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 4552. SOCIAL WORK PRACTICUM INSTRUCTION II. 5 Hours.
Students will complete a minimum of 200 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 4555. SOCIAL WORK PRACTICUM INSTRUCTION BLOCK PART 1. 5 Hours.
Students will complete a minimum of 400 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 4556. SOCIAL WORK PRACTICUM INSTRUCTION BLOCK PART 2. 5 Hours.
Students will complete a minimum of 400 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. For additional information and requirements, see the Field website. Prerequisite: SOCW 2302, SOCW 3301, SOCW 3303, SOCW 3305, SOCW 3306, SOCW 3308, SOCW 3309, and 1 Social Work Elective.

SOCW 5301. HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT. 3 Hours.
Exploration of behavioral and social science knowledge of human behavior and development of diverse persons through the life course. Examines major systems in society: individual, group, family, and community; and the diversity of ethnicity, race, class, sexual orientation, and culture.

SOCW 5303. FOUNDATIONS OF SOCIAL POLICY AND SERVICES. 3 Hours.
Examines how social goals of diverse populations are met by social welfare institutions. Conceptual schemes are developed for analyzing the structure of social welfare institutions and evaluating social welfare sub-systems. The social work profession also is examined in the context of the evolution and function of the contemporary American social welfare system.

SOCW 5304. GENERALIST MICRO PRACTICE. 3 Hours.
This foundation level course introduces graduate students to both theory and methods for social work practice with diverse individuals, families, and small groups. It emphasizes a generalist perspective, beginning interviewing and relationship skills, problem assessment, goal setting, and contracting. Special attention is given to the common roles assumed by social workers (e.g. facilitator, broker, advocate) as well as development of self-reflection skills in relationship to the dynamics of intersectionality of those served.

SOCW 5306. GENERALIST MACRO PRACTICE. 3 Hours.
Examines generalist community and administrative practice roles and includes the perspectives of historical inequities and social injustice and the impact on communities and diverse groups, strengths, empowerment, evidence-based practice, and global practice along with the values of social justice, diversity, and participation. Specific attention is given to assessing community assets and needs.

SOCW 5307. DIVERSE POPULATIONS. 3 Hours.
Introduction to theory, practice, and policy issues related to diverse populations. Historical, political, and socioeconomic forces are examined that maintain discriminatory and oppressive values, attitudes, and behaviors in society and in all levels of organizational behavior.

SOCW 5308. RESEARCH AND EVALUATION METHODS IN SOCIAL WORK I. 3 Hours.
This course is designed to provide students with an understanding of and ability to use the evidence-informed practice process to identify, analyze and apply evidence-informed interventions. Students will be able to comprehend both quantitative and qualitative research and to synthesize strengths and weaknesses of the social work literature. Students will be able to synthesize and evaluate research in terms of its content, quality, and applicability to clients. Students will understand scientific and ethical approaches to building knowledge to apply to and evaluate the impact of interventions on clients or clients' presenting problems.

SOCW 5310. ENVIRONMENTAL JUSTICE & GREEN SOCIAL WORK. 3 Hours.
This course examines how a variety of vulnerable or marginalized populations are impacted by environmental injustices, and explores ways that social service professionals can solve environmental justice issues on the micro, mezzo and macro level. Students will explore how issues such as climate change, extreme weather events and environmental toxins intersect with health, mental health, children & youth, older adults, indigenous populations, food deserts, climate-forced migration, international conflict, environmental racism, and more and examine solutions including ecotherapy, climate policy, and community organizing. This course is also offered at the undergraduate level as SOCW 3310. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level.

SOCW 5311. ADVANCED MICRO PRACTICE. 3 Hours.
Builds on the generalist perspective and the basic familiarity with social work processes (such as problem identification, assessment, contracting, plan implementation, and outcome evaluation) in the context of (1) existing psychosocial intervention modalities; (2) the particular client values, personal goals, treatment preferences, and characteristics such as racial, ethnic, gender, sexual orientation, age, and ability identities; and (3) selection of change modalities appropriate in relation to clients' characteristics, social justice, and the client's presenting issues. Required of all Direct Practice students. Prerequisite: Advanced Standing OR SOCW 5307 AND SOCW 5303 AND SOCW 5308 AND SOCW 5381 OR SOCW 5385.

SOCW 5312. COMMUNITY AND ADMINISTRATIVE PRACTICE. 3 Hours.
This course surveys theory and builds skills in roles associated specifically with understanding the complex history and multilayered intersections, e.g. discrimination, oppression, disparities or other lived experiences that influence diverse community practice (e.g. community/locality history and development, social planning, social action) and culturally inclusive and sensitive administrative practice (e.g. supervision, administration, diverse management and management systems). Students complete an advanced culturally informed assignment in community and/or organizational assessment and program design. Required of all CAP (Community and Administrative Practice) students. Prerequisite: Advanced Standing OR SOCW 5307 AND SOCW 5303 AND SOCW 5308 AND SOCW 5381 OR SOCW 5385.

SOCW 5313. RESEARCH AND EVALUATION METHODS IN SOCIAL WORK II. 3 Hours.
This course is designed to provide students with an understanding of and ability to analyze, monitor, and evaluate evidence informed interventions and human service programs. In this course quantitative and qualitative research methods and approaches are applied to the scientific and ethical evaluation of evidence informed interventions and human service programs. Research skills and knowledge are presented from the perspective of promoting diversity and social and economic justice in anti-oppressive research and evaluation of social work. Students seeking a Master of Social Work (MSW) must take either SOCW 5313 or SOCW 5323. Prerequisite: Advanced Standing OR SOCW 5308.

SOCW 5314. INTIMATE PARTNER VIOLENCE. 3 Hours.
This course covers interdisciplinary theoretical frameworks for understanding and addressing intimate partner violence in diverse relationships, including critical feminism, psychological, and sociological models, as well as prevention and intervention practices that reflect a stance of cultural and critical humility. This course is also offered at the Bachelor's level as SOCW 4314. Students who receive credit for this course in the undergraduate program may not repeat the course at the Master's level. Co-requisite: SOCW 5311. If the co-requisite is dropped, this course will be as well.

SOCW 5315. BRAIN AND BEHAVIOR. 3 Hours.
The focus of this course is on current advances in knowledge of the neurobiological underpinnings of human behavior and development, the interaction between those underpinnings and the social context and environment, the relevance to social work practice with individuals, families, groups, programs/organizations, and communities, and related assessment and intervention practice behaviors across several practice domains. The domains include human development, genetics, mental health and substance misuse, cognition, stress and trauma, and violence and aggression. The implications of neurobiological and environmental influences (including public health issues and health disparities) will be examined in terms of social justice, social work values, knowledge, and skills, as well as in terms of those populations who have historically been harmed by structural and systematic arrangement and delivery of social welfare services at the micro, mezzo, and macro levels. Co-requisite: SOCW 5311. Please note that if the co-requisite course is dropped, this one will be also.

SOCW 5316. STRESS, CRISIS, AND COPING. 3 Hours.
The impact of specific crises on individuals and families will be examined including the unique stresses, crises, and coping responses of diverse cultural and social identities as these relate to the stresses of oppression and social injustice and inequity. Variations in cultural wellness and health relative to stress and recovery will also be explored. Typical crises will include life-threatening illness, trauma, physical and mental disability, and death. Assessment and evaluation of an individual's coping ability and appropriate strategies for social work interventions will be studied. Differential therapeutics relative to ethnicity, cultural norms, inclusiveness, and access to wellness resources, will be infused into course assignments and discussion. Co-requisite: SOCW 5311. Please note that if the co-requisite is dropped, this will be also.

SOCW 5317. PALLIATIVE CARE. 3 Hours.
This course introduces students to palliative care and the unique opportunities and challenges it presents to social workers employed in those settings. While a complete review of palliative care would be impossible to achieve within the confines of this course, the materials are designed to introduce students to key palliative care philosophies, values, and practice considerations. Students will be challenged to think critically about how dying and death is constructed and supported in Western medical settings, and leave with an understanding of social workers' role in delivery compassionate and personalized care to clients who are at the end of their lives. Co-requisite: SOCW 5311. Please note that if the co-requisite course is dropped, this one will be also.

SOCW 5318. DEATH & DYING. 3 Hours.
This course will give students an overview of the principles of thanatology from anthropological, sociological, psychological, medical, historical, spiritual, cultural, and political perspectives and the role(s) that social work can play in helping individuals, families, and communities from diverse backgrounds. Using life course and life span approaches, course content will include personal death awareness, the integration of theoretical perspectives and evidence-based practice interventions in working with dying, death, and bereavement with emphasis on cultural and religious/spiritual perspectives, bioethical principles, and end-of-life decision making, social justice, and advocacy for the dying. Particular attention is given to the intersections of older adults with gender, race, sexuality, age, education level, and other aspects of identity. Therefore, the class content promotes individual self-reflection and discussion through the lens of diversity and intersectionality across the developmental life span and life course about the meaning of life and death and implications for social work practice. This dialog is a precursor to engagement with clients, caregivers, grieving persons, and health care personnel about sensitive and culturally diverse issues around the experience of dying and death. Co-requisite: 5311. Please note that if the co-requisite is dropped, this course will be dropped as well.

SOCW 5319. SUICIDE PREVENTION, INTERVENTION, & POSTVENTION. 3 Hours.
This course will provide students with an overview of the public health problem of suicide, with specific attention to prevention, intervention, and postvention. Students will gain an understanding of suicide epidemiology and underlying theory, as well as risk and protective factors for suicidal thoughts and behaviors. This course will familiarize students with evidence-based practices and ethical considerations with clients engaging in suicidal thoughts and behaviors. Students will learn about state and national strategies for suicide prevention, as well as policies related to suicide. Students will gain skills in assessment and management of suicide risk, intervention and treatment techniques with suicidal clients, and postvention approaches with survivors of suicide loss at the individual, community, and national levels. Co-requisite: SOCW 5311. Please note that if the co-requisite course is dropped, this one will be also.

SOCW 5320. ADVANCED ADMINISTRATIVE PRACTICE. 3 Hours.
Focuses on selected topics, issues, and skills for effective social work administration. Content includes inclusive and anti-oppressive approaches to leadership, worker motivation, resource development, stakeholder engagement, interagency relations, and managing conflict and diversity in a climate of scarce resources. Prerequisite: SOCW 5312 or concurrent enrollment. Please note that if SOCW 5312 is dropped, this course will be dropped as well.

SOCW 5321. ADVANCED COMMUNITY PRACTICE. 3 Hours.
This course explores research, theory and evidence-based approaches to community practice. Content is focused on the development of skills for partnering with neighborhoods, communities, and groups to address community problems rooted in structural inequalities. Major topics include the politics of empowerment, mobilizing coalitions, locating resources, and mediating conflict. Prerequisite: SOCW 5312 or concurrent enrollment.

SOCW 5323. PROGRAM EVALUATION. 3 Hours.
This course is designed to provide students with an understanding of and ability to evaluate human service programs. Relationships between program evaluation and program planning or administration are emphasized using both quantitative and qualitative data collection/analysis methods and approaches from the perspective of promoting diversity and social and economic justice in the evaluation of human service programs. Prerequisite: SOCW 5308 or Advanced Standing.

SOCW 5324. SOCIAL WORK SUPERVISION. 3 Hours.
This course introduces the culturally diverse roles, functions, and contexts of social work supervision between the supervisor and supervisee. Covers culturally sensitive administrative and clinical perspectives on the social work supervisor as a manager, educator, mentor, mediator, and leader in diverse human service organizations. Co-requisite: SOCW 5311 or SOCW 5312. Please note if co-requisite is dropped, this course will be dropped as well.

SOCW 5325. BUDGETING AND FINANCIAL MANAGEMENT. 3 Hours.
This course provides a basic overview of financial management applied specifically to human service agencies. Grounded in a historical lens that examines power relationships in human service financial management, this course emphasizes basic concepts and skill building in budgeting and fund raising; accounting principles; financial statements, and computerized financial information systems. Special emphasis is given to the role of participatory approaches in resource allocation and distribution for human services. Co-requisite: SOCW 5312. Please note that if the co-requisite is dropped, these course will be dropped also.

SOCW 5326. GRANT PROPOSAL DEVELOPMENT SEMINAR. 3 Hours.
Grant proposal development is a fundamental method of accessing funds and developing new programs in the social service arena. In this class, students will identify key funding opportunities in their fields of interest and will write a proposal using an actual federal application and a foundation funding announcement. The majority of the course will be devoted to the development of the skills and knowledge necessary to produce a competitive proposal. These include, but are not limited to: a) needs and capacities assessment, b) program development, c) strategic planning, d) budgeting, e) evaluation, and f) community collaboration. Co-requisite: SOCW 5312. If the co-requisite is dropped, this one will be as well.

SOCW 5327. HUMAN BEHAVIOR IN MACRO ENVIRONMENTS. 3 Hours.
Offers advanced students the opportunity to study diverse people's behavior within large and complex social settings including: natural helping networks and ontological communities, organizations, and bureaucracies, and social and political movements. Prerequisite: Advanced Standing OR SOCW 5301 and SOCW 5307.

SOCW 5328. ADVOCACY AND SOCIAL POLICY. 3 Hours.
Politics are key to developing equitable social policy. Students learn theory and skills to impact social and distributive justice at local, state, and national levels. Examines the role of the social work profession in politics. Prerequisite: SOCW 5303.

SOCW 5329. POVERTY, INEQUALITY AND SOCIAL POLICY. 3 Hours.
This course examines the nature and extent of poverty and inequality in the United States, their causes and consequences, and the debate concerning the role of government in providing anti-poverty programs. Many points of view concerning social and distributive justice are presented, from the radical left to radical right. Prerequisite: SOCW 5303.

SOCW 5332. DIRECT PRACTICE WITH AGING. 3 Hours.
Course presents an overview of current issues, trends, and practice in the care, treatment, and delivery of social services to diverse older adults and their families. Students learn practice procedures designed to equip them with the skills needed for effective social work practice, review major theories on aging, as well as evaluate needs and gaps in services to diverse older adults and their families. Particular attention is given to the intersections of older adults with gender, race, sexuality, age, education level, and other aspects of identity. Co-requisite: 5311. Please note if the co-requisite is dropped, this course will be dropped as well.

SOCW 5333. AGING AND SOCIAL POLICY. 3 Hours.
Social welfare policies and programs are examined in terms of the overall impact on older adults and society. Needs and gaps in services to older adults and their families are evaluated. Current issues in aging policy are examined. Particular attention is given to the intersections of policy with gender, race, sexuality, age, education level, and other aspects of identity. Prerequisite: SOCW 5303.

SOCW 5334. FAMILY CAREGIVING & AGING. 3 Hours.
This course will give students an overview of the individual and social impact of family caregiving and aging within a bio-psycho-social-spiritual context and the role(s) of social workers in helping individuals, families, and communities face the contemporary challenges of caregiving. Course content will be underscored by a strengths-based framework and will include the effects of culture on family caregiving, families' process of providing care to persons with chronic and/or complex illness across levels of care (e.g. hospital/rehabilitation/hospice), working with family caregivers within long-term care settings (e.g. nursing homes), dementia caregiving, end of life care as well as evidence-based assessment and intervention with family caregivers. Social services and policy related to effective practice with older adults and family caregivers are also discussed, including innovative and emerging approaches (e.g. technology). Particular attention is given to the intersections of family caregiving with gender, race, sexuality, age, education level, and other aspects of identity. Co-requisite: SOCW 5311. Please note if the co-requisite is not met, the course will be dropped.

SOCW 5335. AGING IN AMERICAN SOCIETY. 3 Hours.
This course presents the major theories of aging, in the United States and across cultures, and explores the diverse factors of aging through the lens of intersectionality taking into account intersections of race, gender, sexuality, educational level and other aspects of identity. It includes various perspectives including psychological, biological, sociological, and spiritual. Students will examine current social and economic issues impacting older adults, such as aging & healthcare policy, living arrangements, caregiving, technology, and sexuality. Theories are integrated into practice thus providing students a sound foundation for social work practice with diverse older adults. Students who receive credit for this course in the undergraduate program (SOCW 4335) may not repeat the course at the Master's level (SOCW 5335). Prerequisite: Prerequisite: SOCW 5301 and SOCW 5307 or Advanced Standing and not taken SOCW 4335.

SOCW 5342. DIRECT PRACTICE IN HEALTH CARE. 3 Hours.
Explores the central contribution of social work to comprehensive health care and health for diverse individuals and communities in theory and evidence; advanced knowledge and skills in human behavior theory relevant to health care including social determinants of health, as well as social work interventions to assess and ameliorate the psychological effects of illness and disability (across the lifespan), are included along with emerging roles for social work in prevention and health maintenance. Co-requisite: SOCW 5311. If the co-requisite is dropped, this course will be as well.

SOCW 5343. HEALTH POLICY AND SOCIAL JUSTICE. 3 Hours.
Provides a critical historical overview of health policy in the United States, current and projected national and local health policies and roles of providers and consumers of health care and public health is examined; service demands, economic, access, and regulatory issues analyzed; relationships between governmental, voluntary, and commercial sectors studied; analytic frameworks for developing and understanding the impact of policy on diverse populations explored. Prerequisite: SOCW 5303.

SOCW 5344. HEALTH INSURANCE AND ACCESS TO CARE. 3 Hours.
Explores the history and underlying philosophy of managed care in health and social services, reviews interdisciplinary approaches and principles for understanding and critiquing health care systems, and covers current trends and practice issues. Assesses the potential for conflict between social work values and managed care systems. Builds skills for advancing health equity through administrative roles in managed care settings. Co-requisite: SOCW 5311 OR SOCW 5312. Please note that if the co-requisite is dropped, this course will be dropped as well. This course is offered at the undergraduate level as SOCW 4344. Students who take this at the undergraduate level may not repeat it at the graduate level.

SOCW 5345. SPECIAL TOPICS IN HEALTH EQUITY. 3 Hours.
Building on a social determinants of health theoretical perspective and research methods in health care, this course undertakes a critical examination of both historical and present day policies, research and practices that contribute to health inequities across communities disproportionately impacted by health inequities. Topics vary each semester depending on the needs and interests of students and faculty. Potential topics may include, but are not limited to: community health, homelessness, HIV/AIDS, maternal and child health, immigrant health, and veteran health. Emphasis is placed on the role of the social work practitioner in promoting health equity and reducing health inequities. Co-requisites: SOCW 5311 OR SOCW 5312. Please note if the co-requisite is dropped, this course will be dropped as well.

SOCW 5352. DIRECT PRACTICE IN MENTAL HEALTH. 3 Hours.
Using a bio-psycho-social risk and resilience perspective this direct practice course focuses on assessment, intervention and appropriate evidence based practices with those evidencing acute and chronic mental health problems, and disabilities in diverse populations. Applying a critical lens, students will explore the delivery of services, review historical and current service delivery systems (community mental health, transinstitutionalization, managed behavioral health care), and a wide range of community mental health problems. Additional topics include the function and critique of the Diagnostic Statistical Manual with a social justice perspective, mental health recovery principles. ethics, case management, treatment planning, person in environment, and substance misuse. Co-requisite: SOCW 5311. Please not that if the co-requisite is dropped, this course will be dropped as well.

SOCW 5353. SOCIAL POLICY AND MENTAL HEALTH. 3 Hours.
This course explores programs, policies and systems in the field of mental health, and their impact on mental health consumers. Disparities occurring within mental healthcare systems will be explored using a health equity framework focusing on the differential impact policies may have on women, children and youth, individuals from diverse racial/ethnic backgrounds, LGBTQ+ individuals, veterans and immigrants/refugees. Approaches to policy analysis and implementation will be presented. Prerequisite: SOCW 5303.

SOCW 5354. PRINCIPLES OF SUBSTANCE MISUSE TREATMENT. 3 Hours.
This course provides a solid grounding in theory and treatment of substance misuse disorders. In keeping with the social work values of respecting the worth and dignity of all persons, the use of affirming and destigmatizing language is paramount. The application of assessment and screening tools, and implementation of evidence-based interventions, skills and techniques will be examined to include culturally informed diagnosis and treatment across a variety of behavioral health treatment settings. We will consider the importance of integrating identity into treatment through the consideration of gender, race, ethnicity, culture, age, and SOGIE (sexual orientation, gender identity and expression). This course will be taught from a strength-based social justice and trauma-informed perspective, with a focus on harm reduction, relapse prevention and sustained recovery. Prerequisite: SOCW 5311.

SOCW 5355. MILITARY SOCIAL WORK. 3 Hours.
The focus of this course is to examine military culture using a diversity framework that involves considering ethical implications for practice, comprehending prevalent social and health issues, and the effects of policies and health disparities across diverse social identities within varied military environments. Students enrolled in this course will analyze current advances in knowledge on the neurobiological underpinnings of human behavior and development pertinent to social and health issues as well as resilience to stress and adversity among diverse members of the military population. Students will identify and evaluate the relevant implications for social work practice with individuals, families, groups, programs/organizations, and communities using a multicultural multidimensional perspective in connection with social justice, social work values, knowledge, and skills. Students will also examine the structural and systematic arrangement and delivery of social welfare services at the micro, mezzo, and macro levels of social work practice.

SOCW 5356. SEMINAR IN COGNITIVE-BEHAVIORAL INTERVENTION STRATEGIES. 3 Hours.
Explores the three historical phases CBT's development: (1) Behavioral, (2) Cognitive, and now (3) Mindfulness, Acceptance, and Commitment. Addresses interventions across life-span development, culture, etc., to address such clinical issues as depression, anxiety, trauma, substance misuse, cognitive disorders, bereavement, etc., using a multicultural multidimensional perspective. Teaches assessment and interventions drawn from evidence-based practice knowledge and informed practice wisdom and includes a variety of interventions, such as DBT, behavioral activation, cognitive restructuring, mindfulness, etc. Prerequisite: SOCW 5311.

SOCW 5357. GROUP DYNAMICS AND SOCIAL WORK PRACTICE. 3 Hours.
Examines contemporary social-psychological concepts and small group research using a multicultural framework, with a view to testing their applicability to practice propositions and operational principles, in work with both task and treatment groups that include diverse populations. Group work will be examined in terms of social justice, social work values, knowledge, and skills, as well as in terms of those populations who have historically been been harmed by structural and systematic arrangement and delivery of social welfare services at the micro, mezzo, and macro levels. Co-requisite: SOCW 5311. Please note if the co-requisite is dropped, this course will be as well.

SOCW 5358. TREATMENT OF CHILDREN AND ADOLESCENTS. 3 Hours.
Overview of the literature which describes physical, psychological, and the multitude of diverse cultural characteristics unique to childhood and adolescence. Attention then turned to treatment principles, and the specification of procedures for the amelioration of problems common to children and adolescents of diverse populations. Co-requisite: SOCW 5311. Please note if the co-requisite is dropped, this course will be as well.

SOCW 5359. MILITARY FAMILIES. 3 Hours.
This course studies the social milieu in which military-connected families exist, their intersectional identities, the strengths that characterize them, and the challenges they navigate. Topics include cultural competence, military community demographics, ethics and values, self-care of practitioners, social theories, military policies, diversity among military-connected families, differences in service status (e.g., active duty, National Guard, Reserves), operational challenges (e.g., deployment, frequent moves), Service Member/Veteran mental health, dependent special needs (e.g., educational, medical), marital issues (e.g., divorce, domestic violence), and transitions away from the Military (e.g., retirement, separation, death). Special emphasis is placed on diversity, intersectional identities, and military differences (e.g., rank, Branch, service status). Students who complete this course will integrate cultural competence, professional ethics (military and human service professions), social theories, and military policy into their understanding of military-connected families.

SOCW 5360. TREATMENT OF MILITARY POPULATIONS. 3 Hours.
The focus of this advanced course is on assessment and intervention and advanced theory and evidence with military populations across the life course, especially those evidencing service-connected acute and chronic mental health problems and disabilities and challenges in community reintegration during and after military service. The course addresses the delivery of services to various military groups (service members, veterans, military families, military spouses/partners, military health disparities groups), service delivery systems (community mental health, managed behavioral health care, Veterans Health Administration, Military Treatment Facilities), and a wide range of problems, including specific training in relevant social work practice skills such as diagnosis of signature injuries using standardized instruments/protocols, prolonged exposure therapy, psychosocial rehabilitation, and deployment-related psychoeducation. Topics include well-being, ethics, treatment planning, DSM conditions (including substance use and misuse), and military culture-based syndromes. Co-requisite: SOCW 5311. If the co-requisite is dropped, this course will be as well.

SOCW 5361. MILITARY TRAUMA. 3 Hours.
The focus of this course is to examine military culture using a trauma-informed framework that involves considering ethical implications for practice, comprehending the various types of trauma that may impact service members and their families, and the effects of policies and health disparities across diverse social identities within varied military environments. This course addresses the needs of service members, veterans and their families at different developmental phases of the military life cycle. In addition, theoretical and practical approaches to treatment of chronic stress, acute stress, and trauma-related stress disorders are examined with the goal of advancing students' knowledge of best practices and current evidence-based models. Prerequisite: SOCW 5355.

SOCW 5362. DIRECT PRACTICE WITH CHILDREN AND FAMILIES. 3 Hours.
This course focuses on the preparing students for social work practice who will work with children, youth, and families in various employment settings. Throughout this course students will examine evidence-based interventions (and their theoretical roots) that build on strengths and resources of families with the intention of promoting social justice and cultural competence in social work practice with children, youth, and families. The course will address key areas of diversity among children, youth, and families, such as family structure, age, ability, religion, spirituality, sexual orientation, gender (including gender identity and expression), racial and ethnic identity, class, and culture. Specific techniques considered include child therapy, play therapy, behavioral contracting, cognitive-behavioral interventions, and crisis intervention. Co-requisite: SOCW 5311. Please note if the co-requisite is dropped, this course will be as well.

SOCW 5363. SOCIAL POLICY FOR CHILDREN & YOUTH. 3 Hours.
Examination of current policies, programs and practices impacting children and youth. Disproportionality and disparities occurring within child and youth serving systems (such as child welfare, the education system, the healthcare system and the juvenile justice system) will be explored, focusing on the differential impact of these policies on youth from diverse racial/ethnic backgrounds, LGBTQ+ youth and immigrant/refugee youth. Through analysis, research, and advocacy, students will increase their knowledge of trauma informed, equitable policies and practice with children and youth. Prerequisite: SOCW 5303.

SOCW 5365. CLINICAL ASSESSMENT OF CHILD MALTREATMENT. 3 Hours.
Examines knowledge/technique in child physical/emotional/sexual abuse, physical/emotional neglect, among diverse populations. Includes interviewing, identification, legal issues, assessment/evaluation, and follow-up with an intersectional lens to examine the role of each of these in diverse communities. Prerequisite: SOCW 5311; Co-requisite: SOCW 5362 OR SOCW 5352 OR SOCW 5342. Please note that if the co-requisite course is dropped, this will be as well.

SOCW 5366. SEMINAR IN WOMEN'S ISSUES. 3 Hours.
Explores women's issues in human behavior theory, practice theory, and policy. Using an intersectional lens, the historical, political, and socioeconomic forces that maintain sexism among diverse groups are discussed. Environmental influences are examined in relation to social justice, social work values, knowledge, and skills. This course is also offered as SOCW 4366 in the BSW Program. Students receiving credit at the BSW level may not repeat this course for Master's level credit. Prerequisite: SOCW 5301, SOCW 5307.

SOCW 5367. TREATING PARENT-CHILD RELATIONSHIPS. 3 Hours.
Evidence-based treatment strategies and evaluation methods relevant to treating parent-child relationships in diverse families; intervention strategies and evaluation methods will be explored taking into account the developmental, social, and cultural factors that may influence the diversified parent-child dynamics, such as gender, power, socialization practices, race, ethnicity, and among others. Co-requisite: SOCW 5311. Please note if the co-requisite course is dropped, this will be dropped as well.

SOCW 5368. SEMINAR IN DIRECT METHODS IN COUPLES COUNSELING. 3 Hours.
Examination of various psychological, social, and cognitive-behavioral treatment approaches to problems in intimate couples across a variety of client populations. Emphasis is placed on the social environment, and its impact on the sources and patterns of intimate partner dissatisfaction and conflict. An additional focus will be on identifying components of mutually satisfying intimate partner relationships. Ways to appropriately adapt intervention approaches to be inclusive of couples of diverse sexual orientations/gender identities and from a wide range of religious, ethnic and cultural backgrounds will be explored. Prerequisite: SOCW 5311 or concurrent enrollment. Please note if the co-requisite course is dropped, this will be dropped as well.

SOCW 5369. SEMINAR IN FAMILY THERAPY. 3 Hours.
SOCW 5369 aims to compare various approaches to working with the family as a total system; enhance cognitive understanding of similarities and differences in theory and goals of family treatment in many fields of practice; and integrate strategies and techniques of each method into an individual style of therapy. Additionally, in recognition of power structures that have silenced indigenous and minority voices in assessing and treating families, this course will assign readings from diverse authors, as well as encourage student discussion and assignments in an activist-oriented classroom environment that seeks to understand how social work benefits from and perpetuates colonialism. Prerequisite: SOCW 5311.

SOCW 5370. SOCIAL WORK IN SCHOOLS. 3 Hours.
The purpose of this course is to provide an overview of the various social work-related theoretical perspectives, models, and programs for intervention with diverse children and their families in the school setting. This includes skills in assessment, prevention, and intervention in providing services to students that are marginalized for numerous reasons including race, gender, skin color, religion, immigrant status, disability, sexual orientation, and socioeconomic status among other factors. Students will learn to use intervention skills that address each level of the ecosystem's perspective in schools. Co-requisite: SOCW 5311. Please note if the co-requisite is dropped, this course will be dropped also.

SOCW 5371. INEQUITIES AND INCARCERATION. 3 Hours.
This course surveys mass incarceration in the U.S. criminal justice system as a racialized and classist system of control. First, this course will contextualize the US criminal justice system, both historically and through global comparisons. Then students will be introduced to four broad content areas: entering the criminal justice system (school-to-prison pipeline and policing), who is detained (demographics and common mental health and substance use issues) and what they experience in detention (including COVID-19 in jails and prisons), experiences and problems encountered when returning citizens reenter society, and trends in criminal justice reform advocacy (including problem-solving courts and advocacy efforts such as Black Lives Matter). Finally, the course considers the social work grand challenge of smart decarceration as a path towards reform specific to social workers. Also offered as SOCW 4371 in the BSW program. Students who take this course at the undergraduate level may not repeat it at the graduate level.

SOCW 5381. FOUNDATION FIELD SPLIT II. 3 Hours.
Students will complete a minimum of 240 clock hours in a supervised field placement. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their field placements. Prerequisite: SOCW 5581 and SOCW 5307.

SOCW 5385. FOUNDATION FIELD BLOCK II. 3 Hours.
Students will complete a minimum of 240 clock hours in a supervised field placement. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their field placements. Prerequisite: Pre-requisite or Co-requisite: SOCW 5307; Co-requisite: SOCW 5585. Please note if co-requisite is dropped, this course will be dropped as well.

SOCW 5390. INDEPENDENT STUDY. 3 Hours.
Arrangements may be made for a directed and supervised independent study in a select area of special interest to the student.

SOCW 5392. SELECTED TOPICS IN SOCIAL WELFARE. 3 Hours.
Topics vary from semester to semester depending on the needs and interest of the students.

SOCW 5395. INTEGRATIVE SEMINAR. 3 Hours.
This course focuses on the cycle of practice from assessment and engagement to termination and evaluation. This course serves as the capstone for non-thesis MSW students and integrates an anti-oppressive lens toward promoting social justice across all aspects of practice. Prerequisite: SOCW 5482 or SOCW 5882.

SOCW 5396. THESIS RESEARCH. 3 Hours.
Initial research in the student's area of concentration, leading to thesis.

SOCW 5398. THESIS. 3 Hours.
Requires an individual research project in the individual's area of concentration, with a minimum of six semester hours total needed for the project. Satisfactory completion requires approval of the supervising committee. Defense in a final oral examination is required. Prerequisite: SOCW 5396.

SOCW 5482. ADVANCED PRACTICUM SPLIT I. 4 Hours.
Students will complete a minimum of 250 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate advanced social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. Prerequisite: SOCW 5312 OR SOCW 5311 AND SOCW 5332 OR SOCW 5342 OR SOCW 5352 OR SOCW 5362.

SOCW 5483. ADVANCED PRACTICUM SPLIT II. 4 Hours.
Students will complete a minimum of 250 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate advanced social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. Prerequisite: SOCW 5482.

SOCW 5485. ADVANCED PRACTICUM BLOCK I. 4 Hours.
Students will complete a minimum of 500 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. Prerequisite: SOCW 5312 OR SOCW 5311 AND SOCW 5332 OR SOCW 5342 OR SOCW 5352 OR SOCW 5362; Co-requisite: SOCW 5486.

SOCW 5486. ADVANCED PRACTICUM BLOCK II. 4 Hours.
Students will complete a minimum of 500 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate advanced social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. Prerequisite: SOCW 5312 OR SOCW 5311 AND SOCW 5332 OR SOCW 5342 OR SOCW 5352 OR SOCW 5362; Co-requisite: SOCW 5485.

SOCW 5581. FOUNDATION PRACTICUM SPLIT I. 5 Hours.
Students will complete a minimum of 200 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. Additionally, students will spend two hours a week in a seminar course to reflect and integrate social work knowledge, theory, and skills learned over the course of the program that they are applying in their practicum. Prerequisite: SOCW 5301, SOCW 5304, SOCW 5306; Co-requisite: SOCW 5307.

SOCW 5585. FOUNDATION PRACTICUM BLOCK I. 5 Hours.
Students will complete a minimum of 400 clock hours in a supervised practicum. Students will gain social work experience in an agency that will integrate generalist social work practice concepts into professional social work experience. Students will follow the NASW Code of Ethics and work with an anti-oppressive lens while in their practicum. Additionally, students will spend two hours a week in a seminar course to reflect and integrate social work knowledge, theory, and skills learned over the course of the program that they are applying in their practicum. Prerequisite: Pre-requisite or Co-requisite: SOCW 5307; Co-requisite: SOCW 5385. Please note that if the co-requisite is dropped, this course will also be dropped.

SOCW 5698. THESIS. 6 Hours.
Requires an individual research project in the individual's area of concentration, with a minimum of six semester hours total needed for the project. Satisfactory completion requires approval of the instructor in charge, a supervising committee appointed by the Dean of Graduate Studies. Defense in a final oral examination is required.

SOCW 6039. FIRST YEAR SEMINAR. 0 Hours.
This Seminar focuses on topics related to socialization, skill-building, and professional development for Social Work PhD students. Content will explore social work research as a discipline including past and current contextual influences, explicate program and professional milestones to support student professional development, identify emerging areas of research interest and forms of scholarly inquiry, support initial engagement in writing for publication, and provide a venue for students to explore the development of their scholarly identity.

SOCW 6111. CAPSTONE PROPOSAL. 1 Hour.
This 1-credit course is designed to guide students through the conceptualization of their two-part capstone project. Students will identify a relevant social work issue, conduct an informal review of the literature, and develop research questions aligned with their chosen area of focus. The course previews the capstone process, project objectives, methodology, and outcomes. By the end of the course, students will produce a formal capstone proposal for parts I and II of their capstone that integrates advanced social work theory, ethics, and practice, preparing them for the next phase of their doctoral project.

SOCW 6190. TUTORIAL. 1 Hour.
Arrangements may be made for a directed and supervised tutorial in a select area of special interest to the student.

SOCW 6212. SOCIAL WORK ENTREPRENEURSHIP. 2 Hours.
Students will explore entrepreneurship in social work, focusing on establishing private practices, consulting, and other entrepreneurial ventures. Topics include developing a strong professional brand, creating business plans, marketing strategies, and managing finances. Students will also learn about building client networks and leveraging technology for business growth. Through case studies and practical exercises, students will gain the skills to innovate and lead in a variety of social work practice realms.

SOCW 6301. INTRODUCTION TO DOCTORAL STUDIES. 3 Hours.
This course introduces students to the DSW identity as a scholar-practitioner and prepares students for success in a DSW program. The course emphasizes ethics and is aimed to develop effective online learning strategies, build a sense of belonging within the cohort, elevate professionalism, and strengthen critical thinking and writing skills, including preparation to write for publication. This course also guides students to begin conceptualizing their final capstone project.

SOCW 6302. STRATEGIES OF INQUIRY. 3 Hours.
This course explores the foundational paradigms that shape research and theoretical framework development in social work. Students will apply paradigms and theoretical orientations to analyze and conduct research that addresses complex social issues.

SOCW 6303. THE SCIENCE OF SELF-CARE. 3 Hours.
Explores evidence-based practices that promote wellness, prevent burnout, and support brain health. Topics include neuroplasticity, mindfulness, motivation, balance, trauma-informed approaches, and resilience-building strategies that enhance personal and professional wellbeing. Students will learn how self-care impacts brain function, emotional regulation, and overall health, with a focus on practical neuroscience applications in clinical, educational, and leadership settings. This course provides tools for modeling sustainable self-care routines and strategies that support individual growth and help others thrive in challenging professional contexts. Prerequisite: SOCW 6301: Introduction to Doctoral Studies.

SOCW 6304. APPLIED RESEARCH FOR EVIDENCE-BASED SOCIAL WORK. 3 Hours.
Provides a survey of research processes relevant to DSW scholars, including formulating research questions, exploring qualitative, quantitative, and mixed-methods approaches, and developing competencies in research ethics. Students will learn to critically evaluate journal articles, understand research design, and interpret basic statistical methods. The course emphasizes interpreting research findings and translating research into practice, with a focus on evidence-based practice to inform social work interventions. Prerequisite: SOCW 6302: Strategies of Inquiry.

SOCW 6305. SOCIAL JUSTICE. 3 Hours.
Focuses on the application of anti-racism, diversity, equity, and inclusion (ADEI) principles to social work practice settings. Students will explore implicit bias, systemic inequality, power dynamics, and strategies to promote social justice in various contexts. Emphasizing interdisciplinary practice, students will develop practical skills to address oppression, foster inclusivity, and advance equity in social work practice, leadership, and education.

SOCW 6306. ADVANCED POLICY & ADVOCACY. 3 Hours.
Provides students with the skills to critically analyze and advocate for social policies that promote justice and equity at the agency, local, federal, and global levels. Topics include policy analysis, comparative global social policy, research-informed policy solutions, and the role of technology in shaping policy. Students will explore best practices in leading policy development, lobbying, legislative advocacy, and media relations. Prerequisite: SOCW 6305: Social Justice.

SOCW 6307. ADVANCED SOCIAL WORK LEADERSHIP & SUPERVISION. 3 Hours.
This course equips students with practical skills to lead, mentor, and supervise in clinical, educational, and social service agency settings. It covers core leadership principles, supervision models, management techniques, interprofessional collaboration, and strategic planning for organizational development. Through real-world applications, the course emphasizes leadership in decision-making, ethical practice, and technological innovation across social work contexts. Prerequisite: SOCW 6303: The Science of Self-Care.

SOCW 6308. ADVANCED GRANT WRITING & BUDGETING. 3 Hours.
Equips students with the skills to develop competitive grant proposals and manage program budgets effectively. The course covers the entire grant-writing process, from identifying funding opportunities to writing compelling narratives and justifying budgets. Students will learn to design program budgets, allocate resources, and monitor financial performance. Practical applications will focus on writing grants for social services, research projects, and community initiatives, with an emphasis on ethical financial management and aligning funding strategies with organizational goals.

SOCW 6309. ADVANCED PROGRAM EVALUATION. 3 Hours.
Provides students with the foundational skills needed to design, implement, and assess social programs. Topics include understanding the principles and types of evaluation, creating logic models, and conducting both formative and summative evaluations. Students will explore needs assessment, data collection methods, survey design, and ethics in evaluation. The course emphasizes analyzing and interpreting data, measuring program impact, and communicating findings effectively. Students will also learn to use evaluation results to improve program design and implementation, ensuring sustainability and accountability.

SOCW 6310. EDUCATION I: INTRODUCTION TO SOCIAL WORK ANDRAGOGY & CURRICULUM DEVELOPMENT. 3 Hours.
This foundational course equips aspiring educators with the knowledge and skills to prepare to teach social work students. The course introduces students to the world of academia as they begin to develop a strong teaching identity as social work educators. Students will explore key concepts such as the history and signature andragogies of social work education, adult learning theories, teaching philosophies, curriculum design, and building inclusive, accessible, & decolonized learning environments. Students will learn to design a comprehensive syllabus and utilize teaching resources and mentorship.

SOCW 6313. EDUCATION II: IMPLEMENTING EFFECTIVE TEACHING PRACTICES. 3 Hours.
This course focuses on practical teaching methods and classroom management strategies for social work educators. Topics include engaging students, building a sense of belonging, and utilizing various teaching methods, such as lectures, discussions, group work, and experiential education. Students will explore giving effective feedback, using technology in the classroom, and managing both in-person and online environments. Emphasizing self-reflection and growth, the course also covers contributing to the field through trainings, publishing, conferences, and preparing for an academic career. Prerequisite: SOCW 6310: Education I.

SOCW 6314. CAPSTONE I: SYSTEMATIC LITERATURE REVIEW. 3 Hours.
Guides students through the process of conducting a comprehensive and systematic review of the existing literature on a specific social work topic of the student's choosing. The course focuses on data extraction, evaluating sources, synthesizing findings, and identifying research gaps. Students will produce a complete systematic literature review manuscript. Prerequisite: SOCW 6111: Capstone Proposal.

SOCW 6315. APPLIED TEACHING PRACTICUM. 3 Hours.
This course Introduces students to the academic instructor role through in-person or online teaching practice in social work or related field at either the graduate (MSW) or undergraduate level. Students will serve as a real course instructor at UTA or another pre-approved institution. Prerequisite: SOCW 6313- Education II: Implementing Effective Teaching Practices.

SOCW 6316. CAPSTONE II: APPLIED PROJECT. 3 Hours.
Focuses on the execution of an advanced, practice-based project that addresses a real-world social work issue in a clinical, leadership, or social work education setting. Students will apply research findings and theories from their Capstone I work to develop and implement a significant project within their practice setting. By the end, students will present their applied project in an online showcase, demonstrating mastery as a scholar-practitioner. Prerequisite: SOCW 6314: Capstone Project I- Systematic Literature Review.

SOCW 6328. SOCIAL POLICY RESEARCH AND ANALYSIS. 3 Hours.
Seminar examining methods for analyzing social policies and for assessing effects of policy. Students evaluate and apply different models for social policy analysis, including comparative models. Students work with social indicators and other data sources used in policy research. Prerequisite: acceptance into the Ph.D. program.

SOCW 6340. ADVANCED RESEARCH METHODS IN HUMAN SERVICES. 3 Hours.
Acquaints students at an advanced level with research methodology as it applies to the human services. Includes techniques and tools of research, problem conceptualization, measurement, research and instrument design and data collection methods. Prerequisite: acceptance into the Ph.D. program.

SOCW 6341. ADVANCED STATISTICAL METHODS IN HUMAN SERVICES. 3 Hours.
Advanced statistical applications in the human services. Emphasis on multivariate statistical approaches including multiple regression analysis, logistic regression, and advanced general linear modeling approaches to analyzing data from social work research. Prerequisite: SOCW 6347.

SOCW 6346. TEACHING PRACTICUM. 3 Hours.
Introduces students to the academic role through teaching practice at graduate and/or undergraduate level supervised by a full-time faculty member. Prerequisite: SOCW 6328, SOCW 6340, SOCW 6348,SOCW 6373.

SOCW 6347. INTERMEDIATE STATISTICS. 3 Hours.
Statistical applications for doctoral social work students. Emphasizes both parametric and non-parametric techniques, including t-tests, ANOVA, correlation and regression, chi-square, and other non-parametrics. Designed to provide a foundation for advanced multivariate statistical techniques. Prerequisite: acceptance into the Ph.D. program.

SOCW 6348. SEMINAR IN QUALITATIVE RESEARCH METHODS. 3 Hours.
Explores a variety of qualitative approaches to knowledge building and research. Designed to prepare students to carry out research projects within their areas of interest. Content includes discussions of knowledge development, study designs, data collection, analysis, and report writing. Prerequisite: acceptance into the Ph.D. program.

SOCW 6349. MIXED METHODS RESEARCH. 3 Hours.
This course will provide an applied overview of mixed methods research designs with an emphasis on their utility in social justice-oriented research. It will foster student synthesis and reflection on qualitative and quantitative research training, exploring mixed methods as one paradigm to enhance scholarly insight into critical issues. The course will cover the epistemological underpinnings of mixed methods research, the development of mixed methods research questions, core mixed methods research designs, complex mixed methods research designs, and appropriate methods for collecting, analyzing, integrating, and reporting mixed methods research. Prerequisite: SOCW 6340 and SOCW 6348.

SOCW 6356. SEMINAR IN PROGRAM AND PRACTICE EVALUATION. 3 Hours.
This course provides hands on opportunities to develop program and clinical evaluation plans for social work/welfare agencies. Educational principles and theoretical foundations are discussed as the actual plans are developed. Students work with agency decision makers and the instructor to generate a plan acceptable to the agency for implementation. Prerequisite: SOCW 6347.

SOCW 6367. SEMINAR IN ADVANCED STATISTICAL APPLICATIONS. 3 Hours.
This seminar covers statistical analysis of complex data and statistical modeling including latent variables. Emphasis is on structural equation model analysis using AMOS, LISREL, or EQS. The course focuses on applications of statistics using various data sets. Prerequisite: Knowledge of SPSS; SOCW 6341 and SOCW 6347.

SOCW 6373. THEORY AND MODELING BUILDING IN SOCIAL WORK RESEARCH. 3 Hours.
This course gives special emphasis on ways in which theory informs social work research. This course prepares students to perform application and critical analysis of social science and social work theory and theory-driven research. The course involves students in integrating theory, research, and social work practice with the goal of producing models of interventions, programs, and policies. Prerequisite: acceptance into the Ph.D. program.

SOCW 6390. TUTORIAL. 3 Hours.
Arrangements may be made for a directed and supervised tutorial in a select area of special interest to the student.

SOCW 6392. SELECTED TOPICS IN SOCIAL WELFARE. 3 Hours.
Topics vary from semester to semester based on the needs and interests of students.

SOCW 6393. GRANT WRITING. 3 Hours.
This course introduces the student to the process of writing grants. This includes knowledge of sponsors and opportunities as well as practical "know-how" in writing competitive grants for supporting research in social service and health service provision. The emphasis of the course will be on federal grants, but state and foundation grants will also be cited as case illustrations. Prerequisite: Doctoral standing or permission of the instructor.

SOCW 6394. APPLIED RESEARCH PRACTICUM. 3 Hours.
Students engage in an active program of applied research under direct supervision of a faculty member.

SOCW 6396. SOCIAL WORK EDUCATION: PRINCIPLES AND SKILLS. 3 Hours.
Considers a range of ideas in educational thought relevant to the formulation of an analytical appraisal of social work education and training. Educational methods and skills relevant to social work are addressed and practice opportunities offered. Prerequisite: acceptance into the Ph.D. program.

SOCW 6397. WRITING FOR PUBLICATION. 3 Hours.
This course will explore the world of academic publishing. Students will provide peer reviews of manuscripts, prepare and critique their ideas and draft sections of a manuscript, and present a final manuscript and publication plan. The intent is to help the students increase their chance of publishing manuscripts as a Ph.D. student and as a new faculty member. Although nothing can substitute for having information and research relevant for the field, the art of writing for publication should not be underestimated. Journal publishing, like any other human service endeavor, is easier as you become proficient. Most academics become proficient at communicating their ideas and research through trial and error. However, one's chances of becoming published can be increased by learning from experts in the field. Prerequisite: acceptance into the Ph.D. program.

SOCW 6399. DISSERTATION. 3 Hours.
Preparation and submission of a doctoral dissertation in an area in social work.

SOCW 6694. APPLIED RESEARCH PRACTICUM. 6 Hours.
Students engage in an active program of applied research under direct supervision of a faculty member.

SOCW 6699. DISSERTATION. 6 Hours.
Preparation and submission of a doctoral dissertation in an area in social work.

SOCW 6999. DISSERTATION. 9 Hours.
Preparation and submission of a doctoral dissertation in an area in social work.

SOCW 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

Social Work - Graduate

Programs

DEGREES

- Social Work PhD (p. 1826)
- MSW (Advanced Standing) (p. 1830)
- MSW (Traditional Entry) (p. 1833)

CERTIFICATES

- Administrative Leadership Graduate Certificate (p. 1828)
- Military Social Work Graduate Certificate (p. 1829)
- Community Leadership Graduate Certificate (p. 1837)
- Military, Veteran, and Family Care Graduate Certificate (p. 1837)
- Organizational Leadership Graduate Certificate (p. 1838)
- Policy Leadership Graduate Certificate (p. 1839)

Policies

MSW

In addition to University-wide policies (https://catalog.uta.edu/academicregulations/degreerequirements/graduate/), the School of Social Work has established polices specific to its MSW program. These policies are indicated in the MSW Manual (https://www.uta.edu/academics/schools-colleges/social-work/programs/msw/msw-manual/). In cases of conflict between the catalog and the manual, the catalog is governing.

DSW

In addition to University-wide policies (https://catalog.uta.edu/academicregulations/degreerequirements/graduate/), the School of Social Work has established polices specific to its DSW program. These policies are indicated in the DSW manual. In cases of conflict between the catalog and the manual, the catalog is governing.

PHD

In addition to University-wide policies (https://catalog.uta.edu/academicregulations/degreerequirements/graduate/), the School of Social Work has established polices specific to its PhD program. These policies are indicated in the PhD Manual (https://www.uta.edu/academics/schools-colleges/social-work/programs/phd/). In cases of conflict between the catalog and the manual, the catalog is governing.

Doctor of Philosophy in Social Work

About This Program

The Doctor of Philosophy in Social Work prepares scholars to advance knowledge and scholarship, pursue excellence, and provide leadership and service and to promote social and economic justice and cultural competence with diverse populations. The program builds on the premise that social welfare must be scientifically and theoretically based and continually responsive to changing local and global societal needs.

The primary goal of the program is to prepare scholars to advance knowledge development and dissemination for the profession of social work. The program seeks to provide students with an opportunity to contribute to the advancement of knowledge in the field and the profession in order to provide more effective and efficient services in social welfare and qualify for leadership positions in teaching, research, and administration. Graduates of the program are expected to make a significant contribution to the profession of social work through continued research, scholarship, teaching, and service.

Competencies

1. Upon completion, students will display competency in theory and theory development.
2. Upon completion, students will display competency in knowledge and skills in research methods and data analysis.
3. Upon completion, students will display competency in theory, research, and policy as applied to a specialty practice area.

4. Upon completion, students will display competency in understanding and commitment to the underlying values, ethics, and social and economic justice perspectives in the scientific inquiry in social work
5. Upon completion, students will display competency in theory and research as applied to social work practice, policy, and social work education.

Admissions Criteria

To be considered for admission to the PhD program, an applicant must have:

- A Master's Degree:
  - Master's Degree in Social Work
  - Applicants who do not have a Master's Degree in Social Work are expected to have work or volunteer experience in human services and complete an introductory social work course and diversity course prior to beginning the program.
- Transcripts of all undergraduate and graduate work documenting:
  - Undergraduate GPA of 3.0 minimum, on the last 60 hours as calculated by the Office of Admissions, Records, and Registration
  - Masters GPA of 3.4 minimum as calculated by the Office of Admissions, Records, and Registration.
- Curriculum Vitae which outlines (1) work and volunteer experiences in human services; (2) participation in professional organizations and conferences; and (3) publications, if applicable.
- Statement of academic goals consistent with the goals of the Social Work PhD Program goals.
- Professional writing sample that provides evidence of the applicant's writing skills and critical thinking skills.
- Three letters of recommendation, preferably from persons holding PhD degrees, addressing applicant's skills in the areas of analytical thinking and writing skills.
- If English is not the applicant's first language, a minimum TOEFL iBT total score of 90 with a writing sectional score of at least 23 must be submitted.
- An interview will be conducted with applicants meeting the basic admission criteria above.

An application for admission, transcripts of previous academic work and Graduate Record Examination scores must be submitted to Graduate Admissions. An additional separate application and supporting materials must be sent to the Graduate Advisor, PhD in Social Work Program.

Curriculum

Core Courses		
SOCW 6373	THEORY AND MODELING BUILDING IN SOCIAL WORK RESEARCH	3
SOCW 6328	SOCIAL POLICY RESEARCH AND ANALYSIS	3
SOCW 6340	ADVANCED RESEARCH METHODS IN HUMAN SERVICES	3
SOCW 6348	SEMINAR IN QUALITATIVE RESEARCH METHODS	3
SOCW 6347	INTERMEDIATE STATISTICS	3
SOCW 6349	MIXED METHODS RESEARCH	3
SOCW 6341	ADVANCED STATISTICAL METHODS IN HUMAN SERVICES	3
SOCW 6367	SEMINAR IN ADVANCED STATISTICAL APPLICATIONS	3
SOCW 6396	SOCIAL WORK EDUCATION: PRINCIPLES AND SKILLS	3
SOCW 6393	GRANT WRITING	3
Elective Courses		
Two elective courses, one from outside of the School of Social Work.		6
Disertation Hours		
Select 9 hours from the following:		9
SOCW 6399	DISSERTATION	
SOCW 6699	DISSERTATION	
SOCW 6999	DISSERTATION	
SOCW 7399	DOCTORAL DEGREE COMPLETION	3
Total Hours		**48**

Program Completion

INITIAL DIAGNOSTIC ADVISORY COMMITTEE ASSESSMENT

- Upon completion of the 18 credits of foundation coursework, students' progress is evaluated by an Initial Diagnostic Advisory Committee and developmental feedback is provided.

COMPREHENSIVE SPECIALTY EXAMINATION

- Upon completion of 36 credits of required and elective coursework, students must complete and pass their comprehensive specialty examination.
- The comprehensive specialty examination is taken before application for degree candidacy and registration for dissertation.

DISSERTATION

- Dissertation tutorial (3 credits) taken in the same term as the comprehensive specialty examination.
- Students develop and defend a dissertation proposal before beginning the dissertation research.
- Enroll in a minimum of 9 credits of dissertation credits.
- Students complete their dissertation with a formal, oral defense.

Doctoral students must demonstrate knowledge of and adherence to the Code of Ethics of the National Association of Social Workers and the Code of Ethics as currently published by the Texas State Board of Social Worker Examiners.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Graduate Certificate in Administrative Leadership

About This Program

The Administrative Leadership Certificate prepares students to effectively lead organizations, thus positively impacts clients. The certificate provides students with training in program development, program leadership, and supervision of program staff.

Competencies

1. Upon completion, students will be able to effectively lead organizations, thus positively impacting clients.
2. Upon completion, students will be able to assist in program development, program leadership, and supervision of program staff.

Admissions Criteria

For students in the MSW program at the time of enrollment for the Certificate, the Admission requirement will be to be in good standing, as defined by the MSW program, which includes having a GPA of 3.0 or higher. For non-degree seeking students who wish to enroll in the Certificate Program, a bachelor's degree in Social Work or a bachelor's degree and two years of related professional experience, with a GPA of 3.0 or higher is required.

Curriculum

SOCW 5312	COMMUNITY AND ADMINISTRATIVE PRACTICE	3
SOCW 5320	ADVANCED ADMINISTRATIVE PRACTICE	3
SOCW 5324	SOCIAL WORK SUPERVISION	3
Total Hours		**9**

Program Completion

The certificate must be completed within 6 years and a grade of B or better must be achieved in each course.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Post Master's Certificate in Military Social Work

About This Program

This certificate will prepare students to work with military service members, veterans, and their families in clinical social work settings. The Military Social Work Graduate Certificate for MSW Direct Practice students and alumni will enhance their ability to assume advanced evidence-based practice roles in working with individuals and families. The Military Social Work Graduate Certificate is designed for students and alumni with a direct practice, or clinical focus.

Current UTA students in the MSW program who have selected the Direct Practice concentration and are in good academic standing may enroll in the Military Social Work Graduate Certificate at any point prior to graduation. Non-degree seeking students who wish to pursue the Military Social Work Graduate Certificate must possess an MSW from a CSWE-accredited institution with a focus in clinical or direct practice and a cumulative GPA of 3.0 or higher in their graduate coursework.

Competencies

1. Upon completion, students will be able to demonstrate ethical and professional behavior.
2. Upon completion, students will be able to advance human rights and social, racial, economic, and environmental justice.
3. Upon completion, students will be able to engage anti-racism, diversity, equity, and inclusion in practice.
4. Upon completion, students will be able to engage in practice-informed research and research-informed practice.
5. Upon completion, students will be able to engage in policy practice.
6. Upon completion, students will be able to engage with individuals, families, groups, organizations, and communities.
7. Upon completion, students will able to perform assessment with individuals, families, groups, organizations, and communities.
8. Upon completion, students will be able to intervene with individuals, families, groups, organizations, and communities.

Admissions Criteria

Current UTA students in the MSW program who have selected the Direct Practice concentration and are in good academic standing may enroll in the Military Social Work Graduate Certificate at any point prior to graduation. To be conferred the certificate, current MSW students must complete the MSW degree. Non-degree seeking students who wish to pursue the Military Social Work Graduate Certificate must possess an MSW from a CSWE-accredited institution with a focus in clinical or direct practice and a cumulative GPA of 3.0 or higher in their graduate coursework.

Curriculum

Core Course		
SOCW 5355	MILITARY SOCIAL WORK	3
Electives		**12**
Select four from the following:		
SOCW 5315	BRAIN AND BEHAVIOR	
SOCW 5316	STRESS, CRISIS, AND COPING	
SOCW 5319	SUICIDE PREVENTION, INTERVENTION, & POSTVENTION	
SOCW 5354	PRINCIPLES OF SUBSTANCE MISUSE TREATMENT	
SOCW 5359	MILITARY FAMILIES	

SOCW 5360	TREATMENT OF MILITARY POPULATIONS
SOCW 5361	MILITARY TRAUMA
Total Hours	**15**

Program Completion

Fifteen credit hours are required in the certificate (5 courses). All students must have a cumulative GPA in the required courses of at least 3.0 with no grade lower than a C to obtain the certificate. Course credit will post to the students' transcripts upon completion. The time limit for completion of the certificate program is 6 years, and the MSW must be completed for certificate conferral.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Master of Social Work (Advanced Standing)

About This Program

The advanced standing MSW curriculum is for those students who already possess a BSW degree received within the last 6 years and who met the GPA requirements. The advanced standing MSW program allows students to specialize in one of five practice areas through the specialty curriculum. Advanced Standing students select one specialty area: Aging, Children and Families, Community and Administrative Practice, Health, or Mental Health and Substance Misuse.

Competencies

1. Upon completion, students will be able to demonstrate ethical and professional behavior.
2. Upon completion, students will be able to engage diversity and difference in practice.
3. Upon completion, students will be able to advance human rights and social, economic, and environmental justice.
4. Upon completion, students will be able to engage in practice-informed research and research-informed practice.
5. Upon completion, students will be able to engage in policy practice.
6. Upon completion, students will be able to engage with individuals, families, groups, organizations, and communities.
7. Upon completion, students will be able to assess individuals, families, groups, organizations, and communities.
8. Upon completion, students will be able to intervene with individuals, families, groups, organizations, and communities.
9. Upon completion, students will be able to evaluate practice with individuals, families, groups, organizations, and communities.

Admissions Criteria

Please contact the MSW Admissions Office (sswadmissions@uta.edu) to obtain the complete application checklist and information concerning specific application deadlines. Applicants may also visit the MSW Admissions webpage (https://www.uta.edu/academics/schools-colleges/social-work/admissions/) for more information. Students are admitted to the MSW program for Fall or Spring semester with the exception of students that qualify for advanced standing with their undergraduate social work degree. Advanced Standing students can be admitted for a fall, spring or summer semester. The admissions process is the same for all MSW programs, including the Distance Education Cohorts.

*Please note that the School of Social Work's deadline for application is different from the published deadlines of the Graduate School.

There are two methods for application to the MSW Program: the Quick Admissions Process, and the Traditional Admissions Process.

QUICK ADMISSIONS

This process awards the bachelor-level applicant who has earned a 3.0 or better GPA in the last 60 hours of her/his undergraduate degree program a head start by requiring only a two-step process. In step 1, the applicant submits the online application. In step 2, the applicant must submit all official transcripts to the Office of Admissions, Records, and Registration. Once all transcripts have been received and evaluated, students whose GPA is 3.0 or better are generally admitted to the Master of Social Work Program.

Advanced Standing students applying for Quick Admission should follow the same process described above and identify themselves as having earned (or will earn by enrollment) the BSW. The BSW degree is verified by the Office of Admissions, Records, and Registration, and included with other application materials. Advanced Standing status is only granted to individuals who have graduated within the past 6 years from a BSW degree program accredited by CSWE with a 3.0 or better GPA in their last 60 hours. The same evaluation criteria are used for applicants seeking admission to the Advanced Standing MSW program.

TRADITIONAL ADMISSIONS

In the second admission method, applicants deemed ineligible for Quick Admission to the MSW program (based on the 3.0 GPA requirement) will be considered via the Traditional Admission Process for the traditional program only. Traditional Admission includes, but is not limited to the satisfactory presence of the following six qualifications:

1. Possession of a bachelor's degree from a regionally accredited U.S. college or university or its equivalent, with a satisfactory GPA of 2.7 or higher.
2. Submission of three letters of reference indicating professional or academic promise.
3. Submission of narrative essay of three double-spaced pages or less that responds to the following prompt: *Social work practice is often classified as either micro or macro. Explain what is meant by micro practice and macro practice, and why addressing both micro and macro issues is essential to effective social work practice. Use three outside sources to support your statement and include complete citations for each.*
4. Submission of GRE test scores.
5. For applicants whose native language is not English, submission of a score of at least 6.5 on the International English Language Testing System (IELTS) or a minimum TOEFL iBT total score of 79 with sectional scores that meet or exceed the following:
   - 22 for the writing section
   - 21 for the speaking section
   - 20 for the reading section
   - 16 for the listening section

TRANSFER OF CREDIT

Transfer credits for graduate level social work courses may, at the discretion of the Director of Graduate Programs, be accepted by the School of Social Work from comparable coursework taken and passed with a grade of 'B' or better at another Council on Social Work Education (CSWE) accredited program within the last six years. Transfer credits for graduate level course work in related fields may, at the discretion of the Director of Graduate Programs, be accepted by the School of Social Work if comparable to required coursework for the MSW; such courses must have been taken and passed with a grade of 'B' or better within the last six years. Students will be expected to provide syllabi for review. No credit is given for life or work experience.

FINANCIAL AID

Scholarships are awarded annually and administered by the School of Social Work. For information about scholarships available through the School of Social Work, please visit our website (https://www.uta.edu/ssw/student-resources/scholarships/).

A limited number of traineeships are available through the Center for Child Welfare's Title IV-E Program (https://www.uta.edu/academics/schools-colleges/social-work/research/title-iv-e-project/).

GRADUATE FELLOWSHIPS

Candidates for fellowship awards must have a GPA of 3.0 in their last 60 undergraduate credit hours and in any graduate credit hours, and must be enrolled in a minimum of 6 hours in both long semesters to retain their fellowships.

Curriculum

Specialty (Choose one)		
Aging		6
SOCW 5332	DIRECT PRACTICE WITH AGING (Aging)	
SOCW 5333	AGING AND SOCIAL POLICY	
Health		6
SOCW 5342	DIRECT PRACTICE IN HEALTH CARE	
SOCW 5343	HEALTH POLICY AND SOCIAL JUSTICE	
Children & Families		6

SOCW 5362	DIRECT PRACTICE WITH CHILDREN AND FAMILIES	
SOCW 5363	SOCIAL POLICY FOR CHILDREN & YOUTH	
Mental Health & Substance Misuse		9
SOCW 5352	DIRECT PRACTICE IN MENTAL HEALTH	
SOCW 5354	PRINCIPLES OF SUBSTANCE MISUSE TREATMENT	
SOCW 5353	SOCIAL POLICY AND MENTAL HEALTH	
Community & Administrative Practice		18
SOCW 5312	COMMUNITY AND ADMINISTRATIVE PRACTICE	
SOCW 5327	HUMAN BEHAVIOR IN MACRO ENVIRONMENTS	
SOCW 5321	ADVANCED COMMUNITY PRACTICE	
SOCW 5320	ADVANCED ADMINISTRATIVE PRACTICE	
SOCW 5323	PROGRAM EVALUATION	
SOCW 5328	ADVOCACY AND SOCIAL POLICY	
Integrated Theory and Practice Courses		
For Aging, Children & Families, Health, and Mental Health & Substance Misuse specialties, select two of the following:		6
SOCW 5314	INTIMATE PARTNER VIOLENCE	
SOCW 5315	BRAIN AND BEHAVIOR	
SOCW 5316	STRESS, CRISIS, AND COPING	
SOCW 5317	PALLIATIVE CARE	
SOCW 5318	DEATH & DYING	
SOCW 5319	SUICIDE PREVENTION, INTERVENTION, & POSTVENTION	
Electives by Speciality		
For Aging or Health select three of the following (thesis students select two):		9
SOCW 5334	FAMILY CAREGIVING & AGING	
SOCW 5335	AGING IN AMERICAN SOCIETY	
SOCW 5344	HEALTH INSURANCE AND ACCESS TO CARE	
SOCW 5345	SPECIAL TOPICS IN HEALTH EQUITY	
For Children & Families select three of the following (thesis students select two):		9
SOCW 5365	CLINICAL ASSESSMENT OF CHILD MALTREATMENT	
SOCW 5366	SEMINAR IN WOMEN'S ISSUES	
SOCW 5367	TREATING PARENT-CHILD RELATIONSHIPS	
SOCW 5368	SEMINAR IN DIRECT METHODS IN COUPLES COUNSELING	
SOCW 5369	SEMINAR IN FAMILY THERAPY	
SOCW 5370	SOCIAL WORK IN SCHOOLS	
SOCW 5371	INEQUITIES AND INCARCERATION	
For Mental Health & Substance Misuse select two of the following (thesis students select one):		6
SOCW 5355	MILITARY SOCIAL WORK	
SOCW 5356	SEMINAR IN COGNITIVE-BEHAVIORAL INTERVENTION STRATEGIES	
SOCW 5357	GROUP DYNAMICS AND SOCIAL WORK PRACTICE	
SOCW 5358	TREATMENT OF CHILDREN AND ADOLESCENTS	
SOCW 5359	MILITARY FAMILIES	
SOCW 5360	TREATMENT OF MILITARY POPULATIONS	
SOCW 5361	MILITARY TRAUMA	
For Community & Administrative Practice select three of the following (thesis students select two):		9
SOCW 5310	ENVIRONMENTAL JUSTICE & GREEN SOCIAL WORK	
SOCW 5324	SOCIAL WORK SUPERVISION	
SOCW 5325	BUDGETING AND FINANCIAL MANAGEMENT	
SOCW 5326	GRANT PROPOSAL DEVELOPMENT SEMINAR	
SOCW 5392	SELECTED TOPICS IN SOCIAL WELFARE	
Field (All Specialties)		
SOCW 5482	ADVANCED PRACTICUM SPLIT I (or SOCW 5485 Advanced Block Field I)	4
SOCW 5483	ADVANCED PRACTICUM SPLIT II (or SOCW 5486 Advanced Field Block II)	4

Capstone or Thesis (All Specialities)		
Select one of the following:		3
SOCW 5395	INTEGRATIVE SEMINAR	
SOCW 5398	THESIS (and SOCW 5396 as an elective)	
Total Hours		**38**

Program Completion

In addition to the general graduate admission requirements of the University, each graduate student in the social work program must:

1. maintain at least a B (3.0) overall GPA in all coursework;
2. demonstrate suitability for professional social work practice; and,
3. demonstrate knowledge of and adherence to the Code of Ethics of the National Association of Social Workers and the Code of Conduct published by the Texas State Board of Social Work Examiners.

The Professional Standards Committee will monitor and examine potential violations of ethical violations or lack of professional behavior.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Master of Social Work (Traditional Entry)

About This Program

The MSW curriculum provides students with a generalist perspective in the foundation curriculum and allows students to specialize in one of five practice areas through the specialized curriculum. Students must complete required foundation courses prior to taking most specialty courses. Students in the specialty curriculum select one specialty area: Aging, Children and Families, Community and Administrative Practice, Health, or Mental Health and Substance Misuse.

Competencies

1. Upon completion, students will be able to demonstrate ethical and professional behavior.
2. Upon completion, students will be able to engage diversity and difference in practice.
3. Upon completion, students will be able to advance human rights and social, economic, and environmental justice.
4. Upon completion, students will be able to engage in practice-informed research and research-informed practice.
5. Upon completion, students will be able to engage in policy practice.
6. Upon completion, students will be able to engage with individuals, families, groups, organizations, and communities.
7. Upon completion, students will be able to assess individuals, families, groups, organizations, and communities.
8. Upon completion, students will be able to intervene with individuals, families, groups, organizations, and communities.
9. Upon completion, students will be able to evaluate practice with individuals, families, groups, organizations, and communities.

Admissions Criteria

Please contact the MSW Admissions Office (sswadmissions@uta.edu) to obtain the complete application checklist and information concerning specific application deadlines. Applicants may also visit the MSW Admissions webpage (https://www.uta.edu/academics/schools-colleges/social-work/

admissions/) for more information. Students are admitted to the traditional MSW program for Fall or Spring semester. The admissions process is the same for all MSW programs, including online programs.

*Please note that the School of Social Work's deadline for application is different from the published deadlines of the Graduate School.

There are two methods for application to the MSW Program: the Quick Admissions Process, and the Traditional Admissions Process.

QUICK ADMISSIONS

This process awards the bachelor-level applicant who has earned a 3.0 or better GPA in the last 60 hours of their undergraduate degree program a head start by requiring only a two-step process. In step 1, the applicant submits the online application. In step 2, the applicant must submit all official transcripts to the Office of Admissions, Records, and Registration. Once all transcripts have been received and evaluated, students whose GPA is 3.0 or better are generally admitted to the Master of Social Work Program.

TRADITIONAL ADMISSIONS

In the second admission method, applicants deemed ineligible for Quick Admission to the MSW program (based on the 3.0 GPA requirement) will be considered via the Traditional Admission Process for the traditional program only. Traditional Admission includes, but is not limited to the satisfactory presence of the following six qualifications:

1. Possession of a bachelor's degree from a regionally accredited U.S. college or university or its equivalent, with a satisfactory GPA of 2.7 or higher.
2. Submission of three letters of reference indicating professional or academic promise.
3. Submission of a narrative essay of three double-spaced pages or less that responds to the following prompt: *Social work practice is often classified as either micro or macro. Explain what is meant by micro practice and macro practice, and why addressing both micro and macro issues is essential to effective social work practice. Use three outside sources to support your statement and include complete citations for each.*
4. Submission of GRE test scores.
5. For applicants whose native language is not English, submission of a score of at least 6.5 on the International English Language Testing System (IELTS) or a minimum TOEFL iBT total score of 79 with sectional scores that meet or exceed the following:
   - 22 for the writing section
   - 21 for the speaking section
   - 20 for the reading section
   - 16 for the listening section

TRANSFER OF CREDIT

Transfer credits for graduate level social work courses may, at the discretion of the MSW Program Director, be accepted by the School of Social Work from comparable coursework taken and passed with a grade of 'B' or better at another Council on Social Work Education (CSWE) accredited program within the last six years. Transfer credits for graduate level course work in related fields may, at the discretion of the MSW Program Director, be accepted by the School of Social Work if comparable to required coursework for the MSW; such courses must have been taken and passed with a grade of 'B' or better within the last six years. Students may be expected to provide syllabi for review. No credit is given for life or work experience.

FINANCIAL AID

Scholarships are awarded annually and administered by the School of Social Work. For information about scholarships available through the School of Social Work, please visit https://www.uta.edu/ssw/student-resources/scholarships (https://www.uta.edu/academics/schools-colleges/social-work/admissions/scholarships/).

A limited number of traineeships are available through the Center for Child Welfare's Title IV-E Program (https://www.uta.edu/academics/schools-colleges/social-work/research/title-iv-e-project/).

GRADUATE FELLOWSHIPS

Candidates for fellowship awards must have a GPA of 3.0 in their last 60 undergraduate credit hours and in any graduate credit hours, and must be enrolled in a minimum of 6 hours in both long semesters to retain their fellowships.

Curriculum

For students without a BSW and advanced standing, the program leading to the Master of Social Work requires the completion of 61 semester hours of graduate work including class and field instruction, as well as thesis or integrative seminar (non-thesis option).

Foundations		
SOCW 5301	HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT	3

Capstone or Thesis (All Specialties)		
Select one of the following:		3
SOCW 5395	INTEGRATIVE SEMINAR	
SOCW 5698	THESIS (and SOCW 5396 as an elective)	
Total Hours		**61**

Program Completion

In addition to the general graduate admission requirements of the University, each graduate student in the social work program must:

1. maintain at least a B (3.0) overall GPA in all coursework;
2. demonstrate suitability for professional social work practice; and,
3. demonstrate knowledge of and adherence to the Code of Ethics of the National Association of Social Workers (https://www.socialworkers.org/About/Ethics/Code-of-Ethics/Code-of-Ethics-English/), the Texas State Board of Social Worker Examiners Code of Conduct (https://bhec.texas.gov/wp-content/uploads/2024/08/2024-August-SW.pdf) (section 781.301), and the UTA School of Social Work Professional Standards (https://resources.uta.edu/social-work/faculty-academic-and-student-affairs-resources/Rev-Professional-Standards-Policies-and-Procedures.pdf) in their professional practice and in their coursework.

Advising Resources

Please read all student emails carefully and review the frequently asked questions. These resources are intended to provide help when you need it. If you want to meet with your advisor, please sign up for an appointment as early in the semester as possible.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Post-Baccalaureate Certificate in Community Leadership

About This Program

The Community Leadership Certificate provides advanced education and training in social work community practice skills, including mobilizing neighborhood, community, and client groups to solve collective human problems, writing grants for financial support, and planning and conducting advocacy to affect social welfare policy decisions that affect local communities.

Competencies

1. Upon completion, students will be able to mobilize neighborhood, community, and client groups to solve collective human problems.
2. Upon completion, students will be able to write grants for financial support.
3. Upon completion, students will be able to plan and conduct advocacy to affect social welfare policy decisions that affect local communities.

Admissions Criteria

For students in the MSW program at the time of enrollment for the Certificate, the Admission requirement will be to be in good standing, as defined by the MSW program, which includes having a GPA of 3.0 or higher. For non-degree seeking students who wish to enroll in the Certificate Program, a bachelor's degree in Social Work or a bachelor's degree and two-years of related professional experience, with a GPA of 3.0 or higher is required.

Curriculum

SOCW 5321	ADVANCED COMMUNITY PRACTICE	3
SOCW 5326	GRANT PROPOSAL DEVELOPMENT SEMINAR	3
SOCW 5328	ADVOCACY AND SOCIAL POLICY	3
Total Hours		**9**

Program Completion

The certificate must be completed within 6 years and a grade of B or better must be achieved in each course.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Post-Baccalaureate Certificate in Military, Veteran, and Family Care

About This Program

This certificate will prepare students and alumni to work with military service members, veterans and their families across settings. The Military, Veteran and Family Care Graduate Certificate is open to any graduate student at UTA and focuses on military, military-connected, and veteran culture toward effectively serving these populations across a variety of non-direct practice roles in health and social service agencies.

Competencies

1. Upon completion, students will be able to demonstrate ethical and professional behavior.
2. Upon completion, students will be able to advance human rights and social, racial, economic, and environmental justice.
3. Upon completion, students will be able to engage anti-racism, diversity, equity, and inclusion in practice.

4. Upon completion, students will be able to engage in policy practice.
5. Upon completion, students will be able to engage with individuals, families, groups, organizations, and communities.

Admissions Criteria

Current UTA graduate students in good academic standing may complete the Military, Veteran, and Family Care Graduate Certificate. Non-degree seeking students must meet minimum admission criteria for graduate admission, which include a bachelor's degree from a regionally accredited institution; 3.0 GPA in the last 60 hrs of study; and university requirements for people who are not native English speakers.

Curriculum

Core Course		
SOCW 5355	MILITARY SOCIAL WORK	3
Additional Requirements		
SOCW 5361	MILITARY TRAUMA	3
SOCW 5316	STRESS, CRISIS, AND COPING	3
SOCW 5359	MILITARY FAMILIES	3
Total Hours		**12**

Program Completion

Twelve credit hours are required in the certificate (4 courses). All students must have a cumulative GPA in the required courses of at least 3.0 with no grade lower than a C to obtain the certificate. Course credits will post to the students' transcripts upon completion. The time limit for completion of the certificate program is 6 years.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Post-Baccalaureate Certificate in Organizational Leadership

About This Program

The Organizational Leadership Certificate provides advanced education and training in organizational leadership of human service and nonprofit programs to direct practice social work students and members of the community.

Competencies

1. Upon completion, students will be able to supply organizational leadership for human service and nonprofit programs.
2. Upon completion, students will understand and be able to administer budgets for human service and nonprofit programs.

Admissions Criteria

For students in the MSW program at the time of enrollment for the Certificate, the Admission requirement will be to be in good standing, as defined by the MSW program, which includes having a GPA of 3.0 or higher. For non-degree seeking students who wish to enroll in the Certificate Program, a bachelor's degree in Social Work or a bachelor's degree and two-years of related professional experience, with a GPA of 3.0 or higher is required.

Curriculum

SOCW 5320	ADVANCED ADMINISTRATIVE PRACTICE	3
SOCW 5324	SOCIAL WORK SUPERVISION	3
SOCW 5325	BUDGETING AND FINANCIAL MANAGEMENT	3
Total Hours		**9**

Program Completion

The certificate must be completed within 6 years and a grade of B or better must be achieved in each course.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Social Work - Undergraduate Programs

Undergraduate Programs

The School of Social Work offers several undergraduate degrees, certificates and minors.

DEGREES

- Social Work BSW (p. 1840)
- Substance Use and Treatment BS (p. 1843)

CERTIFICATES AND MINORS

- Diversity Studies Undergraduate Certificate (p. 1845)
- Diversity Studies Minor (p. 1847)
- Social Justice and Social Welfare Minor (p. 1850)
- Substance Use and Treatment Minor (p. 1851)

Policies

In addition to University-wide policies (https://catalog.uta.edu/academicregulations/degreerequirements/undergraduate/), the School of School Work has established polices specific to its BSW program. These policies are indicated in the BSW Manual (https://www.uta.edu/academics/schools-colleges/social-work/programs/bsw/bsw-manual/). In cases of conflict between the catalog and the manual, the catalog is governing.

Bachelor of Social Work

About This Program

The Bachelor of Social Work degree program of the School of Social Work is fully accredited by the Council on Social Work Education. Its primary educational objective is to prepare students for generalist social work practice. The course sequence, which integrates academic social work and practicum experience within a liberal arts framework, prepares students to pursue careers in a wide range of social service agencies and settings upon graduation. Students may take courses at the UTA main campus, the UTA Fort Worth Campus, fully online, or a combination.

Competencies

1. Upon completion, students will be able to demonstrate ethical and professional behavior.
2. Upon completion, students will be able to advance human rights and social, racial, economic, and environmental justice.
3. Upon completion, students will be able to engage anti-racism, diversity, equity, and inclusion in practice.
4. Upon completion, students will be able to engage in practice-informed research and research-informed practice.
5. Upon completion, students will be able to engage in policy practice.
6. Upon completion, students will be able to engage with individuals, families, groups, organizations, and communities.
7. Upon completion, students will be able to assess individuals, families, groups, organizations, and communities.
8. Upon completion, students will be able to intervene with individuals, families, groups, organizations, and communities.
9. Upon completion, students will be able to evaluate practice with individuals, families, groups, organizations, and communities.

Admissions Criteria

TRANSITION FROM BSW-INTENDED TO BSW MAJOR

Transition to the BSW Major requires earning a C or better in the following five courses:

SOCW 3300 (formerly 1331) or a combination of SOCW 1231 and UNIV 1131		3
SOCW 2361	INTRODUCTION TO SOCIAL WORK (formerly SOCW 2311)	3
SOCW 3305	SOCIAL WORK PRACTICE I (formerly SOCW 2313)	3
SOCW 3307	DIVERSE POPULATIONS	3
MATH 1308, SOCW 2325, or other approved statistics course		3
Total Hours		**15**

- Complete the BSW Orientation *Map for the Journey*
- Cumulative GPA and major GPA of 2.5 or better

Once transitioned from BSW Intended to BSW Major, students will be required to submit a criminal background statement[1] through a link provided via email.

[1]The criminal background statement is necessary as we need the information to place you with a field internship; some do not accept students with a criminal background.

TRANSFER OF CREDIT

Transfer credits for undergraduate level social work courses may, at the discretion of the Director of Undergraduate Programs, be accepted by the School of Social Work from comparable coursework taken and passed with a grade of 'C' or better at another CSWE accredited program within the last six years. BSW student transcripts are evaluated by the UTA Office of Admissions, and the Director of Undergraduate Programs may approve additional transfer courses for credit. Students may be expected to provide syllabi for review. The total transfer credits awarded should not exceed 50% of the total program credits needed for the degree, and at least 66 credits must be earned at UTA.

No credit is given for life or work experience. Courses that meet the liberal arts requirements of the BSW degree are applied to the degree plan. Other courses are designated as electives. The student receives credit for Introduction to Social Work (regardless of institution) and social work courses from CSWE accredited social work programs. The exceptions are the practicum courses (which must be completed at UTA):

Concurrent enrollment in:		
SOCW 4451 & SOCW 4551	SOCIAL WORK PRACTICUM SEMINAR I and SOCIAL WORK PRACTICUM INSTRUCTION I	9
(Or SOCW 4555 SOCIAL WORK PRACTICUM INSTRUCTION AND SOCW 4455 SEMINAR BLOCK PART 1)		
THEN		
SOCW 4452 & SOCW 4552	SOCIAL WORK PRACTICUM SEMINAR II and SOCIAL WORK PRACTICUM INSTRUCTION II	9
(Or SOCW 4556 SOCIAL WORK PRACTICUM INSTRUCTION AND SOCW 4456 SEMINAR BLOCK PART 2)		

CONTINUATION IN THE BSW PROGRAM

Continuation in the BSW Program and eligibility for entry into Field requires:

- 2.5 average in all social work courses and no grade lower than a C
- 2.5 overall grade point average

Students must complete all SOCW courses within a maximum 6-year period. To ensure our graduates are receiving the most updated and relevant information on social issues, programs and best practices, social work courses completed more than 6 years before graduation may need to be retaken.

Curriculum

Foundations		
General Core Requirements (p. 46)		42
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
ENGL 1302	RHETORIC AND COMPOSITION II	
For Government/Political Science select:		
POLS 2311	GOVERNMENT OF THE UNITED STATES	

POLS 2312	STATE AND LOCAL GOVERNMENT	
For Mathematics select:		
MATH 1301	CONTEMPORARY MATHEMATICS (or other approved MATH course)	
MATH 1308	ELEMENTARY STATISTICAL ANALYSIS (or SOCW 2325 or other approved statistics course)	
For Social and Behavioral Science select:		
SOCW 2361	INTRODUCTION TO SOCIAL WORK (formerly SOCW 2311) [1]	
For US History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
For Life and Physical Science two of following are recommended: BIOL 1333, BIOL 1334, BIOL 1441, BIOL 1442, BIOL 2457, BIOL 2458, CHEM 1345, CHEM 1346, CHEM 1451, GEOL 1330		
BSW Foundations		
SOCW 3300	SOCIAL WORK PROFESSIONALISM AND STUDENT SUCCESS ([formerly 1331] or a combination of SOCW 1231 and UNIV 1131)	3
SOCW 3305	SOCIAL WORK PRACTICE I	3
SOCW 3307	DIVERSE POPULATIONS	3
Professional Courses		
SOCW 2302	HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT	3
SOCW 3301	THEORIES OF HUMAN BEHAVIOR	3
SOCW 3309	SOCIAL WORK PRACTICE II (formerly SOCW 3304)	3
SOCW 3303	SOCIAL WELFARE POLICY AND SERVICES	3
SOCW 3308	SOCIAL WORK RESEARCH METHODS	3
SOCW 3306	SOCIAL WORK PRACTICE III: MACRO PRACTICE	3
12 hours of Social Work Electives		12
Students will take the following Field and Seminar courses concurrently:		
SOCW 4451 & SOCW 4551	SOCIAL WORK PRACTICUM SEMINAR I and SOCIAL WORK PRACTICUM INSTRUCTION I	9
(Or SOCW 4555 SOCIAL WORK PRACTICUM INSTRUCTION AND SOCW 4455 SEMINAR BLOCK PART 1)		
THEN		
SOCW 4452 & SOCW 4552	SOCIAL WORK PRACTICUM SEMINAR II and SOCIAL WORK PRACTICUM INSTRUCTION II	9
(Or SOCW 4556 SOCIAL WORK PRACTICUM INSTRUCTION AND SOCW 4456 SEMINAR BLOCK PART 2)		
Electives sufficient to complete the 120 hours required for the degree [2]		21
Recommendations: Substance Use Treatment Minor, Diversity Certificate or Minor, African American Studies Minor, Mexican American Studies Minor, Disability Studies Minor, Criminology and Criminal Justice Minor, Women and Gender Studies Minor		
Total Hours		**120**

1 Required for transition to the BSW major.

2 No more than four hours of activity (EXSA/DNCA) can be used toward a degree for either hours or GPA.

Program Completion

PRACTICUM REQUIREMENTS

The BSW Program requires two consecutive semesters (split placement) or one full semester (block placement) practicum experience in a single human-service agency. Once necessary pre-requisites are complete and students have a 2.5 or better GPA, students enroll in the practicum courses; during practicum, students complete a total of 400 clock hours in their assigned agency. Field placements are arranged early in the preceding semester by applying through the practicum office. Students should consult with a BSW advisor to ensure completion of pre-requisites for practicum.

Advising Resources

Please read all student emails carefully and review the frequently asked questions. These resources are intended to provide help when you need it. If you want to meet with your advisor, please sign up for an appointment as early in the semester as possible.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Bachelor of Science Substance Use and Treatment

About This Program

The Bachelor of Science in Substance Use & Treatment (BSSUT) uses a multidisciplinary approach to understand the biological, psychological, and social aspects of substance use disorders and related behaviors. Assessment and treatment methods are based on evidence-informed practices to enable students and future professionals to understand and treat individuals, families, groups, and communities.

The BSSUT degree plan is designed to prepare you for a career in substance use treatment or to lay the foundation for you to pursue a graduate degree in a related field.

Competencies

1. Transdisciplinary Foundations: upon completion, students will have an understanding of addiction, treatment knowledge, application to practice, and professional readiness.
2. Practice Dimensions: upon completion, students will have an understanding of clinical evaluation; treatment planning; referral; service coordination; counseling; client, family, and community education; documentation; professional & ethical responsibilities.

Admissions Criteria

Students interested in the BSSUT must first apply to UTA or be a current UTA student and then select or switch to Substance Use & Treatment as your intended major. Once admitted to UTA or already a current UTA student, you must complete the following Substance Use & Treatment requirements before transitioning from Intended-SUT major an official SUT major:

1. A “C” or better in all SUT and Social Work courses taken
2. A Minimum 2.25 overall GPA
3. Completion of the SUT-Intended coursework and at least 30 hours toward the required Core Curriculum

Curriculum

Foundations		
General Core Requirements (p. 46)		42
Students must complete specific courses within certain core areas.		
For Communication select:		
ENGL 1301	RHETORIC AND COMPOSITION I	
ENGL 1302	RHETORIC AND COMPOSITION II	
For Government/Political Science select:		
POLS 2311	GOVERNMENT OF THE UNITED STATES	
POLS 2312	STATE AND LOCAL GOVERNMENT	
For Mathematics select:		
MATH 1301	CONTEMPORARY MATHEMATICS (Or other Math course approved for Math Core)	
MATH 1308	ELEMENTARY STATISTICAL ANALYSIS (or other statistics course approved by Director of Undergraduate Programs)	
For Social and Behavioral Science select:		
SOCW 2302	HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT	
For U.S. History select:		
HIST 1301	HISTORY OF THE UNITED STATES TO 1865	
HIST 1302	HISTORY OF THE UNITED STATES, 1865 TO PRESENT	
For Component Area Option select:		
PSYC 1315	INTRODUCTION TO PSYCHOLOGY	

For Life and Physical Science two of the following are prefered: BIOL 1333, BIOL 1334, BIOL 1441, BIOL 1442, BIOL 2457, BIOL 2458, CHEM 1345, CHEM 1346, CHEM 1451, GEOL 1330		
Courses Required for Transition to the BSSUT Major		
SUT 3300	STUDENT SUCCESS & PROFESSIONALISM IN SUBSTANCE USE TREATMENT (SUT 3300 or SUT 1331 for non-transfer students)	3
SOCW 3305	SOCIAL WORK PRACTICE I	3
SOCW 3307	DIVERSE POPULATIONS	3
SUT 3315	INTRODUCTION TO SUBSTANCE USE DISORDERS	3
Professional Courses		
SOCW 3301	THEORIES OF HUMAN BEHAVIOR	3
SUT 3303	SOCIAL WELFARE POLICY AND SERVICES	3
SUT 3309	SUT PRACTIC II	3
SUT 3318	SCREENING, ASSESSMENT, & ENGAGEMENT	3
SUT 3319	TREATMENT PLANNING, COLLABORATION & REFERRAL	3
SUT 3321	SUBSTANCE USE TREATMENT	3

SOCW 4344	HEALTH INSURANCE AND ACCESS TO CARE	3
SOCW 4371	INEQUITIES AND INCARCERATION	3
SOCW 3308	SOCIAL WORK RESEARCH METHODS	3
Students will take the following Practicum and Seminar courses concurrently:		
SOCW 4451 & SOCW 4551	SOCIAL WORK PRACTICUM SEMINAR I and SOCIAL WORK PRACTICUM INSTRUCTION I	9
(Or SUT 4555 SUBSTANCE USE TREATMENT PRACTICUM INSTRUCTION AND SUT 4455 SEMINAR BLOCK PART 1)		
SOCW 4452 & SOCW 4552	SOCIAL WORK PRACTICUM SEMINAR II and SOCIAL WORK PRACTICUM INSTRUCTION II	9
(Or SUT 4556 SUBSTANCE USE TREATMENT PRACTICUM INSTRUCTION AND SUT 4456 SEMINAR BLOCK PART 2)		
Electives sufficient to complete the 120 hours required for the degree [1]		18
Recommendations: African American Studies Minor, Disability Studies Minor, Diversity Studies Minor or Certificate, Mexican American Studies Minor, Psychology Minor, Public Health Minor, Social Justice and Social Welfare Minor, Sociology Minor, Spanish Minor, Women's and Gender Studies Minor		
Total Hours		**120**

[1] No more than four hours of activity (EXSA/DNCA) can be used toward a degree for either hours or GPA

Program Completion

To complete the filed internship, students must:

1. Earn a "C" or better in all BSSUT courses
2. Have a minimum 2.25 BSSUT & Overall GPA
3. Earn acceptable evaluations in all BSSUT courses.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Certificate in Diversity Studies

About This Program

The Diversity Studies Certificate Program (DCP) is an interdisciplinary certificate that provides undergraduate students the opportunity to gain specialized knowledge, values, and skills in racial and ethnic relations, gender and sexuality, and social and economic inequality, to advance themselves as successful employees and leaders in our global world. The certificate enhances a student's general education, academic major and/or career preparation.

Competencies

1. Upon completion, students will be able to advance human rights and social, racial, economic, and environmental justice.
2. Upon completion, students will be able to engage Anti-Racism, Diversity, Equity, and Inclusion (ADEI) in practice.

Admissions Criteria

- Students selecting the Diversity Certificate must
- Complete the Diversity Studies Declaration Form (https://dsminordeclarationform.questionpro.com/) and the pre-coursework assessment;
- Have a 2.5 Cumulative GPA;
- Complete 12 hours of coursework as follows with a C or better in each course (1 course per area):
- A 3 credit hour designated introductory course (SOCW 3307), and
- 9 credit hours of designated coursework in 3 areas:
  - Racial and Ethnic relations,
  - Social and Economic Inequality,
  - Gender, and
  - Sexuality.
  - In order to receive the certificate, students must also graduate with any Bachelor's degree from UTA
- Finally, students will have a final assessment at the end of their coursework to assess their learning outcomes.

Curriculum

Foundation		
Select one from the following:		3

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Minor in Diversity Studies

About This Program

The Diversity Studies Minor is designed to strengthen students' understanding of the interactions of race, ethnicity, gender, sexuality, social and economic inequality, disability, aging and religion in defining identity and social relationships. This interdisciplinary program of study focuses on key concepts related to power, identity, difference, and the historical and structural forces that shape power and difference in social relationships. The goal of the minor is to arm students with knowledge, skills, and perspectives essential to civic participation, career development and promoting a just society. The Diversity Studies minor is relevant to careers involving diverse populations such as business, industry, education, social welfare, mental health, and physical health.

Competencies

1. Upon completion, students will be able to advance human rights and social, racial, economic, and environmental justice.
2. Upon completion, students will be able to engage Anti-Racism, Diversity, Equity, and Inclusion (ADEI) in practice.

Admissions Criteria

- Complete the Diversity Studies Declaration Form (https://www.questionpro.com/a/TakeSurvey/?tt=D8flvYWJJv4%3D) and the pre-coursework assessment;
- Have a cumulative 2.5 GPA.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Minor in Social Justice and Social Welfare

About This Program

The Minor in Social Justice and Social Welfare provides students with a broad overview of social justice perspectives on issues relevant to the social welfare system, its relationship to the market economy, and the historical, political, and cultural factors that shape it. Through coursework, students learn the analytic and practical skills needed to develop, evaluate, and transform social welfare and justice policies. Students gain competency in the core issues of human needs and social development, relevant to many careers.

The minor also enhances students' preparation for graduate study in social work, law, education, health care, public policy analysis, nonprofit management, social service administration, student affairs, conflict resolution, and others. Students in a variety of major often want to pursue careers that improve the quality of life of others. Understanding of the social welfare system and social justice issues is essential as a foundation for such careers.

Please note:

- Social work majors are not eligible to earn the SJSW minor.
- The SJSW minor does not provide the specific skills needed for actual social work practice or for social work licensing.
- Students who complete the minor and decide to pursue a master's degree in social work at UTA will not be allowed to count courses taken in the minor toward the master's degree.

Competencies

1. Upon completion, students will understand the need for and strategies toward advancing human rights and social, racial, economic, and environmental justice.
2. Upon completion, students will know strategies for supporting anti-racism, diversity, equity, and inclusion (ADEI).

Admissions Criteria

To select this minor, students must have a minimum cumulative GPA of 2.5 and complete the SJSW Declaration Form. (https://sjswminordeclarationform.questionpro.com/) Students will also be required to complete a pre- and post-assessment of learning outcomes.

Curriculum

Introductory Course		
SOCW 3303	SOCIAL WELFARE POLICY AND SERVICES	3
Core Courses		
SOCW 3301	THEORIES OF HUMAN BEHAVIOR	3
SOCW 3307	DIVERSE POPULATIONS	3
Electives		
Select three of the following:		9
SOCW 3312	DISABILITY & SOCIAL WORK	
SOCW 3314	THE LATINA EXPERIENCE	
SOCW 3320	U.S. IMMIGRATION POLICY AND THE AMERICAN DREAM	
SOCW 4314	INTIMATE PARTNER VIOLENCE	
SOCW 4366	SEMINAR IN WOMEN'S ISSUES	
SOCW 4335	AGING IN AMERICAN SOCIETY	
Total Hours		**18**

1. Students are required to earn a C or better in all SJSW minor courses to earn the minor.
2. Additionally, students will have a final assessment at the end of their coursework to assess their learning outcomes (this allows for data gathering for Unit Effectiveness Process [UEP] requirements).

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Minor in Substance Use and Treatment

About This Program

The Minor in Substance Use Treatment (SUT) employs a multidisciplinary approach to understanding the biological, psychological, and social, aspects of substance misuse, gambling, and related behaviors. Assessment and treatment methods are based on evidence-informed practices to enable students and future professionals to understand and treat individuals, families, groups, and communities. The courses prepare graduates for careers in substance use treatment and related fields.

Competencies

1. Upon completion of SUT/SOCW 3315 students will be able to Identify, describe, compare, and evaluate theories and models of substance use, misuse, and addiction.
2. Upon completion of SUT/SOCW 2302 students will be able to explain development across the lifespan so as to better understand substance use at different stages of development.
3. Upon completion of SUT/SOCW 3305, students will be able to use empathy and other interpersonal skills toward developing a mutually agreed-on focus of work
4. Upon completion of SUT 3318, students will be able to collect, organize, and interpret client data as part of the screening, assessment, and engagement processes toward developing a treatment plan for the client.
5. Upon completion of SUT 3319 and SUT 3321, students will be able to develop and implement a treatment plan.

Admissions Requirements

To select this minor, students must have a minimum cumulative GPA of 2.5 and complete the SUT Declaration Form (https://sutminordeclarationform.questionpro.com/). Students will also be required to complete a pre- and post-assessment of learning outcomes.

Curriculum

SOCW/SUT 3315	INTRODUCTION TO SUBSTANCE USE DISORDERS	3
SOCW 2302	HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT	3
SOCW/SUT 3305	SOCIAL WORK PRACTICE I	3
SOCW/SUT 3318	SCREENING, ASSESSMENT, & ENGAGEMENT	3
SOCW/SUT 3319	TREATMENT PLANNING, COLLABORATION & REFERRAL	3
SOCW/SUT 3321	SUBSTANCE USE TREATMENT	3
Total Hours		**18**

1. Students are required to earn a C or better in all minor courses to earn the minor.
2. Students may receive minor credit through completion of any combination of SUT 1350, SUT 2350, SUT 3350, or SUT 4350 as approved by the Director of Undergraduate Programs in the School of Social Work.
3. SUT minors who are not Social Work majors; if they want to pursue Licensed Chemical Dependency Counselor (LCDCi), they must add SUT 4451/SOCW 4451 Practicum as a general elective.

Advising FAQ (https://www.uta.edu/academics/schools-colleges/social-work/programs/advising/advising-faqs/)

Honors College

College Overview

The Honors College is committed to extending opportunities for achievement in undergraduate education to high achieving students across the University. The College works toward this goal by promoting a supportive and diverse environment, both academically and culturally, in which students can pursue excellence in research, creative work, community service, and personal and professional development. By creating a center for academic excellence, the Honors College not only fosters the development of the next generation of academic and community leaders, but also advances the University's broader mission of improving the level of education for all students.

The UT Arlington Honors College is a member of the National Collegiate Honors Council and the regional Great Plains Honors Council.

ADVANCED PLACEMENT SUMMER INSTITUTE (APSI)

The Honors College at UT Arlington, in conjunction with the College Board, annually presents the UT Arlington Advanced Placement Summer Institute. Each year more than 1000 high school teachers receive invaluable training from College Board-certified instructors to prepare them to teach AP courses. Courses are offered in Art, English, Science, Language, Mathematics and Social Studies.

Honors College Undergraduate Policies

STANDARDS FOR ADMISSION

Admission to the Honors College is a rigorous process. All applications are reviewed by a committee that discusses each applicant individually. The Honors College does not offer rolling or automatic admissions, and all applications are reviewed after the deadline has passed. Each student is holistically reviewed based not only on grades and test scores, but their resume, writing ability, and evidence of strong analytical skills. Meeting one or more of the standards below does not guarantee admission to the Honors College. Admission is not guaranteed to any student.

Entering First-Time Freshman

Candidates for admission must fulfill at least one of the following criteria to be eligible to apply:

- Combined Evidence-Based Reading/Writing and Math SAT score of 1270
- ACT score of 27
- 3.5 unweighted high school GPA (U.S. high schools only)
- Graduation in the upper 10 percent of their high school class (U.S. high schools only)

Continuing UT Arlington and Transfer Students

Candidates for admission must fulfill the following criteria to be eligible to apply:

- 3.35 cumulative GPA (for transfers, this is the GPA from all colleges attended prior to UTA)
- A minimum of 60 credit hours remaining until degree completion

Students who do not meet any of the above requirements may apply to the Honors College; however, they MUST complete the optional essay portion of the application. The criteria above are minimums. Admission is not based solely on grades or scores. The admissions committee looks for evidence of strong analytical skills and college-level writing ability; thus, a strong essay is an important consideration in the admissions process. More information on the application process and steps to apply can be found here (https://www.uta.edu/academics/schools-colleges/honors/prospective-students/apply/).

The Honors College is unable to offer admission to students in programs offered exclusively through the Accelerated Online (AO) or online Academic Partnerships (AP) degree plans.

COMPLETING AN HONORS DEGREE

Honors degrees are granted in the following University undergraduate schools and colleges – Architecture, Planning, and Public Affairs; Business; Education; Engineering; Liberal Arts; Nursing and Health Innovation; Science; and Social Work. To graduate with an Honors degree, a student must be a member of the Honors College in good standing, have an overall GPA of 3.200 or higher, and complete the degree requirements in their academic major.

Honors students will be required to earn 18 Honors Points plus a Capstone Project to receive an Honors Degree. Fifteen (15) Course Points and three (3) Experience Points make up the 18 Honors Points total. Course Points and Experience Points are determined by each college.

Course Points

Students must complete 15 Course Points. Students will enroll in Honors-designated or cross-listed courses or contract existing courses. Each successfully completed course will award the student 3 Course Points. Each college will set their own course requirements. Honors courses satisfy

Honors, departmental, college, and University requirements. The Honors College provides departmental advisors with equivalency/substitution information.

Honors students may earn Honors credit for non-Honors courses taught by full-time faculty and adjunct faculty who have taught at UTA for at least one fall or spring semester subject to the terms of the Honors College Contract. To receive Honors credit, the student must complete regular course requirements with a grade of A or B, as well as an independent Honors assignment as agreed upon by the instructor and the student and approved by the Honors College staff.

Experience Points

Students must earn at minimum 3 Experience Points. Students may participate in co-curricular Experiences to earn these Points. A point value will be assigned to each experience based on duration and rigor of the experience (most will be assigned 0.5 points). Each college has their own list of allowable experiences. Each unique experience may be used only one time.

Honors Capstone Project

In addition to earning the required number of Honors Points, students will complete a Capstone Project to receive an Honors Degree. Each college/department/major will determine which of the following "tracks" their students can select. Although not all students will be required to write a thesis, all students will be required to produce a written deliverable. HONR-4000 is required of all students completing their Honors Capstone Project. Students must be enrolled in this course in the semester they will complete their Honors Capstone Project. Students will present their Capstone Project at an Honors Symposium in a poster presentation format.

Research

- Traditional Honors thesis; research conducted with a faculty mentor.

International

- Project developed through study abroad or service learning abroad.

Professional

- Project developed through completing an internship, co-op, or practicum.

Creative

- Creation of original creative work/activity; especially for students in the fine arts.

College Specific Capstone Project

- Determined by each college.

The Honors College encourages students to maintain close contact with their Capstone mentor, academic advisor, and the Honors advising staff. Students must meet with their designated Honors advisor during each of their first three years but are strongly encouraged to meet with the advising staff on a regular basis.

PROBATION POLICY

Honors students whose cumulative GPA falls below 3.200 will be placed on probation. They must meet as soon as possible with an Honors advisor and are required to restore their GPA back to 3.200 or higher in the following semester.

PRIVILEGES

Honors College participation provides several benefits to its students:

- An Honors Bachelor's Degree
- The opportunity to earn priority course registration
- Courses taught by award-winning faculty
- Honors scholarship opportunities
- Honors Residential Learning Community (RLC)
- The opportunity to apply for paid undergraduate research fellowships
- Special check-out privileges at the Central Library
- Access to Honors listserv and the electronic Honors newsletter, *Veneratio*
- Exclusive Honors events
- Honors graduate school fellowship opportunities

- Membership in the Honors College Council
- Use of the Carolyn A. Barros Reading room and free printing

COURSES

HONR 1100. ENRICHMENT SERIES. 1 Hour.
Provides an introduction and orientation to the Honors College. Designed to assist students in acquiring skills for academic survival, individual success, and pursuit of their Honors degree and career possibilities. Format varies; instruction by both faculty and Honors College student peer counselors.

HONR 1304. HONORS INDEPENDENT STUDY. 3 Hours.
Independent study courses are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 2104. HONORS INDEPENDENT STUDY. 1 Hour.
Independent study topics are arranged on an individual basis. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 2106. HONORS SEMINAR. 1 Hour.
The Honors Seminar will cover topics of general interdisciplinary interest to students from a wide variety of academic disciplines. Active learning will be stressed with all students expected to both moderate and participate in classroom discussions of seminar topics. Instructors and topics offered will vary. The course may be repeated for credit as topics change.

HONR 2111. HONORS COMMUNITY SERVICE LEARNING. 1 Hour.
Intensive course in the history and practice of community service learning (CSL). Readings will include general accounts of active learning, the institutional history of CSL in higher education, and a comparative study of CSL programs across the country. Students will design and implement a CSL project based on their major, and in conjunction with an area non-profit organization. Evaluation will be based on written work on both the readings and the CSL project.

HONR 2203. HONORS SPECIAL TOPICS. 2 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 2204. HONORS INDEPENDENT STUDY. 2 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 2300. SEMINAR. 3 Hours.
Team-taught interdisciplinary course that introduces knowledge and perspectives from the arts, sciences, and humanities. Designed around a theme of current or historical significance. Writing-intensive. Depending on topic, may meet the literature, fine arts/humanities or social/cultural studies requirement of the core curriculum (consult departmental advisor for details).

HONR 2304. HONORS INDEPENDENT STUDY. 3 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 2403. SPECIAL TOPICS. 4 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 2404. HONORS INDEPENDENT STUDY. 4 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 2435. HONORS SPECIAL TOPICS. 4 Hours.
Topics, format and prerequisites to be determined by faculty offering the course. May be repeated for credit as topics change.

HONR 3103. INDEPENDENT STUDY. 1 Hour.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 3104. SPECIAL TOPICS. 1 Hour.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 3203. HONORS INDEPENDENT STUDY. 2 Hours.
Independent study topics are arranged on an individual basis. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 3204. SPECIAL TOPICS. 2 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 3303. INDEPENDENT STUDY. 3 Hours.
Independent study topics are arranged on an individual basis. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 3403. HONORS INDEPENDENT STUDY. 4 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 3404. HONORS SPECIAL TOPICS. 4 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 3435. HONORS SPECIAL TOPICS. 4 Hours.
Topics, format and prerequisites to be determined by faculty offering the course. May be repeated for credit as topics change.

HONR 3504. HONORS SPECIAL TOPICS. 5 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 3535. HONORS SPECIAL TOPICS. 4 Hours.
Topics, format and prerequisites to be determined by faculty offering the course. may be repeated for credit as topics change.

HONR 4000. HONORS INDEPENDENT RESEARCH. 0 Hours.
Individualized research conducted under the supervision of a faculty member. This is a zero-credit course. May be repeated. Prerequisite: membership in the Honors College, permission of the supervising faculty member, and approval by the Dean of Honors.

HONR 4103. ADVANCED SPECIAL TOPICS. 1 Hour.
Advanced special topics in Honors. May be repeated for credit as topics change.

HONR 4104. HONORS INDEPENDENT STUDY. 1 Hour.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 4106. HONORS ADVANCED SEMINAR. 1 Hour.
The Honors Advanced Seminar will cover topics of general interdisciplinary interest to students from a wide variety of academic disciplines. Active learning will be stressed with all students expected to research and prepare seminar presentations and moderate class discussions on assigned seminar topics. Instructors and topics offered will vary The course may be repeated for credit as topics change. Prerequisite: Junior or Senior status or permission of the instructor.

HONR 4144. HONORS SERVICE LEARNING OPPORTUNITIES. 1 Hour.
Credit will be given for supervised service to a community agency. The service must be related to formal coursework and approved by a faculty mentor and a degree plan advisor. Prerequisite: Junior standing or permission of the Honors College Dean. Graded Pass/Fail.

HONR 4203. ADVANCED SPECIAL TOPICS. 2 Hours.
Advanced special topics in Honors. May be repeated for credit as topics change.

HONR 4204. HONORS INDEPENDENT STUDY. 2 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 4244. HONORS SERVICE LEARNING OPPORTUNITIES. 2 Hours.
Credit will be given for supervised service to a community agency. The service must be related to formal coursework and approved by a faculty mentor and a degree plan advisor. Graded Pass/Fail.

HONR 4300. ADVANCED SEMINAR. 3 Hours.
Integrates substantive knowledge in the arts, sciences, and humanities around a theme of current or historical significance. May meet the Social/Cultural Studies requirement of the core curriculum.

HONR 4303. ADVANCED SPECIAL TOPICS. 3 Hours.
Advanced special topics in Honors. May be repeated for credit as topics change.

HONR 4304. HONORS INDEPENDENT STUDY. 3 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 4310. HONORS STUDY ABROAD. 3 Hours.
Interdisciplinary course in an out-of-country location around a theme or topic appropriate to the location. Journal, term papers, and/or examinations may be required. Meets the Social/Cultural Studies requirement of the core curriculum.

HONR 4320. HONORS INTERNSHIP. 3 Hours.
Supervised employment in student's area(s) of interest. Journal and term paper required. Reserved for students whose major department does not offer an Internship course.

HONR 4344. HONORS SERVICE LEARNING OPPORTUNITIES. 3 Hours.
Credit will be given for supervised service to a community agency. The service must be related to formal coursework and approved by a faculty mentor and a degree plan advisor. Graded Pass/Fail.

HONR 4394. HONORS SENIOR RESEARCH THESIS/CREATIVE PROJECT. 3 Hours.
A research thesis or creative project and oral presentation are required for the Honors degree. In consultation with the faculty thesis supervisor and the Honors Dean, a program of research and writing will be arranged. Planning for the Honors Thesis/Creative Project should begin early in the student's junior year. For more extensive projects additional credit may be earned. Full details for completing the Honors Research Thesis/Creative Project are provided on the Honors website, https://www.uta.edu/academics/schools-colleges/honors/academics/capstone-project. This course is reserved for departments and programs that do not list dedicated thesis courses in their inventories.

HONR 4403. HONORS SPECIAL TOPICS. 4 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 4404. HONORS INDEPENDENT STUDY. 4 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 4435. HONORS SPECIAL TOPICS. 4 Hours.
Topics, format and prerequisites to be determined by faculty offering the course. May be repeated for credit as topics change.

HONR 4503. HONORS SPECIAL TOPICS. 5 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR 4504. HONORS INDEPENDENT STUDY. 5 Hours.
Independent study topics are arranged on an individual basis with permission of an instructor. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR 4535. HONORS SPECIAL TOPICS. 5 Hours.
Topics, format and prerequisites to be determined by faculty offering the course. May be repeated for credit as topics change.

COURSES

HONR-BU 2303. HONORS SPECIAL TOPICS. 3 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-BU 3304. SPECIAL TOPICS. 3 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-BU 4303. ADVANCED SPECIAL TOPICS. 3 Hours.
Advanced special topics in Honors. May be repeated for credit as topics change.

HONR-BU 4311. LEADER AS COMMUNICATOR. 3 Hours.
Helps students excel in written and oral communication skills. Assignments include writing short papers, making oral presentations, and learning to critique one another. This course provides a perspective on leadership in formal organizations with emphasis on communication, exercising influence, decision-making, and conflict management. Prerequisite: Admission to the Goolsby Leadership Academy.

HONR-BU 4312. LEADER ETHICS. 3 Hours.
Addresses rule-based, consequential, and virtue ethics by examining intentions, actions, and consequences of individual behavior. The course emphasizes the development of character and personal integrity. Prerequisite: Admission to the Goolsby Leadership Academy or permission of the Goolsby Leadership Academy Director.

HONR-BU 4313. SENIOR & EXECUTIVE LEADERSHIP. 3 Hours.
This course introduces and compares the traditional levels of leadership within organizations-front line, middle, senior, and executive. Primary focus is on senior and executive leadership, including a series of lectures by senior leaders and executives who provide insight into their respective roles and unique leadership skills and development. Prerequisite: Admission to the Goolsby Leadership Academy.

HONR-BU 4314. GLOBAL MARKETPLACE. 3 Hours.
Designed to assist Goolsby Scholars become competent in an intercultural world. The heart of the course is aimed at preparing for and participating in a study abroad experience to understand and appreciate cultural, business, and human diversity. Prerequisite: Admission to the Goolsby Leadership Academy or permission of the Goolsby Leadership Academy Director.

HONR-BU 4315. EXECUTIVE INTERNSHIP. 3 Hours.
This internship experience places Goolsby Fellows in field settings with executives from the college's Advisory Council and other executive leaders in specialized areas for students. Prerequisite: Admission to the Goolsby Leadership Academy or permission of the Goolsby Leadership Academy Director.

HONR-BU 4394. HONORS SENIOR RESEARCH THESIS/CREATIVE PROJECT. 3 Hours.
A research thesis or creative project and oral presentation are required for the Honors degree. In consultation with the faculty thesis supervisor and the Honors Dean, a program of research and writing will be arranged. Planning for the Honors Thesis/Creative Project should begin early in the student's junior year. For more extensive projects additional credit may be earned. Full details for completing the Honors Research Thesis/Creative Project are provided on the Honors website, https://www.uta.edu/academics/schools-colleges/honors/academics/capstone-project. This course is reserved for departments and programs that do not list dedicated thesis courses in their inventories.

COURSES

HONR-LA 1301. HONORS COMPOSITION I. 3 Hours.
Introduction to academic writing, with an emphasis research, synthesis of sources, and argumentation.

HONR-LA 1302. HONORS COMPOSITION II. 3 Hours.
A course in academic argumentation in which students learn how to conduct and organize research. The course typically focuses on a particular topic, which will vary by section and be interdisciplinary in nature. Successful completion satisfies the second-semester writing requirement. Prerequisite: membership in the Honors College.

HONR-LA 2300. SEMINAR. 3 Hours.
Team-taught interdisciplinary course that introduces knowledge and perspectives from the arts, sciences, and humanities. Designed around a theme of current or historical significance. Writing-intensive. Depending on topic, may meet the literature, fine arts/humanities or social/cultural studies requirement of the core curriculum (consult departmental advisor for details).

HONR-LA 2303. HONORS SPECIAL TOPICS. 3 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-LA 2407. HONORS SPECIAL TOPICS WITH LAB. 4 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change. Completion of lab required. Prerequisite: Membership in the Honors College; other requirements as determined by faculty teaching the course.

HONR-LA 3300. LIBERAL ARTS HONORS SEMINAR. 3 Hours.
Intensive small class lecture or seminar course addressing basic issues in various liberal arts disciplines. Topics will vary.

HONR-LA 3303. INDEPENDENT STUDY. 3 Hours.
Independent study topics are arranged on an individual basis. Performance may be assessed by oral or written examination, research or review paper as arranged.

HONR-LA 3304. SPECIAL TOPICS. 3 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-LA 3310. POLITICAL & COMMUNITY LEADERSHIP. 3 Hours.
This course examines theories and concepts of leadership in political and community contexts, and processes by which power and authority are exercised to foster political change in one's community. Emphasis is placed on application to actual leadership situations.

HONR-LA 3404. HONORS SPECIAL TOPICS. 4 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-LA 3407. HONORS SPECIAL TOPICS WITH LAB. 4 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change. Completion of lab required. Prerequisite: Membership in the Honors College; other requirements as determined by faculty teaching the course.

HONR-LA 4303. ADVANCED SPECIAL TOPICS. 3 Hours.
Advanced special topics in Honors. May be repeated for credit as topics change.

HONR-LA 4407. HONORS SPECIAL TOPICS WITH LAB. 4 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change. Completion of lab required. Prerequisite: Membership in the Honors College; other requirements as determined by faculty teaching the course.

COURSES

HONR-NU 2203. HONORS SPECIAL TOPICS. 2 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-NU 3304. SPECIAL TOPICS. 3 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-NU 3504. HONORS SPECIAL TOPICS. 5 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-NU 4203. ADVANCED SPECIAL TOPICS. 2 Hours.
Advanced special topics in Honors. May be repeated for credit as topics change.

HONR-NU 4303. ADVANCED SPECIAL TOPICS. 3 Hours.
Advanced special topics in Honors. May be repeated for credit as topics change.

Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-VP 3304. SPECIAL TOPICS. 3 Hours.
Topics, format, and prerequisites to be determined by faculty offering the courses. May be repeated for credit as topics change.

HONR-VP 4303. ADVANCED SPECIAL TOPICS. 3 Hours.
Advanced special topics in Honors. May be repeated for credit as topics change.

University Programs

Overview

University Programs comprise programs administered by units reporting to the Office of the Provost. The Center for African American Studies and the Center for Mexican American Studies report to the Vice Provost of Academic Affairs. The University Studies program is administered by the Division of Student Success. The Multidisciplinary Studies program is administered by the Graduate School.

Center for African American Studies

Center Overview

The Center for African American Studies (CAAS) facilitates discourse on race and contextualizes it in the historical, cultural, and community influences that shape the diverse experiences of Blacks in America.

Established August 2012 at the only one of its kind in North Texas (and one of three in the state), CAAS builds on the University of Texas at Arlington's reputation as one of the most diverse institutions in the nation.

We hope to *enlighten, inspire, and empower* student, faculty, and community stakeholders to create progressive, collaborative solutions that drive social change within the Black community specifically and the broader society generally.

Undergraduate Programs (p. 1864)

Address: Swift Center, Suite 129 1022 UTA Blvd.. PO Box 19024. Arlington, TX 76019

COURSES

AAST 2300. INTRODUCTION TO AFRICAN AMERICAN STUDIES. 3 Hours.
This course introduces students to the African American experience in the United States, including an interdisciplinary analysis of the African American experience in politics, the arts, folklore, religion, economics, sociology, psychology, and community development; and an examination of local history, contemporary issues, and recent events in the African American community. This course satisfies the University of Texas at Arlington core curriculum requirement in Social and Behavioral Sciences.

AAST 2303. HISTORY AND APPRECIATION OF HIP HOP AND R&B MUSIC. 3 Hours.
Explores the history and evolution of Hip Hop and modern urban music, emphasizing musical style and social context, from rhythm and blues through the present. Offered as AAST 2303 and MUSI 1303; credit will be granted in only one department.

AAST 2337. ECONOMICS OF SOCIAL ISSUES. 3 Hours.
Economic analysis and application of basic economic principles to a variety of social issues and topics. Students will become familiar with the U.S. economy, its structure, and how economics applies to an assortment of public policy topics such as crime, energy, immigration, drug use, prostitution, minimum wage, our aging population, healthcare, gender driven wages, recycling, and the macro economy, to name a few. In addition, current economic issues and events may be incorporated into the course via lecture and/or class discussions. This is a non-technical course which satisfies the core requirement for social and behavioral studies. Will not serve to meet degree requirements for College of Business Administration majors. Offered as ECON 2337 and AAST 2337; credit will be granted in only one department.

AAST 2371. LANGUAGE IN A MULTICULTURAL USA. 3 Hours.
The relationship between language in the U.S. and social power. This course explores how negative attitudes toward some language varieties and languages spoken in the U.S. arise from social factors, rather than features of the languages themselves. In addition to studying language varieties, the course shows how American institutions such as the educational system and the media reinforce these negative attitudes and contribute to discrimination. Offered as AAST 2371 and LING 2371; credit will be granted in only one department.

AAST 3300. TOPICS IN GENDER, WOMEN & SEXUALITY STUDIES. 3 Hours.
Special topics of interest in the disciplines of Gender, Women & Sexuality Studies. May be repeated for credit when the topic changes. Offered as GWSS 3300 and AAST 3300; credit will be granted in only one department.

AAST 3301. THEORIES OF HUMAN BEHAVIOR. 3 Hours.
This course explores, within the context of a strengths and empowerment perspective, theories of human behavior. For social work majors, it is strongly recommended that SOCW 2302 be taken before this course. Offered as AAST 3301 and SOCW 3301; credit will be granted in only one department. This course is required for Social Work Field Instruction and Seminar I (SOCW 4951).

AAST 3310. BLACK FAMILIES. 3 Hours.
Course will focus on the historical and cultural development of black families. Topics include slavery, segregation, family structure, and socioeconomic issues. Special attention will be given to people, places, and events that are important for understanding African American family life in the Dallas/Ft Worth area.

AAST 3314. CIVIL WAR AND RECONSTRUCTION. 3 Hours.
The background and causes of secession and the Civil War, the organization of the Confederate States of America, the progress of the war, and the attempts to solve the racial, social, political, and economic problems of the post-war period. Offered as AAST 3314 and HIST 3314; credit will be granted in only one department.

AAST 3317. DIVERSE POPULATIONS. 3 Hours.
Introduction to theoretical, practical, and policy issues related to diverse populations. Historical, political, and socioeconomic forces are examined that maintain discriminatory and oppressive values, attitudes, and behaviors in society in diverse populations and in all levels of organizational behavior. This course is required for admission to the Bachelor of Social Work (BSW) program. Offered as AAST 3317, SOCW 3307 and MAS 3319; credit will be granted in only one department.

AAST 3319. U.S. IMMIGRATION POLICY AND THE AMERICAN DREAM. 3 Hours.
This course focuses on diverse ethnic and racial identities in America through the examination of immigration to the United States, past and present, and the evolution of U.S. immigration policy. Topics include U.S. attitudes and policy responses to European, Asian, and Latin American immigration and to the incorporation of the descendants of African slaves and Native Americans. Emphasis on the decline of the melting pot idea and the incorporation of recent immigrants. Offered as MAS 3320, AAST 3319, and SOCW 3320. Credit will be granted only once.

AAST 3320. BLACK WOMEN IN SOCIETY. 3 Hours.
Course provides an overview of historical and current issues facing African American women. Topics include racism, sexism, political involvement, education, religion, family, and comparisons with the experiences of black men.

AAST 3321. THE LATINA EXPERIENCE. 3 Hours.
A course on the social, cultural, and economic experiences of Latina and Latin American origin women in the United States. Offered as MAS 3314, SOCI 3314, SOCW 3314, GWSS 3314, and AAST 3321. Credit will be granted in only one department.

AAST 3322. AFRICAN AMERICAN HISTORY TO 1863. 3 Hours.
History of blacks in America from their African origins to 1863. Emphasis on early African society, American slavery, and the development of black institutions and culture in the U.S. Offered as AAST 3322 and HIST 3322; credit will be granted in only one department.

AAST 3323. AFRICAN AMERICAN HISTORY SINCE EMANCIPATION. 3 Hours.
Emphasis on the transition from slavery to freedom and the political, social, and economic status of blacks in the late 19th century, 20th century black institutions and culture, and the evolution of the civil rights movements. Offered as AAST 3323 and HIST 3323; credit will be granted in only one department.

AAST 3328. RACE, REPRESENTATION, AND THE MOVIES. 3 Hours.
This course examines the history of race and representation among black Americans in the United States through films, short clips, and documentaries. Offered as HIST 3328 and AAST 3328; credit will be granted only once.

AAST 3329. CONTEMPORARY AFRICAN CULTURES. 3 Hours.
A comparative study of African communities with an emphasis on sub-Saharan Africa. Covers regional cultural geography and history as well as ethnography of specific communities. Explores both the challenges facing contemporary African nations as well as emerging solutions. Includes exposure to African art, literature, music, cinema, and food. Offered as AAST 3329 and ANTH 3329; credit will be granted in only one department.

AAST 3330. CULTURAL DIVERSITY AND IDENTITY. 3 Hours.
The ways identity is constructed in contemporary societies in an increasingly complex and multicultural world. Ethnic, racial, gender, and class identities. How and when identity is asserted and assigned, and how it can both draw boundaries and forge ties between peoples. Formerly listed as ANTH 2350. Credit cannot be given for both ANTH 2350 and ANTH 3330. Also listed as MAS 3330; credit cannot be granted for both ANTH 3330 and MAS 3330. Offered as AAST 3330 and ANTH 3330; credit will be granted in only one department.

AAST 3332. COMPARATIVE KINSHIP AND FAMILY SYSTEMS. 3 Hours.
Variation in kinship and family systems from crosscultural and evolutionary perspectives. Structure, function, and dynamics of kinship and family systems as adaptations to diverse ecological, social, and historical circumstances. Implications of this approach for understanding kinship and family in American society also addressed. Formerly listed as ANTH 4338. Credit cannot be given for both ANTH 3338 and ANTH 4338. Also offered as GWSS 3338; credit will be granted only once. Offered as AAST 3332 and ANTH 3338; credit will be granted in only one department.

AAST 3336. SOCIAL INEQUALITY. 3 Hours.
Examines the processes, characteristics, and consequences of social inequality in society. Topics include the social class structure, status groups, and elite power structure as they influence people's life chances. Offered as AAST 3336 and SOCI 3336; credit will be granted in only one department.

AAST 3337. RACIAL & ETHNIC GROUPS IN US. 3 Hours.
Compares the immigration, acculturation, and adjustment processes of various racial/ethnic groups in the U.S. Examines historical and contemporary discrimination in relation to the social conditions of racial/ethnic minority groups in the U. S. Topics include classical and contemporary theory; individualistic, cultural, and structural arguments about social arrangements; and conflict among majority and minority groups. Offered as AAST 3337, MAS 3337, and SOCI 3337; credit will be granted in only one department. Credit will not be granted for both SOCI 3337 and SOCI 4310 or for MAS 3337 and MAS 4310.

AAST 3338. CONTEMPORARY BLACK EXPERIENCE. 3 Hours.
An overview of recent research concerning the African American experience in the post-civil rights era. Topics include explanations for racial differences across spheres of society such as income, education, and occupation; the debate over race versus social class; the persistence of racial discrimination; and emerging disputes within the black community regarding "what it means to be black." Offered as AAST 3338 and SOCI 3338; credit will be granted in only one department.

AAST 3339. RACE, SPORT AND MEDIA. 3 Hours.
The media, including television, film, print, audio, and online outlets, influence how we view the world. This course analyzes overt, subtle and subliminal messages about culture, race, ethnicity, and sport as presented to us through various forms of the media. Through examinations of media portrayals of race, both past and present, students will analyze media artifacts, identify recurring themes, and examine research focused on the societal effects of stereotypical media portrayals. Offered as AAST 3339 and SOCI 3339; credit will be granted in only one department.

AAST 3341. THE OLD SOUTH, 1607-1863. 3 Hours.
Colonial origins of plantation agriculture, slavery, economics, King Cotton, politics and secession. Other topics include slave cultures, religion, slave insurrections, plantation lifestyle, honor, dueling and southern belles. Offered as AAST 3341 and HIST 3342; credit will be granted in only one department.

AAST 3342. RELIGION IN MODERN AMERICA. 3 Hours.
This course provides an overview of the scientific study of religion from a sociological perspective. The focus is on theories, research and trends relevant to religion in the contemporary United States. Topics include, but are not limited to, religious traditions, practices, and beliefs; declining religious participation; and religion and social change. The relationship between religion, politics, race relations, sex and gender will also be examined. Offered as SOCI 3343 and AAST 3342; credit will be granted in only one department.

AAST 3343. THE NEW SOUTH, 1863-PRESENT. 3 Hours.
From military defeat to Sun Belt growth. Topics include Reconstruction, segregation, migration of Southerners to the North and West, depressions, reforms, Civil Rights, Moral Majority, cultural expressions in literature and music. Offered as AAST 3343 and HIST 3343; credit will be granted in only one department.

AAST 3344. SOCIOLOGY OF THE 1960S. 3 Hours.
This course presents a sociological analysis of the sixties, stressing the connection between grassroots mobilization and large structures of power, war, race and gender. The legacy of the sixties is examined through stories told by and about activists of the period. Parallels between the sixties and the present are identified. Movements covered may include civil rights, black power, anti-war and women's rights. Offered as AAST 3344 and SOCI 3345; credit will be granted in only one department.

AAST 3345. AFRICAN-AMERICAN LITERATURE. 3 Hours.
Examines African-American literature in its various traditions, forms, and cultural and historical contexts. Offered as AAST 3345 and ENGL 3345; credit will be granted in only one department. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

AAST 3347. TOPICS IN MULTICULTURAL AMERICAN LITERATURES. 3 Hours.
Focuses on literature produced within one or more ethnic communities in the U.S. in order to trace a theme or to explore issues such as intersectionality, hybridity/mestizaje, diaspora, or immigrant experiences. Topics may include Afro-Latino poetry, third-world feminist writing, multicultural literature of the Southwest, cultural memory and the Jewish literary tradition, or Asian-American fiction. Offered as ENGL 3347, AAST 3347, and MAS 3347; credit will be granted in only one department, and credit for MAS 3347 will be granted only once. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

AAST 3350. BLACK POLITICAL AND SOCIAL THOUGHT. 3 Hours.
Course examines goals, viewpoints, and strategies of African American political and social movements. Topics include Black Nationalism, Inter-racial Integration, tensions between major historic leaders, reparations, the emergence of "race-neutral" politicians, and changing commitments to liberal and conservative causes.

AAST 3353. SOCIAL CLIMATE OF CITIES. 3 Hours.
A comparative study of urban communities and metropolitan areas in terms of their distinctive social life and culture. Topics touching on power and urban politics, race and ethnic relations, poverty, and leisure and lifestyles will be examined in terms of their contribution to the unique social climate of cities. Offered as AAST 3353 and SOCI 3353; credit will be granted in only one department.

AAST 3373. ARCHAEOLOGY OF EGYPT. 3 Hours.
The culture of ancient Egypt from its earliest occupation until the Arab invasion (7th century A.C.), with emphasis on the first 20 pharaonic dynasties (third and second millennia B.C.). Egyptian social, religious, economic and political development traced through the surviving material culture (architecture, art, industries, artifacts of daily life, funerary remains, etc.) supplemented by historical and literary evidence as pertinent. Egypt's relations with neighboring regions (Crete, Anatolia, Palestine, Nubia and Libya) considered. Offered as AAST 3373 and ANTH 3373; credit will be granted in only one department.

AAST 3378. HISTORY OF THE CARIBBEAN. 3 Hours.
A comparative history of the different societies in the Caribbean (including Cuba, Jamaica, and Haiti) with emphasis on the coming of slavery and the consequences of emancipation. Traces the development of emerging new societies from intermingling of Amerindian, African and European elements. Offered as AAST 3378 and HIST 3378; credit will be granted in only one department.

AAST 3380. RACE, CRIME, AND JUSTICE. 3 Hours.
An examination of race in the context of the criminal justice system. Emphasis is on social construction of crime; and the treatment of racial minorities as victims and offenders by law enforcement, courts, and corrections. Offered as CRCJ 3380 and MAS 3380; credit will be granted only once. Offered as AAST 3380 and CRCJ 3380; credit will be granted in only one department. Prerequisite: CRCJ 2334.

AAST 3385. AFRICAN HISTORY I. 3 Hours.
Examines African prehistory, ancient civilizations, religion, gender issues, slavery, and commerce in precolonial Africa. Offered as AAST 3385 and HIST 3385; credit will be granted in only one department.

AAST 3386. AFRICAN HISTORY II. 3 Hours.
Africa from the "Scramble for Africa" through the establishment of the various colonial systems, through the beginnings of African nationalism, to the contemporary period. The African Revolution and the development of the independent African states. Offered as AAST 3386 and HIST 3386; credit will be granted in only one department.

AAST 4317. ETHNIC GROUP POLITICS IN THE UNITED STATES. 3 Hours.
The influence of selected major ethnic groups with special attention given to organizational development, participation in political parties, leadership, ideology, immigration policy, current issues, and relations with the dominant culture and other ethnic groups. Offered as AAST 4317 and POLS 4317; credit will be granted in only one department. Prerequisite: POLS 2311 and POLS 2312.

AAST 4318. POLITICS OF AFRICAN AMERICANS. 3 Hours.
The influence of African-American politics on United States government and policies with special attention given to organizational development, participation in political parties, leadership, ideology, the Civil Rights movement, current issues, and relations with other ethnic groups. Offered as AAST 4318 and POLS 4318; credit will be granted in only one department. Prerequisite: POLS 2311 and POLS 2312.

AAST 4325. HISTORY OF HIP HOP. 3 Hours.
Focused study of the origins and development of Hip Hop as an artistic genre and political and cultural movement. Topics include deejaying, emceeing, sampling and other musical techniques as well as issues of ethnic and other identities, commercialism, capitalism, cultural appropriation, and authenticity. Offered as HIST 4325 and AAST 4325; credit will be granted only once.

AAST 4326. DIVERSITY IN ORGANIZATIONS. 3 Hours.
This course examines the implications of employee diversity in organizations, an issue of increasing importance. It includes study of the changing demographics of workers, including multiple demographic groups and areas of difference important to organizational treatment and outcomes. This course examines research on treatment, access, and customer discrimination. Legislation related to diversity is also reviewed. This course also provides suggestions for individuals and organizations to increase opportunities and outcomes for workers of all backgrounds. Offered as MANA 4326, AAST 4326 and GWSS 4326; credit will be granted in only one department. Prerequisite: Junior standing.

AAST 4331. RACE, ETHNICITY & FAMILY FORMATION. 3 Hours.
Investigates the ways in which cultural understandings of race and ethnicity have shaped historical and contemporary variations in family structure, familial experiences, and the legal possibilities for family formation. Junior standing (60 hours) or permission of the instructor required to enroll in this course. Offered as AAST 4331 and SOCI 4331; credit will be granted in only one department.

AAST 4333. COMPARATIVE CIVIL RIGHTS HISTORY. 3 Hours.
Explores the U.S. civil rights movement from a comparative perspective, exploring the African American civil rights movement, Chicano movement, women's liberation movement, gay liberation, and disability rights movement. Offered as AAST 4333 and HIST 4333; credit will be granted in only one department.

AAST 4339. TOPICS IN AFRICAN-AMERICAN LITERATURE. 3 Hours.
Concentrates on a topic or theme within the canon of African-American literature, such as a particular genre or era, significant authors, or a philosophical movement. Examples include the Harlem Renaissance, the Civil-Rights/Black-Power era, African-American autobiography, short fiction, and Afrofuturism. Offered as AAST 4339 and ENGL 4339; credit will be granted in only one department. May be repeated for credit as course content changes. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

AAST 4341. INEQUALITIES IN PUBLIC EDUCATION. 3 Hours.
This course examines the manner in which race, ethnicity, and class affect the quality of education in the public schools. Topics include the resegregation of schools, class and race based achievement and funding gaps, and the role the schools play in reproducing inequality. This course has a service learning component and requires volunteering in programs designed to reduce inequality in the schools. Offered as AAST 4341 and SOCI 4341; credit will be granted in only one department.

AAST 4342. TOPICS IN CULTURAL ANTHROPOLOGY. 3 Hours.
Selected topics, to include anthropological theory, population and cultural ecology, semiotics, and humanistic anthropology. May be repeated for credit with departmental permission. Also offered as ANTH 4342. Credit will be granted in only one department.

AAST 4350. SPECIAL TOPICS IN AFRICAN AMERICAN STUDIES. 3 Hours.
Special topics related to African American studies. May be repeated for credit when the topic changes.

AAST 4376. AFRICAN DIASPORA I. 3 Hours.
The major developments which have shaped the history of Africans and their descendants in the Atlantic, Mediterranean, and Indian Ocean areas from the earliest times to 1800. Emphasis on the comparative history of Black Diasporic communities; linkages between Africans and their descendants in the Diaspora. Offered as AAST 4376 and HIST 4376; credit will be granted in only one department.

AAST 4377. AFRICAN DIASPORA II. 3 Hours.
The major developments which have shaped the history of Africans and their descendants in Latin America, the Caribbean, and North America since 1800. Emphasis on the comparative history of Black Diasporic communities; linkages between Africans and their descendants in the Atlantic Diaspora. Offered as AAST 4377 and HIST 4377; credit will be granted in only one department.

AAST 4378. WEST AFRICA AND THE ATLANTIC DIASPORA. 3 Hours.
This course examines the history of West Africa and how this region was integrated into the Atlantic world through the Atlantic slave trade. The course adopts an interdisciplinary approach that integrates traditional classroom instruction with field-based learning in West Africa. This learning method, combined with cultural immersion, challenges students to develop their academic and cross-cultural knowledge and skills. Offered as AAST 4378 and HIST 4378; credit will be granted in only one department.

AAST 4391. CONFERENCE COURSE. 3 Hours.
Directed independent study for the advanced undergraduate. A close examination of a chosen topic through research and/or reading; format designed by instructor and student. May be repeated for a maximum six credit hours when the subject matter varies. Prerequisite: Departmental permission.

AAST 4399. CAPSTONE AFRICAN AMERICAN STUDIES. 3 Hours.
In consultation with the course instructor, students will design a research project or an internship that will integrate their previous course work into a capstone experience in either the applied or the cultural studies stream of the African American Studies minor. Prerequisite: AAST 2300 and departmental permission.

AAST 6391. CONFERENCE COURSE. 3 Hours.
Directed independent study for a masters-level or doctoral student. A close examination of a chosen topic through research and/or reading; format designed by instructor and student. May be repeated for maximum six credit hours when the subject matter varies. Prerequisite: Permission from CAAS Director.

- African American Studies Minor (p. 1864)

Minor in African American Studies

About This Program

The African American Studies Minor is a comprehensive, interdisciplinary program that prepares students for critical thinking and discourse on race and contextual factors, social consciousness and awareness, and civic engagement. In order to receive a minor in African American Studies, students need to take 18 credit hours from a selection of courses offered across different disciplines. The majority of our courses are cross-listed with courses offered in other departments.

Competencies

1. Students will demonstrate critical thinking by comparing and contrasting two events that have significantly impacted African American life, one from the past and one from the present.
2. Students will be able to execute and interpret a trend analysis of nationally-representative data on African Americans.

Curriculum

Foundations		
AAST 2300	INTRODUCTION TO AFRICAN AMERICAN STUDIES	3
Specialization		
Select at least 1 from the following:		3
AAST 3317	DIVERSE POPULATIONS	
AAST 3322	AFRICAN AMERICAN HISTORY TO 1863	
AAST 3323	AFRICAN AMERICAN HISTORY SINCE EMANCIPATION	
AAST 3337	RACIAL & ETHNIC GROUPS IN US	
AAST 3338	CONTEMPORARY BLACK EXPERIENCE	

Select up to 4 from the following:		12
AAST 2303	HISTORY AND APPRECIATION OF HIP HOP AND R&B MUSIC	
AAST 2337	ECONOMICS OF SOCIAL ISSUES

Center for Mexican American Studies

Center Overview

The Center for Mexican American Studies (CMAS) administers an academic minor in Mexican American & Latina/o Studies, supports and enhances research by UTA faculty engaged in studies on Latina/o issues, and serves as a bridge between UTA and the Latina/o community in the Dallas/Fort Worth Metroplex through various service outreach activities.

Through the efforts of State Representative Roberto Alonzo of Dallas, the 73rd Texas Legislature authorized the creation of CMAS in 1993 as UTA's focal point for interdisciplinary education, research, publication, and public outreach activities relating to Mexican Americans. (Acts 1993, 73rd R.S.,ch. 1051, General and Special Laws of Texas). The Center began operating in 1994 under its founding director, José Ángel Gutiérrez.

COURSES

MAS 2300. INTRODUCTION TO MEXICAN AMERICAN STUDIES. 3 Hours. (TCCN = HUMA 1305)
A multidisciplinary introduction to the Mexican American/Latino experience. Emphasis on history, culture, and contemporary socioeconomic and policy issues. Required for completion of the Mexican American Studies minor. This course satisfies the University of Texas at Arlington core curriculum requirement in Language, Philosophy, and Culture.

MAS 3301. INTRODUCTION TO LATINA/HISPANIC FEMINISM. 3 Hours.
This interdisciplinary course explores Latina/Hispanic feminism through the intersection of race, class, gender, and sexuality. This course is organized around the following issues: colonization, immigration, globalization, sexism, health, and violence. Through an analysis of cultural production, politics, socio-economics, literary texts, and feminist methodology, the goal of this course is to develop a robust understanding of how Latina/Hispanic feminist methodologies can be used as tools for social change and social justice. Offered as GWSS 3301, MAS 3301, and DIVR 3301. Credit will only be granted in one department.

MAS 3310. LATINOS IN THE U.S.. 3 Hours.
Examines the Latino experience in the U.S. from an interdisciplinary perspective. Discusses the commonalities and cultural differences among various Latino groups, and focuses on important contemporary Latino issues such as education, employment, family and gender, identity, immigration, and politics. May receive credit for either MAS 3310 or ANTH 3310.

MAS 3312. LATIN AMERICAN CULTURE AND CIVILIZATION. 3 Hours.
An interdisciplinary introduction to Latin American society, history and culture. Offered as MAS 3312 and SPAN 3312; credit will be granted for either MAS or SPAN. Prerequisite: SPAN 2314 or SPAN 2315 with a grade of C or better.

MAS 3314. THE LATINA EXPERIENCE. 3 Hours.
A course on the social, cultural, and economic experiences of Latina and Latin American origin women in the United States. Offered as MAS 3314, SOCI 3314, SOCW 3314, GWSS 3314, and AAST 3321. Credit will be granted in only one department.

MAS 3316. LATINO HEALTH ISSUES. 3 Hours.
A cross-cultural examination of issues in Latino health and relevant health practices in the United States through the lenses of social sciences. Themes include the Latino Threat Narrative, acculturation histories and health care status of major Latino ethnic enclaves in the U.S. Listed as SOCI 3316, MAS 3316 and ANTH 3316; may receive credit for either SOCI 3316, MAS 3316, or ANTH 3316.

MAS 3317. MEXICAN POLITICS AND U.S.-MEXICO RELATIONS. 3 Hours.
Current economic and political systems of Mexico and relevant issues in U.S.-Mexico relations. Trade, immigration, economic dependency, energy, contraband, and other topics. Offered as MAS 3317 and POLS 3317; credit will be given in only one department. Prerequisite: POLS 2311 and POLS 2312.

MAS 3318. BORDERS, CULTURES, AND CARTELS. 3 Hours.
Critically examines life on the Mexico-U.S. border through ethnography, taking into account the impact of the U.S. war on drugs and the influence of cartels on the lives of those living in the southern border region. Topics may include impacts and influences of drugs and narco life on religion, crime, music, and daily life at the nexus of US-Mexico relations. Listed as ANTH 3318 and MAS 3318; may receive credit for either ANTH 3318 or MAS 3318.

MAS 3319. DIVERSE POPULATIONS. 3 Hours.
Introduction to theoretical, practical, and policy issues related to diverse populations. Historical, political, and socioeconomic forces are examined that maintain discriminatory and oppressive values, attitudes, and behaviors in society in diverse populations and in all levels of organizational behavior. This course is required for admission to the Bachelor of Social Work (BSW) program. Offered as AAST 3317, SOCW 3307 and MAS 3319; credit will be granted in only one department.

MAS 3320. U.S. IMMIGRATION POLICY AND THE AMERICAN DREAM. 3 Hours.
This course focuses on diverse ethnic and racial identities in America through the examination of immigration to the United States, past and present, and the evolution of U.S. immigration policy. Topics include U.S. attitudes and policy responses to European, Asian, and Latin American immigration and to the incorporation of the descendants of African slaves and Native Americans. Emphasis on the decline of the melting pot idea and the incorporation of recent immigrants. Offered as MAS 3320, AAST 3319, and SOCW 3320. Credit will be granted only once.

MAS 3321. MEXICAN-AMERICAN HISTORY. 3 Hours.
The role of the Mexican American in the cultural and historical development of the United States with special emphasis on the Southwest. Offered as HIST 3321 & MAS 3321; credit will be granted only once.

MAS 3322. RACE, LATINOS, AND THE AMERICAN NARRATIVE. 3 Hours.
Adopts race and ethnicity as a central platform to examine how sociocultural and structural processes intersect to shape an American narrative of Latinos in the United States. Assesses topics like ethnic capital, socioeconomic mobility, and the digital age to broaden a sociological understanding of Latino group progress in relation to widening inequality gaps. Offered as SOCI 3322 and MAS 3322; credit will be granted in only one department.

MAS 3330. CULTURAL DIVERSITY AND IDENTITY. 3 Hours.
The ways identity is constructed in contemporary societies in an increasingly complex and multicultural world. Ethnic, racial, gender, and class identities. How and when identity is asserted and assigned, and how it can both draw boundaries and forge ties between peoples. Formerly listed as ANTH 2350. Credit cannot be given for both ANTH 2350 and ANTH 3330. Also listed as MAS 3330; credit cannot be granted for both ANTH 3330 and MAS 3330. Offered as AAST 3330 and ANTH 3330; credit will be granted in only one department.

MAS 3337. RACIAL & ETHNIC GROUPS IN US. 3 Hours.
Compares the immigration, acculturation, and adjustment processes of various racial/ethnic groups in the U.S. Examines historical and contemporary discrimination in relation to the social conditions of racial/ethnic minority groups in the U. S. Topics include classical and contemporary theory; individualistic, cultural, and structural arguments about social arrangements; and conflict among majority and minority groups. Offered as AAST 3337, MAS 3337, and SOCI 3337; credit will be granted in only one department. Credit will not be granted for both SOCI 3337 and SOCI 4310 or for MAS 3337 and MAS 4310.

MAS 3343. LATINO/A LITERATURE. 3 Hours.
Explores Latino/a literature of the United States from the nineteenth century through the present as conditioned by the intersections of race, class, gender, sexuality, and regional variation. Texts may include novels, poetry, drama, short fiction, and non-fiction by and about peoples in the U.S. with heritage from South America, Central America, the Caribbean, and Mexico. Offered as ENGL 3343 and MAS 3343; credit will be granted in only one department. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

MAS 3346. MEXICAN AMERICAN AND CHICANO/A LITERATURE. 3 Hours.
Surveys Mexican American literature from 1848 to the present, including literature of the Chicano movement, focusing on important genres, themes, and historical developments. Offered as ENGL 3346 and MAS 3346; credit will be granted in only one department.

MAS 3347. TOPICS IN MULTICULTURAL AMERICAN LITERATURES. 3 Hours.
Focuses on literature produced within one or more ethnic communities in the U.S. in order to trace a theme or to explore issues such as intersectionality, hybridity/mestizaje, diaspora, or immigrant experiences. Topics may include Afro-Latino poetry, third-world feminist writing, multicultural literature of the Southwest, cultural memory and the Jewish literary tradition, or Asian-American fiction. Offered as ENGL 3347, AAST 3347, and MAS 3347; credit will be granted in only one department, and credit for MAS 3347 will be granted only once. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

MAS 3348. LATINO IMMIGRATION TO THE U.S.. 3 Hours.
Examines Latino immigration from the perspective of sociocultural anthropology. Focuses on how anthropologists have studied Mexican and other Latino immigrants, and discusses contemporary issues such as transnational communities, gender and immigration, citizenship, and immigrants' politics. The course seeks to familiarize students with the largest immigrant community in the U.S. through ethnographic case studies.

MAS 3363. TEXAS TO 1850. 3 Hours.
Multicultural heritage of Texas from pre-Colombian period to early statehood. Cultural contact; social, economic, and political change. Completion of either HIST 3345 or HIST 3346 is recommended for those planning to teach in Texas schools. Offered as HIST 3345 and MAS 3363; credit will be granted in only one department.

MAS 3364. TEXAS SINCE 1845. 3 Hours.
Texas in the Mexican-American and Civil Wars. Political events and ethnic relations since annexation. Rise of cotton, cattle, and oil industries. Literature and music in the 20th century. Completion of either HIST 3345 or HIST 3346 is recommended for those planning to teach history in Texas secondary schools. Offered as HIST 3346 and MAS 3364; credit will be granted in only one department.

MAS 3375. LATIN AMERICAN HISTORY: ORIGINS THROUGH INDEPENDENCE. 3 Hours.
Latin America during the colonial period of Spanish and Portuguese rule. Pre-European civilizations; Iberian backgrounds; conquest of indigenous peoples; development of colonial institutions, economic patterns, social structures, and race relations; independence from Europe. Offered as MAS 3375 and HIST 3375; credit will be granted in only one department.

MAS 3376. LATIN AMERICAN HISTORY: POST-INDEPENDENCE TO THE PRESENT. 3 Hours.
The evolution of six Latin American nations during the 19th and 20th centuries. The social, economic, and political development of three social groups in three regions: the Europeanized southern cone area of Argentina, Chile, and Uruguay; the indigenous culture of the Andean mountains in Peru; the African background of Brazil and Cuba. Offered as MAS 3376 and HIST 3376; credit will be granted in only one department.

MAS 3377. HISTORY OF MEXICO. 3 Hours.
Mexican history from its pre-Colonial indigenous foundation to the current situation. A social and economic analysis of the major events in Mexican history with emphasis on the 19th and 20th centuries. The major theme in this class is the growth of Mexican nationalism and its relation to region, religion, and ethnicity. Offered as HIST 3377 and MAS 3377; credit will only be granted in one department.

MAS 3378. LATINO POLITICS. 3 Hours.
An overview of Latino/Hispanic political behavior, identity, and power that analyzes the social, economic, and political issues impacting the Latino/Hispanic community in the United States. To be offered as POLS 3378 and MAS 3378. Credit will be granted only once.

MAS 3379. LATINO POLITICAL THOUGHT. 3 Hours.
An overview of the development of Latino/Hispanic political thought from Iberian and Latin American political culture and philosophy to contemporary North American Latino/Hispanic political ideology and political thought. To be offered as POLS 3379 and MAS 3379. Credit will be granted only once.

MAS 3380. RACE, CRIME, AND JUSTICE. 3 Hours.
An examination of race in the context of the criminal justice system. Emphasis is on social construction of crime; and the treatment of racial minorities as victims and offenders by law enforcement, courts, and corrections. Offered as CRCJ 3380 and MAS 3380; credit will be granted only once. Offered as AAST 3380 and CRCJ 3380; credit will be granted in only one department. Prerequisite: CRCJ 2334.

MAS 4313. TOPICS IN HISPANIC CULTURE. 3 Hours.
Among the topics are Spanish or Latin American music, television, radio, film, and literature as culture. May be repeated for credit as topic changes. Prerequisite: SPAN 3315 with a grade of C or better. Offered as MAS 4313 and SPAN 4313; credit will be given for MAS 4313 or SPAN 4313 but not both in a given semester.

MAS 4315. TOPICS IN CONTEMPORARY LATIN-AMERICAN LITERATURE AND CULTURE, MODERNISM TO THE PRESENT. 3 Hours.
Topics may include: Latin-American literature and culture of Modernism, modern Latin-American literature and culture, or any particular movement, genre, work or author from Modernism to the present. May be repeated for credit when content changes. Offered as MAS 4315 and SPAN 4315; credit will be given for MAS 4315 or SPAN 4315 but not both in a given semester. Prerequisite: SPAN 3315 with a grade of C or better.

MAS 4317. U.S.-MEXICO LITERATURE & CULTURE. 3 Hours.
U.S.-Mexico cultural manifestations with particular attention to music, television, radio, film, performance art, and literature as culture. Cross-listed with MAS 4317. Prerequisite: SPAN 3315 with a grade of C or better.

MAS 4318. MEXICAN LITERATURE. 3 Hours.
Studies in Mexican fiction, poetry, drama, and literary essay. Offered as MAS 4318 and SPAN 4318; credit will be given for MAS 4318 or SPAN 4318 but not both in a given semester. Prerequisite: SPAN 3315 with a grade of C or better.

MAS 4319. POLITICS OF MEXICAN AMERICANS. 3 Hours.
The influence of Mexican-American politics on United States government and policies with special attention given to organizational development, participation in political parties, leadership, ideology, the Chicano Movement, current issues, and relations with other ethnic groups. Offered as MAS 4319 and POLS 4319; credit will be given in only one department. Prerequisite: POLS 2311 and POLS 2312.

MAS 4327. WOMEN IN HISPANIC LITERATURE. 3 Hours.
Considers women as characters in and writers of Hispanic literature. Includes the analysis of themes, language, and how the writings of women often give voice to lesser-known aspects of culture. Also listed as SPAN 4327. Credit cannot be given for both.

MAS 4350. TOPICS IN MEXICAN AMERICAN STUDIES. 3 Hours.
Subjects of interest in Mexican American and Latino studies. May be repeated for credit when topic changes.

MAS 4360. CONFERENCE COURSE. 3 Hours.
Permission of the director of the Center for Mexican American Studies required. Topics for research or study in designated areas assigned in consultation with course instructor.

MAS 4370. CAPSTONE MEXICAN AMERICAN STUDIES. 3 Hours.
In consultation with the course instructor, students will design a research project or an internship that will integrate their previous course work into a capstone experience in either the applied or the cultural studies stream of the Mexican American Studies minor.

MAS 4391. CONFERENCE COURSE. 3 Hours.
Permission of the director of the Center for Mexican American Studies required. Topics for research or study in designated areas assigned in consultation with course instructor.

MAS 4393. MEXICAN AMERICAN STUDIES INTERNSHIP. 3 Hours.
A combination of field-related experience in the service, community, and/or business sectors with an academic component. Prerequisite: At least two MAS courses and permission of the instructor.

CMAS - Graduate

Programs

- Mexican American Studies Graduate Certificate (p. 1869)

Post-Baccalaureate Certificate in Mexican American Studies

About This Program

The Center for Mexican American Studies offers a Mexican American Studies Graduate Certificate to graduate students and non-degree seeking students to develop an interdisciplinary graduate concentration in Mexican American Studies while completing their graduate degree. The Graduate Certificate courses examine the historical, cultural, political, and social development of Mexican Americans and Latinos.

Competencies

1. Participants completing the certificate will obtain valuable intercultural and international competence.
2. Participants completing the certificate will identify and understand the prevalent issues that are affecting the Mexican American and Latino community in the United States.
3. Participants completing the certificate will apply theory and knowledge produced by Mexican American and Latino communities to describe the critical events, histories, cultures, intellectual traditions, and contributions of these communities.

Curriculum

Core Course		**3**
Seclect one of the following:		
ENGL 5328	TOPICS IN LATINO/A LITERATURE	
HIST 5364	READING COLLOQUIUM IN TRANSNATIONAL HISTORY (when the topic is Migrations and Movement in US West and Boarderlands)	
HIST 5365	READING COLLOQUIUM: TOPICS (when the topic is Mexican American Women's History)	
POLS 5328	PUBLIC POLICY AND MEXICAN AMERICAN COMMUNITIES	
Electives		**9**
Select three from the following:		

EDAD 5377	CONTEMPORARY ISSUES IN EDUCATION
POLS 5335	LATIN AMERICAN POLITICS
PLAN 5327	GREEN CITIES AND TRANSPORTATION
SPAN 5317	U.S. LATINO LITERATURE AND CULTURE
SPAN 5318	MEXICAN LITERATURE AND CULTURE
Or any core course option not used to statisify the core requirement.

Minor in Mexican American & Latino Studies

About This Program

Through research, teaching, and service, the Minor in Mexican American & Latino Studies enables the student to explore issues that are critical to understanding the Mexican American and Latino experience. In addition, as private and government employers are increasingly requiring professionals with intercultural and international competence, the MAS Minor provides students a unique opportunity to be prepared for the challenges of a competitive global society. Minoring in MAS can help you better prepare to work and live in a society in which Latinos continue to become visible neighbors, fellow citizens, clients, and co-workers. Besides learning about Latino culture, you will also be awarded a MAS Certification after program completion.

Competencies

1. Students will demonstrate critical thinking, communication, and analytical skills by identifying and illustrating three events of great consequence to the socioeconomic and psycho-historical development of Mexican American communities.
2. Students will demonstrate adeptness in drawing specific connections between the knowledge gained in Mexican American Studies with other disciplines and professional careers.

Curriculum

Total Hours	**18**

After consulting with their major departments or programs, students will file a degree plan for the MAS minor at the Center for Mexican American Studies. Courses beyond those listed may qualify as electives with the approval of the director of the Center for Mexican American Studies. Most courses are cross-listed with courses offered in other departments.

Certificate in Mexican Culture

About This Program

The Certificate in Mexican Culture includes foundational courses that provide students with a solid background in the core areas of Mexican culture, as well as elective options at the 4000 level that allow students to tailor their program of study to meet their interests and academic and professional goals. Students will learn about some of the most important characteristics of Mexican culture (literature, comics, film, food, art, music, popular culture, literary journalism, feminism, Colonial documents and texts, the study and conservation of endangered Mexican indigenous languages, etc.), and the relations between cultural production and the society, and the application of that knowledge to teaching, research, translation and interpreting, as well as other professions in the healthcare, business, and government sectors. The certificate consists of 12 semester hours.

Competencies

1. Upon completion, students will demonstrate proficiency in listening, reading, speaking, and writing Spanish (communication skills, critical thinking skills).
2. Upon completion, students will demonstrate intercultural knowledge and competence in Hispanic cultures generally and in Mexican culture specifically (social responsibility, global competence, critical thinking skills).
3. Upon completion, students will demonstrate an understanding of course content knowledge as it pertains to Mexican culture (e.g., language, literary and cultural studies, linguistics) (disciplinary knowledge, critical thinking skills).

Curriculum

Division of Student Success

Division Overview

The Division of Student Success promotes student learning and development by providing coordinated and centralized academic resources and support services that help students define their educational goals and pursue a path toward graduation. In addition, the Division of Student Success serves as a focal point for campus programming that helps first-year students successfully transition to college life and meet the academic challenges set by faculty. While the Division of Student Success focuses on assisting first time in college students as they transition to college, our programs and services serve all students who seek academic support during their career at UT Arlington. The Division administers the University Studies degree for students who have investigated different majors and now want to utilize the courses already taken to complete a bachelor's degree in a timely manner.

Undergraduate Program (p. 1874)

Contact Information

To contact the Division of Student Success, please email DSS@uta.edu.

For the Bachelor of Science in University Studies program, please email universitystudies@uta.edu or call 817-272-1786.

COURSES

UNIV 1000. FIRST YEAR EXPERIENCE. 0 Hours.
A first-year seminar that orients students to life on UTA's campus and emphasizes engagement beyond the classroom. Students in this course will experience the UTA community by attending campus events and making connections beyond their studies, including interaction with career services, the library and financial literacy services. Students will also be able to identify campus resources to support their wellness from multiple aspects of their lives, both the social and the physical. Students will understand how critical thinking and study skills can be applied to academic content, explore chosen majors and possible career pathways, and connect to activities and resources on campus.

UNIV 1101. CAREER PREPARATION AND STUDENT SUCCESS. 1 Hour.
A course for new transfer students that will help students transition into UTA and achieve academic and personal success through recognition of campus resources and community building. Students will discover effective ways to balance personal and career obligations with academic goals. The course will allow for the discovery of marketable skills within a chosen academic discipline and the professions associated with that program of study. Experiential learning opportunities will be discussed, including undergraduate research, leadership, international engagement, community engagement and career development. Students will understand how critical thinking and study skills can be applied to academic content, explore chosen majors and possible career pathways, and connect to activities and resources on campus.

UNIV 1131. STUDENT SUCCESS. 1 Hour.
A first-year seminar that introduces new students to academic and success skills to aid their transition into college. The goal of the course is to help students identify their individual needs, determine what resources are appropriate, recognize the faculty role in their development, and formulate a plan for an actively engaged and enriched experience from campus to career. Experiential learning opportunities will be discussed, including undergraduate research, leadership, international engagement, community engagement and career development. Students will understand how critical thinking and study skills can be applied to academic content, explore chosen majors and possible career pathways, and connect to activities and resources on campus.

UNIV 1302. COLLEGE LEARNING. 3 Hours.
A first-year seminar that introduces students to the strategies and behaviors necessary for academic success, personal growth, and career development. Emphasizing self-assessment, self-exploration, and cognitive theories, students will complete a self-change project to apply these concepts. The course aids the transition to college by helping students identify their individual needs, recognize the role of faculty in their development, and formulate a plan for an actively engaged academic experience. Topics include critical thinking, study skills, major exploration, and career pathways. Experiential learning opportunities, such as undergraduate research, leadership, global connections, community engagement, and career development, will be explored, connecting students to campus activities and resources that support their goals from college to career.

UNIV 3335. PEER ACADEMIC LEADER TRAINING. 3 Hours.
Students are trained on the expectations and responsibilities of becoming a Peer Academic Leader (PAL). These students will work as group leaders for UNIV 1131 after successful completion of the course. Students will learn group instruction procedures and requisite guidance material to explain academic regulations and student services, analyze study skills, initiate appropriate study habits, and make appropriate referrals when necessary. Focus on classroom management, learning theory, and lesson plan development. Elective credit; does not count as part of the professional education certification requirements. Prerequisite: Permission of the instructor.

Division of Student Success - Undergraduate

Program

- University Studies BS (p. 1874)

Bachelor of Science in University Studies

About This Program

The Bachelor of Science in University Studies is designed for students seeking options beyond the traditional university majors. This program features a range of academic disciplines that will prepare you for a variety of career paths or enhance your current career. Through this program, you will earn your bachelor of science degree in University Studies, giving you a unique educational profile that you can market to employers or graduate programs**.** The program is designed for:

- Former students who want to return to UT Arlington and complete their degrees.
- Transfer students who have more than 60 hours and are unsure about what major to pursue or who want to accelerate their graduation but have numerous hours that don't easily apply to a major.
- UT Arlington students unable to meet the academic requirements to enter or graduate from another major.

Please note: The Bachelor of Science in University Studies is not open to students who have already earned an undergraduate bachelor's degree or who wish to pursue a double or dual major. In addition, students completing a University Studies degree are not able to declare minors.

Competencies

1. Critical Thinking: Upon completion, students will demonstrate creative thinking, innovation, inquiry, analysis, evaluation, and synthesis of information
2. Communication Skills: Upon completion, students will be able to develop, interpret, and express ideas through written, oral, and visual communication.
3. Empirical and Quantitative Skills: Upon completion, students will be able to manipulate and analyze numerical data or observable facts, resulting in informed conclusions.
4. Teamwork: Upon completion, students will be able to consider different points of view and work effectively with others to support a shared purpose or goal.
5. Personal Responsibility: Upon completion, students will be able to connect choices, actions, and consequences to ethical decision-making.
6. Social Responsibility: Upon completion students will demonstrate intercultural competence, knowledge of civic responsibility, and the ability to engage effectively in regional, national, and global communities.

Admissions Criteria

Students must have completed 60 hours to be admitted to the program.

Curriculum

Foundations [1]	
General Core Requirements (p. 46)	42
Major Content [2]	
Select two of the following content areas in consultation with a University Studies advisor. Individual courses in each discipline may require prerequisites.	
Area I: Art, Media, Humanities	
Courses from: AAST, ADVT, ARAB, ARCH, ART, ASL, BCMN, CHIN, CLAS, COMM, COMS, CTEC, DIVR, DNCS, DS, ENGL, FREN, GERM, GLOBAL, GREK, HIST, HUMA, INTD, JOUR, KORE, LARC, LATN, LING, MAS, MODL, MUSI, PHIL, PORT, PREL, RUSS, SPAN, THEA, WOMS	
Area II: Business, Community Studies, Social Science	
Courses from: ACCT, ANTH, BANA, BCOM, BDEC, BEEP, BLAW, BSTAT, BUSA, CM, CRCJ, ECED, ECON, EDAD, EDML, EDUC, ELED, FINA, GEOG, INSU, INSY, LIST, LSCHP, MANA, MARK, OPMA, PAPP, PCOM, PLAN, POLS, PSYC, REAE, SOCI, SOCW, SPED, UDES	
Area III: Engineering, Health & Wellness, Physical Science	
Courses from: AREN, ASTR, BE, BIOL, CE, CHEM, CSE, DATA, EE, ENGR, ENVR, EXSA, EXSS, GEOL, HEED, IE, KINE, MAE, MATH, MSE, NE, NURS, PHED, PHYS, REE, SCIE, STATS	
Primary Content Area	24

From a primary area, select 24 hours with at least 12 hours at the 3000/4000 level	
Secondary Content Area	21
From a secondary area, select 21 hours with at least 6 hours at the 3000/4000 level	
Electives	
Select electives sufficient to complete 120 hours with at least 36 hours at the 3000/4000 level. No more than 4 hours of EXSA or DNCA courses may count toward the electives. No more than 15 hours of coursework transferred in as WECM may count toward electives.	33
Total Hours	**120**

[1] Courses completed as part of the core curriculum may not be used to satisfy the content area requirements.
[2] No more than 15 of the 45 Major Content hours can come from the same department.

Program Completion

To earn a Bachelor of Science degree in University Studies you must complete 120 credit hours and have a 2.0 cumulative grade point average upon completing the course requirements. Of the 120 total hours, you must complete at least 36 advanced credit hours and meet residency requirements for completing a degree at UTA. In addition:

- No more than four hours of exercise or dance courses can be counted toward the electives.
- A maximum of 30 hours from the College of Business is allowed.
- Courses completed as part of the core curriculum cannot be used to satisfy content areas.
- You must also meet the residency requirements (p. 49) for completing a degree at UT Arlington.

Advising Resources

Your University Studies advisor will guide you through your degree program, help you to make informed decisions about your academic path and support you in reaching your graduation goals. In addition to academic planning, advisors can assist with non-academic concerns, so be sure to meet with them regularly.
With the support of your University Studies advisor, creating a class schedule and exploring your personal and career goals is simple and stress-free. We'll ensure your courses fulfill degree requirements and keep you on track for timely graduation.
All University Studies students, including seniors and those on academic probation, are required to meet with an advisor each semester to review academic progress and register for classes.

Address: 701 S. Nedderman Drive, Arlington, TX 76019

Master of Multidisciplinary Studies

About This Program

The Master of Multidisciplinary Studies (MMS) provides students the opportunity to earn a graduate degree that builds marketable skills and knowledge in two or more complementary fields of study. The program is flexible, allowing graduate certificates and courses to be combined to provide individualized pathways for reskilling and upskilling. It is intended for students to build upon prior education and provide combinations of learning experiences that are not provided by graduate degrees in a single field of study. With the approval of the program's advisor, students may apply prior graduate coursework at UTA towards this degree, if it has not been used for another graduate degree. Students may apply up to nine hours of transferred graduate coursework from another institution of recognized standing. The MMS is a 30-hour graduate degree in which students are required to complete a graduate certificate program (9-15 hours), combined with additional coursework in one or more other disciplines, including the option of obtaining a second certificate. If the required certificate has less than 12 required hours, additional courses must be taken in the same discipline to reach 12 hours. The additional coursework taken beyond these 12 hours must include at least 9 hours in a different discipline taught in another department, unless approved by the program's graduate advisor.

Students will work with the program's graduate advisor to select the required certificate and additional coursework. This individualized plan of study must be approved by the program's graduate advisor. Review and approval of the plan of study will be based on how well it meets the student's intended professional and personal goals, through study of multiple disciplines. All of the certificates and coursework used in the program are offered by the academic colleges. To complete the degree, students must satisfy the criteria established by the respective colleges for the required certificate. They must also satisfy prerequisites for courses they take. Course content, delivery, and grading will follow college policies. Students are admitted to the MMS program based upon the basic requirements for graduate admission in the university catalog and the admission requirements established for the required certificate they intend to complete. Applicants must also submit a personal statement identifying the certificate program they want to use for their required certificate, and the discipline they are interested in for their additional coursework. The personal statement should also describe how the intended studies will contribute to their professional and personal goals. Applicants are strongly encouraged to consult with the program's graduate advisor while working on this statement.

Competencies

1. Upon completion, students will demonstrate the competencies developed by the certifications comprised in the individual degree plan.

Admissions Criteria

UNCONDITIONAL ADMISSION

The following are minimal requirements for Unconditional Admission into the Master of Multidisciplinary Studies program.

1. A bachelor's degree with a minimum undergraduate GPA of 3.0 on a 4.0 scale, as calculated by the Office of Admissions.
2. An applicant whose native language is not English must demonstrate a sufficient level of skill with the English language to assure success in graduate studies. Applicants are expected to submit a score of at least 6.5 on the IELTS or achieve a minimum TOEFL iBT total score of 79. Further, when the TOEFL iBT is taken, sectional scores of at least 22 on the writing section, 21 on the speaking section, 20 on the reading section, and 16 on the listening section are preferred.
3. A personal statement identifying the graduate certificate program they want to use for their required certificate, and the discipline they are interested in for their additional coursework. Graduate certificate programs are listed here (https://www.uta.edu/admissions/apply/certificates/). The personal statement should also describe how the intended studies will contribute to their professional and personal goals. Applicants are strongly encouraged to consult with the program's graduate advisor while working on this statement.

PROBATIONARY ADMISSION REQUIREMENTS

Students will be considered for Probationary Admission if they have a minimum undergraduate GPA of 2.75 on a 4.0 scale. Students admitted on probation must maintain a GPA of at least 3.0 during their first 12 semester credit hours of coursework.

HOW TO APPLY

First, read the general instructions for applying to the graduate program and download the checklists available on the Office of Admissions webpage (https://www.uta.edu/admissions/apply/graduate.html). Then, submit the application through ApplyUTA.

Curriculum

First Discipline/Certificate	
Select at least 12 hours in any graduate certificate. (For 9 hour certificates, complete additional coursework.)	12
Second Discipline	

Select up to 18 hours in graduate courses, at least 9 hours of which must be in a discipline and department different from that of the first discipline certificate.	18
Total Hours	**30**

Athletics

UT Arlington Department of Athletics

COLLEGE PARK CENTER

UTAMavs.com

UT Arlington Athletics competes in the highest level of collegiate sports and is a proud NCAA member with 16 Division-I teams: men's and women's basketball, baseball, softball, volleyball, men's and women's indoor track and field, men's and women's outdoor track and field, men's and women's cross country, men's and women's tennis, men's and women's golf and women's flag football.

On May 15, 2025, UTA announced the addition of women's flag football that is set to begin play in Spring 2027. UTA becomes just the fifth NCAA Division I university to add the sport (Alabama State, Long Island, Mercyhurst and Mount St. Mary's), and the third program in the state of Texas across all levels to do so (Concordia, Texas Wesleyan). There are currently over 50 colleges and universities nation-wide offering women's flag football as a varsity sport (NAIA, NCAA Divisions I, II, and III), while 65 NCAA schools across all three divisions sponsor women's flag football either at the varsity or club level. Women's flag football is set to debut at the Olympics in Los Angeles in 2028.

The Mavericks are members of the Western Athletic Conference (WAC) and is comprised of seven current member institutions along with UTA: Abilene Christian, California Baptist, Southern Utah, Tarleton, Utah Tech and Utah Valley.

The Mavs were previously members of the Southland Conference (1963-2012), Western Athletic Conference (2012-13) and Sun Belt (2013-22).

UTA teams have amassed more than 100 conference championships and have made over 80 team appearances in NCAA Tournaments. Nearly 175 Mavs have been named All-Americans, UTA athletes have won three National Championships, and the department has had representation at 11 of the last 14 Olympic Games, winning three Gold Medals and a Silver.

All UTA students are admitted free of charge to all home contests with a valid student ID and are permitted to bring an additional guest.

You can also follow the Mavs on X: @UTAMavs (https://x.com/utamavs/), Instagram: @UTAMavs (https://www.instagram.com/utamavs/) and Facebook: /UTAMavs (https://www.facebook.com/UTAMavs/). Additionally, each team has its own Twitter, Instagram and Facebook accounts, and those can be accessed by visiting the social media account page on UTAMavs.com (https://utamavs.com/socialaccounts.aspx). For any other news and information regarding UTA Athletics, visit UTAMavs.com (https://utamavs.com/).

Division of Student Affairs

Apartment and Resident Life

Arlington Hall Breezeway · Box 19370 · 817-272-2926 · www.uta.edu/housing (http://www.uta.edu/housing/)

Living on campus is a great way to get connected, meet friends, and be involved. To that end, University Housing offers single and double occupancy options available in residence halls or apartments. In addition, Learning Communities and Freshman Interest Groups are available to enhance the connection between student's academic and social pursuits. All our communities are designed to meet the needs of today's students and provide an environment that supports academic growth and community respect by offering opportunities for leadership, involvement, and connections for residents that live on campus.

The University is entitled to conduct criminal background checks on students applying for on-campus housing. Students will be notified if they are denied housing due to information gathered from a criminal background check per Texas Government Code, Section 411.094.

Apply for University Housing at www.uta.edu/housing.

Campus Recreation

500 W. Nedderman Drive · 817-272-3277 · www.uta.edu/campusrec (http://www.uta.edu/campusrec/)

The Department of Campus Recreation provides a diverse span of recreational and leisure opportunities for students, faculty and staff through several components including Informal Recreation, Intramural Sports, Adaptive Recreation, Fitness & Wellness, Sport Clubs, Aquatics and Spirit Groups. The Campus Recreation facilities include the MAC, Fields Complex, and The Green at College Park.

The MAC–Maverick Activities Center is a state-of-the-art, $34.5 million recreation facility where students, faculty, staff, and alumni can meet, relax, workout, and continue to be engaged in UT Arlington's campus life. Some of the amenities include a 20,000 square foot weight and fitness room (90+ pieces of cardio equipment, 4 circuit training units & a free weight area), 5 indoor basketball courts, 8 volleyball courts, a climbing wall, game room, computer lab, Market at the MAC, indoor soccer field and more.

Spirit Groups

500 W. Nedderman Drive · 817-272-3277 · www.uta.edu/spirit (http://www.uta.edu/spirit/)

UTA Spirit Groups consist of the cheerleading squad, dance team, mascot, and the Maverick Wranglers. Together, the groups provide support for UTA athletic teams and lead the University community in spirit. These athletes represent UT Arlington at the collegiate national championships and host camps and clinics throughout the summer.

The Lockheed Career Development Center

216 University Administration Building, 701 S. Nedderman Drive · Box 19695 · 817-272-2932 · www.uta.edu/careers (http://www.uta.edu/careers/)

The Career Development Center empowers students and alumni for professional success by helping them discover and plan for possible career paths, connecting them with employers and professional opportunities, preparing them to present themselves well to compete for the opportunities they seek, and helping them develop the skills that will allow them to succeed in their professional goals now and in the future.

The Career Development Center maintains the online job database, HIREAMAV, powered by Handshake, which is for those seeking full-time, part-time, and internship opportunities, and over 150 employers attend the bi-annual Job Fair hosted by the Career Development Center each fall and spring.

The Center for Students in Recovery

B170 Lower Level, University Center · Box 19355 · 817-272-2354 · www.uta.edu/csr (http://www.uta.edu/csr/)

The Center for Students in Recovery (CSR) provides a safe, healthy, and welcoming environment for students to cultivate life skills and celebrate recovery successes. Members enjoy access to scholarships, educational and volunteer opportunities, and a strong network of supportive peers. The recovery coaching and peer-based recovery mentorship help students manage challenging situations with agility and grace. To join CSR, a student must be admitted to The University of Texas at Arlington and committed to living clean and sober.

Counseling and Psychological Services

Counseling and Psychological Services: 303 Ransom Hall · Box 19156 · 817-272-3671 · www.uta.edu/caps (http://www.uta.edu/caps/)

Counseling and Psychiatric Services: 605 S. West Street · Box 19329 · 817-272-2771 or 817-272-0429 · www.uta.edu/caps (http://www.uta.edu/caps/)

Counseling and Psychological Services (CAPS) is a department of Health Services. Services are available to help students increase their understanding of personal issues, address mental and behavioral health problems and make positive changes in their lives. Individual, couples and group counseling and psychotherapy are provided by an interdisciplinary team of licensed mental health providers including psychologists, counselors, social workers, and psychological associates. Psychological assessments are conducted for ADHD and learning disorders. Psychiatrists and psychiatric nurse practitioners provide diagnostic assessment and ongoing treatment of psychiatric conditions including medication management and brief psychotherapy. An integral part of the CAPS mission is to provide outreach to the campus community in the form of workshops and training sessions. CAPS staff is also available to provide consultation to concerned students, faculty and staff.

Services are available to campus based students. CAPS has resources online that are available to all students including those enrolled in distance education/online programs. Online resources include an online mental health screening, links to external suicide prevention websites and links to external self-help information.

INTERCULTURAL student ENGAGEMENT center

B110 Lower Level, University Center · Box 19353 · 817-272-2099 · www.uta.edu/student-affairs/intercultural-student-engagement-center (https://www.uta.edu/student-affairs/intercultural-student-engagement-center/)

The Intercultural Student Engagement Center supports student retention and completion for the many cultural, religious/spiritual, and identity groups reflected within the UTA community through belonging and engagement initiatives and academic support. At the core, the center creates opportunities for students to build social connections, engage with academic support resources, and engage in leadership development through student organization

support. While holding space for the wholistic experience, the center serves to promote belonging and embrace the cultural richness of the UTA community.

Fraternity and Sorority Life

B160 Lower Level, University Center · Box 19348 · 817-272-9234 · www.uta.edu/fsl

Fraternity and Sorority Life at UT Arlington prepares young men and women to be contributing members of society. Fraternity and sorority members have a variety of opportunities on and off campus geared toward the enhancement of their educational experience and contributions toward their personal growth. Most importantly, fraternities and sororities focus on the development of four pillars; Brotherhood/Sisterhood, Philanthropy/Community Service, Scholarship and Leadership. The fraternity and sorority community is comprised of four governing bodies representing over 30 fraternities and sororities and two affiliated honorary organizations, Order of Omega and Gamma Sigma Alpha.

Health Services

605 South West Street · Box 19329 · 817-272-2771 · www.uta.edu/healthservices (http://www.uta.edu/healthservices/)

Health Services is an ambulatory health care facility fully accredited by the Accreditation Association for Ambulatory Health Care. Health Services' mission is to support academic success by providing excellent health care and promoting wellness. It provides currently enrolled UTA students with quality, accessible, comprehensive, and cost-effective primary health care.

In addition to a general medicine clinic, Health Services provides a pharmacy, laboratory, radiology department, counseling and psychological services, women's health clinic, immunization clinic, and a health promotion and substance abuse prevention office.

Medical Emergencies

For true medical emergencies on campus, or when the seriousness of an individual's condition is uncertain, call the University Police at 817-272-3003. The police will dispatch officers to the site, and call an ambulance, if needed. Officers are trained in CPR and first aid, and can stabilize the individual until an ambulance arrives. This procedure should be followed even when Health Services is open. If individuals experiencing a medical emergency are off-campus, call 911.

The Follett Leadership Center

B160 Lower Level, University Center · Box 19340 · 817-272-9220 · www.uta.edu/leadership

The Leadership Center strives to develop innovative and collaborative leaders who actively apply their leadership knowledge and skills to improve their local and global communities. The Leadership Center is home to the Alternative Breaks Program, UTA Volunteers, the Leadership Honors Program, FLOC (Freshmen Leaders on Campus) and the Maverick Mentors, Peer Mentoring program. Some other programs and events include the fall leadership retreat, Certified Leader Institutes, academic courses and Leadership Studies Minor.

Maverick Pantry

520 S. Center St. in College Park Center · eaf@uta.edu · www.uta.edu/student-affairs/dos/resources/maverick-pantry (https://www.uta.edu/student-affairs/dos/resources/maverick-pantry/)

The Maverick Pantry is committed to creating and maintaining equitable access to food and essential items so that all members of the University Community can thrive academically, personally, and professionally. Education, support, and advocacy are the pillars that guide our mission in alleviating food insecurity within our Maverick community. While #FeedingStudentSuccess is the primary mission, students can also utilize the Professional Clothing Development Closet and the Cap & Gown Rental Program housed within the Maverick Pantry.

The Movin' Mavs and Lady Mavs Wheelchair Basketball Teams

801 W. Greek Row · 817-272-3410 · www.uta.edu/movinmavs (http://www.uta.edu/movinmavs/)

UTA's Movin' Mavs wheelchair basketball team has won eight national championships. The team has a rich history of leading the nation in intercollegiate wheelchair basketball, exemplified by offering full athletic scholarships to team players, by players consistently being named to the First-Team All-America squads, and by participation in the Paralympics. Visit the website to keep up with the Movin' Mavs. The Lady Movin' Mavs began in 2013 with five players and has become one of the most dominant teams in the NWBA Intercollegiate Division with a first place finish in the 2016 and 2018 national championship. Several of the Lady Movin' Mavs have been selected for USA National Team Tryouts, College Division Post-Season honors and All Academic Selections.

New Maverick Orientation

B160 Lower Level, University Center · Box 19348 · 817-272-9234 · www.uta.edu/orientation (http://www.uta.edu/orientation/)

The University of Texas at Arlington is dedicated to the retention and overall success of our students, by promoting academic excellence and fostering lifelong learning. New Maverick Orientation offers a variety of programs, both on campus and online, for new freshmen, transfer students, veterans, international students, and graduate students. At orientation, new students gain valuable information about the services, resources, activities,

and organizations that will enhance their success at UTA. Additionally, the connections students make at orientation can develop into meaningful relationships and networks.

Student Access and Resource Center

102 University Hall · Box 19510 · 817-272-3364 · www.uta.edu/student-affairs/sarcenter (https://www.uta.edu/student-affairs/sarcenter/)

The Student Access and Resource Center (SAR) assists students with disabilities to participate in the full spectrum of college life. The SAR serves students using exemplary practices in assistive technology, disability counseling, and academic accommodations such as testing accommodations, sign language interpreters, volunteer note-takers, e-text, and auxiliary aids.

MAV TRANSITIONS

B100 & b170 Lower Level, University Center · Box 19363 · tRANSITIONS pROGRAMS: 817-272-2121/Parent & Family Services: 817-272-2128 · www.uta.edu/student-affairs/mav-transitions (https://www.uta.edu/student-affairs/mav-transitions/)

Our aim is to ensure that all new students and their families begin and end their journey at UTA with a positive and meaningful connection to the Maverick Way. Offering a collection of collaborative programs and services to enhance their Maverick experience and facilitate the transition, adjustment, and connection of transfer students, parents and families, off-campus students, first-generation students, and other target populations.

Relationship Violence and Sexual Assault Prevention Program

Ransom Hall 301 · Box 19355 · 817-272-3947 · www.uta.edu/rvsp (http://www.uta.edu/rvsp/)

The Relationship Violence and Sexual Assault Prevention (RVSP) program promotes education and awareness of intimate partner violence, sexual assault, harassment, and stalking on campus. An **confidential** advocate is available to provide advocacy, support, and referral services to students impacted by sexual and/or relationship violence. Anonymous forms to report an incident are available online. Additionally, the RVSP program hosts a number of training opportunities for faculty, staff, and students on response and advocacy. Educational and social programming highlighting the impact of sexual violence are the most prominent during Domestic Violence Awareness Month (DVAM) in October and Sexual Assault Awareness Month (SAAM) in April. RVSP stands by and will always #BelieveSurvivors.

Student Organizations

Lower Level, University Center · Box 19348 · 817-272-2963 · www.uta.edu/studentorganizations (https://www.uta.edu/studentorganizations/)

Student Organizations serves as a focal point of out-of-classroom involvement and engagement at UTA. Participation in co-curricular activities helps students gain valuable skills and experiences that complement academic work, enhances leadership, and enriches the collegiate experience.

There are over 300 registered student organizations operating on campus. Groups are formed and governed by their members around a variety of common causes including academic/professional, sport/recreational, honorary, cultural, spiritual, and a variety of special interests. Don’t see exactly what you’re looking for? Make your way down to our offices and learn how you can form your own. Visit mavorgs.uta.edu for more information on campus organizations. Student Organizations is also where student organizations obtain approval to reserve space on campus, post flyers and publicity on campus and register their events. Organizations can receive consultation and advice on campus policy and operational matters.

Student Conduct

B170 Lower Level, University Center · Box 19355 · 817-272-2354 · www.uta.edu/conduct (http://www.uta.edu/conduct/)

The Office of Student Conduct is responsible for the implementation of the Student Conduct & Discipline Handbook of Operating Procedures and the Regents' Rules and Regulations at the University of Texas at Arlington. The University of Texas at Arlington Handbook of Operating Procedures (HOP) contains official policies and procedures for the governance of UT Arlington. The Honor Code upholds UT Arlington's tradition of academic integrity, a tradition that values hard work and honest effort in the pursuit of academic excellence Please see the University Requirements & Policies tab within the University Catalog for information on Student Conduct and Academic Integrity.

We strive to uphold and support standards of personal honesty and integrity for all students consistent with the goals of a community of scholars and students seeking knowledge and responsibility. Consistent with this goal, the office is engaged in the task of educating the community regarding standards for student behavior and procedures used in the resolution of student disciplinary allegations. Students at the University of Texas at Arlington are encouraged to engage their campus in a positive way. By staying educated on policy and procedure, students can ensure a healthy and productive education at the University of Texas at Arlington. The Office of Student Conduct sponsors several large scale programs across campus, smaller residence life focused programming efforts and training for students, staff and faculty throughout the year.

Student Governance

B150, Lower Level, E. H. Hereford University Center · Box 19350 · 817-272-0556 · www.uta.edu/studentgovernance (http://www.uta.edu/studentgovernance/)

Student Governance is dedicated to providing a medium for students to voice their concerns and opinions and hosts of UTA. By serving as the voice of the student body, Student Government and the Graduate Student Senate provide student representation on various university committees and have the opportunity to represent the student perspective on a variety of campus issues.

The UTA Ambassadors serve as the official student hosts of UT Arlington, under the direction of Mr. and Ms. UTA. The group maintains and promotes new and old campus traditions; increases awareness of UT Arlington's services, programs, and activities to students and the surrounding community; and establishes and strengthens pride and passion for UT Arlington on and off-campus. The UTA Ambassadors are involved in the planning of the Maverick Speakers Series, the Maverick of the Month recognition program, the UTA Spirit Horse initiative, and Spirit Week.

Student Government is UTA's elected representative body for undergraduate and graduate students. Members work to implement change on campus, solicit concerns, and propose resolutions to solve problems. The group serves as the major link between students and the administration. In addition, the organization sponsors voter registration drives, supports the on-campus early voting polling site, and hosts various programs to solicit student feedback on a variety of campus issues.

The Graduate Student Senate (GSS) understands the needs and concerns of graduate students here at UTA. The Graduate Student Senate passes resolutions to improve graduate student life on campus, hosts guest speakers to discuss current issues, creates ad-hoc committees to research potential changes in University policy that may impact graduate students, and assists with Graduate Forums, the ACES research symposium, and the Graduate School Showcase.

Student Publications

Lower Level, E.H. Hereford University Center · Box 19038 · 817-272-3661 · www.uta.edu/studentpubs (http://www.uta.edu/studentpubs/) and www.theshorthorn.com (http://www.theshorthorn.com/)

The Student Publications department employs more than 100 student journalists, advertising sales representatives, marketing assistants, web developers, and office assistants in jobs that help them prepare for their careers. The department publishes *The Shorthorn*, the Maverick Connection phone directory and the Maverick Housing Guide. It also houses a full-service creative services agency. The department's mission is to provide a spectrum of hands-on communication training to students while providing a valuable news service to the UTA community and an open forum for free expression.

The Shorthorn is UTA's oldest and most honored source of news and information. Students created the award-winning student newspaper in 1919. Today, *The Shorthorn* delivers news as it happens through its website and social media channels. It also provides a daily summary of pertinent headlines emailed to you with links that will work on any mobile device or computer. The print edition is published every Wednesday. *The Shorthorn* website also contains interactive features, videos, and photo galleries of student events and activities, and lets you submit your own photos to the newspaper. *Shorthorn* discussions also allow you to express your opinions on campus issues in an open forum.

Student Activities

B160 Lower Level, University Center · Box 19348 · 817-272-2963 · www.uta.edu/student-affairs/student-activities (https://www.uta.edu/student-affairs/student-activities/)

The department of Student Activities collaborates with departments and organizations to produce large-scale campus events that engage students, staff, and faculty, while strengthening students' ties to the university and community. University Events is involved in the planning of Maverick Stampede (Welcome Week), the MavsMeet AfterParty, Homecoming, the Spring Concert, and BlockParty. University Events is also home to the UTA Ambassadors and The Big Event.

The university's student programming board, EXCEL Campus Activities, plans and implements social, recreational, cultural and educational events. From large to small, throughout the year there are a variety of events and traditions that make the university an enriching place to make the most of your time. These diverse programs become an essential part of the culture on campus because they are student led and university supported. These events and activities are open to all students; you can even get involved by becoming a member of EXCEL.

The Big Event is an organization of service-minded students whose purpose is to plan and implement a day of community service and outreach involving UTA students, faculty, staff and community members in an effort to engage, educate, and mobilize volunteers throughout the community. Numerous community-based and non-profit organizations/agencies benefit from the volunteer efforts, as well as local residents. Enthusiastic volunteers participate in various service project sites such as painting, landscaping, youth development workshops, and facility cleanup all on one BIG day.

Veteran Programs

406 Summit Ave · 817-272-3017 · www.uta.edu/student-affairs/veterans (https://www.uta.edu/student-affairs/veterans/)

Veterans and their families are valued and vital components of the UTA community. The University serves more than 3,000 student veterans and dependents of military veterans working to earn college degrees. We are constantly looking for ways to ease their transition to college, and we provide a full range of services to help them adapt and succeed in their academic pursuits. From Veterans Education Counselors working with the Veterans

Commission, to career development, to financial aid, we've got veterans covered. For more information, visit uta.edu/student-affairs/veterans (https://www.uta.edu/student-affairs/veterans/). Veteran's Assistance Center is the hub for coordinating all veteran service departments at UTA, serving as a liaison and advocate for military connected students. Available to answer questions, and assist in obstacle navigation, the Executive Director is knowledgeable about UTA student support services and can connect military connected students with the appropriate departments best suited to assist with their individual needs.

University Libraries

The University of Texas at Arlington Libraries is a model 21st century urban academic library dedicated to elevating the research and scholarship of our diverse communities. Collections include current books, journals, and electronic resources, as well as unique historical manuscripts, maps, and photographs. The Libraries boasts 5+ million annual book and article downloads and more than one million annual visits from its users.

Central Library contains numerous study spaces for quiet or collaborative study. Meet a research coach or tutor on the 2nd floor, create something new in the FabLab or brand-new Studios, or get tech help from our in-house OIT helpdesk. Our Special Collections on the 6th floor holds more than 1,500 archives and manuscript collections, primarily in Texas history, cartography, and the U.S.-Mexico War of 1846-48. When you need a break, visit the Market or Einstein Bros. Bagels for a snack, or kick back with friends in our premier gaming space, The Basement. Weekly events like Doggy Days, Maverick Kitchen, and more provide opportunities for students to build community and learn new skills beyond the classroom.

The Libraries also offers robust virtual and in-person services and collections via its branches in the Architecture & Fine Arts and Science & Engineering buildings, as well as houses thousands of additional materials in its offsite Library Collection Depository that are available upon request.

Visit the Libraries website (https://libraries.uta.edu/) and follow them on Facebook (http://facebook.com/utalibraries/), Twitter (http://twitter.com/utalibraries/), Instagram (http://instagram.com/utalibraries/), and YouTube (https://www.youtube.com/channel/UCVGeKT4ynuNN-jUOMM1300A/)!

Veterans Upward Bound

UT Arlington Veterans Upward Bound is a free program for qualified veterans, designed to motivate and assist veterans in the development of academic and other requisite skills necessary for acceptance and success in a program of post-secondary education. The program provides assessment and enhancement of basic skills through counseling, mentoring, tutoring and academic instruction in the core subject areas of mathematics through pre-calculus, laboratory science, foreign language, composition and literature. The primary goal of the program is to increase the rate at which participants enroll in and complete post-secondary education programs.

In our Learning Center, participants receive individualized tutoring from an instructor who has identified each participant's own strengths and needs. Participants advance at their own pace, are able to refresh any forgotten skills, and will be motivated toward academic success in higher education. Our veterans education counselors provide answers to questions regarding college enrollment processes and serve as a liaison between participants and representatives in the academic unit they wish to attend.

Resources and services available include:

- Basic skills development to help veterans successfully complete a high school equivalency program and gain admission to college education programs.
- Short-term remedial or refresher classes for high school graduates that have put off pursuing a college education.
- Assistance with applications to the college or university of choice.
- Assistance with applying for financial aid.
- Academic advice and assistance.
- Career Counseling.
- Personalized Counseling.
- Assistance in getting veterans services from other available resources.
- Exposure to cultural events, academic programs, and other educational activities.

For additional information on these and other resources and services, please visit: Veterans Upward Bound (http://www.uta.edu/veteransub/).

Mid-Year Addendum

ABOUT THE MID-YEAR ADDENDUM

OVERVIEW

The University Catalog is published annually and serves as a reference for the academic year. The University recognizes the evolving nature of curriculum and policy development results in proposal approvals throughout the academic year. **The University Catalog Mid-Year Addendum allows critical policy updates and academic courses and programs approved outside the catalog publication cycle to be included in the official University catalog in a timely manner.**

The Mid-Year Addendum is limited to policy updates to maintain compliance or align with international, national, state and other regulatory bodies, newly approved academic courses and programs, and critical announcements. Items included in the Mid-Year Addendum are effective at the start of the Spring term unless otherwise noted.

PRIOR PUBLICATIONS

The University of Texas at Arlington Online University Catalog, published in June, is the official catalog of the University and takes precedence over any previously printed or online catalog. **As such, the University Catalog Mid-Year Addendum, published and effective at the start of Spring term, also supersedes catalog editions published prior to this date.**

Students are governed by the catalog under which they were enrolled or, at a student's option, the catalog of any subsequent year in which that student was in residence. Please refer to the academic requirements and procedures section (p. 26) for more information.

IN THIS EDITION

Below is a list of items included in the 2025 edition of the University Catalog Mid-Year Addendum. If the page is listed here, detailed information can be found on the corresponding linked page. If no updates were made, the page will be notated with, "*No updates at this time*."

Course Descriptions

COURSES

AAST 2300. INTRODUCTION TO AFRICAN AMERICAN STUDIES. 3 Hours.
This course introduces students to the African American experience in the United States, including an interdisciplinary analysis of the African American experience in politics, the arts, folklore, religion, economics, sociology, psychology, and community development; and an examination of local history, contemporary issues, and recent events in the African American community. This course satisfies the University of Texas at Arlington core curriculum requirement in Social and Behavioral Sciences.

AAST 2303. HISTORY AND APPRECIATION OF HIP HOP AND R&B MUSIC. 3 Hours.
Explores the history and evolution of Hip Hop and modern urban music, emphasizing musical style and social context, from rhythm and blues through the present. Offered as AAST 2303 and MUSI 1303; credit will be granted in only one department.

AAST 2337. ECONOMICS OF SOCIAL ISSUES. 3 Hours.
Economic analysis and application of basic economic principles to a variety of social issues and topics. Students will become familiar with the U.S. economy, its structure, and how economics applies to an assortment of public policy topics such as crime, energy, immigration, drug use, prostitution, minimum wage, our aging population, healthcare, gender driven wages, recycling, and the macro economy, to name a few. In addition, current economic issues and events may be incorporated into the course via lecture and/or class discussions. This is a non-technical course which satisfies the core requirement for social and behavioral studies. Will not serve to meet degree requirements for College of Business Administration majors. Offered as ECON 2337 and AAST 2337; credit will be granted in only one department.

AAST 2371. LANGUAGE IN A MULTICULTURAL USA. 3 Hours.
The relationship between language in the U.S. and social power. This course explores how negative attitudes toward some language varieties and languages spoken in the U.S. arise from social factors, rather than features of the languages themselves. In addition to studying language varieties, the course shows how American institutions such as the educational system and the media reinforce these negative attitudes and contribute to discrimination. Offered as AAST 2371 and LING 2371; credit will be granted in only one department.

AAST 3300. TOPICS IN GENDER, WOMEN & SEXUALITY STUDIES. 3 Hours.
Special topics of interest in the disciplines of Gender, Women & Sexuality Studies. May be repeated for credit when the topic changes. Offered as GWSS 3300 and AAST 3300; credit will be granted in only one department.

AAST 3301. THEORIES OF HUMAN BEHAVIOR. 3 Hours.
This course explores, within the context of a strengths and empowerment perspective, theories of human behavior. For social work majors, it is strongly recommended that SOCW 2302 be taken before this course. Offered as AAST 3301 and SOCW 3301; credit will be granted in only one department. This course is required for Social Work Field Instruction and Seminar I (SOCW 4951).

AAST 3310. BLACK FAMILIES. 3 Hours.
Course will focus on the historical and cultural development of black families. Topics include slavery, segregation, family structure, and socioeconomic issues. Special attention will be given to people, places, and events that are important for understanding African American family life in the Dallas/Ft Worth area.

AAST 3314. CIVIL WAR AND RECONSTRUCTION. 3 Hours.
The background and causes of secession and the Civil War, the organization of the Confederate States of America, the progress of the war, and the attempts to solve the racial, social, political, and economic problems of the post-war period. Offered as AAST 3314 and HIST 3314; credit will be granted in only one department.

AAST 3317. DIVERSE POPULATIONS. 3 Hours.
Introduction to theoretical, practical, and policy issues related to diverse populations. Historical, political, and socioeconomic forces are examined that maintain discriminatory and oppressive values, attitudes, and behaviors in society in diverse populations and in all levels of organizational behavior. This course is required for admission to the Bachelor of Social Work (BSW) program. Offered as AAST 3317, SOCW 3307 and MAS 3319; credit will be granted in only one department.

AAST 3319. U.S. IMMIGRATION POLICY AND THE AMERICAN DREAM. 3 Hours.
This course focuses on diverse ethnic and racial identities in America through the examination of immigration to the United States, past and present, and the evolution of U.S. immigration policy. Topics include U.S. attitudes and policy responses to European, Asian, and Latin American immigration and to the incorporation of the descendants of African slaves and Native Americans. Emphasis on the decline of the melting pot idea and the incorporation of recent immigrants. Offered as MAS 3320, AAST 3319, and SOCW 3320. Credit will be granted only once.

AAST 3320. BLACK WOMEN IN SOCIETY. 3 Hours.
Course provides an overview of historical and current issues facing African American women. Topics include racism, sexism, political involvement, education, religion, family, and comparisons with the experiences of black men.

AAST 3321. THE LATINA EXPERIENCE. 3 Hours.
A course on the social, cultural, and economic experiences of Latina and Latin American origin women in the United States. Offered as MAS 3314, SOCI 3314, SOCW 3314, GWSS 3314, and AAST 3321. Credit will be granted in only one department.

AAST 3322. AFRICAN AMERICAN HISTORY TO 1863. 3 Hours.
History of blacks in America from their African origins to 1863. Emphasis on early African society, American slavery, and the development of black institutions and culture in the U.S. Offered as AAST 3322 and HIST 3322; credit will be granted in only one department.

AAST 3323. AFRICAN AMERICAN HISTORY SINCE EMANCIPATION. 3 Hours.
Emphasis on the transition from slavery to freedom and the political, social, and economic status of blacks in the late 19th century, 20th century black institutions and culture, and the evolution of the civil rights movements. Offered as AAST 3323 and HIST 3323; credit will be granted in only one department.

AAST 3328. RACE, REPRESENTATION, AND THE MOVIES. 3 Hours.
This course examines the history of race and representation among black Americans in the United States through films, short clips, and documentaries. Offered as HIST 3328 and AAST 3328; credit will be granted only once.

AAST 3329. CONTEMPORARY AFRICAN CULTURES. 3 Hours.
A comparative study of African communities with an emphasis on sub-Saharan Africa. Covers regional cultural geography and history as well as ethnography of specific communities. Explores both the challenges facing contemporary African nations as well as emerging solutions. Includes exposure to African art, literature, music, cinema, and food. Offered as AAST 3329 and ANTH 3329; credit will be granted in only one department.

AAST 3330. CULTURAL DIVERSITY AND IDENTITY. 3 Hours.
The ways identity is constructed in contemporary societies in an increasingly complex and multicultural world. Ethnic, racial, gender, and class identities. How and when identity is asserted and assigned, and how it can both draw boundaries and forge ties between peoples. Formerly listed as ANTH 2350. Credit cannot be given for both ANTH 2350 and ANTH 3330. Also listed as MAS 3330; credit cannot be granted for both ANTH 3330 and MAS 3330. Offered as AAST 3330 and ANTH 3330; credit will be granted in only one department.

AAST 3332. COMPARATIVE KINSHIP AND FAMILY SYSTEMS. 3 Hours.
Variation in kinship and family systems from crosscultural and evolutionary perspectives. Structure, function, and dynamics of kinship and family systems as adaptations to diverse ecological, social, and historical circumstances. Implications of this approach for understanding kinship and family in American society also addressed. Formerly listed as ANTH 4338. Credit cannot be given for both ANTH 3338 and ANTH 4338. Also offered as GWSS 3338; credit will be granted only once. Offered as AAST 3332 and ANTH 3338; credit will be granted in only one department.

AAST 3336. SOCIAL INEQUALITY. 3 Hours.
Examines the processes, characteristics, and consequences of social inequality in society. Topics include the social class structure, status groups, and elite power structure as they influence people's life chances. Offered as AAST 3336 and SOCI 3336; credit will be granted in only one department.

AAST 3337. RACIAL & ETHNIC GROUPS IN US. 3 Hours.
Compares the immigration, acculturation, and adjustment processes of various racial/ethnic groups in the U.S. Examines historical and contemporary discrimination in relation to the social conditions of racial/ethnic minority groups in the U. S. Topics include classical and contemporary theory; individualistic, cultural, and structural arguments about social arrangements; and conflict among majority and minority groups. Offered as AAST 3337, MAS 3337, and SOCI 3337; credit will be granted in only one department. Credit will not be granted for both SOCI 3337 and SOCI 4310 or for MAS 3337 and MAS 4310.

AAST 3338. CONTEMPORARY BLACK EXPERIENCE. 3 Hours.
An overview of recent research concerning the African American experience in the post-civil rights era. Topics include explanations for racial differences across spheres of society such as income, education, and occupation; the debate over race versus social class; the persistence of racial discrimination; and emerging disputes within the black community regarding "what it means to be black." Offered as AAST 3338 and SOCI 3338; credit will be granted in only one department.

AAST 3339. RACE, SPORT AND MEDIA. 3 Hours.
The media, including television, film, print, audio, and online outlets, influence how we view the world. This course analyzes overt, subtle and subliminal messages about culture, race, ethnicity, and sport as presented to us through various forms of the media. Through examinations of media portrayals of race, both past and present, students will analyze media artifacts, identify recurring themes, and examine research focused on the societal effects of stereotypical media portrayals. Offered as AAST 3339 and SOCI 3339; credit will be granted in only one department.

AAST 3341. THE OLD SOUTH, 1607-1863. 3 Hours.
Colonial origins of plantation agriculture, slavery, economics, King Cotton, politics and secession. Other topics include slave cultures, religion, slave insurrections, plantation lifestyle, honor, dueling and southern belles. Offered as AAST 3341 and HIST 3342; credit will be granted in only one department.

AAST 3342. RELIGION IN MODERN AMERICA. 3 Hours.
This course provides an overview of the scientific study of religion from a sociological perspective. The focus is on theories, research and trends relevant to religion in the contemporary United States. Topics include, but are not limited to, religious traditions, practices, and beliefs; declining religious participation; and religion and social change. The relationship between religion, politics, race relations, sex and gender will also be examined. Offered as SOCI 3343 and AAST 3342; credit will be granted in only one department.

AAST 3343. THE NEW SOUTH, 1863-PRESENT. 3 Hours.
From military defeat to Sun Belt growth. Topics include Reconstruction, segregation, migration of Southerners to the North and West, depressions, reforms, Civil Rights, Moral Majority, cultural expressions in literature and music. Offered as AAST 3343 and HIST 3343; credit will be granted in only one department.

AAST 3344. SOCIOLOGY OF THE 1960S. 3 Hours.
This course presents a sociological analysis of the sixties, stressing the connection between grassroots mobilization and large structures of power, war, race and gender. The legacy of the sixties is examined through stories told by and about activists of the period. Parallels between the sixties and the present are identified. Movements covered may include civil rights, black power, anti-war and women's rights. Offered as AAST 3344 and SOCI 3345; credit will be granted in only one department.

AAST 3345. AFRICAN-AMERICAN LITERATURE. 3 Hours.
Examines African-American literature in its various traditions, forms, and cultural and historical contexts. Offered as AAST 3345 and ENGL 3345; credit will be granted in only one department. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

AAST 3347. TOPICS IN MULTICULTURAL AMERICAN LITERATURES. 3 Hours.
Focuses on literature produced within one or more ethnic communities in the U.S. in order to trace a theme or to explore issues such as intersectionality, hybridity/mestizaje, diaspora, or immigrant experiences. Topics may include Afro-Latino poetry, third-world feminist writing, multicultural literature of the Southwest, cultural memory and the Jewish literary tradition, or Asian-American fiction. Offered as ENGL 3347, AAST 3347, and MAS 3347; credit will be granted in only one department, and credit for MAS 3347 will be granted only once. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

AAST 3350. BLACK POLITICAL AND SOCIAL THOUGHT. 3 Hours.
Course examines goals, viewpoints, and strategies of African American political and social movements. Topics include Black Nationalism, Inter-racial Integration, tensions between major historic leaders, reparations, the emergence of "race-neutral" politicians, and changing commitments to liberal and conservative causes.

AAST 3353. SOCIAL CLIMATE OF CITIES. 3 Hours.
A comparative study of urban communities and metropolitan areas in terms of their distinctive social life and culture. Topics touching on power and urban politics, race and ethnic relations, poverty, and leisure and lifestyles will be examined in terms of their contribution to the unique social climate of cities. Offered as AAST 3353 and SOCI 3353; credit will be granted in only one department.

AAST 3373. ARCHAEOLOGY OF EGYPT. 3 Hours.
The culture of ancient Egypt from its earliest occupation until the Arab invasion (7th century A.C.), with emphasis on the first 20 pharaonic dynasties (third and second millennia B.C.). Egyptian social, religious, economic and political development traced through the surviving material culture (architecture, art, industries, artifacts of daily life, funerary remains, etc.) supplemented by historical and literary evidence as pertinent. Egypt's relations with neighboring regions (Crete, Anatolia, Palestine, Nubia and Libya) considered. Offered as AAST 3373 and ANTH 3373; credit will be granted in only one department.

AAST 3378. HISTORY OF THE CARIBBEAN. 3 Hours.
A comparative history of the different societies in the Caribbean (including Cuba, Jamaica, and Haiti) with emphasis on the coming of slavery and the consequences of emancipation. Traces the development of emerging new societies from intermingling of Amerindian, African and European elements. Offered as AAST 3378 and HIST 3378; credit will be granted in only one department.

AAST 3380. RACE, CRIME, AND JUSTICE. 3 Hours.
An examination of race in the context of the criminal justice system. Emphasis is on social construction of crime; and the treatment of racial minorities as victims and offenders by law enforcement, courts, and corrections. Offered as CRCJ 3380 and MAS 3380; credit will be granted only once. Offered as AAST 3380 and CRCJ 3380; credit will be granted in only one department. Prerequisite: CRCJ 2334.

AAST 3385. AFRICAN HISTORY I. 3 Hours.
Examines African prehistory, ancient civilizations, religion, gender issues, slavery, and commerce in precolonial Africa. Offered as AAST 3385 and HIST 3385; credit will be granted in only one department.

AAST 3386. AFRICAN HISTORY II. 3 Hours.
Africa from the "Scramble for Africa" through the establishment of the various colonial systems, through the beginnings of African nationalism, to the contemporary period. The African Revolution and the development of the independent African states. Offered as AAST 3386 and HIST 3386; credit will be granted in only one department.

AAST 4317. ETHNIC GROUP POLITICS IN THE UNITED STATES. 3 Hours.
The influence of selected major ethnic groups with special attention given to organizational development, participation in political parties, leadership, ideology, immigration policy, current issues, and relations with the dominant culture and other ethnic groups. Offered as AAST 4317 and POLS 4317; credit will be granted in only one department. Prerequisite: POLS 2311 and POLS 2312.

AAST 4318. POLITICS OF AFRICAN AMERICANS. 3 Hours.
The influence of African-American politics on United States government and policies with special attention given to organizational development, participation in political parties, leadership, ideology, the Civil Rights movement, current issues, and relations with other ethnic groups. Offered as AAST 4318 and POLS 4318; credit will be granted in only one department. Prerequisite: POLS 2311 and POLS 2312.

AAST 4325. HISTORY OF HIP HOP. 3 Hours.
Focused study of the origins and development of Hip Hop as an artistic genre and political and cultural movement. Topics include deejaying, emceeing, sampling and other musical techniques as well as issues of ethnic and other identities, commercialism, capitalism, cultural appropriation, and authenticity. Offered as HIST 4325 and AAST 4325; credit will be granted only once.

AAST 4326. DIVERSITY IN ORGANIZATIONS. 3 Hours.
This course examines the implications of employee diversity in organizations, an issue of increasing importance. It includes study of the changing demographics of workers, including multiple demographic groups and areas of difference important to organizational treatment and outcomes. This course examines research on treatment, access, and customer discrimination. Legislation related to diversity is also reviewed. This course also provides suggestions for individuals and organizations to increase opportunities and outcomes for workers of all backgrounds. Offered as MANA 4326, AAST 4326 and GWSS 4326; credit will be granted in only one department. Prerequisite: Junior standing.

AAST 4331. RACE, ETHNICITY & FAMILY FORMATION. 3 Hours.
Investigates the ways in which cultural understandings of race and ethnicity have shaped historical and contemporary variations in family structure, familial experiences, and the legal possibilities for family formation. Junior standing (60 hours) or permission of the instructor required to enroll in this course. Offered as AAST 4331 and SOCI 4331; credit will be granted in only one department.

AAST 4333. COMPARATIVE CIVIL RIGHTS HISTORY. 3 Hours.
Explores the U.S. civil rights movement from a comparative perspective, exploring the African American civil rights movement, Chicano movement, women's liberation movement, gay liberation, and disability rights movement. Offered as AAST 4333 and HIST 4333; credit will be granted in only one department.

AAST 4339. TOPICS IN AFRICAN-AMERICAN LITERATURE. 3 Hours.
Concentrates on a topic or theme within the canon of African-American literature, such as a particular genre or era, significant authors, or a philosophical movement. Examples include the Harlem Renaissance, the Civil-Rights/Black-Power era, African-American autobiography, short fiction, and Afrofuturism. Offered as AAST 4339 and ENGL 4339; credit will be granted in only one department. May be repeated for credit as course content changes. Prerequisite: English majors must have earned a C or better in ENGL 3350 and in one literature survey course (ENGL 3340, ENGL 3341, ENGL 3351, ENGL 3352, ENGL 3361, or ENGL 3362). Non-majors must have earned a C or better in 3 hours of sophomore literature (ENGL 2303, ENGL 2309, ENGL 2319, ENGL 2329).

AAST 4341. INEQUALITIES IN PUBLIC EDUCATION. 3 Hours.
This course examines the manner in which race, ethnicity, and class affect the quality of education in the public schools. Topics include the resegregation of schools, class and race based achievement and funding gaps, and the role the schools play in reproducing inequality. This course has a service learning component and requires volunteering in programs designed to reduce inequality in the schools. Offered as AAST 4341 and SOCI 4341; credit will be granted in only one department.

AAST 4342. TOPICS IN CULTURAL ANTHROPOLOGY. 3 Hours.
Selected topics, to include anthropological theory, population and cultural ecology, semiotics, and humanistic anthropology. May be repeated for credit with departmental permission. Also offered as ANTH 4342. Credit will be granted in only one department.

AAST 4350. SPECIAL TOPICS IN AFRICAN AMERICAN STUDIES. 3 Hours.
Special topics related to African American studies. May be repeated for credit when the topic changes.

AAST 4376. AFRICAN DIASPORA I. 3 Hours.
The major developments which have shaped the history of Africans and their descendants in the Atlantic, Mediterranean, and Indian Ocean areas from the earliest times to 1800. Emphasis on the comparative history of Black Diasporic communities; linkages between Africans and their descendants in the Diaspora. Offered as AAST 4376 and HIST 4376; credit will be granted in only one department.

AAST 4377. AFRICAN DIASPORA II. 3 Hours.
The major developments which have shaped the history of Africans and their descendants in Latin America, the Caribbean, and North America since 1800. Emphasis on the comparative history of Black Diasporic communities; linkages between Africans and their descendants in the Atlantic Diaspora. Offered as AAST 4377 and HIST 4377; credit will be granted in only one department.

AAST 4378. WEST AFRICA AND THE ATLANTIC DIASPORA. 3 Hours.
This course examines the history of West Africa and how this region was integrated into the Atlantic world through the Atlantic slave trade. The course adopts an interdisciplinary approach that integrates traditional classroom instruction with field-based learning in West Africa. This learning method, combined with cultural immersion, challenges students to develop their academic and cross-cultural knowledge and skills. Offered as AAST 4378 and HIST 4378; credit will be granted in only one department.

AAST 4391. CONFERENCE COURSE. 3 Hours.
Directed independent study for the advanced undergraduate. A close examination of a chosen topic through research and/or reading; format designed by instructor and student. May be repeated for a maximum six credit hours when the subject matter varies. Prerequisite: Departmental permission.

AAST 4399. CAPSTONE AFRICAN AMERICAN STUDIES. 3 Hours.
In consultation with the course instructor, students will design a research project or an internship that will integrate their previous course work into a capstone experience in either the applied or the cultural studies stream of the African American Studies minor. Prerequisite: AAST 2300 and departmental permission.

AAST 6391. CONFERENCE COURSE. 3 Hours.
Directed independent study for a masters-level or doctoral student. A close examination of a chosen topic through research and/or reading; format designed by instructor and student. May be repeated for maximum six credit hours when the subject matter varies. Prerequisite: Permission from CAAS Director.

COURSES

ACCT 2301. PRINCIPLES OF ACCOUNTING I. 3 Hours. (TCCN = ACCT 2301)
The accounting process and its informational output. Financial accounting concepts, basic procedures, and the resulting reports. Recognition and creation of accounting information as bases for decisions. An accounting lab is required. The grade for this course requires the completion of both the lecture component and the accounting lab. Prerequisite: 30 credit hours or permission of the department.

ACCT 2302. PRINCIPLES OF ACCOUNTING II. 3 Hours. (TCCN = ACCT 2302)
A study of managerial accounting concepts and techniques. Topics include cost behavior, budgeting, responsibility accounting, and product costing. An accounting lab is required. The grade for this course requires the completion of both the lecture component and the accounting lab. Prerequisite: ACCT 2301 with a grade of C or higher.

ACCT 2303. ACCOUNTING AND COMPLIANCE OF NON-PROFIT ORGANIZATIONS. 3 Hours.
The primary objective of this course is to help students understand accounting theories and compliance issues that relate to non-profit and philanthropic organizations. The course introduces students to general accounting theories, budgeting, internal control, fraud, and compliance issues of non-profit organizations. Restriction: Students enrolled in this course cannot be accounting majors. Prerequisite: Students enrolled in this course cannot be accounting majors, 30 credit hours.

ACCT 3133. PROFESSIONALISM IN ACCOUNTING. 1 Hour.
Topics to engender a stronger sense of professionalism: business and social etiquette, self-assessment, professional deportment, networking, effective communication skills, and dressing professionally. Topics primarily presented by accomplished professionals from public accounting, industry, and government. Prerequisites: Accounting major and ACCT 3311, can be taken concurrently.

ACCT 3303. INTRODUCTION TO ACCOUNTING INFORMATION SYSTEMS. 3 Hours.
The structure of contemporary accounting systems with emphasis on controls, auditing, reporting, and efficient operation. Prerequisite: ACCT 2302 and INSY 2303 with grades of C or higher.

ACCT 3308. FINANCIAL STATEMENT ANALYSIS FOR BANKING. 3 Hours.
The environment of accounting, development of standards, basic theory, financial statements, worksheets with a particular focus on the application of accounting topics of Intermediate Accounting to banking institutions. Prerequisite: ACCT 2301 with a grade of C or higher. Credit will not be received for both ACCT 3311 and ACCT 3308.

ACCT 3309. ACCOUNTING FOR MANAGERS. 3 Hours.
Planning, controlling, decision making, and performance evaluation. Uses a variety of teaching techniques (e.g., problems, cases, and projects) and is open only to non-accounting majors. Credit will not be given for both this course and ACCT 4302. Prerequisite: ACCT 2302 with a grade of C or higher.

ACCT 3311. FINANCIAL ACCOUNTING I. 3 Hours.
The environment of accounting, development of standards, basic theory, financial statements, worksheets, annuities and present value, receivables, inventories, liabilities, plant assets, depreciation and depletion, and intangible assets. Prerequisite: ACCT 2301 with a grade of C or higher and successful completion of basic accounting skills exam. (See the departmental website for details about the exam.).

ACCT 3312. FINANCIAL ACCOUNTING II. 3 Hours.
Stockholders' equity, earnings per share, investments in bonds and stocks, equity method, revenue recognition, accounting changes, error analysis, income taxes, leases, and cash flows. Prerequisite: ACCT 3311 with a grade of C or higher.

ACCT 3315. PRINCIPLES OF FEDERAL INCOME TAX. 3 Hours.
A study of general federal income tax principles such as income, deductions, losses, and property transactions. Emphasis is placed on the taxation of individuals as well as on an understanding of property transactions which apply to individuals and other entities. Prerequisite: Accounting major with junior standing and ACCT 3311 with a grade of C or higher.

ACCT 3316. DATA ANALYTICS FOR ACCOUNTING. 3 Hours.
Businesses use data analytics to evaluate organizational data and improve business decisions. The ability to collect, analyze, and use data to provide information for better decisions is a critical skill for accounting professionals. This course will introduce students to the growing role of analytics to answer business questions. Students will analyze data to solve problems frequently encountered in accounting. This course will also introduce students to basic statistical techniques used to analyze specific accounting related business problems. Prerequisite: ACCT 2302 with a C or better.

ACCT 4191. STUDIES IN ACCOUNTING. 1 Hour.
Advanced studies, on an individual basis, in the various fields of accounting. Prerequisite: Senior standing and permission of instructor. May be repeated for credit with consent of department chair.

ACCT 4193. ACCOUNTING INTERNSHIP. 1 Hour.
Practical training in accounting. Analysis of theory applied to real life situations. Graded on a pass/fail basis. No credit will be given for previous experience or activities. Prerequisite: ACCT 4393 and accounting major with junior standing and consent of department internship advisor.

ACCT 4291. STUDIES IN ACCOUNTING. 2 Hours.
Advanced studies, on an individual basis, in the various fields of accounting. Prerequisite: Senior standing and permission of instructor. May be repeated for credit with consent of department chair.

ACCT 4302. COST ANALYSIS AND DECISION MAKING. 3 Hours.
This course will cover advanced cost analysis concepts including Cost-Volume-Profit analysis, cost-benefit analysis, product and service costing, pricing and budgeting. Class discussions will integrate concepts and applications of cost analysis with corporate practice through use of analytical problem solving, real world examples and case analyses. Prerequisite: Accounting major with 60 credit hours and ACCT 3303 with a grade of C or higher.

ACCT 4304. MANAGEMENT PLANNING AND CONTROL. 3 Hours.
This course covers intermediate and advanced concepts in decentralization and management control, including budgetary control, performance measurement and incentive structures, and transfer pricing. Class discussions will integrate concepts and applications of control with corporate practice through use of analytical problem solving, real world examples and case analyses. Prerequisite: Accounting major with junior standing and ACCT 4302 with a grade of C or higher.

ACCT 4318. AUDITING. 3 Hours.
Principles, concepts, and techniques which are appropriate to the acquisition, evaluation, and documentation of audit evidence. Internal control concepts, financial compliance, and operational auditing. Prerequisite: Accounting major with junior standing and ACCT 3303 and ACCT 3312 with grades of C or higher.

ACCT 4319. FINANCIAL ACCOUNTING III. 3 Hours.
Accounting for business combinations, preparation of consolidated financial statements, multinational operations, and partnerships. Prerequisite: ACCT 3312 with a C or higher.

ACCT 4323. CORPORATE SUSTAINABILITY REPORTING. 3 Hours.
This course examines current trends in corporate sustainability reporting by business organizations. Topics include stakeholders, voluntary reporting frameworks, mandatory reporting standards, climate risk disclosures, sustainability ratings, and assurance. Student learning will be enhanced with in-class discussions, guest speaker visits, and assignments that require critical thinking, written communication, and oral communication. Prerequisite: Junior standing.

ACCT 4325. GOVERNMENTAL ACCOUNTING. 3 Hours.
Budgeting, accounting, and financial reporting for local governmental units, hospitals, voluntary health and welfare organizations, and other nonprofit entities. Prerequisite: Accounting major with junior standing and ACCT 3312 with a grade of C or higher.

ACCT 4331. SEMINAR IN ACCOUNTING. 3 Hours.
Readings and discussions of special topics in accounting. Prerequisite: Junior or senior standing and consent of instructor. May be repeated for credit with consent of department chair.

ACCT 4332. INTERNAL AUDITING I. 3 Hours.
A comprehensive study of internal auditing standards, ethics, concepts, audit techniques, and reporting practices. Prerequisite: Accounting major with junior standing and ACCT 3303 with a grade of C or higher or consent of the instructor.

ACCT 4333. INTERNAL AUDITING II. 3 Hours.
An advance study of operational, organizational, and quality control audits. Topics will include operational audit methodology, audits of administrative and support services, audits of line functions, and audits of special areas. Prerequisite: Accounting major with junior standing and ACCT 4332 with a grade of C or higher and a 3.0 GPA.

ACCT 4340. STUDY OF FEDERAL INCOME TAX FOR ENTITIES OTHER THAN INDIVIDUALS. 3 Hours.
Comprehensive analysis of the federal income tax consequences applicable to entities other than individuals. Analysis of the relevant tax principles of corporations, partnerships, trusts and estates will be undertaken. Cannot be taken for credit within the 36-hour program requirements for Master of Science in Taxation program. Prerequisite: ACCT 3315 with a C or higher.

ACCT 4380. ETHICS IN ACCOUNTING. 3 Hours.
This course is intended to introduce students to ethical reasoning, integrity, objectivity, independence, professionalism and other core values. The course incorporates the essentials of professional responsibilities, including elements of trust and communications with clients and other professionals. Both ethical principles and rules are considered. This course is intended to satisfy conditions of the Texas State Board of Public Accountancy that require candidates for the CPA Exam to have completed an approved ethics course. Accounting majors may take this course as a business elective, but may not count this course as an accounting elective nor include it in the calculation of their accounting GPA. Prerequisite: ACCT 3312 with a grade of C or higher.

ACCT 4391. STUDIES IN ACCOUNTING. 3 Hours.
Advanced studies, on an individual basis, in the various fields of accounting. Prerequisite: Senior standing and permission of instructor. May be repeated for credit with consent of department chair.

ACCT 4393. ACCOUNTING INTERNSHIP. 3 Hours.
Practical training in accounting. Analysis of theory applied to real life situations. May be used as an advanced business elective only; graded on a pass/fail basis. No credit will be given for previous experience or activities. Prerequisite: Accounting major with junior standing and consent of department internship advisor.

ACCT 5133. PROFESSIONALISM IN ACCOUNTING. 1 Hour.
Topics to engender a stronger sense of professionalism: business and social etiquette, self-assessment, professional deportment, networking, effective communication skills, and dressing professionally. Topics primarily presented by accomplished professionals from public accounting, industry, and government. Prerequisite: ACCT 5311 with a grade of C or higher or acceptance in the PPIA .

ACCT 5199. GRADUATE ACCOUNTING INTERNSHIP. 1 Hour.
Practical training in accounting. Analysis of theory applied to real life situations. Course counts as an elective and has a pass/fail grade. No credit will be given for previous experience or activities. Prerequisite: Minimum twelve accounting semester hours beyond principles completed or with approval of the internship coordinator.

ACCT 5299. GRADUATE ACCOUNTING INTERNSHIP. 2 Hours.
Practical training in accounting. Analysis of theory applied to real life situations. Course counts as an elective and has a pass/fail grade. No credit will be given for previous experience or activities. Prerequisite: Minimum twelve accounting semester hours beyond principles completed or with approval of the internship coordinator.

ACCT 5301. ACCOUNTING ANALYSIS I. 3 Hours.
Introduction to concepts, purposes, problems, methodology, and terminology of financial accounting.

ACCT 5302. ACCOUNTING ANALYSIS II. 3 Hours.
Introduction to concepts, purposes, problems, methodology, and terminology of managerial accounting. Prerequisite: ACCT 5301 with a grade of C or higher.

ACCT 5307. MEASUREMENT AND ANALYSIS FOR BUSINESS DECISION-MAKING. 3 Hours.
This course provides students with a comprehensive overview of financial reporting, analysis and measurement issues in the context of business decision making. Student will gain an understanding of financial statements and their underlying measurements. They will then use this understanding to conduct analyses using financial ratios. Students will then explore the role of cost measurements, allocations, etc. in determining the performance measures of parts of the organization and their inter-relationship with both choosing and evaluating strategies in various business contexts. They will cover issues such as matching strategies to performance measures, choosing and evaluating key performance indicators and balanced scorecards, etc.

ACCT 5311. FINANCIAL ACCOUNTING I. 3 Hours.
Examination of financial accounting process, problems encountered in preparation of financial statements, and concepts and principles used to resolve these problems. Prerequisite: ACCT 5301 with a grade of C or higher.

ACCT 5312. FINANCIAL ACCOUNTING II. 3 Hours.
Study of additional problems encountered in preparation of financial statements. Prerequisite: ACCT 5311 with a grade of C of higher.

ACCT 5313. SOFTWARE TOOLS. 3 Hours.
An in-depth study of software that would likely be used by accountants and other business people. May include spreadsheet, database, and accounting software, tax software, and other types of tools such as XBRL and XML. Prerequisite: ACCT 5302 with a grade of C or higher.

ACCT 5314. PRINCIPLES OF FEDERAL INCOME TAX. 3 Hours.
A study of general federal income tax principles such as income, deductions, losses and property transactions. The principles of individual taxation will be covered as well as an overview of tax considerations for entities such as corporations and partnerships. Prerequisite: ACCT 5301 with a grade of C or higher.

ACCT 5315. ACCOUNTING SYSTEMS ANALYSIS. 3 Hours.
Analysis and design of business information processes. Includes coverage of control concepts, audit trails, and the uses of information technology. Emphasis on the role of accounting in collecting, storing, and communicating information for management planning and control. Prerequisite: ACCT 5302 with a grade of C or higher.

ACCT 5316. AUDITING CONCEPTS AND PRACTICES. 3 Hours.
Concentrates on practice of professional accounting and auditing. Emphasizes decision making in a variety of unstructured situations where decisions demand a grasp of purpose, method, and judgment for their resolution. May not be taken for credit by students who have received credit for a course in auditing. Prerequisite: ACCT 5312 and ACCT 5315 with grades of C or higher.

ACCT 5317. COST ANALYSIS AND DECISION MAKING. 3 Hours.
The course will cover advanced cost analysis concepts including Cost-Volume-Profit analysis, cost-benefit analysis, product and service costing, pricing and budgeting. Class discussions will integrate concepts and applications of cost analysis with corporate practice through use of analytical problem solving, real world examples and case analyses. Prerequisite: ACCT 5302 with a grade of C or higher.

ACCT 5318. STUDIES IN AUDITING. 3 Hours.
A critical analysis of advanced topics in both auditing theory and professional practice. Emphasis on: development of auditing theory, generally accepted auditing standards, professional responsibilities, auditing EDP, SEC practice and reporting, cases in audit decision making, and analyses of emerging issues and contemporary problems in auditing. Prerequisite: ACCT 5316 with a grade of C or higher.

ACCT 5319. FINANCIAL ACCOUNTING III. 3 Hours.
Accounting for business combinations, preparation of consolidated financial statements, multinational operations, partnerships, and estates and trusts. Prerequisite: ACCT 5312 with a grade of C or higher.

ACCT 5320. GOVERNMENTAL AND NONPROFIT ACCOUNTING. 3 Hours.
Budgeting, accounting and financial reporting, managerial control, and auditing considerations of governmental and nonprofit entities. Prerequisite: ACCT 5312 with a grade of C or higher.

ACCT 5321. RESEARCH IN ACCOUNTING ISSUES. 3 Hours.
Designed to improve student's ability to research complex areas in accounting and to sharpen understanding and application of accounting concepts and principles. Case studies and problems considered and analyzed. Prerequisite: Excel certification and ACCT 5312 with a grade of C or better.

ACCT 5322. ACCOUNTING FOR MANAGEMENT PLANNING AND CONTROL. 3 Hours.
This course covers intermediate and advanced concepts in decentralization and management control, including budgetary control, performance measurement and incentive structures, and transfer pricing. Class discussions will integrate concepts and applications of control with corporate practice through use of analytical problem solving, real world examples and case analyses. May not be taken for credit by students who previously received credit for ACCT 4302 (before Fall 2020) or ACCT 4304 (after Fall 2020) or equivalent. Prerequisite: ACCT 5317 with grade of C or higher.

ACCT 5323. CORPORATE SUSTAINABILITY REPORTING. 3 Hours.
This course examines current trends in corporate sustainability reporting by business organizations. Topics include stakeholders, voluntary reporting frameworks, mandatory reporting standards, climate risk disclosures, sustainability ratings, and assurance. Student learning will be enhanced with in-class discussions, guest speaker visits, and assignments that require critical thinking, written communication, and oral communication.

ACCT 5324. FINANCIAL STATEMENT ANALYTICS AND BUSINESS VALUATION. 3 Hours.
This course covers the use of financial data to analyze business performance. Students will develop an understanding of financial data, how to evaluate a firm's strategy and risk factors, how to analyze and forecast financial statements, and techniques to value a business's equity. Students implement these lessons through the use of case studies involving data analytics. Prerequisite: ACCT 5307 or equivalent course with a grade of B or higher.

ACCT 5327. CONTEMPORARY ISSUES IN ACCOUNTING THEORY. 3 Hours.
Designed to familiarize students with significant problems currently facing the accounting profession, to examine in depth various solutions proposed by accounting scholars and others, and to strengthen student understanding of today's critical issues in accounting theory. Prerequisite: ACCT 5312 with a grade of C or higher.

ACCT 5329. ADVANCED ACCOUNTING INFORMATION SYSTEMS AND ANALYTICS. 3 Hours.
An exploration of advanced topics critical to accounting information systems. The course is designed to enhance student understanding of complex and emerging issues and technologies related to reporting, internal controls, system security and effectiveness. Topics may change semester to semester. Prerequisite: ACCT 5315 with a grade of C or higher.

ACCT 5330. INTERNATIONAL ACCOUNTING AND FINANCIAL REPORTING. 3 Hours.
Financial accounting and reporting principles and practices in various countries, the role of accounting in economic development, as well as the accounting considerations in international business operations -- e.g. foreign currency translation, auditing, accounting systems, taxation, and sensitive payments. Prerequisite: ACCT 5302 with a grade of C or higher.

ACCT 5332. OPERATIONAL AUDITING. 3 Hours.
A study of operational audit methodology for management audits. Audits of administrative and support functions, and other special areas such as fraud audits. Prerequisite: Graduate standing and six hours of accounting with grades of C or higher.

ACCT 5335. ACCOUNTING ANALYTICS. 3 Hours.
The analysis of data as it pertains to accounting professionals. Focuses on analytical techniques and the skills necessary to translate accounting information into actionable proposals that can be presented to decision makers in areas such as auditing, risk management, forensics, predictive modeling and strategic planning. Prerequisite: Business statistics, ACCT 5315 and ACCT 5316 with a grade of C or higher or consent of instructor.

ACCT 5339. TAX PLANNING AND RESEARCH. 3 Hours.
A study of the use of various techniques and procedures available in evaluating issues arising under federal income tax law. Emphasizes research into individual and business tax problems and planning alternatives. Prerequisite: ACCT 5314 with a grade of C or higher.

ACCT 5340. STUDY OF FEDERAL INCOME TAX FOR ENTITIES OTHER THAN INDIVIDUALS. 3 Hours.
Comprehensive analysis of the federal income tax consequences applicable to entities other than individuals. Analysis of the relevant tax principles of corporations, partnerships, trusts and estates will be undertaken. Cannot be taken for credit within the 36-hour program requirements for Master of Science in Taxation program. Prerequisite: ACCT 5314 with a grade of C or higher.

ACCT 5341. TAXATION OF PASSTHROUGH ENTITIES. 3 Hours.
Analysis of the federal income tax rules governing passthrough entities. Credit will not be received for both ACCT 5340 and ACCT 5341. Prerequisite: ACCT 5339 with grade of C or higher.

ACCT 5342. TAX PROBLEMS OF CORPORATIONS AND SHAREHOLDERS. 3 Hours.
Analysis of the federal income tax rules governing corporations and shareholders. Subjects include corporate formations, corporate capital structure, administrative requirements affecting corporations, the corporate alternative minimum tax, special tax provisions (such as the personal holding company and accumulated earnings taxes and the collapsible corporation rules), nonliquidating distributions, stock dividends, redemptions and partial liquidations, liquidating distributions, corporate reorganizations, and Subchapter S corporations. Credit will not be received for both ACCT 5340 and ACCT 5342. Prerequisite: Excel certification and ACCT 5339 with grade of C or higher.

ACCT 5343. TAX PROBLEMS OF TRANSACTIONS IN REAL ESTATE. 3 Hours.
Problems and elections relating to the acquisition, holding, and disposition of real property. Subjects include means of acquisition and disposition, capital gains and losses, deferred payment sales, organization of syndicates, sale and leaseback, dissolutions, and general tax-saving methods. Prerequisite: ACCT 5339 with grade of C or higher.

ACCT 5345. STATE AND LOCAL TAXATION. 3 Hours.
Introduction to the principles and practices of state and local taxation. Topics considered in the course include the application of both inter- and intra-state taxation, allocation and apportionment principles and issues in relation to the predominant forms of state taxes, such as franchise, sales, use, income, ad valorem, and property tax. Prerequisite: ACCT 5339 with grade of C or higher.

ACCT 5346. TAX PRACTICE AND PROCEDURE. 3 Hours.
This course overviews the procedural aspects of dealing with the Internal Revenue Service. The focus is from the private practitioner's perspective in assisting clients in navigating the Service's administrative requirements. Topics include administrative organization of the Service, tax audits, the use of Service administrative summonses, statutes of limitation, penalties, interest charges, civil and criminal procedures and appeals. Prerequisite: ACCT 5339 with grade of C or higher.

ACCT 5347. FEDERAL TAXATION OF GIFTS AND ESTATES. 3 Hours.
A comprehensive survey of the principles and procedures involved in determining the federal estate tax and the supplementary federal gift tax including taxability and valuation of property and the determination of deductions and credits. Prerequisite: ACCT 5339 with grade of C or higher.

ACCT 5352. INFORMATION SYSTEMS AUDIT AND CONTROL. 3 Hours.
A study of modern approaches to the audit and control of business information systems. Prerequisite: ACCT 5315 and ACCT 5316 with grades of C or higher.

ACCT 5353. STATISTICAL TECHNIQUES USED IN ACCOUNTING. 3 Hours.
A study of statistical techniques used in accounting. Topics include alternative sample selection methods, attribute methods, mean-per-unit estimation, ratio and difference estimation, monetary unit sampling, and regression analysis. Prerequisite: STAT 5301 with a grade of C or higher.

ACCT 5366. FRAUD EXAMINATION. 3 Hours.
Analysis of fraud examiner and auditor responsibilities and current methodologies with respect to financial fraud investigation, detection, and prevention. Management's responsibilities for fraud deterrence and implementation of effective prevention measures. Identification, analysis, and examination of financial fraud using actual case studies. Prerequisite: ACCT 5316 with a grade of C or higher.

ACCT 5372. FEDERAL TAXATION OF INTERNATIONAL TRANSACTIONS. 3 Hours.
This course provides an overview of the U.S. system for taxing international transactions. Topics include U.S. jurisdictional and source-of-income rules; the foreign tax credit; anti-deferral provisions; taxation of U.S. activities of foreign persons, and issues common to both outbound and inbound activities including intercompany transfer pricing rules. Prerequisite: ACCT 5339 with grade of C or higher.

ACCT 5380. ETHICS IN ACCOUNTING. 3 Hours.
This course is intended to introduce students to ethical reasoning, integrity, objectivity, independence, professionalism and other core values. The course incorporates the essentials of professional responsibilities, including elements of trust and communications with clients and other professionals. Both ethical principles and rules are considered. This course is intended to satisfy conditions of the Texas State Board of Public Accountancy that require candidates for the CPA Exam to have completed an approved ethics course. Prerequisite: ACCT 5311 or equivalent.

ACCT 5382. INDEPENDENT STUDIES IN ACCOUNTING. 3 Hours.
Extensive analysis of an accounting topic. Prerequisite: Consent of faculty member and department chair.

ACCT 5392. SELECTED TOPICS IN ACCOUNTING. 3 Hours.
In-depth study of selected topics in accounting. May be repeated when topics vary. Prerequisite: consent of instructor.

ACCT 5398. THESIS. 3 Hours.
Thesis. Graded F, R. Prerequisite: permission of Accounting Graduate Advisor.

ACCT 5399. GRADUATE ACCOUNTING INTERNSHIP. 3 Hours.
Practical training in accounting. Analysis of theory applied to real life situations. Course counts as an elective and has a pass/fail grade. No credit will be given for previous experience or activities. Prerequisite: Minimum twelve accounting semester hours beyond principles completed or with approval of the internship coordinator.

ACCT 5698. THESIS. 6 Hours.
Thesis. Graded F, R. Prerequisite: permission of Accounting Graduate Advisor.

ACCT 6101. ACCOUNTING RESEARCH COLLOQUIUM. 1 Hour.
A forum in which visiting scholars and U.T. Arlington faculty members present and discuss results of their contemporary research. Doctoral students participate by meeting with visiting scholars, reading the research papers, providing written critiques, and discussing the papers. Doctoral students are required to enroll and attend the colloquia presentations each fall and spring semester until the students pass all their comprehensive examinations. May be repeated for credit. Prerequisite: consent of College PhD advisor.

ACCT 6309. SEMINAR IN ACCOUNTING RESEARCH I. 3 Hours.
Analysis of the theoretical and empirical literature in accounting. Prerequisite: consent of College PhD advisor.

ACCT 6310. SEMINAR IN ACCOUNTING RESEARCH II. 3 Hours.
Analysis of Theoretical and Empirical Research in Accounting.

ACCT 6311. SEMINAR IN ACCOUNTING RESEARCH III. 3 Hours.
Continuation of analysis of the theoretical and empirical literature in accounting. Prerequisite: ACCT 6310 with a grade of C or higher and consent of the College Ph.D. advisor.

ACCT 6312. SEMINAR IN ACCOUNTING RESEARCH IV. 3 Hours.
Continuation of analysis of the theoretical and empirical literature in accounting.

ACCT 6313. SEMINAR IN ACCOUNTING RESEARCH V. 3 Hours.
Seminar will cover advanced accounting research topics.

ACCT 6390. SPECIAL TOPICS IN ACCOUNTING RESEARCH. 3 Hours.
Doctoral level coverage of advanced topics in accounting. Topics may vary. Prerequisite: Approval by faculty member and doctoral program advisor.

COURSES

ADVT 2337. INTRODUCTION TO ADVERTISING. 3 Hours. (TCCN = COMM 2327)
The role of advertising in society. Basic concepts include marketing message creation, budget determination, agency-client relationships, and social responsibility of advertisers.

ADVT 3304. STRATEGIC COMMUNICATION I. 3 Hours.
Introductory strategy course focusing on creative communication in advertising and marketing communication planning. The evolution and development of the strategic creative process is evaluated relative to campaign objectives and research, especially as it impacts Integrated Marketing Communication and branding programs. Students successfully completing Strategic Communication I advance to Strategic Communication II. Prerequisite: COMM 2311, ADVT 2337, and either MATH 1308 or MATH 1309, all with a grade of C or better.

ADVT 3305. ADVERTISING MEDIA. 3 Hours.
Decision-making in selection and use of advertising media. Evaluation of media alternatives in terms of marketing communication objectives and strategy, audience analysis, media-market research, cost, and editorial/program content. Media plans are developed consistent with Integrated Marketing Communication and branding programs. Prerequisite: COMM 2311, ADVT 2337, and either MATH 1308 or MATH 1309, all with a grade of C or better.

ADVT 3306. STRATEGIC COMMUNICATION II. 3 Hours.
Advanced strategy course building on the foundation from Strategic Communication I; assumes a basic understanding of strategy and research. Advanced critiques of existing campaigns coupled with the development of strategic communication for various media, including print, broadcast, direct mail, and Internet. Persuasive presentation of strategies and executions to others as in an agency setting; includes copywriting, basic art direction, and multimedia usage. Prerequisite: ADVT 3304 with a grade of C (2.0/4.0 scale) or better, and COMM 3303.

ADVT 3308. DIGITAL ADVERTISING DESIGN. 3 Hours.
Course covers the practice of results-oriented creative advertising and design, including both visual and copy concepts through digital execution with an emphasis on strategic development. The course also focuses on advanced applications of digital software to design and communicate targeted messages utilizing communication theory and practice. Prerequisite: COMM 3303 with a grade of C (2.0/4.0 scale) or better.

ADVT 4300. DIGITAL INTEGRATED MARKETING COMMUNICATION (IMC) MANAGEMENT. 3 Hours.
Theory and management of digital integrated marketing communication. The course focuses on using digital analytics to plan and execute successful integrated strategies that reach appropriate audiences with targeted messages. Key topics include digital advertising, social media, digital media, email marketing, and search engine optimization (SEO). Prerequisite: A grade of C or better in PREL 3320.

ADVT 4301. ADVERTISING AND IMC CAMPAIGNS. 3 Hours.
Advanced study in the application of advertising and marketing communication theories. Advertising campaigns are developed consistent with Integrated Marketing Communication and branding programs. Student agency teams develop speculative advertising and IMC plans for organizations, products and/or brands. Prerequisite: A grade of C (2.0/4.0 scale) or better in the following courses: ADVT 3305, ADVT 3306, and ADVT 4300.

ADVT 4391. CONFERENCE COURSE. 3 Hours.
Topic assigned on an individual basis, covering individual research or study in the designated areas. May be repeated when topic changes. Prerequisite: 60 or more hours earned and permission of the department.

ADVT 4393. SPECIAL TOPICS. 3 Hours.
Special studies in advertising. Topic varies from semester to semester. May be repeated when topic changes, for a maximum of six credit hours. Prerequisite: 60 or more hours earned and permission of the department.

ADVT 4395. PROFESSIONAL INTERNSHIP. 3 Hours.
Individual research in advertising while working with business and industry. Individual conference to be arranged. Graded Pass/Fail. Prerequisite: 60 or more hours earned and permission of the department.

COURSES

AE 5100. PREPARATORY COURSE FOR AEROSPACE ENGINEERING. 1 Hour.
The course may be offered with multiple sections, wherein each section is paired with a corresponding UG course being offered that semester. The purpose of this course is to strengthen academic preparation of students who were found inadequately prepared for a graduate degree in Aerospace Engineering. Students can concurrently enroll in multiple sections and may need to enroll in this course multiple times until their academic preparation is deemed complete. In order to pass this class, the student has to earn at least a B grade in aggregate based on all the assignments and exams. The student will earn an R grade if the class aggregate is a C/D and will need to repeat the course until the student passes the class. The student will Fail the class if the aggregate is an F. The course may be repeated as often as required.

AE 5101. GRADUATE SEMINAR. 1 Hour.
The purpose is to acquaint graduate students with ongoing research at UTA, and outside in academia and industry. Seminars are given by graduate students of the department based on their ongoing research. Seminars are also given by external speakers from academia, industry and government.

AE 5191. ADVANCED STUDIES IN AEROSPACE ENGINEERING. 1 Hour.
Individual research or design project performed for fulfilling the requirements of the Master of Engineering degree option. Prior approval of the AE Graduate Advisor is required for enrollment. A written and/or oral report is required.

AE 5197. RESEARCH IN AEROSPACE ENGINEERING. 1 Hour.
Research in masters programs.

AE 5200. PREPARATORY COURSE FOR AEROSPACE ENGINEERING. 2 Hours.
The course may be offered with multiple sections, wherein each section is paired with a corresponding UG course being offered that semester. The purpose of this course is to strengthen academic preparation of students who were found inadequately prepared for a graduate degree in Aerospace Engineering. Students can concurrently enroll in multiple sections and may need to enroll in this course multiple times until their academic preparation is deemed complete. In order to pass this class, the student has to earn at least a B grade in aggregate based on all the assignments and exams. The student will earn an R grade if the class aggregate is a C/D and will need to repeat the course until the student passes the class. The student will Fail the class if the aggregate is an F. The course may be repeated as often as required.

AE 5291. ADVANCED STUDIES IN AEROSPACE ENGINEERING. 2 Hours.
Individual research or design project performed for fulfilling the requirements of the Master of Engineering degree option. Prior approval of the AE Graduate Advisor is required for enrollment. A written and/or oral report is required.

AE 5297. RESEARCH IN AEROSPACE ENGINEERING. 2 Hours.
Research in masters programs.

AE 5300. PREPARATORY COURSE FOR AEROSPACE ENGINEERING. 3 Hours.
The course may be offered with multiple sections, wherein each section is paired with a corresponding UG course being offered that semester. The purpose of this course is to strengthen academic preparation of students who were found inadequately prepared for a graduate degree in Aerospace Engineering. Students can concurrently enroll in multiple sections and may need to enroll in this course multiple times until their academic preparation is deemed complete. In order to pass this class, the student has to earn at least a B grade in aggregate based on all the assignments and exams. The student will earn an R grade if the class aggregate is a C/D and will need to repeat the course until the student passes the class. The student will Fail the class if the aggregate is an F. The course may be repeated as often as required.

AE 5301. ADVANCED TOPICS IN AEROSPACE ENGINEERING. 3 Hours.
To provide formal instruction in special topics pertinent to Aerospace Engineering from semester to semester depending on the availability of faculty. May be repeated for credit as provided topics change.

AE 5302. ADVANCED FLIGHT MECHANICS. 3 Hours.
Rigid body motion. Kinematics and dynamics of aerospace vehicles. Linear and nonlinear control of aircraft and spacecraft. Advanced aircraft and spacecraft modeling and control issues. Prerequisite: MAE 3405 and MAE 4310.

AE 5303. CLASSICAL METHODS OF CONTROL SYSTEMS ANALYSIS AND SYNTHESIS. 3 Hours.
Equip the student with familiarity of significant tools of the control engineer. Topics covered include controllers and their effect on system performance and stability, block diagram algebra, stability and analysis, system performance definition, root locus, frequency techniques, and state variable methods. Digital simulation tools for design and simulation of control systems. Demonstration of controller design and performance in the laboratory. Also offered as ME 5303.

AE 5305. DYNAMIC SYSTEMS MODELING. 3 Hours.
To equip the student with the capability of determining the necessary equations for distributed and lumped parameter modeling of mixed physical system types including mechanical, fluid, electrical, and thermal components. Models are formulated for computer simulation and analysis for systems with deterministic and stochastic inputs. Topics of random vibration and system identification are included. Offered as AE 5305 and ME 5305. Credit will be granted only once.

AE 5310. FINITE ELEMENT METHODS. 3 Hours.
Finite element method in the study of the static response of complex structures and of continua applications to field problems; analytical methods emphasized and digital computer application undertaken. Offered as AE 5310 and ME 5310. Credit will be granted only once.

AE 5311. STRUCTURAL DYNAMICS. 3 Hours.
Natural frequencies; forced response of complex structural systems studied through the use of the finite element method; computational aspects of these problems discussed, and digital computer applications undertaken. Offered as AE 5311 and ME 5311. Credit will be granted only once.

AE 5312. CONTINUUM MECHANICS. 3 Hours.
Study of the underlying physical and mathematical principles relating to the behavior of continuous media; interrelationships between fluid and solid mechanics. Offered as AE 5312 and ME 5312. Credit will be granted only once.

AE 5313. FLUID DYNAMICS. 3 Hours.
Basic conservation laws, flow kinematics, special forms of the governing equations, two-dimensional potential flows, surface waves and some exact solutions of viscous incompressible flows. Offered as AE 5313 and ME 5313. Credit will be granted only once.

AE 5315. FUNDAMENTALS OF COMPOSITES. 3 Hours.
This fundamental course will introduce students to mechanics of composites at various scales, including analysis, characterization, and manufacturing methods. Emphasis is on constitutive relations; mechanical and hygrothermal behavior; stress analysis; and simple applications. Offered as AE 5315 and ME 5315. Credit will be granted only once.

AE 5320. DESIGN OPTIMIZATION. 3 Hours.
The purpose of this course is to present modern concepts of optimal design of structures. Basic ideas from optimization theory are developed with simple design examples. Analytical and numerical methods are developed and their applications discussed. Use of numerical simulation methods in the design process is described. Concepts of structural design sensitivity analysis and approximation methods will be discussed. The emphasis is made on the application of modern optimization techniques linked to the numerical methods of structural analysis, particularly, the finite element method. Prerequisite: AE 5310 or ME 5310.

AE 5322. AEROELASTICITY. 3 Hours.
A fundamental course addressing phenomena related to the time-independent interactions between structural flexibility and aerodynamic loads as relevant to flying vehicles. Emphasis is placed upon the development and use of simple analytical and/or interactive computational models that capture the essential aspects of the static aeroelastic phenomena investigated and provide insight into the response, including i) aeroelastic divergence; ii) aeroelastic change in control effectiveness; iii) aeroelastic distribution of lift; and iv) aeroelastic change in longitudinal static stability.

AE 5323. ENGINEERING RESEARCH METHODS. 3 Hours.
This hands-on course will teach the tools that are essential for conducting graduate research, with an aim to prepare the students for project-based graduate research. The course will be focused on the integration of engineering concepts to complete course projects that imitate mini research projects. Prerequisite: Undergraduate education in engineering or science.

AE 5325. COMBUSTION. 3 Hours.
Fundamental treatment of problems involving simultaneous occurrence of chemical reaction and transfer of heat, mass and momentum. Topics include kinetically controlled combustion phenomena; diffusion flames in liquid fuel combustion; combustion of solids; combustion of gaseous fuel jets; flames in premixed gasses. Offered as AE 5325 and ME 5325. Credit will be granted only once.

AE 5326. AIR-BREATHING PROPULSION. 3 Hours.
Development of thrust and efficiency equations, thermodynamic cycle analysis, cycle design methods of aerospace propulsion systems, component performance analysis methods, component matching and dynamic interactions, and vehicle/propulsion-system integration.

AE 5327. COMPUTATIONAL AERODYNAMICS I. 3 Hours.
Solution of engineering problems by finite-difference methods, emphasis on aerodynamic problems characterized by single linear and non-linear equations, introduction to and application of major algorithms used in solving aerodynamics problems by computational methods.

AE 5328. COMPUTATIONAL AERODYNAMICS II. 3 Hours.
Review of the fundamental equations of aerodynamics, development of methods for solving Euler, boundary-layer, Navier-Stokes, and parabolized Navier-Stokes equations, application to practical aerodynamic analysis and design problems.

AE 5329. ADDITIVE MANUFACTURING. 3 Hours.
The range of technologies and processes, both physical and digital, used to translate virtual solid model data into physical models using additive layering methods. Emphasis is given to application of these technologies to manufacture end use components and assemblies but rapid prototyping is also discussed. Metal, polymer, ceramic, and composite material applications of additive manufacturing are included. Discussion includes advantages and limitations of additive methods with respect to subtractive methods and to each other. Principles of design for additive manufacturing are covered along with discussion of applications. Students complete a project to design and build an engineering component or assembly for additive manufacturing. Offered as AE 5329 and ME 5329. Credit will be granted only once. Prerequisite: Graduate standing.

AE 5331. ANALYTIC METHODS IN ENGINEERING. 3 Hours.
Introduction to advanced analytic methods in engineering. Methods include multivariable calculus and field theory, Fourier series, Fourier and Laplace Transforms. Offered as AE 5331 and ME 5331. Credit will be granted only once. Prerequisite: Undergraduate degree in engineering, physics, or mathematics.

AE 5332. ENGINEERING ANALYSIS. 3 Hours.
Introduction to partial differential equations and complex variable theory with application to modeling of physical systems. Offered as AE 5332 and ME 5332. Credit will be granted only once.

AE 5333. THERMAL PHENOMENA IN MICROSYSTEMS. 3 Hours.
Introduction to experimental methods for microscale thermal transport, including experimental measurement techniques, design of experiments, data acquisition and analysis tools. Significant emphasis on carrying out mini-projects on related topics. Course learning outcomes are directly relevant for engineering jobs in semiconductors, energy conversion and other related industries. Offered as AE 5333 and ME 5333. Credit will be granted only once.

AE 5335. OPTIMAL CONTROL OF DYNAMIC SYS. 3 Hours.
Linear and nonlinear optimization methods; optimal control; continuous time Ricatti equation; bang-bang control; singular arcs; differential inclusions; collocation techniques; design of optimal dynamic system trajectories. Offered as AE 5335 and ME 5335. Credit will be granted only once.

AE 5336. OPTIMAL ESTIMATION OF DYNAMIC SYSTEMS. 3 Hours.
Kalman filter design and implementation. Optimal filtering for discrete-time and continuous-time dynamical systems with noise. Wiener filtering. State-space determination. Offered as EE 6327, AE 5336 and ME 5336. Credit will be granted only once. Prerequisite: Prior introductory systems or identification course is desirable.

AE 5337. INTRODUCTION TO ROBOTICS. 3 Hours.
An overview of industrial robots and their application to traditional and emerging applications. Coordinate systems and homogeneous transformations, kinematics of manipulators; motion characteristics and trajectories; dynamics and control of manipulators; actuation and design issues. Programming of industrial robotic manipulators in the laboratory. Offered as AE 5337 and ME 5337. Credit will be granted only once.

AE 5338. ANALYTICAL & COMPUTATIONAL DYNAMICS. 3 Hours.
The course focuses on developing the equations of motion for dynamic systems composed of multiple, connected and unconnected, rigid bodies using Kane's method and the Lagrangian approach. The resulting model is used to simulate and visualize the predicted motion. Topics include kinematics, Euler parameters, kinematic constraints, virtual work, the calculus of variations, energy, momentum, contact, impact, and checking functions. Offered as AE 5338 and ME 5338. Credit will be granted only once.

AE 5339. INTERMEDIATE MECHANICS OF MATERIALS. 3 Hours.
This fundamental mechanics course covers the concepts of deriving stress formulas from deformation and the stress-strain relationship, stress and failure analysis, 2D elasticity, energy methods, and elastic stability. Offered as AE 5339 and ME 5339. Credit will be granted only once.

AE 5341. CONTROL SYSTEM COMPONENTS. 3 Hours.
The components and hardware used in electronic, hydraulic, and pneumatic control systems; techniques of amplification, computation, compensation, actuation, and sensing; modeling of multiport systems as well as servo systems analysis. Pulse modulated systems. Offered as AE 5341 and ME 5341. Credit will be granted only once. Prerequisite: Undergraduate introductory control course in Mechanical Engineering or equivalent or ME 5303 or equivalent.

AE 5342. GAS DYNAMICS. 3 Hours.
Review of fundamental compressible flow theory, method of characteristics for perfect gases, the Rankine-Hugoniot conditions, linearized flow theory. Offered as AE 5342 and ME 5342. Credit will be granted only once. Prerequisite: MAE 3303 or equivalent.

AE 5345. NUMERICAL HEAT TRANSFER AND FLUID FLOW. 3 Hours.
Introduction to numerical solutions for problems in heat transfer and fluid flow by the finite-volume method. The focus will be on numerical aspects pertaining to incompressible fluids. It provides the background training towards the use of commercial software. Offered as AE 5345 and ME 5345. Credit will be granted only once.

AE 5347. ROCKET PROPULSION. 3 Hours.
Thrust and efficiency relations, trajectory analysis, introduction to design and performance analysis of chemical (liquid and solid), electrical and nuclear rocket systems, combined cycle propulsion systems, and pulse detonation rockets.

AE 5348. HYPERSONIC PROPULSION. 3 Hours.
Design and performance analysis of propulsion systems for sustained flight at hypersonic speeds, airframe/propulsion system integration, supersonic combustion, finite-rate chemistry effects, radiative cooling.

AE 5349. POLYMER SCIENCE AND ENGINEERING. 3 Hours.
This course provides a broad introduction to polymer science, technology, and use in engineering design. Topics covered are: polymer chemistry (major synthetic polymerization routes); Polymer physics (solution and melt behavior, solid-state morphology and properties); polymer engineering (melt processing, recycling methods); and polymer applications (automotive, aerospace, composites, 3D printing). Offered as AE 5349 and ME 5349. Credit will be granted only once.

AE 5350. CLASSICAL AERODYNAMICS. 3 Hours.
To present a classical treatment of incompressible and compressible aerodynamics. Kinematics of fluid flow. Potential flow theory applied to non-lifting and lifting wings and bodies. Subsonic and supersonic wings and bodies. Familiarity with advanced engineering mathematics is recommended.

AE 5362. GUIDANCE, NAVIGATION, AND CONTROL OF AEROSPACE VEHICLES. 3 Hours.
Basics of flight dynamics and control. Autopilot structures for aerospace vehicles (aircraft, missiles, launch vehicles). Equilibrium glide trajectories for atmospheric flight. Discussion of the various guidance algorithms used in aircraft/missiles/launch vehicles. Basics of Kalman filtering, sensor and data fusion. Selection and trade-off between various navigation components such as the IMU, GPS and other navigation components. Integration of the guidance, navigation and control components in aerospace vehicles.

AE 5363. INTRODUCTION TO ROTORCRAFT ANALYSIS. 3 Hours.
History of rotorcraft. Behavior of the rotor blade in hover and forward flight. Rotor configurations, dynamic coupling with the fuselage, elastic and aeroelastic effects. Offered as AE 5363 and ME 5363. Credit will be granted only once.

AE 5364. INTRODUCTION TO AERODYNAMICS OF ROTORCRAFT. 3 Hours.
Practical aerodynamics of rotors and other components of rotorcraft. Introduction to performance, handling qualities, and general flight mechanics related to rotorcraft design, test, and certification requirements. Emphasis is on real rotorcraft mission capabilities as defined by the customer. Offered as AE 5364 and ME 5364. Credit will be granted only once.

AE 5365. INTRODUCTION TO HELICOPTER AND TILTROTOR SIMULATION. 3 Hours.
Dynamic and aerodynamic modeling of rotorcraft elements using vector mechanics, linear algebra, calculus and numerical methods. Special emphasis on rotors, aerodynamic interference, proper axis system representation, model assembly methods and trimming. Offered as AE 5365 and ME 5365. Credit will be granted only once.

AE 5367. HIGH-SPEED AIRCRAFT AND SPACE ACCESS VEHICLE DESIGN. 3 Hours.
An introductory course on high-speed aircraft and space access vehicle design. The course concentrates on reusable flight vehicles. Topics covered are historical case studies, design disciplines, design space visualization and proof of design convergence. Prerequisite: consent of the instructor.

AE 5368. FLIGHT VEHICLE SYNTHESIS AND SYSTEMS ENGINEERING. 3 Hours.
An introductory course on multi-disciplinary design decision-making applied to flight vehicle design. The course introduces decision-making techniques leading to efficient aerospace product design. The following main topics are covered: a) management domain, b) operational domain, c) engineering domain.

AE 5372. PARAMETRIC SIZING OF HIGH-SPEED AIRCRAFT. 3 Hours.
An introductory course on high-speed aircraft design. Aimed to develop insight into basic concepts underlining the analysis and design of supersonic and hypersonic aircraft. Topics covered are historical case studies, design disciplines, and design methodologies. Prerequisite: MAE 4350, MAE 4351 or equivalent.

AE 5374. NONLINEAR SYSTEMS ANALYSIS AND CONTROLS. 3 Hours.
Nonlinear systems; phase plane analysis; Poincare-Bendixon theorems; nonlinear system stability; limit cycles and oscillations; center manifold theorem, Lyapunov methods in control; variable structure control; feedback linearization; backstepping techniques. Offered as AE 5374 and ME 5374. Credit will be granted only once.

AE 5378. INTRODUCTION TO UNMANNED VEHICLE SYSTEMS. 3 Hours.
Introduction to UVS (Unmanned Vehicle Systems) such as UAS (Unmanned Aircraft Systems), UGS (Unmanned Ground System) and UMS (Unmanned Maritime System), their history, missions, capabilities, types, configurations, subsystems, and the disciplines needed for UVS development and operation. UVS missions could include student competitions sponsored by various technical organizations. This course is team-taught by engineering faculty. Offered as AE 5378 and ME 5378. Credit will be granted only once.

AE 5379. UNMANNED VEHICLE SYSTEM DEVELOPMENT. 3 Hours.
Introduction to the technologies needed to create an UVS (Unmanned Vehicle System). Integration of these technologies (embodied as a set of sensors, actuators, computing and mobility platform sub-systems) into a functioning UVS through team work. UVS could be designed to compete in a student competition sponsored by various technical organizations or to support a specific mission or function defined by the instructors. This course is team-taught by engineering faculty. Offered as AE 5379 and ME 5379. Credit will be granted only once. Prerequisite: B or better in MAE 4378 or AE 5378 or ME 5378 and admission to the UVS certificate program.

AE 5380. DESIGN OF DIGITAL CONTROL SYSTEMS. 3 Hours.
Difference equations, Z- and w-transforms, discrete TF (Transfer Function). Discrete equivalence (DE) to continuous TF. Aliasing & Nyquist sampling theorem. Design by DE, root locus in z-plane & Youla parameterization. Discrete state-space model, minimality after sampling, pole placement, Moore-Kimura method, linear quadratic regulator, asymptotic observer. Computer simulation and/or lab implementation. Offered as EE 5324, AE 5380 and ME 5380. Credit will be granted only once. Prerequisite: MAE 4310 or equivalent.

AE 5381. BOUNDARY LAYERS. 3 Hours.
An introductory course on boundary layers. The coverage emphasizes the physical understanding and the mathematical foundations of boundary layers, including applications. Topics covered include laminar and turbulent incompressible and compressible layers, and an introduction to boundary layer transition. Offered as AE 5381 and ME 5381. Credit will be granted only once.

AE 5382. ADVANCED ASTRONAUTICS. 3 Hours.
Topics include orbital mechanics, orbital maneuvering, relative motion, orbit determination and estimation, three body problem, perturbations and numerical techniques.

AE 5383. HYPERSONIC FLOW. 3 Hours.
A study of the basic principles of hypersonic flows. Inviscid and viscous hypersonic flows. The course focuses on the effects of high temperature on the gas properties and associated effects on canonical gas dynamics processes. Applications in aerodynamic heating and atmospheric entry. Application of numerical methods.

AE 5385. HIGH TEMPERATURE GASDYNAMICS. 3 Hours.
Surveys kinetic theory, statistical mechanics, and chemical reaction rate theory. Application to the prediction of thermodynamic properties of gasses and the analysis of problems in high-temperature gasdynamics.

AE 5386. WIND & OCEAN CURRENT ENERGY HARVESTING FUNDAMENTALS. 3 Hours.
A broad senior/graduate first course in wind/wave/ocean current energy harvesting systems, focused on fundamentals, and serving as the basis for subsequent MAE specialized follow-on graduate course offerings focused on structures (conventional and composite), aero/hydro-mechanical response and control, and tailoring and smart material actuation, respectively, as well as for non-MAE, specialized graduate courses.

AE 5391. ADVANCED STUDIES IN AEROSPACE ENGINEERING. 3 Hours.
Individual research or design project performed for fulfilling the requirements of the Master of Engineering degree option. Prior approval of the AE Graduate Advisor is required for enrollment. A written and/or oral report is required.

AE 5397. RESEARCH IN AEROSPACE ENGINEERING. 3 Hours.
Research in masters programs.

AE 5398. THESIS. 3 Hours.
Thesis.

AE 5400. PREPARATORY COURSE FOR AEROSPACE ENGINEERING. 4 Hours.
The course may be offered with multiple sections, wherein each section is paired with a corresponding UG course being offered that semester. The purpose of this course is to strengthen academic preparation of students who were found inadequately prepared for a graduate degree in Aerospace Engineering. Students can concurrently enroll in multiple sections and may need to enroll in this course multiple times until their academic preparation is deemed complete. In order to pass this class, the students has to earn at least a B grade in aggregate based all the assignments and exams. The student will earn an R grade if the class aggregate is a C/D and will need to repeat the course until the student passes the class. The student will Fail the class if the aggregate is an F. The course may be repeated as often as required.

AE 5698. THESIS. 6 Hours.
Thesis.

AE 6196. AEROSPACE ENGINEERING INTERNSHIP. 1 Hour.
For students participating in internship programs. Requires prior approval of Graduate Advisor.

AE 6197. RESEARCH IN AEROSPACE ENGINEERING. 1 Hour.
Research in doctoral programs.

AE 6297. RESEARCH IN AEROSPACE ENGINEERING. 2 Hours.
Research in doctoral programs.

AE 6299. DISSERTATION. 2 Hours.
Dissertation Prerequisite: Admission to candidacy for the Doctoral of Philosophy degree.

AE 6304. ADVANCED MECHANICS OF MATERIALS. 3 Hours.
This graduate level course will cover the calculation of stresses and strains in a body that experiences hyperelastic, viscoelastic and plastic deformation. Offered as AE 6304 and ME 6304. Credit will be granted only once. Prerequisite: AE 5339, ME 5339, or instructor consent.

AE 6310. ADVANCED FINITE ELEMENT METHODS. 3 Hours.
Modeling of large systems, composite and incompressible materials, substructuring, mesh generation, solids applications, nonlinear problems. Offered as AE 6310 and ME 6310. Credit will be granted only once. Prerequisite: AE 5310, ME 5310, or instructor consent.

AE 6311. ADVANCED STRUCTURAL DYNAMICS. 3 Hours.
Normal mode method for undamped and proportionally damped systems, component mode synthesis, generally damped systems, complex modes, effect of design modification on system response. Offered as AE 6311 and ME 6311. Credit will be granted only once. Prerequisite: AE 5311, ME 5311, or instructor consent.

AE 6314. FRACTURE MECHANICS. 3 Hours.
Linear elastic fracture mechanics, energy of fracture, mixed mode crack propagation, fatigue crack growth, numerical methods for stress intensity factor determination, damage tolerance and durability design. Offered as AE 6314 and ME 6314. Credit will be granted only once. Prerequisite: AE 5339, ME 5339, or instructor consent.

AE 6315. ADVANCED COMPOSITES. 3 Hours.
This course introduces students to advanced mechanics of composites at various scales, including analysis and characterization methods. Emphasis is on advanced methods for material characterization; nonlinear constitutive relations; structural and microstructural analysis; and advanced materials and structures applications. Offered as AE 6315 and ME 6315. Credit will be granted only once. Prerequisite: AE 5315, ME 5315, or instructor consent.

AE 6337. ADVANCED ROBOTICS. 3 Hours.
Advanced robotic design concepts considering structural statics, dynamics and control strategies for both rigid and flexible manipulators will be studied using optimization techniques and analytical approaches and introduction to micro- and mobile robotic devices. Study of emerging applications of robotics will be explored. Digital simulation of robotic devices and programming and demonstration of robotic devices in the laboratory. Prerequisites: AE 5337 or ME 5337 or equivalent.

AE 6397. RESEARCH IN AEROSPACE ENGINEERING. 3 Hours.
Research in doctoral programs.

AE 6399. DISSERTATION. 3 Hours.
Dissertation Prerequisite: admission to candidacy for the Doctor of Philosophy degree.

AE 6697. RESEARCH IN AEROSPACE ENGINEERING. 6 Hours.
Research in doctoral programs.

AE 6699. DISSERTATION. 6 Hours.
Dissertation. Prerequisite: Admission to candidacy for the Doctor of Philosophy degree.

AE 6999. DISSERTATION. 9 Hours.
Dissertation. Prerequisite: Admission to candidacy for the Doctor of Philosophy degree.

AE 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

ANTH 1200. PERSONAL AND PROFESSIONAL SUCCESS IN THE SOCIAL SCIENCES. 2 Hours.
A first year experience course for new students and new transfer students interested in a career in the social sciences. Provides the necessary foundation for success in a college environment while balancing personal and/or work obligations. Orients students to life on campus, demonstrates how to leverage campus resources to achieve career and academic goals, and emphasizes engagement outside the classroom through collaborative and co-curricular opportunities. Fulfills the University requirement for either UNIV 1101 or UNIV 1131. Offered as SOCI 1200 and ANTH 1200; credit will be granted only once.

ANTH 1306. INTRODUCTION TO ANTHROPOLOGY. 3 Hours. (TCCN = ANTH 2346)
This course, primarily intended for non-majors and as a first course for students considering majoring in anthropology, provides an overview of the subdisciplines of anthropology: ethnology (cultural anthropology), archaeology, physical (biological) anthropology, and linguistic anthropology.

ANTH 1310. GREAT DISCOVERIES IN ARCHAEOLOGY. 3 Hours.
A survey of some of the most spectacular and otherwise significant archaeological discoveries worldwide over the past three centuries. Consideration of particular archaeological sites as case studies to illustrate cultural development from the Stone Age to Medieval times.

ANTH 2307. BIOLOGICAL ANTHROPOLOGY. 3 Hours. (TCCN = ANTH 2301)
Human variation and human evolution. Genetics, living and fossil nonhuman primates, the human skeleton, the fossil record of human evolution, modern human variation and biological adaptation.

ANTH 2322. GLOBAL CULTURES. 3 Hours. (TCCN = ANTH 2351)
Methods and theories of sociocultural anthropology. Examines systems of social organization and cultural meaning in contemporary human societies. Topics include fieldwork, cross-cultural analysis, applied anthropology, and global perspectives on political, economic, and social institutions.

ANTH 2339. INTRODUCTION TO ARCHAEOLOGY. 3 Hours. (TCCN = ANTH 2302)
Archaeology is the study of the human past through physical evidence and material remains. This evidence ranges from entire landscapes to small objects. Students learn how archaeological sites are discovered, investigated, and interpreted, and how this knowledge contributes to our understanding of human society.

ANTH 2349. HONORS PRINCIPLES OF ARCHAEOLOGY. 3 Hours.
Methods and theories of prehistoric archaeology. Techniques and approaches employed in recovering, dating and interpreting prehistoric cultural materials. Writing-intensive course including group and individual projects and oral presentations. Prerequisite: Membership in the Honors College or permission of instructor.

ANTH 2357. ANTHROPOLOGY IN ACTION. 3 Hours.
Anthropological examination of a particular culture, region or cultural industry. Topics include identity, heritage, commoditization, historical and cultural representation, and authenticity. May be offered on campus or as a field course or study abroad course.

ANTH 2358. ARCHAEOLOGICAL CULTURES. 3 Hours.
Survey of a particular archaeological culture, region, or period. Can be offered on campus or as a field course or study abroad course.

ANTH 2359. MYTHS AND MYSTERIES IN ARCHAEOLOGY. 3 Hours.
This course will critically examine pseudoscience, cult archaeology and creationism from a scientific perspective. Through the close examination of case studies we will dispel archaeological myths and mysteries which are often depicted as fantastic or cult archaeology. This course will demonstrate that a strong adherence to scientific investigation can uncover facts about prehistory that are as interesting as the myths.

ANTH 2370. ASIAN AMERICAN EXPERIENCE. 3 Hours.
Examines the lived experiences and diverse histories of Asian Americans. Various aspects of the Asian American experience are addressed, including, but not limited to, immigration; citizenship; civic engagement, including alliances with Mexican American and African American social movements; health; and creative expressions in art, film, literature, and music. Themes related to the Asian American diaspora such as imagination, authenticity, identity, representation, stereotypes, consumption, ritual, and borders will also be discussed.

ANTH 3300. DEBATES IN CULTURAL ANTHROPOLOGY. 3 Hours.
Explores core concepts, critiques of past applications, and current challenges of theory and practice in cultural anthropology.

ANTH 3301. ARCHAEOLOGICAL METHOD AND THEORY. 3 Hours.
Explores core concepts, critiques of past applications, and current challenges of theory and practice in archaeology. Topics include history of archaeological thought, processual and actualistic approaches, ethnoarchaeology, evolutionary archaeology, stewardship of the archaeological past, and post-processual critiques. Prerequisite: ANTH 2339 or permission of instructor.

ANTH 3307. EVOLUTIONARY MEDICINE. 3 Hours.
The application of evolutionary theory to the practice of medicine from an anthropological perspective. Topics include diet/paleodiets, sleep habits, infectious diseases, the developmental origins of health and disease, mental health, women's health and reproduction, and aging/senescence, among others. Offered as BIOL 3307 and ANTH 3307; credit will only be granted in one department.

ANTH 3308. FORENSIC ANTHROPOLOGY. 3 Hours.
Explores the role of skeletal biology and physical anthropology in criminal investigation. Topics include determination of victim identity and context of death. Case studies will be used to demonstrate application of the methods studied.

ANTH 3310. LATINOS IN THE U.S.. 3 Hours.
Examines the Latino experience in the U.S. from an interdisciplinary perspective. Discusses the commonalities and cultural differences among various Latino groups, and focuses on important contemporary Latino issues such as education, employment, family and gender, identity, immigration, and politics. May receive credit for either MAS 3310 or ANTH 3310.

ANTH 3311. HUMAN ADAPTATION AND THE CONCEPT OF RACE. 3 Hours.
The study of modern human biological variation in the context of the history of the concept of race. Detailed historical review explores changing perspectives on variation within our species. Course examines physiological adaptations to environmental stress among a variety of human populations and implications of recent genetic research. Offered as BIOL 3313 and ANTH 3311; credit will only be granted in one department.

ANTH 3313. PRIMATE EVOLUTION AND BEHAVIOR. 3 Hours.
An overview of the Primate Order covering primate origins, evolution, ecology, adaptation, and behavior. Examination of the environmental context within which primates live, how the form of their bodies reflects their activities, and how they relate behaviorally to their environments and to one another. Offered as BIOL 3314 and ANTH 3313; credit will only be granted in one department.

ANTH 3316. LATINO HEALTH ISSUES. 3 Hours.
A cross-cultural examination of issues in Latino health and relevant health practices in the United States through the lenses of social sciences. Themes include the Latino Threat Narrative, acculturation histories and health care status of major Latino ethnic enclaves in the U.S. Listed as SOCI 3316, MAS 3316 and ANTH 3316; may receive credit for either SOCI 3316, MAS 3316, or ANTH 3316.

ANTH 3318. BORDERS, CULTURES, AND CARTELS. 3 Hours.
Critically examines life on the Mexico-U.S. border through ethnography, taking into account the impact of the U.S. war on drugs and the influence of cartels on the lives of those living in the southern border region. Topics may include impacts and influences of drugs and narco life on religion, crime, music, and daily life at the nexus of US-Mexico relations. Listed as ANTH 3318 and MAS 3318; may receive credit for either ANTH 3318 or MAS 3318.

ANTH 3325. ETHNOGRAPHY OF SOUTH AMERICA. 3 Hours.
The indigenous groups of South America, with emphasis on the Aymara and Quechua of the Andes. Topics include culture change, environmental destruction, and preservation of cultural heritage.

ANTH 3328. CIVILIZATIONS OF SOUTH AMERICA. 3 Hours.
Complex agrarian civilizations in South America, concentrating on political, social, and cultural developments of the Chavin, Nazca, Moche, Tiahuanaco, Wari-Tiahuanaco, Inca, and Conquest periods. Formerly listed as ANTH 4328. Credit cannot be given for both ANTH 3328 and ANTH 4328.

ANTH 3329. CONTEMPORARY AFRICAN CULTURES. 3 Hours.
A comparative study of African communities with an emphasis on sub-Saharan Africa. Covers regional cultural geography and history as well as ethnography of specific communities. Explores both the challenges facing contemporary African nations as well as emerging solutions. Includes exposure to African art, literature, music, cinema, and food. Offered as AAST 3329 and ANTH 3329; credit will be granted in only one department.

ANTH 3330. CULTURAL DIVERSITY AND IDENTITY. 3 Hours.
The ways identity is constructed in contemporary societies in an increasingly complex and multicultural world. Ethnic, racial, gender, and class identities. How and when identity is asserted and assigned, and how it can both draw boundaries and forge ties between peoples. Formerly listed as ANTH 2350. Credit cannot be given for both ANTH 2350 and ANTH 3330. Also listed as MAS 3330; credit cannot be granted for both ANTH 3330 and MAS 3330. Offered as AAST 3330 and ANTH 3330; credit will be granted in only one department.

ANTH 3331. CULTURE AND PERSONALITY. 3 Hours.
The interplay of culture and personality in various Western and non-Western societies. The relationship of specific practices to the development of personality and the psychological effects of colonization, modernization, and economic development of traditional societies.

ANTH 3332. FOOD AND CULTURE. 3 Hours.
Considers food systems from biological, ecological, and political-economic perspectives. May include food history, cuisines, food preferences, and other areas of anthropological scholarship on food and culture. May cover food and economic development, hunger and overnutrition, food and religion, and the globalization of foods and food systems.

ANTH 3333. NORTH AMERICAN INDIANS. 3 Hours.
North American Indian cultures and their development both before and after European contact.

ANTH 3334. ANTHROPOLOGY OF SOUTH ASIA. 3 Hours.
With a focus on the Indian subcontinent, this course introduces students to the culture, history and politics of South Asia. Drawing upon anthropological studies and a range of materials, including Bollywood films, music, tourist brochures, advertisements, Gandhi's writings, and South Asian literature, students will gain an increased understanding of the region's past and present.

ANTH 3335. GLOBAL ICONS: GANDHI, KING, MANDELA & OTHERS IN POPULAR CULTURE. 3 Hours.
Addresses the life and times of Mahatma Gandhi, Martin Luther King, Jr., Nelson Mandela, and other global icons in order to explore cultural politics, social movements, and globalization processes. Students gain an understanding of the enduring significance of these figures in popular culture.

ANTH 3336. ANTHROPOLOGY OF RELIGION. 3 Hours.
A crosscultural study of magic and religion. Theories of the origin and function of magic and religion in pre-industrial societies.

ANTH 3338. COMPARATIVE KINSHIP AND FAMILY SYSTEMS. 3 Hours.
Variation in kinship and family systems from crosscultural and evolutionary perspectives. Structure, function, and dynamics of kinship and family systems as adaptations to diverse ecological, social, and historical circumstances. Implications of this approach for understanding kinship and family in American society also addressed. Formerly listed as ANTH 4338. Credit cannot be given for both ANTH 3338 and ANTH 4338. Also offered as GWSS 3338; credit will be granted only once. Offered as AAST 3332 and ANTH 3338; credit will be granted in only one department.

ANTH 3339. URBAN ANTHROPOLOGY. 3 Hours.
Examines main issues, theoretical approaches and ethnographic methods used by anthropologists working in cities. Also discusses relevant contemporary topics such as growth of global cities, gentrification, poverty and inequality, and the economic, social and cultural integration of international immigrants in U.S. cities.

ANTH 3341. RESEARCH METHODS IN CULTURAL ANTHROPOLOGY. 3 Hours.
Observational techniques, participant-observation, hypothesis testing, research design, use of the computer in research, analysis, and report writing, and oral presentations of research reports. Satisfies oral communication and computer use competence requirements. Prerequisite: ANTH 1306 or ANTH 2322 or permission of instructor.

ANTH 3343. APPLIED ANTHROPOLOGY. 3 Hours.
Explores the use of anthropological knowledge and skills to address practical problems in today's global society, and examines how these are used in government, non-profit, and private sector industries. Addresses issues of health, education, environment, human rights, economic development, and others.

ANTH 3345. VISUALIZING CULTURE: MEDIA, IDENTITY AND POLITICS IN THE GLOBAL WORLD. 3 Hours.
Introduces students to key concepts in Visual Anthropology. This course highlights the contribution of anthropological methods in theorizing the visual in everyday life for the construction of nationalist, gender, ethnic, and class identities. Readings are drawn from diverse geographical regions. Visual material discussed in class may include ethnographic films, art, graphic novels, comics, illustrated magazines, virtual exhibitions and soap operas. Assignments include a writing and research component, and team-based exercises. Offered as ANTH 3345 and COMM 3345; credit will be granted only in one department.

ANTH 3346. GLOBAL IMPACTS OF TOURISM. 3 Hours.
Examines the cultural practices of travel and the impact of tourism on both host and guest communities. Various forms of tourism are addressed including, but not limited to, ethnic, historical, regional, health and medical, and ecotourism. Themes of the "tourist gaze" authenticity, identity, consumption, ritual, borders, and pilgrimage will be explored.

ANTH 3348. CULTURAL ENCOUNTERS: MIGRATION AND IDENTITIES. 3 Hours.
This course focuses on the expanding field of migration studies in social and cultural anthropology. It traces the history of migration studies in anthropology, discusses the major theoretical contributions of anthropologists to the interdisciplinary field of migration, and addresses key contemporary topics in migration studies including globalization, transnational communities, gender, identity, and citizenship. The course heavily relies on ethnographic case studies of different immigrant populations in the U.S. written by anthropologists in the recent past.

ANTH 3349. ANTHROPOLOGY OF GLOBALIZATION. 3 Hours.
The forces of economic globalization now reach every corner of the world to the point that few societies have been untouched by their impact. This course examines the forces that drive globalization and their repercussions upon local communities around the world. It examines how economic globalization affects the lives of real people in developing and industrialized countries as well as in small-scale societies traditionally studied by anthropologists.

ANTH 3350. NORTH AMERICAN ARCHAEOLOGY. 3 Hours.
Prehistoric cultural adaptations in North America from human arrival to European contact. Topics treated include the question of when and where the first Native Americans arrived; the beginnings of village and farming life; and the development of Puebloan and "Mound-building" cultures.

ANTH 3351. ARCHAEOLOGY OF THE AMERICAN SOUTHWEST. 3 Hours.
This course investigates the peoples and places of the prehistoric North American Southwest. The focus is on the period of increasing settlement, diversity, movement, and change from 500 to 1500 C.E. Focuses on the archaeological record, ethnographies and comparative research to understand the past and present peoples of the Southwest.

ANTH 3352. ARCHAEOLOGY OF AFRICA. 3 Hours.
Course follows the African archaeological record from earliest evidence for human behavior through beginnings of state society. Topics may include stone tool technologies, forager strategies, agricultural systems, early iron technology, and trade and social networks. This is a lecture course, with an emphasis on student research. No prerequisites required, but ANTH 2339 is recommended preparation.

ANTH 3353. STONE AGE HUNTERS AND FARMERS. 3 Hours.
Human adaptations and cultural evolution in the Old World from the earliest African sites over two million years ago to the domestication of plants and animals about ten thousand years ago. Formerly ANTH 2353; credit cannot be granted for both ANTH 2353 and ANTH 3353.

ANTH 3354. ANTHROPOLOGY OF HUNTING. 3 Hours.
Covers a broad range of topics exploring hunting through time, from the prehistoric to the present. Topics include cross-cultural issues of meat and diet, hunter-gatherer subsistence behavior, overkill and animal extinction, and sport hunting. Course is relevant to environmental studies and sustainability studies.

ANTH 3355. THE RISE OF CIVILIZATION. 3 Hours.
The development of complex cultures from village farming societies in various regions of the Old and New Worlds. The civilizations of Mesopotamia, Egypt, and Mesoamerica, among others, will be treated, along with general questions concerning the rise, development, and collapse of early civilizations. Formerly ANTH 2355; credit will not be granted for both ANTH 2355 and ANTH 3355.

ANTH 3356. MESOAMERICAN ARCHAEOLOGY. 3 Hours.
Covers cultural developments in Mesoamerica through the rise of complex societies and the Spanish conquest. Topics include the emergence of Olmecs, Zapotecs, Maya, Toltecs, and the Aztecs, and explore the factors that contributed to their appearance and decline. New discoveries within the field of Mesoamerican archaeology will be examined.

ANTH 3357. COLLAPSE AND SUSTAINABILITY OF SOCIETIES. 3 Hours.
This course investigates the collapse of past societies. Understanding why and how archaeologically-known societies collapsed may provide insights to help us understand contemporary social and environmental sustainability problems.

ANTH 3358. UNDERWATER ARCHAEOLOGY. 3 Hours.
Explores the field of underwater archaeology and research methods. Topics include shipwrecks, submerged terrestrial sites, the use of scuba diving, robots, and sonar in excavation and survey, and the history and development of the discipline.

ANTH 3359. STONE TOOLS. 3 Hours.
Covers the evolution of stone tools from the first modified stone objects to the use of stone tools in complex societies such as the ancient Maya and Egyptians. Introduces students to lithic analysis and manufacture, emphasizing hands-on learning.

ANTH 3360. ARCHAEOLOGY IN PRACTICE. 3 Hours.
Covers the practical aspects of archaeology with a focus on hands-on activities and experiential learning. Students learn archaeological skills and understand the life and research of archaeologists. Topics may include research design, survey, and the laws protecting archaeological sites.

ANTH 3366. SEX, GENDER, AND CULTURE. 3 Hours.
The ways gender and sexuality are culturally constructed. Readings include ethnographies, life histories, and fiction. Debates within anthropology and within specific cultures over maleness and femaleness. Offered as ANTH 3366 and GWSS 3366; credit will be granted only once.

ANTH 3369. MEDICAL ANTHROPOLOGY. 3 Hours.
Medical systems studied cross-culturally to understand how environmental, biological, social, and cultural factors affect disease and health. The cultural dynamics of traditional practitioners and rituals within the health care system. Methods of articulating modern medicine with traditional medicine are discussed.

ANTH 3370. ARCHAEOLOGY OF THE PREHISTORIC AEGEAN. 3 Hours.
Origin, evolution and decline of the first high civilizations in Europe, namely the Minoans on the island of Crete and the Mycenaeans in Greece. Stone Age background and Early Bronze Age seafaring in the Cycladic Islands; Late Bronze Age society, economy, and religion; art and architecture of the Minoan and Mycenaean palaces; Linear A and B tablets; Mycenaean collapse and the beginning of the Iron Age; Homer's Iliad, archaeology and the Trojan War.

ANTH 3371. ARCHAEOLOGY OF GREECE. 3 Hours.
Material evidence relevant to our understanding of classical Greek culture and society from the collapse of the Mycenaean Empire through the Hellenistic Period (ca. 1200-31 B.C.). Examination of the magnificent (temples, sculpture, athletic monuments, ships) and the mundane (domestic architecture, pottery, crafts, coinage, inscriptions, architecture and artifacts of civic life, burials). Archaeological evidence will be considered in light of contemporary historical sources.

ANTH 3372. ARCHAEOLOGY OF THE ANCIENT NEAR EAST. 3 Hours.
Survey of the cultures of Mesopotamia, Syria, Palestine, and Anatolia from the earliest agricultural settlements to the late first millennium B.C. based on the surviving archaeological remains. Among the topics covered: Nature of early urbanism; development of religious and economic hierarchies; origins and impact of writing; interrelationships among early states.

ANTH 3373. ARCHAEOLOGY OF EGYPT. 3 Hours.
The culture of ancient Egypt from its earliest occupation until the Arab invasion (7th century A.C.), with emphasis on the first 20 pharaonic dynasties (third and second millennia B.C.). Egyptian social, religious, economic and political development traced through the surviving material culture (architecture, art, industries, artifacts of daily life, funerary remains, etc.) supplemented by historical and literary evidence as pertinent. Egypt's relations with neighboring regions (Crete, Anatolia, Palestine, Nubia and Libya) considered. Offered as AAST 3373 and ANTH 3373; credit will be granted in only one department.

ANTH 3374. ARCHEOLOGY OF EUROPE. 3 Hours.
Ancient Europe is a mosaic of archaeological regionalism whose complexity is arguably unparalleled elsewhere in the world. This course surveys the material remains of several prominent ancient cultures from Iberia to the Danube, from Scandinavia to Greece, dating from stone age to medieval times. Emphasis will be on understanding the various regional traditions and their interactions, and on explicating trends in technology, economy and religion in European society during this long period. Among the topics to be examined: Paleolithic hunters and artists; agricultural origins; megalithic monuments; bronze metallurgy and its ramifications; the first high civilizations in the Mediterranean; the rise of the Celts; the coming of iron; impact of Romanization; the nature of Viking exploration and expansion.

ANTH 3375. NEANDERTHALS AND THE ICE AGE WORLD. 3 Hours.
Explores the archaeological record of Neanderthals, early modern humans, and their contemporaries. Topics include new genetic and isotopic analyses, ancient environments, early art and symbolism, and how the Paleolithic is imagined in modern society.

ANTH 3390. SPECIAL TOPICS IN ANTHROPOLOGY. 3 Hours.
Selected, specialized topics in anthropology. These may be cultural, archaeological, or biological in focus, and vary each semester. Contact the department or click on the course link to find current course title and description. May be repeated for credit with departmental permission as topics vary.

ANTH 3409. PALEOANTHROPOLOGY. 4 Hours.
Paleoanthropology: an exploration of fossil evidence for human origins and human evolution. Course focuses on the evolution of humans and our close relatives, from our origins as a distinct lineage to "anatomically modern" Homo sapiens, including the relationship between biological and cultural/ behavioral evolution. Offered as BIOL 3409 and ANTH 3409; credit will be granted only once.

ANTH 4191. CONFERENCE COURSE. 1 Hour.
Topics assigned on an individual basis covering personal research or study in the designated area. Topics assigned on an individual basis covering personal research or study in the designated area. Prerequisite: permission of the instructor.

ANTH 4291. CONFERENCE COURSE. 2 Hours.
Topics assigned on an individual basis covering personal research or study in the designated area. Topics assigned on an individual basis covering personal research or study in the designated area. Prerequisite: permission of the instructor.

ANTH 4315. GROWTH, DEVELOPMENT, AND EVOLUTION. 3 Hours.
A survey of topics at the nexus of modern human biological research in growth and development and the evolutionary record of hominid subadults. Offered as BIOL 4316 and ANTH 4315; credit will be granted only in one department. Prerequisite is only required for students registering for ANTH 4315. Prerequisite: ANTH 2307 or permission of the instructor.

ANTH 4322. PROBLEMS IN ANTHROPOLOGY. 3 Hours.
Intensive examination of an important problem in anthropological research selected by the instructor. May be repeated for credit whenever the topic varies.

ANTH 4342. TOPICS IN CULTURAL ANTHROPOLOGY. 3 Hours.
Selected topics, to include anthropological theory, population and cultural ecology, semiotics, and humanistic anthropology. May be repeated for credit with departmental permission. Also offered as ANTH 4342. Credit will be granted in only one department.

ANTH 4348. POLITICAL ANTHROPOLOGY. 3 Hours.
Relationships among power, identity, and culture in cross-cultural perspective. Traditional political systems, political symbols and rituals, gender and power, and the relationship between domination and resistance. How culture influences the ways in which men and women get power, use power, and resist power.

ANTH 4358. TOPICS IN ARCHAEOLOGY. 3 Hours.
Selected topics, to include examination of specific archaeological cultures of the Old World, archaeological theory, and archaeology and pseudoscience. May be taken up to four times for a total of 12 hours credit.

ANTH 4391. CONFERENCE COURSE. 3 Hours.
Topics assigned on an individual basis covering personal research or study in the designated area. Topics assigned on an individual basis covering personal research or study in the designated area. Prerequisite: permission of the instructor.

ANTH 4392. PRACTICUM IN ANTHROPOLOGY. 3 Hours.
Supervised practicum with anthropology faculty in which students apply practical, career-oriented anthropological skills in archaeology, biological anthropology, or cultural anthropology. Prerequisite: ANTH 2307, ANTH 2322, OR ANTH 2339; permission of the instructor; and junior standing.

ANTH 4393. INTERNSHIP IN ANTHROPOLOGY. 3 Hours.
Supervised internship program, in which students intern at various companies, non-profit and governmental agencies, and museums in the Metroplex. Applied use of anthropology in a non-academic setting. Students will learn skills of career development in anthropology. Requirements include several short assignments and a final report to the instructor. Prerequisite: ANTH 2307, ANTH 2322, OR ANTH 2339; permission of the instructor; and junior standing.

ANTH 4394. HONORS THESIS/SENIOR PROJECT. 3 Hours.
Required of all students in the University Honors College. During the senior year, the student must complete a thesis or project of equivalent difficulty under the direction of a faculty member in the major department.

ANTH 4398. SUMMER FIELD SCHOOL IN ANTHROPOLOGY. 3 Hours.
(3 or 6 hours credit). Offered only during the summer session. Experience in methods of field research in ethnography or archaeology. May be repeated for credit if research topic changes.

ANTH 4406. HUMAN OSTEOLOGY. 4 Hours.
Detailed examination of human skeletal morphology. Topics include form and function of all skeletal elements in the human body, differentiation of each bone, left and right side identification, identification or fragmented remains, and muscle attachments and articulations. Content useful in forensic anthropology, archaeology, and hominid paleontology. Offered as BIOL 4406 and ANTH 4406; credit will be granted only in one department.

ANTH 4459. BIOARCHAEOLOGY. 4 Hours.
The study of human remains in archaeological contexts in order to reconstruct individual identity, life history, and past population characteristics. No formal prerequisites, but familiarity with the human skeleton is helpful. Lab component is required. Offered as BIOL 4459 and ANTH 4459; credit will be granted only in one department.

ANTH 4460. ZOOARCHAEOLOGY. 4 Hours.
The study of faunal remains from archaeological contexts to understand past human economic strategies and ecological circumstances. Topics include skeletal and taxonomic identification, taphonomic processes, mortality profiles, biometric analyses, and human behavioral ecology. Lab component is required. Offered as BIOL 4460 and ANTH 4460; credit will be granted only once.

ANTH 4698. SUMMER FIELD SCHOOL IN ANTHROPOLOGY. 6 Hours.
(3 or 6 hours credit). Offered only during the summer session. Experience in methods of field research in ethnography or archaeology. May be repeated for credit if research topic changes.

ANTH 5191. CONFERENCE COURSE. 1 Hour.

ANTH 5307. FORENSIC ANTHROPOLOGY. 3 Hours.
Estimating age, sex, race, stature, pathology, cause of death, and time since death from human remains. The role of skeletal biology and physical anthropology in criminal investigation. Case studies will be used to demonstrate application of the methods studied. Requires enrollment in the undergraduate lab section.

ANTH 5310. HISTORY OF ANTHROPOLOGICAL THEORY. 3 Hours.
This course is a critical examination of major theoretical trends in ethnological theory, from mid-19th century to the present.

ANTH 5315. ARCHAEOLOGICAL METHODS. 3 Hours.
An examination of research methods and underlying theory in archaeology and their evolution since the era of European antiquarianism. Origins and development of archaeology as a scholarly discipline. Emphasis on the period 1960-present; consideration of recent trends in analysis and reportage.

ANTH 5317. ARCHAEOLOGY OF EXPLORATION. 3 Hours.
Archaeological evidence for travel in antiquity. Technology of travel (horse/camel, wheeled vehicles, boats) and related topics (navigation; development of trade and trade routes; nature of discovery, settlement and colonization in antiquity). Case studies drawn from ancient cultures of the Old World from the Stone Age through Medieval times.

ANTH 5320. METHODS IN BIOLOGICAL ANTHROPOLOGY. 3 Hours.
This course covers several topical areas relevant to biological anthropologists specializing in human biology, including osteology and skeletal biology, skeletal maturation (both postcranial and craniofacial), growth and development from birth to biological maturity, and selected topics in forensics, anthropometry, physiology, nutrition, genetics, epidemiology, and demography.

ANTH 5325. QUALITATIVE METHODS. 3 Hours.
Students do fieldwork in anthropology. Students practice participant observation, conduct an interview, collect a kinship chart, map blocks, collect life histories and participate in rituals. Course emphasizes methods of data collection, analysis/interpretation of data, and critical writing.

ANTH 5341. POSTCOLONIAL SOUTH ASIA. 3 Hours.
It approaches the competing and complementary claims on postcolonial theory by mapping the intersections in historical anthropology, literary theory, and cultural analysis. More broadly it brings to focus the shifts from Marxist to Poststructuralist directions. Though the regional focus is on India, the endeavor is also to assess dialogues among varying strands of cultural perspectives and its impact in other postcolonial contexts, both within and beyond the South Asian subcontinent.

ANTH 5342. ADVANCED ETHNOLOGY. 3 Hours.
Seminar based on student reports and critiques of assigned readings. Major emphasis on the areas of ethnology and social anthropology.

ANTH 5344. CULTURES OF LATIN AMERICA. 3 Hours.
An ethnological comparison of societies and cultures in Central and South America. Emphasis on gender, ethnicity, and political economy.

ANTH 5345. RELIGION AND CULTURE. 3 Hours.
An ethnological comparison of native religions to understand non-western belief systems. Emphasis on rituals, myths, totemic systems, taboos, and cosmology.

ANTH 5346. MESOAMERICAN ARCHAEOLOGY. 3 Hours.
An examination of the diversities of several prehistoric Mesoamerican cultures including the Olmec, Maya, Teotihuacan, Zapotec, and the Aztec. Current issues including the beginnings of agriculture, early village life, the rise of complexity and the institution of kingship, warfare, and Mesoamerican ideology and cosmology will be addressed.

ANTH 5349. TOPICS IN ANTHROPOLOGY. 3 Hours.
May be repeated for credit as the topic changes.

ANTH 5351. EMERGENCE OF HUMANKIND. 3 Hours.
An intensive review of the evidence for, and main outlines of, human biological and cultural evolution up to agricultural origins.

ANTH 5353. MEDICAL ANTHROPOLOGY. 3 Hours.
An examination of anthropological concepts for understanding curing practices and attitudes toward health programs in various cultures.

ANTH 5355. HUNTERS AND GATHERERS. 3 Hours.
Cross-cultural approach to the ecological, social, and historical contexts of hunters, gatherers, and foragers.

ANTH 5363. ETHNOGRAPHY AND PERSONAL NARRATIVE. 3 Hours.
Focus is on anthropology and autobiography, autoethnography, life history, and narrative constructions of selfhood in different cultural contexts. Development of the life history approach in ethnographic research. Methods in the collections and analysis of life stories.

ANTH 5365. GLOBALIZATION AND INTERNATIONAL MIGRATION. 3 Hours.
Examines how the expansion of global capitalist economy has contributed to the growth of international migration around the world. Focuses on how transnational migration affects the economic, social, political, and cultural practices of immigrants in both their countries of origin and destination.

ANTH 5369. FOLKLORE AND MYTHOLOGY. 3 Hours.
Function, forms, and interpretation of folklore and myth in traditional societies; examination of oral literature as an expression of continuity and change; emphasis on a structural analysis of myth.

ANTH 5370. APPLIED ANTHROPOLOGY. 3 Hours.
Examines the application of anthropological knowledge to solve practical problems in today's global world. We learn how anthropological concepts, methods, and insights are applied to understand and solve important problems related to economic development, health, environmental issues, immigration, international business, and others.

ANTH 5371. RESEARCH PRACTICUM / INTERNSHIP. 3 Hours.

ANTH 5373. ARCHAEOLOGY FIELD SCHOOL. 3 Hours.
This course, conducted during the summer sessions, consists of on-site and classroom instruction in techniques of archaeological survey, excavation, laboratory, processing, and analysis. Students can receive either three or six hours of credit. Enrollment by permission of instructor only. Prior coursework in anthropology desirable but not necessary.

ANTH 5389. TEACHING ANTHROPOLOGY. 3 Hours.
To learn strategies of coping with practical problems of teaching undergraduate anthropology, students confer with one or more professors to discuss preparing syllabi and lectures, constructing and evaluating examinations, etc. Not to be counted toward the degree requirement.

ANTH 5392. CONFERENCE COURSE IN ANTHROPOLOGY. 3 Hours.

ANTH 5398. THESIS. 3 Hours.

ANTH 5406. HUMAN OSTEOLOGY. 4 Hours.
Detailed examination of human skeletal morphology. Topics include form and function of all skeletal elements in the human body, differentiation of each bone, left and right side identification, identification of fragmented remains, and muscle attachments and articulations. Content useful in forensic anthropology, archaeology, and hominid paleontology. If taken for undergraduate credit either as ANTH 4306 or ANTH 4406, cannot be repeated for graduate credit.

ANTH 5673. ARCHAEOLOGY FIELD SCHOOL. 6 Hours.
This course, conducted during the summer sessions, consists of on-site and classroom instruction in techniques of archaeological survey, excavation, laboratory, processing, and analysis. Students can receive either three or six hours of credit. Enrollment by permission of instructor only. Prior coursework in anthropology desirable but not necessary.

ANTH 5698. THESIS. 6 Hours.

COURSES

ARAB 1441. BEGINNING ARABIC I. 4 Hours. (TCCN = ARAB 1411)
Multimedia Immersion in the culture and language of Arabic-speaking countries. Designed to enable students to understand and communicate effectively in Arabic at the beginning level.

ARAB 1442. BEGINNING ARABIC II. 4 Hours. (TCCN = ARAB 1412)
Continuation of beginning Arabic. Prerequisite: ARAB 1441 with a grade of C or better.

ARAB 1491. CONFERENCE COURSE. 4 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor.

ARAB 2310. ARABIC CULTURE IN THE WORLD. 3 Hours.
An overview of the cultures of the Arabic-speaking world in a global context, examining cultural products such as food, art, music, popular culture, literature, and/or film. Taught in English.

ARAB 2313. INTERMEDIATE ARABIC I. 3 Hours. (TCCN = ARAB 2311)
Continued immersion in the culture and language of Arabic-speaking countries. Application of strategies and technology in mastering listening, speaking, reading, and writing at the intermediate level. Prerequisite: ARAB 1442 with a grade of C or better.

ARAB 2314. INTERMEDIATE ARABIC II. 3 Hours. (TCCN = ARAB 2312)
Continuation of intermediate Arabic. Prerequisite: ARAB 2313 with a grade of C or better.

ARAB 2391. CONFERENCE COURSE. 3 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor.

ARAB 3303. ARABIC CONVERSATION & CULTURE. 3 Hours.
Practice in oral expression with an emphasis on developing conversational skills and improving language proficiency in reading and writing. This course looks at the differences between classical and regional colloquialisms as well as elements of Middle Eastern culture. Prerequisite: ARAB 1442 with a grade of C or better.

ARAB 3304. ARABIC CONVERSATION & CULTURE II. 3 Hours.
Students continue to develop conversational skills and cultural knowledge through the use of readings, film, and other media. Extensive conversation practice allows students to develop intermediate high level oral skills in a broad range of communicative and cultural contexts. Students learn to express more abstract ideas through description, comparison, and narration. Prerequisite: ARAB 2314 with a grade of C or better.

ARAB 3305. ARABIC READING AND COMPOSITION. 3 Hours.
The analysis of Arabic texts and composition with emphasis on reading comprehension, grammar, writing skills, and compositional techniques. Readings may include newspaper articles, short stories, and essays on various topics of Arabic culture. Prerequisite: ARAB 2314 with a grade of C or better.

ARAB 3306. ARABIC FOR BUSINESS AND THE PROFESSIONS. 3 Hours.
This course develops language skills relevant to high-demand sectors in business, healthcare, Arabic translation, and media communication. Emphasis is placed on bridging linguistic and cultural gaps to prepare students for effective communication and engagement in various professional contexts requiring Arabic proficiency. Prerequisite: ARAB 2314 with a grade of C or better.

ARAB 3310. ARABIC LOCALIZATION AND TRANSLATION. 3 Hours.
Introduction to cultural and linguistic issues in the translation of Arabic language texts. Students will explore current technologies used in various real-world translation contexts and how to adapt texts, products, and services to the locale for which they are intended. Prerequisite: ARAB 2314 or the equivalent with a grade of B or better. May not be repeated for credit.

ARAB 3311. ARABIC LOCALIZATION AND TRANSLATION II. 3 Hours.
Continued study of cultural and linguistic issues in the translation of Arabic and English language texts. Systematic development of advanced skills in localization and computer-aided translation and in using TMX/TBX (international standards for translation memory and terminology exchange) tools. Translation practice, individually and in translation teams, with increasingly longer and more specialized texts. Prepares localization and translation specialists for real-world careers in the language-services industry. May not be repeated for credit. Prerequisite: ARAB 3310 with a grade of B or better.

ARAB 3312. TOPICS IN ARABIC LITERATURE AND CULTURE. 3 Hours.
Multimedia immersion in the language and culture of Arabic speaking countries through the study of selected literary texts in various genres and literary structures, with an emphasis on developing language skills of reading, writing, and oral communication. May be repeated for credit as topic changes. Prerequisite: ARAB 1442 with a grade of C or better.

ARAB 3345. INTRODUCTION TO COMPUTER-ASSISTED TRANSLATION. 3 Hours.
Introduction to computer-assisted translation (CAT), machine translation (MT), translation memory (TM) and terminology management tools in modern translation and localization workflows. Prepares students for real-world careers in the language services industry. Exclusively for students pursuing a minor in Localization and Translation-Arabic. ARAB 3310 is strongly recommended before ARAB 3345.

ARAB 3391. CONFERENCE COURSE. 3 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of Instructor.

ARAB 3393. ARABIC INTERNSHIP. 3 Hours.
A combination of field-related experience in the business or service sector with an academic component. Coursework may include journal writing, outside readings, reflection papers, and formal presentations. Prerequisite: Permission of Instructor.

ARAB 4393. ARABIC INTERNSHIP. 3 Hours.
This course is a combination of field-related experience in the business or service sector with an academic component. Coursework may include journal writing in Arabic, outside readings, and formal presentations. Prerequisite: Two ARAB 3000 level courses and permission of the instructor.

COURSES

ARCH 1101. ACADEMIC SUCCESS SKILLS IN ARCHITECTURE. 1 Hour.
This is a required course intended to establish a solid overview of the School of Architecture and the architecture program for all first semester UTA students who intend to declare as an architecture major. Topics for the class include: critical thinking, presentation techniques, internships, attendance of exhibitions and lectures, navigating the advising process, portfolio review and techniques, and using the library and other university resource sources. Other topics may also be discussed. The course be taken only once for credit.

ARCH 1191. CONFERENCE COURSE. 1 Hour.
Independent study guided by an instructor on a regular basis. May be repeated for credit. Permission of the instructor and architecture undergraduate advisor required. Restricted to architecture-intended majors.

ARCH 1301. INTRODUCTION TO ARCHITECTURE AND INTERIOR DESIGN. 3 Hours.
The interrelationships between society, culture, and the built environment. Prerequisite: Department consent.

ARCH 1341. DESIGN COMMUNICATIONS I. 3 Hours.
Design Communications I is an introduction course to analog and digital representation with emphasis on notational techniques of freehand drawing, proportioning strategies, and analysis. Students will also be exposed to physical and digital model-making, craftsmanship, file organization, orthographic and axonometric delineation, line weights, and digital documentation. Prerequisite: Restricted to Architecture-Intended, ARCH_UNIV, Interior Design-Intended and INTD_UNIV majors.

ARCH 1342. DESIGN COMMUNICATIONS II. 3 Hours.
Design Communications II is a continuation of ARCH 1341 with emphasis on refined techniques and more complex drawing problems. This course focuses on scale and proportion, relational design strategies, circulation, spatial hierarchy, design narrative, and digital documentation. Students will also be exposed to in-situ notational drawing. This course is offered as INTD 1342; credit will be granted only once. Prerequisites: "C" or better in ARCH 1301 and ARCH 1341. Restricted to Architecture-Intended, ARCH_UNIV, Interior Design-Intended and INTD_UNIV majors.

ARCH 2300. MASTERWORKS OF WESTERN ARCHITECTURE. 3 Hours.
Selected architectural complexes as representative of various periods of Western culture. Stresses cultural relevance rather than stylistic analysis. Intended as humanities elective for non-architecture majors.

ARCH 2303. HISTORY OF ARCHITECTURE AND INTERIOR DESIGN I. 3 Hours.
A global survey of architecture emphasizing the material and cultural context for design. Focused primarily on the period from prehistory through 1750. Prerequisite: "C" or better in ARCH 1301, ARCH 1341, and ARCH 1342 or INTD 1342. Restricted to Architecture-intended and Interior Design-intended majors.

ARCH 2304. HISTORY OF ARCHITECTURE AND INTERIOR DESIGN II. 3 Hours.
A global survey of architecture emphasizing the material and cultural context for design. Focused on the period from 1750 to the present. Prerequisites: "C" or better in ARCH 1301, ARCH 1341, ARCH 1342 or INTD 1342, and ARCH 2303. Sophomore standing in the program. Restricted to Architecture-intended and Interior Design-intended majors.

ARCH 2341. DESIGN COMMUNICATION FOR ENGINEERS. 3 Hours.
This course introduces engineering students to design communication skills. Content includes sketching, drawing, graphic layout, diagramming and an introduction to orthographic projections and perspectives. Media will be both analog and digital. Digital tools may include image processing software, graphic design software and computer aided design (CAD) software. Prerequisite: Restricted to AREN students.

ARCH 2391. TOPICS IN ARCHITECTURE. 3 Hours.
Selected topics in concepts, philosophy, and models of architecture and allied arts of design. Prerequisite: Department Consent.

ARCH 2551. BASIC DESIGN AND DRAWING I. 5 Hours.
Basic Design and Drawing I course, the first design studio in the Basic Studies Foundation, is an introduction to architectural design, basic design theory and methodologies relating to spatial abstractions and forms. The course focuses on heuristic thinking with an emphasis on process and making. Two- and three-dimensional studio exercises develop a sensibility to design fundamentals, architectural vocabulary and design decision based on analysis and critique towards process-based learning strategies. As a continuation to the first-year courses, the role of design communications is reiterated in drawing exercises focusing on form, color theory, texture, and spatial determinants, historical precedence, sketching, orthographic projection and modeling. Prerequisite: "C" or better in ARCH 1342 or INTD 1342, credit or concurrent enrollment in ARCH 2303. Sophomore standing in the program. Restricted to Architecture-intended, ARCH_UNIV, Interior Design-intended, and INTD_UNIV majors.

ARCH 2552. BASIC DESIGN AND DRAWING II. 5 Hours.
Basic Design and Drawing II, the second design studio in the Basic Studies Foundation builds on disciplinary principles of basic design theory, 2D and 3D projects, with emphasis on visual and verbal representation. The course follows established methodologies that develop an understanding of foundational design principles of space, hierarchy, scale, proportion, circulation, and enclosure. Studio exercises and projects develop individual skills and collectively apply analog and digital processes to understand the design of architectural spaces and forms, their constituent parts, and their conditional relationships to the context, as a coherent, inter-related design process. The study of historical and contemporary masterworks of architecture serves to inform the projects toward the role of historical precedent in design. Design communication focuses on accurate orthographic projections, drawing conventions, graphic sensibility, and the exploration of 2D and 3D representation with physical models using a range of techniques, which exhibit understanding of tectonics, craft, materiality, and the representation of ideas. Prerequisite: "C" or better in ARCH 2303, ARCH 2551, and credit or concurrent enrollment in ARCH 2304. Restricted to Architecture-intended and Interior Design-intended majors.

ARCH 3312. HISTORY OF CONTEMPORARY THEORY. 3 Hours.
This course will familiarize students with major intellectual paradigms and themes that have informed postwar architectural practice in Western tradition. Through reading primary theoretical texts that have had major impact on practice, students will hone their skills of critical thinking and be better able to position themselves in their navigation of contemporary theoretical issues. Prerequisite: ARCH 2303 and ARCH 2304 and Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 3323. CONSTRUCTION MATERIALS AND METHODS. 3 Hours.
This course discusses the nature of materials and structural concepts to be used in the construction process. The principles and fundamentals of building construction materials and methods is evaluated, and the project development process and construction delivery systems are introduced. The course provides an understanding of building standards and codes; the impact of materials and buildings on the environment and human health, safety, and welfare; the material properties including structural properties of materials as well as performance properties and the major materials and construction systems such as light wood frame, mass timber, and steel and concrete frame construction. Prerequisite: ARCH 2552. Junior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 3324. STRUCTURES I. 3 Hours.
This course is the foundation for all advanced structures courses in the undergraduate and graduate architecture programs. In an engineering curriculum, this course is offered in two separate courses referred to as: (a) Statics and (b) Strength of Materials, each of one-semester duration. the present course capsules the information yet is rigorous enough and covers all important topics in the two engineering courses including equilibrium of particles and rigid bodies, analysis of important structural load bearing items such as cables, beams and Trusses, Definition of Stress and strain and their role in structural design, cross-sectional properties of structural members and analysis of strength for the beams. Prerequisite: ARCH 3323, PHYS 1441 or PHYS 1443, MATH 1327 or MATH 1426. Junior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 3336. STRUCTURAL SYSTEMS FOR ARCHITECTURAL ENGINEERS. 3 Hours.
This course covers the engineering design of various concrete, steel and masonry structural systems used in the construction of buildings. Building types vary from single-story commercial buildings to low-rise and high-rise buildings. Current building codes and project examples are examined from a fundamental structural engineering perspective, in which the rationale for the structural system is analyzed, calculations performed, and systematic construction design processes are developed for gravity loads and lateral loads from start to completion of each project. The project examples culminate with a detailed cost analysis based on current industry trends. Prerequisite: Restricted to CE_AENUCOL, CE_ARENINT, CE_ARENBS, and CE_AREPROB majors.

ARCH 3343. ARCHITECTURE COMPUTER GRAPHICS (DESIGN COMMUNICATION III). 3 Hours.
An advanced course to develop visual sensitivity and awareness of digital techniques to enable the student to study design ideas and present those ideas in the various design disciplines. Emphasis on the relationship of computer graphics with the design process. This course is offered as ARCH 3343 and INTD 2343, credit will only be granted once. Prerequisite: Junior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 3354. INTRODUCTION TO ENVIRONMENTAL & SUSTAINABILITY STUDIES. 3 Hours.
Introduces major topics, questions, issues and methods within interdisciplinary and cross-disciplinary environmental studies. Includes a study of some of the most significant texts, studies, practices, and creative works from at least four different fields as they pertain to questions of environment, ecology, and sustainability.

ARCH 3357. DESIGN TECHNOLOGIES - BUILDING INFORMATION MODELING FOR ARCHITECTS/ENGINEERS. 3 Hours.
Introduction to Building Information Modeling (BIM); discussions of the roles and impacts of BIM in the design process, energy assessment, and facility management. The course includes creating building elements such as walls, windows, doors, roof, ceiling, stairs, ramp, and structural and MEP systems. Course provides an overview of BIM applications such as daylight and energy analysis. Prerequisite: AREN 2352. Restricted to CE_AENUCOL, CE_ARENINT, CE_ARENBS, and CE_AREPROB majors.

ARCH 3361. ARCHITECTURE AND ENVIRONMENT. 3 Hours.
An overview of sustainable design integrated with natural resource conservation. Prerequisite: ARCH 2552. Junior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 3364. SITE DESIGN. 3 Hours.
The related site design process includes site planning pertaining to land use, case studies, siting of structures, codes, and topography. Prerequisite: Junior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 3551. BASIC DESIGN FOR ENGINEERS. 5 Hours.
This course is an introduction to design communication (verbal and graphic), the process of design, architectural principles and the process of navigating the relationship between architectural design and engineering. Precedent studies introduce students to Architecture and two- and three-dimensional studio exercises develop a sensibility to design fundamentals and vocabulary. Prerequisite: ARCH 1301 and ARCH 2341 and restricted to AREN students.

ARCH 3553. DESIGN STUDIO: ARCHITECTURE I. 5 Hours.
The reiteration of basic design principles, formal ordering systems and spatial concepts toward the synthesis of simple building types, with application of materials, introduction of structural systems, rudimentary building systems, limited program, with preliminary understanding of site design, and environmental issues. Projects will investigate small scale institutional, civic, or cultural buildings set in cities of historical significance that respond directly to their context. Research and analysis of influential precedent buildings and cities, whether historical or contemporary will inform the design process and methodologies. Credit will be given for only one of ARCH 3553 or INTD 3553. Prerequisite: ARCH 2552 or INTD 2552. Credit or concurrent enrollment in ARCH 3323 and ARCH 3343 or ARCH 3364. Junior standing in the program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 3554. DESIGN STUDIO: ARCHITECTURE II. 5 Hours.
A continuation of ARCH 3553 with an increased complexity and scale of projects which address buildings within urban contexts. Projects will incorporate design theory with technical, site and structural considerations. Research of local specifics as design imperatives will inform building and site integration, which respond to context. Projects will investigate and subsequently integrate rudimentary building systems including those for formal ordering, spatial organization, structural support, materiality, building assembly, envelopes, building services, life safety, and circulation, with a particular attention towards sustainability, accessibility, efficiency, and code compliance. Design communication will demonstrate understanding of project components by developing an encompassing set of orthographic projections Three dimensional models will test and communicate spatial intentions relating to the context addressing, proportion, massing, materiality, environment, and project character. Prerequisite: ARCH 3323, ARCH 3553, and ARCH 3343 or ARCH 3364. Credit or concurrent enrollment in ARCH 3324 and ARCH 3343 and ARCH 3364. Junior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 3595. SELECTED TOPICS ARCHITECTURE. 5 Hours.
A transitional studio course to explore and present selected topics in architecture and design. May be repeated for credit as topics change. Prerequisite: Department consent. Junior standing in program. Restricted to Architecture majors.

ARCH 4191. CONFERENCE COURSE. 1 Hour.
Independent study guided by an instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor or the Architecture Undergraduate Advisor.

ARCH 4305. THE CITY OF ROME. 3 Hours.
History, topography, and monuments of the city of Rome and its environs from its legendary founding in 753 B.C. until the 20th Century. Urban form and architecture will be inspected in context of contemporaneous culture, with special emphasis on imperial and papal Rome. Prerequisite: Department consent. Restricted to Architecture and Interior Design Majors.

ARCH 4306. URBAN DESIGN THEORY. 3 Hours.
Design theory and its application to the urban scale, as applied to historical and contemporary examples. Prerequisite: ARCH 2552. Department consent. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4307. THE LIFE OF CITIES. 3 Hours.
A look at a series of world cities by situating their architectural context, with a particular focus on the impact of 20th century modernism and postmodernism on city fabric. Prerequisite: ARCH 2303 and ARCH 2304 and Junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4308. HISTORY OF URBAN FORM. 3 Hours.
The history of cities as physical form, influenced by political, economic, and social forces. Prerequisite: Department consent. Restricted to Architecture and Interior Design majors.

ARCH 4309. MUSEUMS: HISTORY, CULTURE, DESIGN. 3 Hours.
This course investigates the historical and cultural forces driving the design of museums in the 19th and 20th centuries with special attention to the development of a diverse range of new museum types beyond traditional art and natural science museums. Field trips to local museum sites are required. Prerequisite: ARCH 2303 and ARCH 2304, junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4310. SKYSCRAPER HISTORIES. 3 Hours.
This course considers the history of the skyscraper from multiple perspectives, seeking consensus about what a skyscraper really is. This course will allow students to begin to develop their skills in reading, writing, critical thinking, visual memory, and visual analysis using the history of architecture as a medium. Students will also develop basic research skills using primary sources to document architecture. Prerequisite: ARCH 2303 and ARCH 2304, junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4311. TOPICS IN ARCHITECTURAL THEORY. 3 Hours.
Selected topics in concepts, philosophy, and models of architecture and allied arts of design with specific application to 20th Century problems. May be repeated for credit as specific topics vary. Prerequisites: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4312. WHAT MAKES A CITY: CRITICAL ISSUES IN ARCHITECTURE, PLANNING, AND URBAN DESIGN. 3 Hours.
This class is a critical exploration of the physical environment of the city, looking at a range of issues--mobility, housing, landscape, gentrification, sustainability, health-to understand how the built world shapes the way we live every day. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4313. THE ARCHITECT IN CONTEMPORARY SOCIETY. 3 Hours.
Readings on the Culture of Architecture The focus of this course is to examine this social construct in the belief that critical self-reflection can assist in improving success within it. This examination will be conducted through readings in a collection of publications both historical and contemporary that offer critical insight into the professional/social culture of architects. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4314. HISTORIC PRESERVATION AND RESTORATION. 3 Hours.
Concepts and implementation of the restoration and preservation of historic structures and places, including archaeological, bibliographic, legislative, institutional, and physical parameters to the retention and adaptive re-use of significant architecture. This course is offered as ARCH 4314 and INTD 4314; credit will be granted only once. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4315. TOPICS IN THE HISTORY OF ARCHITECTURE AND DESIGN. 3 Hours.
Selected topics in architecture and the allied arts of design. Some recent topics include: Architecture of Texas, The Life of Cities, History of Architecture Theory, Developing World Slum Housing, Architecture and Politics, and Contemporary Architecture. Certain topics may be offered every second or third year. The course may be repeated up to four times as the topics change. Prerequisite: ARCH 2303 and ARCH 2304, junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4316. MODERN ARCHITECTURE I. 3 Hours.
Development of 20th Century architecture from the origins of the modern movement in the 1890s until its diffusion in Europe and America in the 1930s. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4317. MODERN ARCHITECTURE II. 3 Hours.
Development of 20th Century architecture from the diffusion of modernism in the 1930s to the present day. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4318. ARCHITECTURE ON SCREEN. 3 Hours.
How do the things we watch shape our perceptions of architecture and the city? How do the environments in film and on television frame our vision, shape character, and convey themes? How are architects and other design professionals portrayed? What do they suggest about changes in the physical and technological world in which we live? This course explores those questions and others through screen history, from the earliest films to contemporary television and digital productions. Themes will include the dystopian city, suburbia, the evolving depiction of modernism, architecture as documentary subject, and the history of the city on screen. Students will explore these questions and will have to make their own short films. May be repeated for credit as specific topics vary. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4319. HOUSING PROTOTYPES: 1920s TO PRESENT. 3 Hours.
An extensive investigation of the many states of housing that architects and educators have encountered in the last 100 years. The course is organized through introduction, research, analysis, and case study of various housing typologies, unit design principles, density concerns, site, relationship of inside and outside, zoning and building codes, and new emerging housing building types. Prerequisite: ARCH 2303 and ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4320. PERFORMANCE-BASED DESIGN IN ARCHITECTURE. 3 Hours.
An overview of Performance-Based Building Design (PBBD) in architecture and how clients' expectations are translated into performance requirements, how we describe performance objectives, how we define performance indicators, and finally, how we can quantify and assess building performance. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4322. ARCHITECTURE + POLITICS. 3 Hours.
This course examines how notions of national identity are expressed in parliament buildings and other important buildings of state. Throughout the course, questions about what constitutes national identity, capital cities, and how architecture is used as a manifestation of these political aspects will be addressed. Buildings within nations or subnational regions across six continents are examined, giving students a global understanding of these issues. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4325. ENVIRONMENTAL CONTROL SYSTEMS I. 3 Hours.
Acoustics and illumination and their significance in the total design. Prerequisite: PHYS 1442. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4326. ENVIRONMENTAL CONTROL SYSTEMS II. 3 Hours.
Climate controls, mechanical and electrical systems, and their significance in the total design. Prerequisite: ARCH 4325 or AREN 3331. Junior standing in program. Restricted to Architecture, Interior Design, and Architectural Engineering majors.

ARCH 4329. TOPICS IN COMPUTERS AND DESIGN. 3 Hours.
Selected topics in the range and potential of digital computer applications in the design professions. May be repeated for credit as specific topics vary. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4332. ENERGY USE AND CONSERVATION IN ARCHITECTURE. 3 Hours.
Basic concepts of the efficient use and conservation of energy related to architectural design principles. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4338. CODES AND REGULATIONS. 3 Hours.
A study of accessibility, building and energy codes and related regulations including the architects' responsibility for compliance. This course is offered as ARCH 4338 and INTD 3338; credit will be granted only once. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4339. DIGITAL FABRICATION METHODOLOGY. 3 Hours.
The history, theory, and methodology framing the discourse for parametric design and digital fabrication with an emphasis on digital fabrication techniques and introduction to parametric modeling software. Prerequisites: Junior standing in program. Open to ARCH and INTD majors.

ARCH 4340. MODERN + CONTEMPORARY ARCHITECTURE IN MEXICO. 3 Hours.
This course examines notions of Mexican national identity as expressed through architecture. Part 1 looks at late 19th and early 20th century architecture during the Porfiriato, as well as that occurring shortly after the Mexican Revolution of 1910-20, including the critical role that cement played. Part 2 considers how the so-called First Generation of architects adapted and transformed Modernism in Mexico. Part 3 examines how the Second and Third Generations moved beyond Modernism, including. The course concludes with Mexico's "First Generation" of women architects as issues of gender are addressed. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors, or Department consent.

ARCH 4341. NOTATIONAL DRAWING. 3 Hours.
Seminar concerned with analytical drawing techniques and how to use the sketchbook as a tool and process for architectural production. Emphasis will be on cultivating drawing strategies that will heighten the ability to make observations through first-hand experience and record them with the correct conventions in order to enable recovery for future use in architectural design. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4344. CONCEPTUAL DRAWING. 3 Hours.
A seminar to explore the aspects of conceptual drawing for the architect and the relationship of design ideas in the drawing process. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4345. DIGITAL CONSTRUCTION. 3 Hours.
A workshop exploring video cartography using photography, animation, motion graphics and digital video. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4346. CONSTRUCTION DRAWINGS. 3 Hours.
The techniques of building construction, the communication of technical information, and the process of preparing contract drawings for construction. Prerequisite: ARCH 3343. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4347. DIGITAL TECTONICS & PROTOTYPING. 3 Hours.
The use of digital technology in the architectural design process focusing on the research and fabrication of full-scale production of prototypes. ARCH 4339 Digital Fabrication Methodology is highly recommended. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4348. ARCHITECTURAL PHOTOGRAPHY. 3 Hours.
Basic photography for architects. The use of photography as an investigative and presentation device in architecture. Emphasis on composition and black and white technique. Prerequisite: ARCH 2552. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4349. PORTFOLIO DESIGN. 3 Hours.
Principles and techniques of producing an architectural/interior design portfolio and resume including graphic design, layout, typography, grid systems, model photography as well as use of layout and photographic software. Prerequisite: ARCH 3553, ARCH 3554. Restricted to Architecture and Interior Design majors.

ARCH 4350. ARCHITECTURE, ENGAGEMENT + COMMUNITY POWER. 3 Hours.
Architecture, Engagement and Community Power will unpack the role of the citizen architect. It will examine participatory design processes that center community voice and shift existing power structures. In this country, constructed systems of oppression including racist practices, policies and financial systems have shaped the way our neighborhoods have developed. These acts have created inequities across communities that impact one's ability to thrive. Starting from the notion that all places are designed, and can therefore be undesigned, this course will explore the ways in which design processes can strengthen community power for marginalized communities. This course will encourage activism as an inherent quality in the development of an architect; encourage students to make connections between classroom learning and the larger community; require students to develop the skill to see and hear multiple voices; and encourage the development of visual, written, & oral communication tools. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4351. WILDERNESS: A CONDITION OF MIND. 3 Hours.
Changing conceptions of wilderness in Western thought, from ancestral prejudices to recent, revolutionary appreciation. Literary and visual documentation. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4352. HOUSING: FROM CAVES TO MANSIONS IN THE CLOUDS. 3 Hours.
This course examines the evolution of American urban settlements as they evolved from French, Spanish and English concepts of town-planning. The course begins with the Native American settlements in the American Southwest, particularly Mesa Verde and Hovenweep, followed by examination of the earliest European capital cities of Rome, Paris and London. Since the wholesale transplanting of European principles of town-planning traditions could not take root in the New World, distinctly American housing settlements evolved such as Savannah, Santa Fe, Taos and St. Augustine. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4353. HISTORY OF LANDSCAPE ARCHITECTURE. 3 Hours.
Development of landscape design from prehistory through 19th century with emphasis upon rural gardens and urban parks as representative of the social, cultural, and intellectual circumstances of the times and places in which they were created. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4354. CONVERGENCES: BETWEEN ART AND ARCHITECTURE. 3 Hours.
This course explores the convergences of artist methods of production with the processes of architectural practices. The course traces the work of leading filmmakers, both artistic and documentarian, whose professional leanings verge on the province of the architect. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4357. BUILDING INFORMATION MODELING & VISUALIZATION. 3 Hours.
To gain a working knowledge of Building Information Modeling software (Revit) and advanced 3D modeling software. This course is offered as ARCH 4357 and INTD 3357, credit will only be granted once. Prerequisite: ARCH 3343, INTD 2343, or INTD 3343; and Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4360. POLITICS AND PRACTICE OF PRESERVATION. 3 Hours.
The history and theory of preservation and of the political context that influence these. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4362. STRUCTURAL SYSTEMS IN BUILDINGS. 3 Hours.
An overview of various structural systems including those used in long-span and high-rise buildings. Numerical work limited to the explanation of relevant structural concepts. Prerequisite: ARCH 3324. Junior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 4365. CATALYTIC MAPPING. 3 Hours.
An advanced theory elective course and workshop using the potential of mapping as a design, analytic and research mechanism for exploring complex contexts. Prerequisite: Junior standing in Architecture, Interior Design or permission of the advisor.

ARCH 4366. RADICAL URBANISM. 3 Hours.
An advanced theory course focused on the exposure to and critical analysis of some of the most radical, inspirational, and transformative urban design ideas and projects from Vitruvius to today. Prerequisite: Junior standing in Architecture, Interior Design or permission by the advisor.

ARCH 4367. HIGH PERFORMANCE FACADE SYSTEMS. 3 Hours.
Examines the role of the façade and building envelope as it relates to design, indoor comfort, energy and carbon usage, and overall performance through an exploration of materiality, assembly, and construction. The course also introduces the potential of generative technologies, smart materials, passive-active combinations, and integrated systems. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4368. GREEN DESIGN + CONSTRUCTION. 3 Hours.
Green building design, construction, and operation is an opportunity to reduce negative impacts on the environment, and the health and comfort of building occupants, thereby improving building performance. It provides cost savings to all tax-payers through improved human health and productivity, lower cost building operations, and resource efficiency. Green design and construction focuses on strategies and technologies to improve the energy efficiency and performance of buildings, and to reduce the environmental impact of buildings. The course emphasizes on different aspects of green building during all phases of a building's life-cycle, including design, construction, operation and decommissioning. All LEED categories are covered throughout the course and students get prepared to take LEED Green Associate exam by the end of the semester. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4369. TERRITORIAL STRATEGIES. 3 Hours.
Territorial Strategies focus on climate resilience of the built environment on the territorial scale. In Territorial Strategies, students explore how macro-level drivers of spatial (trans)formation impact micro-level strategies and actions in distinct climatic regions. Students apply a systems-thinking approach to map, diagram, model, draw, and visualize project outcomes, research findings, and data through various media. Prerequisite: Junior standing in Architecture, Interior Design, Sustainable Urban Design, or permission by the advisor.

ARCH 4371. FUTURE CITIES. 3 Hours.
Future Cities focus on climate resilience of the built environment on the urban scale. In Future Cities, students explore historical and contemporary concepts of ecological design and combine mitigative and adaptive strategies and actions for urban landscapes in the age of anthropogenic climate change. Students apply a participatory mixed-methods approach to map, diagram, model, draw, and visualize project outcomes, research findings, and data through various media. Prerequisite: Junior standing in Architecture, Interior Design, Sustainable Urban Design, or permission by the advisor.

ARCH 4372. ADAPTIVE TYPOLOGIES. 3 Hours.
Adaptive Typologies focus on climate resilience of the built environment on the architectural object scale. In Adaptive Typologies, students explore architectural objects, their characteristics, and their performative aspects as integrated parts of the urban ecosystem. Students analyze, transform, and develop hybrid typologies merging physical, digital, and biological concepts and apply a digital mixed-methods approach, utilizing analytical, representational, and generative tools. Prerequisite: Junior standing in Architecture, Interior Design, Sustainable Urban Design, or permission by the advisor.

ARCH 4377. SPATIAL [IN] JUSTICE. 3 Hours.
Through lectures and discussions, Spatial [in] Justice will provide students with historical perspectives on how American cities became segregated, the creation and lack of inclusivity of 'public space', and the architect's role within a socially engaged practice. The course will begin by studying key philosophies and theories of justice. Students will work with a community partner to produce a community engagement and development plan. They will research publicly available data and organize it into a package for the community and other stakeholders. Prerequisite: ARCH 2303, ARCH 2304. Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4382. URBAN DESIGN SEMINAR. 3 Hours.
The Seminar establishes a basic critical understanding, and a critique of urban design by reviewing its past, present and the future as an academic field and an area of practice. The seminar introduces urban design as a transdisciplinary specialization and professional endeavor that encompasses landscape architecture, architecture, city planning, and real estate to shape and influence the built environment primarily within urban context. Students actively present and lead informed discussions on topics such as urban form, urban landscapes, land-use patterns, population density, circulation, legibility, public art, environmental behavior and urban/rural interchange. Field trips are required. Prerequisite: C or better in UDES 4551, ARCH 3554, or approved equivalent. Students must have a minimum cumulative GPA of 2.8 and a minimum major course(s) GPA of 2.8. Department consent.

ARCH 4391. CONFERENCE COURSE. 3 Hours.
Independent study guided by an instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor or the Architecture Undergraduate Advisor.

ARCH 4395. SELECTED TOPICS ARCHITECTURE. 3 Hours.
Studio and lecture courses to explore and present selected topics in architecture and design. May be repeated for credit as topics change. Prerequisite: Junior standing in program. Restricted to Architecture and Interior Design majors.

ARCH 4556. DESIGN STUDIO: ARCHITECTURE III. 5 Hours.
Advanced architectural design projects integrating research on contemporary issues intrinsic to architecture. Prerequisites: ARCH 3324, ARCH 3343, ARCH 3364, and ARCH 3554. Senior standing in program. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 4557. DESIGN STUDIO: ARCHITECTURE IV. 5 Hours.
Advanced architectural projects focusing on contemporary design issues that address topics extrinsic to the disciplines of architecture. Prerequisite: ARCH 3324, ARCH 3343, ARCH 3364, and ARCH 3554. Restricted to Architecture majors. Minimum 2.8 GPAs both cumulative and within the major required.

ARCH 4591. CONFERENCE COURSE. 5 Hours.
Independent study guided by an instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor or the Architecture Undergraduate Advisor. Senior standing in program. Restricted to Architecture majors.

ARCH 4595. SELECTED TOPICS ARCHITECTURE. 5 Hours.
A transitional studio course to explore and present selected topics in architecture and design. May be repeated for credit as topics change. Prerequisite: Department consent.

ARCH 5191. CONFERENCE COURSE. 1 Hour.
Special subjects and issues as arranged with individual students and faculty members. May be repeated for credit as topic changes.

ARCH 5291. CONFERENCE COURSE. 2 Hours.
Special subjects and issues as arranged with individual students and faculty members. May be repeated for credit as topic changes.

ARCH 5301. INTRODUCTION TO ARCHITECTURE AND INTERIOR DESIGN. 3 Hours.
A survey study of the interrelationships between society, culture, and architecture. Concurrent enrollment of ARCH 5591 and ARCH 5342 required.

ARCH 5303. HISTORY OF ARCHITECTURE AND INTERIOR DESIGN I. 3 Hours.
A global survey of architecture emphasizing the material and cultural context for design. Focused primarily on the period from prehistory through 1750. Prerequisite: Permission of the instructor.

ARCH 5304. HISTORY OF ARCHITECTURE AND INTERIOR DESIGN II. 3 Hours.
A global survey of architecture emphasizing the material and cultural context for design. Focused on the period from 1750 to the present. Prerequisite: ARCH 5303 and permission of the instructor.

ARCH 5305. CITY OF ROME. 3 Hours.
History, topography, and monuments of Rome and its environs from its legendary founding in 753 B.C. until the 20th Century, with special emphasis on imperial and papal Rome.

ARCH 5306. URBAN DESIGN. 3 Hours.
Urban design theory, method, and implementation using contemporary and historic examples.

ARCH 5307. THE LIFE OF CITIES. 3 Hours.
A look at a series of world cities by situating their architectural context, with a particular focus on the impact of 20th century modernism and postmodernism on city fabric. Prerequisites: ARCH 2303 & ARCH 2304 or ARCH 5303 & ARCH 5304.

ARCH 5308. HISTORY OF URBAN FORM. 3 Hours.
The history of cities as physical form, influenced by political, economic, and social forces.

ARCH 5309. MUSEUMS: HISTORY, CULTURE, DESIGN. 3 Hours.
This course investigates the historical and cultural forces driving the design of museums in the 19th and 20th centuries with special attention to the development of a diverse range of new museum types beyond traditional art and natural science museums. Field trips to local museum sites are required. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304. Department consent.

ARCH 5310. SKYSCRAPER HISTORIES. 3 Hours.
This course considers the history of the skyscraper from multiple perspectives, seeking consensus about what a skyscraper really is. This course will allow students to begin to develop their skills in reading, writing, critical thinking, visual memory, and visual analysis using the history of architecture as a medium. Students will also develop basic research skills using primary sources to document architecture. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304. Department consent.

ARCH 5311. ARCHITECTURAL THEORY. 3 Hours.
A review and analysis of the concepts, philosophy, ideology, and models that promulgated 20th Century architectural design. May be repeated for credit as topics change. Prerequisite: ARCH 2303 or ARCH 5303, ARCH 2304 or ARCH 5304, and permission of the department.

ARCH 5312. WHAT MAKES A CITY: CRITICAL ISSUES IN ARCHITECTURE, PLANNING, AND URBAN DESIGN. 3 Hours.
This class is a critical exploration of the physical environment of the city, looking at a range of issues--mobility, housing, landscape, gentrification, sustainability, health-to understand how the built world shapes the way we live every day. Prerequisite: ARCH 2303 or ARCH 5303, ARCH 2304 or ARCH 5304, and permission of the department.

ARCH 5313. THE ARCHITECT IN CONTEMPORARY SOCIETY. 3 Hours.
Readings on the Culture of Architecture The focus of this course is to examine this social construct in the belief that critical self-reflection can assist in improving success within it. This examination will be conducted through readings in a collection of publications both historical and contemporary that offer critical insight into the professional/social culture of architects. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304.

ARCH 5314. HISTORIC PRESERVATION AND RESTORATION. 3 Hours.
Concepts and implementation of the restoration and preservation of historic structures and places, including archaeological, bibliographic, legislative, institutional, and physical parameters to the retention and adaptive re-use of significant architecture.

ARCH 5315. TOPICS IN ARCHITECTURAL HISTORY. 3 Hours.
Courses to explore and present selected topics in architecture and related fields of the Ancient Mediterranean, the Classical World, the Middle Ages, the 19th Century, and the Non-Western Traditions. May be repeated for credit as topics change. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304. Department consent.

ARCH 5316. MODERN ARCHITECTURE I 1890 TO 1945. 3 Hours.
Origins and development of Modern Architecture in Europe from 1890 to World War II, and its further evolution in Europe and America from 1918 to 1945. Prerequisites: ARCH 2303 and ARCH 2304.

ARCH 5317. MODERN ARCHITECTURE II 1945 TO PRESENT. 3 Hours.
Architectural developments in Europe, Asia, and America since World War II. Prerequisites: ARCH 2303 and ARCH 2304.

ARCH 5318. ARCHITECTURE ON SCREEN. 3 Hours.
How do the things we watch shape our perceptions of architecture and the city? How do the environments in film and on television frame our vision, shape character, and convey themes? How are architects and other design professionals portrayed? What do they suggest about changes in the physical and technological world in which we live? This course explores those questions and others through screen history, from the earliest films to contemporary television and digital productions. Themes will include the dystopian city, suburbia, the evolving depiction of modernism, architecture as documentary subject, and the history of the city on screen. Students will explore these questions and will have to make their own short films. Prerequisite: ARCH 2303 or ARCH 5303, ARCH 2304 or ARCH 5304, and permission of the department.

ARCH 5319. HOUSING PROTOTYPES: 1920s TO PRESENT. 3 Hours.
An extensive investigation of the many states of housing that architects and educators have encountered in the last 100 years. The course is organized through introduction, research, analysis, and case study of various housing typologies, unit design principles, density concerns, site, relationship of inside and outside, zoning and building codes, and new emerging housing building types. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304.

ARCH 5320. PERFORMANCE-BASED DESIGN IN ARCHITECTURE. 3 Hours.
An overview of Performance-Based Building Design (PBBD) in architecture and how clients' expectations are translated into performance requirements, how we describe performance objectives, how we define performance indicators, and finally, how we can quantify and assess building performance.

ARCH 5321. ADVANCED COMPUTER APPLICATIONS. 3 Hours.
The study and application of specialized computer programs in environmental design. Prerequisites: ARCH 3343 or INTD 3343 or ARCH 5343, or the equivalent. Department consent.

ARCH 5322. ARCHITECTURE + POLITICS. 3 Hours.
This course examines how notions of national identity are expressed in parliament buildings and other important buildings of state. Throughout the course, questions about what constitutes national identity, capital cities, and how architecture is used as a manifestation of these political aspects will be addressed. Buildings within nations or subnational regions across six continents are examined, giving students a global understanding of these issues. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304. Department consent.

ARCH 5323. CONSTRUCTION MATERIALS AND METHODS. 3 Hours.
This course discusses the nature of materials and structural concepts to be used in the construction process. The principles and fundamentals of building construction materials and methods is evaluated, and the project development process and construction delivery systems are introduced. The course provides an understanding of building standards and codes; the impact of materials and buildings on the environment and human health, safety, and welfare; the material properties including structural properties of materials as well as performance properties and the major materials and construction systems such as light wood frame, mass timber, and steel and concrete frame construction. Prerequisite: Permission of the instructor.

ARCH 5324. STRUCTURES I. 3 Hours.
This course is the foundation for all advanced structures courses in the undergraduate and graduate architecture programs. In an engineering curriculum, this course is offered in two separate courses referred to as: (a) Statics and (b) Strength of Materials, each of one-semester duration. The present course encapsulates the information yet is rigorous enough and covers all important topics in the two engineering courses including equilibrium of particles and rigid bodies, analysis of important structural load bearing items such as cables, beams and Trusses, Definition of Stress and strain and their role in structural design, cross-sectional properties of structural members and analysis of strength for the beams. Prerequisite: ARCH 5323 or ARCH 3323.

ARCH 5325. ENVIRONMENTAL CONTROL SYSTEMS I. 3 Hours.
Illumination,acoustics, climate controls, mechanical and electrical systems, and their significance in the total design.

ARCH 5326. ENVIRONMENTAL CONTROL SYSTEMS II. 3 Hours.
Climate controls, mechanical and electrical systems, and their significance in the total design.

ARCH 5327. STRUCTURES II. 3 Hours.
This course is a continuation of ARCH 5324 with an emphasis on structural theory and systems in steel construction. It covers the design and investigation of structural steel. The course begins with a general introduction to structural behavior, strength, and modulus of elasticity of steel material. The elastic and plastic behavior of structural steel material is discussed, and the definition of yield strength is addressed as one of the main structural measures of steel material. Loads and load combinations are the next part of the course. This part describes how the gravity and lateral loads are distributed in a steel structure and what combination of loads should be considered for the design. To address the requirements of the design of structural members, simple methods of structural analysis are covered by which the internal moments and shear in members can be found. The course is continued by formulating and step by step description of the design of decks, beams and girders, open-web steel joists and joist girders as well as columns. Prerequisite: ARCH 5324.

ARCH 5328. STRUCTURES III. 3 Hours.
This course is a continuation of ARCH 5327 with an emphasis on structural theory and systems in concrete construction. It covers the design and investigation of structural concrete. The course begins with a general introduction to structural behavior, strength, and modulus of elasticity of concrete material. To ensure that the concrete has the required minimum strength, special field sampling and tests are necessary. Loads and load combinations are the next part of the course. This part describes how the gravity and lateral loads are distributed in a concrete structure and what combination of loads should be considered for the design. To address the requirements of the design of structural members, a simplified method of structural analysis is defined by which the internal moments and shear in members can be found. Course is continued by formulating and step by step description of the design of beams, columns, and footings in a concrete structure. Prerequisite: ARCH 5327.

ARCH 5329. TOPICS IN COMPUTERS AND DESIGN. 3 Hours.
Computer aided design, drafting and graphic techniques as applied to architecture. May be repeated for credit as topics change.

ARCH 5330. COMPARATIVE STRUCTURES. 3 Hours.
Comparative analysis and design of structural systems and construction techniques, including architectural and economic determinants. Prerequisite: ARCH 5328 or permission of the instructor.

ARCH 5331. PROFESSIONAL PRACTICE. 3 Hours.
Survey of the administrative functions, and the ethical and legal responsibilities of the architect. Prerequisite: ARCH 5670.

ARCH 5332. ENERGY USE AND CONSERVATION IN ARCHITECTURE. 3 Hours.
Basic concepts of the efficient use and conservation of energy related to architectural design principles. Prerequisite: permission of the instructor.

ARCH 5333. CONSTRUCTION II. 3 Hours.
Advanced construction assemblies and methods, including the principles of cost control. Prerequisites: ARCH 5670.

ARCH 5335. ADVANCED PROFESSIONAL PRACTICE II: MARKETING DESIGN SERVICES. 3 Hours.
A study of the strategies and methods for marketing professional services. Presented as case studies of architecture, interior design, and landscape architecture firms.

ARCH 5336. PROGRAMMING AND SITE DESIGN II. 3 Hours.
The course focuses on project programming and the technical aspects of site design. Prerequisite: ARCH 5670.

ARCH 5337. SOILS AND FOUNDATIONS. 3 Hours.
Soil classifications, field and laboratory identification, physical properties and load-bearing characteristics, retaining walls and foundations.

ARCH 5338. CODES AND REGULATIONS. 3 Hours.
A study of accessibility, building and energy codes and related regulations including the architects' responsibility for compliance. Prerequisite: Permission of Department.

ARCH 5339. DIGITAL FABRICATION METHODOLOGY. 3 Hours.
The conceptualizing and making of objects lying outside the traditional scope of architectural practice, including elements of industrial and product design and the development of working prototypes.

ARCH 5340. MODERN + CONTEMPORARY ARCHITECTURE IN MEXICO. 3 Hours.
This course examines notions of Mexican national identity as expressed through architecture. Part 1 looks at late 19th and early 20th century architecture during the Porfiriato, as well as that occurring shortly after the Mexican Revolution of 1910-20, including the critical role that cement played. Part 2 considers how the so-called First Generation of architects adapted and transformed Modernism in Mexico. Part 3 examines how the Second and Third Generations moved beyond Modernism, including. The course concludes with Mexico's "First Generation" of women architects as issues of gender are addressed. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304. Department consent.

ARCH 5341. NOTATIONAL DRAWING. 3 Hours.
Seminar concerned with analytical drawing techniques and how to use the sketchbook as a tool and process for architectural production. Emphasis will be on cultivating drawing strategies that will heighten the ability to make observations through first-hand experience and record them with the correct conventions in order to enable recovery for future use in architectural design.

ARCH 5342. DESIGN COMMUNICATIONS. 3 Hours.
Architectural drawing, perception, projections, and three-dimensional representation. Prerequisite: Concurrent enrollment in ARCH 5591 is required.

ARCH 5343. ARCHITECTURAL GRAPHICS II. 3 Hours.
An advanced course to develop visual sensitivity and awareness of digital techniques to enable the student to study design ideas and present those ideas in the various design disciplines. Emphasis on the relationship of computer graphics to the design process. Prerequisite: ARCH 5342 or program approval.

ARCH 5344. CONCEPTUAL DRAWING. 3 Hours.
Seminar to explore aspects of conceptual drawing for the architect and the relationship of design ideas in the drawing process.

ARCH 5345. DIGITAL CONSTRUCTION. 3 Hours.
A workshop exploring video cartography using photography, animation, motion graphics and digital video.

ARCH 5346. CONSTRUCTION DRAWINGS I. 3 Hours.
The techniques of building construction, the communication of technical information, and the process of preparing contract drawings for construction.

ARCH 5347. DIGITAL TECTONICS & PROTOTYPING. 3 Hours.
The use of digital technology in the architectural design process focusing on the research and fabrication of full-scale production of prototypes. Completion of ARCH 4339 or ARCH 5339 Digital Fabrication Methodology is highly recommended.

ARCH 5348. ARCHITECTURAL PHOTOGRAPHY. 3 Hours.
The use of photography as an investigative and presentation medium in architecture. Emphasis on composition in black and white technique.

ARCH 5349. ARCHITECTURE PORTFOLIO. 3 Hours.
Seminar concerned with goal toward the production of a personal design portfolio.

ARCH 5350. ARCHITECTURE, ENGAGEMENT + COMMUNITY POWER. 3 Hours.
Architecture, Engagement and Community Power will unpack the role of the citizen architect. It will examine participatory design processes that center community voice and shift existing power structures. In this country, constructed systems of oppression including racist practices, policies and financial systems have shaped the way our neighborhoods have developed. These acts have created inequities across communities that impact one's ability to thrive. Starting from the notion that all places are designed, and can therefore be undesigned, this course will explore the ways in which design processes can strengthen community power for marginalized communities. This course will encourage activism as an inherent quality in the development of an architect; encourage students to make connections between classroom learning and the larger community; require students to develop the skill to see and hear multiple voices; and encourage the development of visual, written, & oral communication tools. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304. Department consent.

ARCH 5351. WILDERNESS: A CONDITION OF MIND. 3 Hours.
Changing conceptions of wilderness in Western thought, from ancestral prejudices to recent, revolutionary appreciation. Literary and visual documentation.

ARCH 5352. HOUSING: FROM CAVES TO MANSIONS IN THE CLOUDS. 3 Hours.
This course examines the evolution of American urban settlements as they evolved from French, Spanish and English concepts of town-planning.

ARCH 5354. CONVERGENCES: BETWEEN ART AND ARCHITECTURE. 3 Hours.
This course explores the convergences of artist methods of production with the processes of architectural practices. The course traces the work of leading filmmakers, both artistic and documentarian, whose professional leanings verge on the province of the architect.

ARCH 5355. HEMISPHERES. 3 Hours.
The study and analysis of Japanese arts and contemporary culture. The arts of ceramics, painting, calligraphy, and sculpture are examined. Prerequisite: departmental approval.

ARCH 5357. BUILDING INFORMATION MODELING & VISUALIZATION. 3 Hours.
To gain a working knowledge of Autodesk Revit and 3D Studio Max. Prerequisites: ARCH 3343 or ARCH 5343 or INTD 3343.

ARCH 5361. ARCHITECTURE AND ENVIRONMENT. 3 Hours.
An overview of sustainable design integrated with natural resource conservation.

ARCH 5362. STRUCTURAL SYSTEMS IN BUILDING. 3 Hours.
An overview of various structural systems including those used in long-span and high-rise buildings. Numerical work limited to the explanation of relevant structural concepts. Prerequisite: ARCH 5324.

ARCH 5363. DESIGN RESEARCH. 3 Hours.
Seminar directed toward the understanding of research methods and the programming of an independent design project, leading to the thesis substitute.Graded P/F/R.Prerequisite: Permission of Graduate Advisor.

ARCH 5364. SITE DESIGN. 3 Hours.
The related site design process includes site planning pertaining to land use, case studies, siting of structures, codes, and topography.

ARCH 5365. CATALYTIC MAPPING. 3 Hours.
An advanced theory elective course and workshop using the potential of mapping as a design, analytic and research mechanism for exploring complex contexts.

ARCH 5366. RADICAL URBANISM. 3 Hours.
An advanced theory course focused on the exposure to and critical analysis of some of the most radical, inspirational, and transformative urban design ideas and projects from Vitruvius to today.

ARCH 5367. HIGH PERFORMANCE FACADE SYSTEMS. 3 Hours.
Examines the role of the façade and building envelope as it relates to design, indoor comfort, energy and carbon usage, and overall performance through an exploration of materiality, assembly, and construction. The course also introduces the potential of generative technologies, smart materials, passive-active combinations, and integrated systems.

ARCH 5368. GREEN DESIGN + CONSTRUCTION. 3 Hours.
Green building design, construction, and operation is an opportunity to reduce negative impacts on the environment, and the health and comfort of building occupants, thereby improving building performance. It provides cost savings to all tax-payers through improved human health and productivity, lower cost building operations, and resource efficiency. Green design and construction focuses on strategies and technologies to improve the energy efficiency and performance of buildings, and to reduce the environmental impact of buildings. The course emphasizes on different aspects of green building during all phases of a building's life-cycle, including design, construction, operation and decommissioning. All LEED categories are covered throughout the course and students get prepared to take LEED Green Associate exam by the end of the semester.

ARCH 5369. TERRITORIAL STRATEGIES. 3 Hours.
Territorial Strategies focus on climate resilience of the built environment on the territorial scale. In Territorial Strategies, students explore how macro-level drivers of spatial (trans)formation impact micro-level strategies and actions in distinct climatic regions. Students apply a systems-thinking approach to map, diagram, model, draw, and visualize project outcomes, research findings, and data through various media. Prerequisite: Graduate level in Architecture, Landscape Architecture, Urban Planning, and Public Administration and Public Policy majors.

ARCH 5370. ADVANCED DESIGN STUDIO. 3 Hours.
Studio course in the generation and development of architectural ideas in formal and environmental contexts. May be repeated for credit. Two of these courses are equivalent to ARCH 5670.

ARCH 5371. FUTURE CITIES. 3 Hours.
Future Cities focus on climate resilience of the built environment on the urban scale. In Future Cities, students explore historical and contemporary concepts of ecological design and combine mitigative and adaptive strategies and actions for urban landscapes in the age of anthropogenic climate change. Students apply a participatory mixed-methods approach to map, diagram, model, draw, and visualize project outcomes, research findings, and data through various media. Prerequisite: Graduate level in Architecture, Landscape Architecture, Urban Planning, and Public Administration and Public Policy majors.

ARCH 5372. ADAPTIVE TYPOLOGIES. 3 Hours.
Adaptive Typologies focus on climate resilience of the built environment on the architectural object scale. In Adaptive Typologies, students explore architectural objects, their characteristics, and their performative aspects as integrated parts of the urban ecosystem. Students analyze, transform, and develop hybrid typologies merging physical, digital, and biological concepts and apply a digital mixed-methods approach, utilizing analytical, representational, and generative tools. Prerequisite: Graduate level in Architecture, Landscape Architecture, Urban Planning, and Public Administration and Public Policy majors.

ARCH 5377. SPATIAL [IN] JUSTICE. 3 Hours.
Through lectures and discussions, Spatial [in] Justice will provide students with historical perspectives on how American cities became segregated, the creation and lack of inclusivity of 'public space', and the architect's role within a socially engaged practice. The course will begin by studying key philosophies and theories of justice. Students will work with a community partner to produce a community engagement and development plan. They will research publicly available data and organize it into a package for the community and other stakeholders. Prerequisite: ARCH 2303 or ARCH 5303 and ARCH 2304 or ARCH 5304. Department consent.

ARCH 5381. PRACTICUM. 3 Hours.
Internship program including work done through an approved architect's office, designed to give practical experience leading to a broader knowledge of the profession. Placement in offices must be approved, and in some cases may also be arranged by the school. Students may enroll in ARCH 5381 for half-time employment or ARCH 5681 for full-time employment. Students enrolled in Practicum may also participate in the Intern Development Program of the American Institute of Architects. No more than six total credit hours in Practicum are allowed for degree. Graded P/F/R.

ARCH 5391. CONFERENCE COURSE. 3 Hours.
Special subjects and issues as arranged with individual students and faculty members. May be repeated for credit as content changes.Prerequisite: Permission of Graduate Advisor.

ARCH 5395. TOPICS IN ARCHITECTURE. 3 Hours.
Studio, lecture or seminar courses to explore and present special topics in architecture and environmental design. May be repeated for credit as topics change.

ARCH 5591. DESIGN STUDIO I. 5 Hours.
An intensive studio course in architectonic theory and operations. Emphasis on analytic, conceptual, and manipulation procedures.

ARCH 5592. DESIGN STUDIO II. 5 Hours.
Continuation of ARCH 5591. Studio course emphasizing the interrelationship of formal/spatial ideas, use, and the building fabric. Prerequisite: ARCH 5591.

ARCH 5593. DESIGN STUDIO III. 5 Hours.
Continuation of ARCH 5592. Studio course emphasizing the interrelationship of formal/spatial ideas, use, and the building fabric with special attention to the urban context. Prerequisite: ARCH 5592.

ARCH 5594. DESIGN STUDIO IV. 5 Hours.
Continuation of ARCH 5593. Emphasis on complex building designs in urban environments. Off campus study may be substituted. Prerequisite: ARCH 5593.

ARCH 5665. INTERMEDIATE DESIGN STUDIO. 6 Hours.
Advanced architectural design problems in programming, schematic organization, synthesis and design of buildings in their environmental context.

ARCH 5670. ADVANCED DESIGN STUDIO. 6 Hours.
Studio course emphasizing the analysis and design of building aggregations within the urban context. May be repeated for credit.

ARCH 5671. INTEGRATIVE DESIGN STUDIO I. 6 Hours.
Introduces the design of a small to moderate scaled architectural building program. Focus on pre-design, site design, structural resolution, building assembly, building performance, detailing and materiality will be made through graphical identification, analysis, and evaluation. Additional considerations of codes, regulations, cost analysis, and life-cycle cost, are areas of emphasis informing the design process. Prerequisite: ARCH 5325 or ARCH 4325, ARCH 5327, and ARCH 5670. Credit or concurrent enrollment in ARCH 5357, ARCH 4357, or INTD 3357.

ARCH 5672. INTEGRATIVE DESIGN STUDIO II. 6 Hours.
Introduces the design of a larger-scaled architectural project with more complex programming requirements. Focus on the integration of environmental stewardship, accessibility, site conditions, life safety, environmental systems, structural systems, and building envelope systems will be made through graphical identification, analysis, and evaluation, and technical documentation. Project demonstration includes problem identification, contextual evaluative criteria, analyzing solutions, and predicting the effectiveness of implementation. Prerequisite: ARCH 5671 with a grade of C or above.

ARCH 5681. PRACTICUM. 6 Hours.
Internship program including work done through an approved architect's office, designed to give practical experience leading to a broader knowledge of the profession. Placement in offices must be approved, and in some cases may also be arranged by the school. Students may enroll in ARCH 5381 for half-time employment or ARCH 5681 for full-time employment. Students enrolled in Practicum may also participate in the Intern Development Program of the American Institute of Architects. No more than six total credit hours in Practicum are allowed for degree. Graded P/F/R.

ARCH 5691. CONFERENCE COURSE. 6 Hours.
Special subjects and issues as arranged with individual students and faculty members. May be repeated for credit. Prerequisite: Permission of Graduate Advisor.

ARCH 5693. DESIGN THESIS. 6 Hours.
Individual study project conducted by a supervising committee, with program and statement of intent to be filed with the Graduate Advisor during the previous semester. Graded R. Prerequisite: ARCH 5363.

ARCH 5695. TOPICS IN ARCHITECTURE. 6 Hours.
Studio, lecture or seminar courses to explore and present special topics in architecture and environmental design. May be repeated for credit as topics change. Prerequisite: Permission of Graduate Advisor.

ARCH 5698. RESEARCH THESIS. 6 Hours.

COURSES

AREN 1105. INTRODUCTION TO ARCHITECTURAL ENGINEERING. 1 Hour.
Introduction to basic architectural engineering practice. There are several writing assignments and an oral presentation. Use of spreadsheet and word processor software in solving architectural engineering problems and presenting solutions. Professional engineering licensure and the various specializations within civil engineering are covered.

AREN 1152. INTRODUCTION TO CONSTRUCTION DRAFTING. 1 Hour.
This course will introduce students to basic concepts of construction drafting including an introduction to orthographic drawings (plans, sections, elevations), principles of scale, line weight, drawing types and drawing conventions. The course introduces students to 2-dimensional Computer Aided Design tools which they use to produce the construction drawings. Prerequisite: Grade of C or better in MATH 1421; or concurrent enrollment in MATH 1426 or HONR-SC 1426; or grade of C or better in MATH 1426 or HONR-SC 1426.

AREN 1205. INTRODUCTION TO ARCHITECTURAL ENGINEERING. 2 Hours.
This course introduces students to the education and practice of architectural engineering, a discipline of engineering that prepares engineers to work effectively on teams that are creating buildings. Course content addresses engineering ethics, professional licensure, sustainability, creative approaches to problem solving and the role of architectural engineering and other engineering disciplines on building construction projects.

AREN 1252. COMPUTER TOOLS - AUTOCAD. 2 Hours.
Introduction to computer aided design, using AutoCAD. Creation of precise two-dimensional engineering drawings and solid models. Prerequisite: Grade of C or better in MATH 1421.

AREN 2152. COMPUTER TOOLS - MATHCAD. 1 Hour.
Introduction to computer aided mathematics, using Mathcad. Solution of engineering problems involving systems of simultaneous linear and nonlinear equations and elementary calculus, use of the tools for visualization. Prerequisite: Grade of C or better in PHYS 1443.

AREN 2153. COMPUTER TOOLS - CIVIL 3D. 1 Hour.
Introduction to civil engineering construction documentation and building information modeling (BIM) using AutoCAD Civil 3D. Prerequisite: Grade of C or better in AREN 1252.

AREN 2191. PROBLEMS IN ARCHITECTURAL ENGINEERING. 1 Hour.
Selected problems in architectural engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the department chair.

AREN 2213. BUILDING SCIENCE. 2 Hours.
This course introduces the physical phenomena that affect human comfort and building energy performance. The basic principles of thermodynamics applied to building systems are discussed to understand heat and mass transfer analysis techniques. This includes development and application of energy balance equation and psychrometric process with respect to building energy performance. Prerequisite: Grade of C or better in CHEM 1465 and PHYS 1444.

AREN 2221. DYNAMICS. 2 Hours.
Planar and spatial kinematics and kinetics of particles and rigid bodies utilizing Newton's Laws of Motion, the principle of work and energy, and the principle of impulse and momentum; introduction to single degree of freedom vibration. Prerequisite: Grade of C or better in AREN 2311; grade of C or better in MATH 2425.

AREN 2252. INTRODUCTION TO CONSTRUCTION DRAFTING. 2 Hours.
This course will introduce students to basic concepts of construction drafting including an introduction to orthographic drawings (plans, sections, elevations), principles of scale, line weight, drawing types and drawing conventions. The course introduces students to 2-dimensional Computer Aided Design tools which they use to produce the construction drawings. Prerequisite: Grade of C or better in MATH 1421; or concurrent enrollment in MATH 1426 or HONR-SC 1426; or grade of C or better in MATH 1426 or HONR-SC 1426.

AREN 2291. PROBLEMS IN ARCHITECTURAL ENGINEERING. 2 Hours.
Selected problems in architectural engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the department chair.

AREN 2311. STATICS. 3 Hours.
Vector algebra; composition and resolution of forces; equivalence of force couple systems; equilibrium of force systems acting on particles, and force - couple systems acting on rigid bodies, and systems of rigid bodies; internal forces in rigid bodies; shear and moment diagrams; centroids and moments of inertia; frictional forces. Prerequisite: Grade of C or better in PHYS 1443.

AREN 2312. STATICS & DYNAMICS FOR AREN. 3 Hours.
Principles of forces and force systems, resultants and components of force systems, forces due to friction, condition of equilibrium, forces acting on members of trusses and frame structures, centroids and moments of inertia, review of kinematics and kinetics of particle motion, and two-dimensional motion of rigid bodies. Prerequisite: Grade of C or better in MATH 2425 (or concurrent enrollment) and PHYS 1443 (or concurrent enrollment).

AREN 2313. MECHANICS OF MATERIALS I. 3 Hours.
Concepts of stress and strain; stress-strain relationships. Behavior of members subjected to tension, compression, shear, bending, torsion, and combined loading. Deflections and elastic curves, shear and bending moment diagrams for beams, and column theory. Prerequisite: Grade of C or better in AREN 2311; Grade of C or better in MATH 2425.

AREN 2315. CONSTRUCTION MATERIALS AND METHODS. 3 Hours.
Materials, methods and sequences of the construction process; emphasis on design, specification, purchase and use of concrete, steel, masonry and wood. An understanding of the uses of construction materials. Prerequisite: Grade of C or better in AREN 1205.

AREN 2321. BUILDINGS AND THE ENVIRONMENT. 3 Hours.
A general engineering course on geological materials and processes that interact with the built environment and are critical to architectural engineering including:1) mineral and rock formation processes; rock mechanics and deformation, weathering, erosion and soils; soil hazards, land subsidence and mass movements; groundwater geology, 2) Interactions between plate tectonics, atmosphere, oceans, and human built environment, 3) Nature and variability of weather and climate, including wind, temperature, clouds and precipitation, droughts, and flooding. Storm systems, fronts, thunderstorms, tornadoes, hurricanes. Relevant topics toward the interactions between buildings and the natural environment are included. Prerequisite: Grade of C or better in AREN 1205.

AREN 2391. PROBLEMS IN ARCHITECTURAL ENGINEERING. 3 Hours.
Selected problems in architectural engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the chair of the department.

AREN 3110. ARCHITECTURAL ENGINEERING COMMUNICATIONS. 1 Hour.
Technical writing, oral communication, professional presentations, and other related topics. Prerequisite: Grade of C or better in COMS 2302.

AREN 3143. PROPERTIES AND BEHAVIOR OF SOILS. 1 Hour.
An introduction to determination of civil engineering properties of soil and their behavior, identification, grain size analysis, Atterberg limits, compaction, permeability, consolidation, and shear strength. Also an introduction to sampling of soil materials. Prerequisite: Concurrent enrollment in AREN 3343.

AREN 3191. PROBLEMS IN ARCHITECTURAL ENGINEERING. 1 Hour.
Selected problems in architectural engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the department chair.

AREN 3218. ARCHITECTURAL ENGINEERING GEOMETRIC DESIGN TOOLS. 2 Hours.
This course will address principles of Euclidean and non-Euclidean Geometry in the area of architectural engineering. Topics include golden ratio, golden mean, geodesics on surfaces, conic sections, parametric equations with focus on the techniques, skills, and modern engineering tools necessary for architectural engineering practices. Prerequisite: MATH 1421 or equivalent, AREN 1205.

AREN 3291. PROBLEMS IN ARCHITECTURAL ENGINEERING. 2 Hours.
Selected problems in architectural engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the department chair.

AREN 3301. STOCHASTIC MODELS FOR CIVIL ENGINEERING. 3 Hours.
Basic theory of probability and statistics with practical applications to civil and environmental engineering problems. Emphasis on sampling, distribution functions, tests of significance, and regression modeling. Prerequisite: Grade of C or better in MATH 2425.

AREN 3305. BASIC FLUID MECHANICS. 3 Hours.
Fundamentals of fluid statics, kinematics of fluid flow, fluid energy, fluid forces, similitude, and dimensional analysis. Related to steady flow of incompressible fluids in confined and free surface systems. Prerequisite: Grade of C or better in AREN 2311; Grade of C or better in MATH 3319 or concurrent enrollment.

AREN 3311. CONSTRUCTION ENGINEERING. 3 Hours.
Principles of construction engineering and the project management process, value engineering, specifications, different construction contracts and delivery methods, estimating and scheduling fundamentals and project control, and management of construction process. Prerequisite: Grade of C or better in IE 2308.

AREN 3315. BUILDING HYDRAULIC SERVICE SYSTEMS. 3 Hours.
This course takes a system-based approach to the analysis and design of hydraulic building systems, ensuring they meet the operational requirements of architectural spaces in compliance with the International Building Code. Topics include: 1) stormwater management & collection system design, 2) sewage management & sanitary plumbing system design, 3) domestic water distribution (cold & hot water systems and water heating system design), 4) gas distribution system design, 5) fire suppression & firefighting water distribution systems, 6) design of retention tanks, clear water storage, fire safety tanks, sump tanks, and temporary detention systems during construction. Prerequisite: Grade of C or better in AREN 3305.

AREN 3330. APPLICATIONS OF BUILDING CODES IN ARCHITECTURE. 3 Hours.
An engineering-based approach to architecture, space planning, and occupant safety focused on the technical aspects associated to engineering an architectural space per the International Building Code. Topics included are: occupant load calculations and sizing of facilities, space programming aspects (room sizing and window sizing), acoustic, noise control, & thermal considerations in space planning, circulation aspects (vertical and horizontal circulations and ADA, elevator specification and stair design), fire safety aspects (emergency egress, fire resistance of the structure & building envelope/enclosures, suppression, detection and alarm, smoke control, first responder considerations), considerations in engineering architectural finishes (smoke development, flame spread, indoor air quality & volatile organic compounds). Prerequisite: Grade of C or better in AREN 2315.

AREN 3331. MECHANICAL AND ELECTRICAL SYSTEMS. 3 Hours.
Mechanical and electrical systems with a major emphasis on estimating and installation, design and control of the electrical, heating, ventilation and cooling system, site planning and acoustical treatments. Prerequisite: Grade of C or better in PHYS 1444.

AREN 3341. STRUCTURAL ANALYSIS. 3 Hours.
Structural analysis/design process, structural forms, and basic structural elements. Analysis of statically determinate structures including beams, trusses, frames, and composite structures, shear and moment diagrams, influence lines, and moving loads. Methods to compute deflections including double integration, moment area, and virtual work. Methods of analysis for statically indeterminate structures including consistent deformation, slope deflection and moment distribution. Use of structural analysis programs. Prerequisite: Grade of C or better in AREN 2313.

AREN 3343. SOIL MECHANICS. 3 Hours.
An introduction to the significant geophysical and soil science properties and behavior of materials making up the earth's crust as they apply to civil engineering, sources of materials, classification, plasticity, permeability, stress distribution, consolidation, shear strength, and settlement. Also an introduction to basic foundation engineering concepts. Prerequisite: Grade of C or better in AREN 2313; Concurrent enrollment in AREN 3143.

AREN 3346. ELECTRICAL SYSTEMS & LIGHTING FOR ARCHITECTURAL ENGINEERS. 3 Hours.
Basic fundamentals of electrical principles and electric lighting principles; application of basic electrical science for the design and specification of electrical systems and lighting for buildings using modern techniques; safety and protection systems in buildings and national electrical code and standards. Prerequisite: Grade of C or better in MATH 2425 (or HONR-SC 2425) and PHYS 1444; Admission to the AREN Professional Program.

AREN 3391. PROBLEMS IN ARCHITECTURAL ENGINEERING. 3 Hours.
Selected problems in architectural engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the department chair.

AREN 4300. ADVANCED TOPICS IN ARCHITECTURAL ENGINEERING. 3 Hours.
Advanced topics of current interest in any one of the various fields of architectural engineering. The subject title to be listed in the class schedule. May be repeated for credit when topic changes. Prerequisite: Consent of instructor required and Admission to the AREN Professional Program.

AREN 4301. ADVANCED TOPICS IN ARCHITECTURAL ENGINEERING WITH LAB. 3 Hours.
Advanced topics of current interest in any one of the various fields of architectural engineering. The subject title to be listed in the class schedule. May be repeated for credit when topic changes. Prerequisite: Consent of instructor required and Admission to the AREN Professional Program.

AREN 4307. CONSTRUCTION SUSTAINABILITY. 3 Hours.
Types of construction contracts, contractual relationship between general contractor and owner, contractual relationship between general contractor and subcontractors, legal issues in construction administration, insurance, and concepts in value engineering. Reading and evaluating specifications, CSI Master Format. Credit not granted for both AREN 4307 and CE 5382. Prerequisite: Grade of C or better in AREN 3311; Admission to the AREN Professional Program.

AREN 4309. THERMODYNAMICS FOR ARCHITECTURAL ENGINEERS. 3 Hours.
Basic concepts and definitions of thermodynamics, entropy, and introduction to first law of thermodynamics, second law of thermodynamics, and introduction to conductive, convective, and radiative transfer. Application of thermodynamics to building heating, cooling and ventilation (HVAC) systems; use of modern techniques for design and specifications of selected thermal and mechanical systems for buildings. Prerequisite: Grade of C or better in MATH 2425 (or HONR-SC 2425), PHYS 1444, and CHEM 1465 (or concurrent enrollment) or CHEM 1441 and CHEM 1442 (or concurrent enrollment).

AREN 4314. TECHNOLOGIES FOR HIGH PERFORMANCE BUILDINGS. 3 Hours.
Post design & construction phase, it is important to continuously monitor, operate, improve building performance for energy efficiency and occupant comfort. This course discusses various topics in high performance buildings with hands-on learning experiences using practical skills, including 1) sensing & control for building environmental systems, 2) post occupancy evaluation for occupant comfort & health, 3) sustainable building retrofits, and 4) smart building systems. Prerequisite: Grade of C or better in AREN 2213. Admission to the AREN Professional Program.

AREN 4316. BUILDING STRUCTURAL SYSTEMS. 3 Hours.
Structural system-based approach to analysis & design of steel building structural systems under gravity and lateral loads per American Institute of Steel Construction (AISC 360 & AISC 341 & ACI 318) & American Society of Civil Engineering (ASCE 7) criteria including: 1) Ordinary Concentrically Braced Frames & Tension Elements, 2) Special Concentrically Braced Frames & Compression Elements, 3) Ordinary/Intermediate Moment Frames & Bending Elements, 4) Truss Moment Frames, 5) Eccentrically Braced Frames & Shear Elements, 6) Special Moment Frames & Axial/Moment Interaction, 7) Floor Systems (Diaphragm and Composite Action), 8) Foundations Systems and Integration of Steel Elements with RC Foundation Elements. Prerequisite: Grade of C or better in AREN 3341 and admission to the AREN professional program.

AREN 4318. MACHINE LEARNING IN CIVIL ENGINEERING. 3 Hours.
Machine learning is transforming the way we approach problems across all fields of civil and environmental engineering. This course is designed for students across various concentrations to offer a broad perspective on how data science and machine learning can reshape the future of Civil and Environmental engineering. You will learn how machine learning techniques can be applied to analyze and improve a wide range of engineering systems-from smart buildings and geotechnical infrastructure to water resources and transportation networks. Whether working with big data, such as GPS tracking data for traffic flow, satellite images for environmental monitoring, and IoT sensor data in buildings, or small data, such as soil properties for construction site assessment and water distribution system restoration after disasters, machine learning can uncover patterns and insights to improve efficiency, reliability, and resilience of the components or systems. Students will learn how to select and build models for regression, classification, and clustering, and apply them to tackle real-world challenges across various engineering disciplines. Through case studies and practical exercises in Python and Jupyter Notebooks, you will also gain valuable skills in exploratory data analysis, machine learning model construction and validation, and result visualization. Credit not granted for both AREN 4318 and CE 4318. Prerequisite: Grade of A or better in AREN 3301 or consent of instructor and admission to the AREN Professional Program.

AREN 4320. SYSTEM RESILIENCE, RELIABILITY, & PERFORMANCE IN AREN. 3 Hours.
This course focuses on risk & reliability aspects of architectural engineering, applied to design & performance of various building systems. Students will explore probabilistic analysis and reliability-based design principles for hydraulic systems (storm drainage, water distribution, sewage), HVAC systems (thermal loads, system reliability), electrical systems (load factors, redundancy), and structural systems (load combinations, vertical & lateral loads, performance expectations). Emphasis is placed on how uncertainty & variability are quantified in each system to ensure resilience, reliability, and performance. Prerequisite: Grade of C or better in AREN 3301, AREN 3315, AREN 3346, AREN 4331, and AREN 4347 and admission to the AREN Professional Program.

AREN 4326. GIS/HYDROLOGIC & HYDRAULIC MODELING. 3 Hours.
Use of Geographic Information Systems (GIS) and design of GIS-developed hydrologic/hydraulic models commonly applied in the water resources field. The course will have three main areas of emphasis including: principles and operations of ArcGIS, design and implementation of standard hydrologic and hydraulic models, and the linkage of these models to engineering analysis of current water resources problems including flooding, water quality and water supply. Prerequisite: Grade of C or better in AREN 3305; Admission to the AREN Professional Program.

AREN 4331. BUILDING HVAC SYSTEMS DESIGN. 3 Hours.
This course will introduce the fundamental principles and engineering procedures for basic building science; design of heating, ventilating, and air conditioning (HVAC) systems; system and equipment selection; and duct design and layout. This course will also include energy conservation techniques and computer applications, including building energy modeling. Prerequisite: Grade of C or better in PHYS 1444; Admission to the AREN Professional Program.

AREN 4334. DRONES & ADVANCED CONSTRUCTION TECHNOLOGY. 3 Hours.
A practical course for technologies and their applications used on construction job sites. Topics include drones (also known as sUAS, or small unmanned aircraft systems), robotics, extended reality, artificial intelligence, blockchain, wearables, etc. Practical sessions are included to train students to operate drones for various construction applications. Credit not granted for both CE 4334 and AREN 4334. Prerequisite: Grade of C or better in AREN 3311; Admission to the AREN Professional Program.

AREN 4341. SUSTAINABLE BUILDING ENERGY MODELING. 3 Hours.
This course will introduce a whole process of net-zero energy building design in which students work in teams to design, analyze, and provide full documentation for a net-zero energy building. Students are expected to effectively and affordably integrate principles of building science, construction engineering and management, economic analysis, and architectural design in an integrated design process. The course projects will align with a design competition, typically the Department of Energy's Solar Decathlon Design Challenge. The course prepares the next generation of architects, engineers, and construction managers with skills and expertise to start their careers and generate creative solutions for real-world net zero energy buildings. Prerequisite: Grade of C or better in AREN 3213; Admission to the AREN Professional Program.

AREN 4343. HUMAN INTERACTION IN THE BUILT ENVIRONMENT. 3 Hours.
Understanding human interaction in the built environment is critical for assessing comfort levels and system performance. This course would cover theories of human computer interaction, environmental monitoring, and advanced data analytics. Students would be given a hands-on opportunity to build their own data acquisition system to collect and model human behavior. This course meets the emerging trend in a nexus of computer science and facility management. Prerequisite: Admission to the AREN Professional Program.

AREN 4347. REINFORCED CONCRETE DESIGN. 3 Hours.
An analysis, design and synthesis course for concrete structures, emphasizing strength design method. Topics include strength and serviceability requirements, design of one way slabs, rectangular beams, flanged sections and columns, for strength, shear, bond, bearing, and serviceability. Building codes, American Concrete Institute (ACI) specifications, material specifications, test methods, and recommended practice documents are involved. Prerequisite: Grade of C or better in AREN 3341 and admission to the AREN Professional Program.

AREN 4348. STRUCTURAL DESIGN IN STEEL. 3 Hours.
A design synthesis course for structural steel structures using Allowable Strength Design and Load Resistance Factor Design. Topics include tension members, compression members, flexural members and simple connections. Building codes, American Institute of Steel Construction (AISC) specs, material specs, test methods, and recommended practice documents. Prerequisite: Grade of C or better in AREN 3341 and admission to the AREN Professional Program.

AREN 4352. PROFESSIONAL PRACTICE. 3 Hours.
Professional practice issues in the private and public sector are addressed by visiting practitioners. Topics include project management, teamwork, obtaining work, regulatory requirements, specifications, issues in design/build, design alternatives, cost estimation, design and construction drawings, contract and construction law, legal issues, ethics and professionalism, design reports, licensure, lifelong learning, ethical and engineering practice organizations. Learning principles of engineering practice by working as a team is emphasized. Oral and written presentations are required. Prerequisite: Admission to the AREN Professional Program.

AREN 4356. ADVANCED STEEL DESIGN. 3 Hours.
Covers torsional design of beams, beams with web holes, composite design of beams, lateral-torsional buckling of beams, plate buckling, column design and behavior, frame stability, bracing requirements for compression members. Prerequisite: Grade of C or better in AREN 4348 and Admission to the AREN Professional Program.

AREN 4360. DESIGN OF STRUCTURAL MASONRY. 3 Hours.
Covers masonry unit types and mortar types, reinforcing and connections. Design of beams, columns, pilasters, and walls. Structural behavior and construction practices. Includes plain and reinforced masonry. Building Codes, Masonry Standards Joint Committee (MSJC) specifications, material specifications, test methods, and recommended practice documents. Prerequisite: Grade of C or better in AREN 3341; Admission to the AREN Professional Program.

AREN 4361. ADVANCED REINFORCED CONCRETE DESIGN. 3 Hours.
Advanced topics on structural design of concrete structures. Topics include slender columns, shear walls, torsion, deep beams, brackets, retaining walls, strut and tie model for shear torsion, two-way slabs, and shear friction. Building codes, American Concrete Institute (ACI) specifications, material specifications, test methods, and recommended practice documents are involved. Prerequisite: Grade of C or better in AREN 4347 and Admission to the AREN Professional Program.

AREN 4365. STRUCTURAL WOOD DESIGN. 3 Hours.
Covers material grade and properties of wood, design criteria using structural lumber, glue laminated lumber and structural panels. Design of bending and compression members, trusses and diaphragms. Building codes, National Design Specification for Wood Construction (NDS) specifications, material specifications, test methods, and recommended practice documents. Prerequisite: Grade of C or better in AREN 3341; Admission to the AREN Professional Program.

AREN 4383. SENIOR PROJECT. 3 Hours.
This course will provide architectural engineering students the opportunity to apply tools, skills and principles of architecture engineering towards the planning, analysis of alternatives, and designs of engineering solutions for projects identified by the instructor. Projects will address engineering standards and multiple realistic constraints. Application of computer-aided design and engineering tools will be utilized for analysis and design. Student presentations will address alternative solutions, application of building code and engineering standards within architectural context. Students will work together and submit a team project. Prerequisite: Grade of C or better in AREN 4347 and AREN 4352; Completion of all required 3000 level courses; or permission of instructor.

AREN 4391. PROBLEMS IN ARCHITECTURAL ENGINEERING. 3 Hours.
Selected problems in architectural engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the chair of the department.

AREN 4393. INDUSTRIAL INTERNSHIP. 3 Hours.
Student to experience industrial internship under supervision of an industrial mentor and internship committee. Prerequisite: Admission to the AREN Professional Program.

AREN 4394. RESEARCH INTERNSHIP. 3 Hours.
Student to experience research internship under supervision of a CE faculty. Prerequisite: Admission to the AREN Professional Program.

COURSES

ART 1300. FIRST YEAR SEMINAR IN ART. 3 Hours.
This is a required course intended to establish a solid overview of the Art and Art History Department for all first semester UTA students who intend to declare a studio art or art history major. Topics for the class can include: visiting artist speakers, attendance of exhibitions, writing assignments, surviving the advising process and concentration portfolio review, and library resources. Other topics may be discussed. This course may only be taken once for credit. This course includes student success curriculum and associated content and fulfills the University requirement for either UNIV 1101 or UNIV 1131.

ART 1301. ART APPRECIATION. 3 Hours. (TCCN = ARTS 1301)
Intended to develop an understanding, appreciation, and enjoyment of art in its many forms. Recommended as a fine arts elective for non-art majors.

ART 1305. TWO-DIMENSIONAL DESIGN. 3 Hours. (TCCN = ARTS 1311)
The principles and elements of two-dimensional design as expressed through concepts and problems with various media and techniques.

ART 1306. THREE-DIMENSIONAL DESIGN. 3 Hours. (TCCN = ARTS 1312)
Three-dimensional design principles will be explored to expand knowledge of various materials and develop an awareness of spatial elements as a creative expression.

ART 1307. DRAWING FUNDAMENTALS. 3 Hours. (TCCN = ARTS 1316)
Basic drawing principles and elements in varied media including such concepts and skills as hand-eye coordination, perceptual acuity, spatial organization, and interpretation of directly observed subjects.

ART 1309. INTRODUCTION TO ART HISTORY I: PREHISTORIC THROUGH 16TH CENTURY. 3 Hours. (TCCN = ARTS 1303)
Major developments in the art of the Mediterranean Basin and Europe from prehistory to the end of the 16th century.

ART 1310. INTRODUCTION TO ART HISTORY II: 17TH CENTURY TO THE PRESENT. 3 Hours. (TCCN = ARTS 1304)
The work of major figures in European and American art from the 17th century to the present.

ART 1317. INTRODUCTION TO ART HISTORY III: AFRICA, ASIA, AMERICAS. 3 Hours.
Introduces visual arts and cultural traditions of Africa, Asia, Oceania, and the ancient/indigenous Americas, including how bias from colonial narratives has factored into scholarship on these regions.

ART 2304. DIGITAL MEDIA. 3 Hours. (TCCN = ARTS 2348)
This course introduces students to a variety of digital software and hardware as applied to design and artistic concepts.

ART 2308. DRAWING CONCEPTS. 3 Hours. (TCCN = ARTS 1317)
Application of specific drawing skills with emphasis on personal expression. Course content will focus on conceptual development and media exploration as outlined by instructor. Previous drawing experience strongly recommended. Formerly listed as ART 1348. Credit will not be granted for both ART 1348 and ART 2308. Prerequisite: ART 1305 and ART 1307 or permission of instructor.

ART 2342. GLASSBLOWING. 3 Hours.
The manipulation, construction, and experimentation of glass as a sculptural medium. Emphasis will be on developing technical and aesthetic expertise in glassblowing and related techniques. Exploration of the conceptual application of the material will be addressed.

ART 2353. VISUAL COMMUNICATION FOUNDATION. 3 Hours.
Introduction to the studio practices in the area of Visual Communications. Focus is on advanced foundation design concepts and exposure to contemporary digital tools. In addition, an introduction to the purpose, industry, and broad history of visual communication will be established. Prerequisite: Art + Art History Major, Permission of Advisor, ART 1305.

ART 2354. TYPOGRAPHY. 3 Hours.
Creative problem solving using basic elements of visual communication with an introduction to typography, composition, and materials. Prerequisite: ART 2353 or permission of the instructor.

ART 2355. LAYOUT. 3 Hours.
Development and application of concept, layout, and design as related to visual communication. Prerequisite: ART 2353 or permission of advisor.

ART 2357. DIGITAL PHOTOGRAPHY FOR DESIGNERS. 3 Hours.
Introduction to the production of visuals through digital photographic imaging as related to the needs of the Visual Communication Design field. Students will study composition, camera function, studio lighting, and photographic proficiency to create compelling imagery. Students will be expected to incorporate these photographic skills and concepts into their design practice.

ART 2358. CINEMA PRODUCTION 1. 3 Hours.
Introduction to the video and filmmaking production process, techniques, history and aesthetics through the use of digital video, basic film, and basic digital (computer) video and audio editing. Students will write, produce, and edit a number of short original works.

ART 2360. INTRODUCTION TO PHOTOGRAPHIC CONCEPTS. 3 Hours. (TCCN = ARTS 2356)
Introduction to the essentials of photography including digital camera operation, editing software, inkjet printing, and utilizing the principles of photography for artistic expression. Students are encouraged to use their own digital camera; some cameras may be available for check out on a limited basis.

ART 2371. PAINTING. 3 Hours. (TCCN = ARTS 2316)
Fundamentals of painting, composition and techniques both traditional and contemporary. Prerequisite: ART 1305 and ART 1307 or permission of the instructor.

ART 2387. FILM ANALYSIS AND AESTHETICS. 3 Hours.
Students will critically engage in screenings of selected significant films and learn concepts and approaches to film analysis and criticism. The course will examine the emergence of the film form, the elements of film language, formal approaches and principles of film analysis, and the workings of motion pictures as a means of narrative expression.

ART 3300. METHODS FOR THE STUDY OF ART HISTORY. 3 Hours.
Sources and procedures of art historical research. Introduction to methodologies of art historical scholarship. Use of computer and data retrieval is emphasized.

ART 3302. ART OF ANTIQUITY. 3 Hours.
Ancient art and architecture of the Mediterranean Basin from the Aegean Bronze Age (3000 BCE) to the Late Roman Empire (4th century CE) with attention to the ritual and political uses of art. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3304. JAPANESE ART AND ARCHITECTURE. 3 Hours.
Art and architectural traditions of Japan from the prehistoric to the early modern period. Structured around specific artistic media and techniques that reflect the cultural and social movements informing artistic changes over time. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3305. MID-RENAISSANCE. 3 Hours.
Art and architecture in 15th century Italy, beginning with developments in Renaissance Florence. The relation of humanism and science to the visual arts, patronage, and the social and historical contexts of artistic production. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3306. BYZANTINE AND MEDIEVAL ART. 3 Hours.
Art and architecture of the Mediterranean Basin and Europe beginning with the Early Christian and Byzantine periods (330 CE) to the Gothic Era (14th century). Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3307. THE EARLY RENAISSANCE. 3 Hours.
Art and architecture of the Italian peninsula in the 13th and 14th centuries with attention to cross-cultural exchanges within Europe and across the globe. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3308. HIGH RENAISSANCE. 3 Hours.
Art and architecture of the Italian peninsula in the 16th century with attention to cross-cultural exchanges within Europe and across the globe. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3309. ART OF THE SILK ROADS. 3 Hours.
Exploration of the empires, cultures, and artistic hubs of the overland Silk Roads from the 3rd-10th centuries. Addresses the legacy of Silk Roads art in contemporary society through questions of the ownership of cultural heritage, repatriation of antiquities, and global trade. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3310. FILM AS ART. 3 Hours.
The history and aesthetics of the motion picture from 1895 to the present day. Screening and analysis of film as an artistic medium, focusing on various technical innovations, filmmakers, and landmarks of film history. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3311. AMERICAN ART. 3 Hours.
Focuses on the artists and communities that have shaped American art and national identity from the 18th to 21st centuries, including an emphasis on how contemporary artists amend these today. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3312. NEO-CLASSICISM AND ROMANTICISM. 3 Hours.
European and American art from 1760 to c.1840. Emphasis is placed on cultural and historical contexts. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3313. BACKGROUNDS OF MODERN ART. 3 Hours.
Painting, sculpture, and photography of the period c.1850-1900 in western Europe and the U.S., focusing on Realism, Impressionism, Post-Impressionism, and Symbolism. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3314. MODERN ART. 3 Hours.
The history of European and American art from the late 19th century to the mid-20th century. Emphasis on the formal and conceptual evolution of modernism in art and society, and on the rise of the avant-garde. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3315. IMPRESSIONISM. 3 Hours.
The history, theory, and aesthetics of Impressionist painting in France from 1860 to 1900. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3316. ANCIENT EGYPTIAN AND NEAR EASTERN ART. 3 Hours.
Explores the major art and architectural history of ancient Egypt, including relationships to the Near East and Mesopotamia. Religious, political, economic, and social contexts feature prominently as well as contemporary attitudes toward Egyptian antiquities. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3317. ART AND ISLAM. 3 Hours.
Explores the art of regions with significant Muslim populations and/or Muslim political leadership from the period of the Prophet Muhammad's life to the present. Students analyze how culture, religion, and cross-cultural relationships shape arts of these regions. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3318. THE JAPANESE UKIYO-E WOODBLOCK PRINT. 3 Hours.
Japanese art and cultural history seen through the Japanese woodblock print from the 17th century to the modern era. Technical developments, genres, and master designers examined within the context of East Asian visual traditions, the publishing industry, urban culture, and colonialism. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3319. ART AND ARCHITECTURE OF INDIA. 3 Hours.
Explores the art and architecture of the Indian subcontinent, covering prehistoric periods, the Indus Valley culture, the Vedic Period, early through historic Buddhist and Hindu states, the Islamic states/empires, the Colonial period, and contemporary art of independent India. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3320. ART OF THE ANCIENT AMERICAS. 3 Hours.
Explores the art, architecture, and archaeology of the Americas from the Paleoindian period through European colonization across North, Central, and South America. Students critically consider the biases of scholarship, colonial legacies, and contemporary perspectives. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3321. CHINESE ART AND ARCHITECTURE. 3 Hours.
Art and architectural traditions of China from the Neolithic to the early modern period. Structured around artistic media and techniques that reflect the cultural and social movements informing artistic changes over time. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3322. INTRODUCTION TO ART EDUCATION. 3 Hours.
This course studies the theories and outlines the history of art education and provides undergraduate students with the basic knowledge, skills, and strategies for teaching art. Students will be introduced to current issues in art education including multicultural, visual culture, technological art education, creativity, museum collaborations, and arts for special needs. The course will cover TEKS and national visual arts standards, a child's artistic development, learning styles, and philosophy. Also, students will learn and understand professional development resources. Prerequisites: None.

ART 3323. PLANNING AND CONSTRUCTING ART CURRICULA. 3 Hours.
This course reviews and introduces the elements needed to create art education curricula including production, performance and exhibition of visual art and other performing arts practices, historical and cultural contexts as well as critical and aesthetic response. Students will focus on curriculum development for both 2D and 3D artwork for various age levels. Prerequisite: None; however students are highly encouraged to take ART 3322 before, or concurrent with, this course.

ART 3324. 3D MODELING. 3 Hours.
An introduction to manipulating three-dimensional polygonal forms in digital space. Studying the complexities of modeling, texture mapping, and rendering solutions. Prerequisite: ART 1307.

ART 3325. STUDIES IN THE BAROQUE. 3 Hours.
Developments in European art and architecture in the 17th century with attention to cross-cultural exchanges within Europe and across the globe. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3326. SEQUENTIAL ILLUSTRATION. 3 Hours.
The fundamentals of ordering illustrations for both process and finalized works. Focusing on series of images to tell stories and convey the passage of time. Previously offered as ART 2331. Prerequisite: ART 1307.

ART 3330. 18TH CENTURY ART. 3 Hours.
A history of European and American art from the end of the Baroque era through the Rococo and Neoclassical styles to the beginning of Romanticism. Emphasis will be on cultural and global contexts in which paintings, prints, sculptures, and architecture were produced. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3331. BRITISH ART. 3 Hours.
An overview of British art from prehistory to the present with an emphasis on the period from the 17th century to the present. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3332. ART OF SUB-SAHARAN AFRICA. 3 Hours.
An examination of the art and architectural traditions of cultures within and south of the Sahara Desert of Africa. Emphasis is on indigenous visual traditions prior to Muslim and European contact and contextualizing our understanding through anthropological perspectives. This course incorporates critical considerations of the biases involved in the study of sub-Saharan arts. May include participation with local African arts and archival collections and various campus collections to undertake experiential analysis of primary sources. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3333. ALTERNATIVE PHOTOGRAPHIC PROCESSES. 3 Hours.
This class explores the use of hand-made, physical photographic processes, both historical and modern. Techniques may include camera obscura, pinhole, cyanotype, VanDkye brownprint, tintype, and inkjet negatives. May be repeated for up to six hours credit. Prerequisite: Six hours to be selected from: ART 1305, ART 2360, ART 2371, or ART 3343; or permission from the instructor.

ART 3340. KILN FORMED GLASS. 3 Hours.
The exploration of various non-blowing techniques of glass construction and manipulation. Students will use kilns to explore fusing, slumping, pate de verre, and casting. May be repeated for credit.

ART 3341. SCULPTURE. 3 Hours.
An exploration of sculptural forms, concepts, and methods through various media. Emphasis on contemporary processes and individual expression. May be repeated for credit. Prerequisite: ART 1306. For non-art majors, permission of the instructor.

ART 3342. INTERMEDIATE GLASSBLOWING. 3 Hours.
Continued technical and aesthetic development, manipulation, construction, and experimentation with glass as a sculptural medium. Other techniques may be introduced in order to explore a stronger conceptual application of glass. Prerequisite: ART 2342 or permission of the academic advisor.

ART 3343. PRINTMAKING. 3 Hours.
Development in the technical and conceptual practice of printmaking. Emphasis placed on an understanding of the history, theory and philosophy of independently published prints. Both traditional and nontraditional processes for creating printed images will be explored, including: lithography, relief, intaglio, silk screen, monoprints, book arts, and photomechanical technologies. Prerequisite: ART 1305 and ART 1307 or permission of the instructor.

ART 3344. NEON AND ILLUMINATED GLASS ART. 3 Hours.
Basic techniques of luminous glass tube manipulation as a contemporary art form. Emphasis on hot glass bending, design, pattern making and electrical systems. Prerequisite: ART 1306 or permission from the instructor.

ART 3345. WORKS ON PAPER. 3 Hours.
The class will focus on works on paper as a finished work of art as opposed to being preliminary study for paintings, sculptures, and other disciplines. Class may work in a variety of media including watercolor, drawing, collage, painting and mixed media. Personal creativity and development is stressed along with critical thinking and analysis. May be repeated for credit. Prerequisite: ART 1306, ART 1307, and ART 2308 or permission of the instructor.

ART 3346. PAPERMAKING. 3 Hours.
Procedures for the understanding and development of both Eastern and Western handmade papers. Focus will be on sheet-forming, casting, and marbleizing papermaking processes. Emphasis placed on personal expression, process, and innovation. May be repeated for credit. Prerequisite: ART 1305, ART 1306.

ART 3347. ADVANCED DRAWING. 3 Hours.
Conceptual and expressive problems to encourage independent thinking with regard to contemporary drawing issues. May be repeated for credit. Prerequisite: ART 2308.

ART 3348. LIFE DRAWING. 3 Hours.
Drawing of the human figure using a variety of media in the solution of figure construction problems with emphasis on perceptual and creative expression. May be repeated for credit. Prerequisite: ART 2308.

ART 3349. WATER MEDIA PAINTING. 3 Hours.
Transparent and opaque water color media and techniques. Emphasis on conceptual and manipulative skills. May be repeated for credit. Prerequisite: ART 1305, ART 1307, and ART 2371 or permission of the instructor.

ART 3350. SCREENWRITING 1. 3 Hours.
Students will learn the principles of storytelling and will apply these principles to the craft of screenwriting. As part of this process students will learn to evaluate and improve their own and other's original stories, characters, dramatic conflict, dialogue and descriptions. All screenplays must use proper screenwriting formatting and all creative projects must demonstrate the use of content introduced in class. Offered as ENGL 4330 when that course is taught as Screenwriting; credit will be granted in only one department. Prerequisite: ENGL 1301 and ENGL 1302 or permission of instructor.

ART 3351. ILLUSTRATION FOR DESIGN. 3 Hours.
Practical approach to concepts, techniques, and problem solving for crafting and integrating illustration with typographic elements for successful layout solutions. Prerequisite: ART 2354 and ART 2355.

ART 3352. DIGITAL IMAGING. 3 Hours.
Basic course in computer imaging for art majors. Emphasis is on the introduction and use of the computer as a tool for personal expression. Fundamental principles in electronic media are explored with additional emphasis on experimental and innovative techniques. May be repeated for credit. Prerequisite: ART 2304.

ART 3354. SIGN AND SYMBOL. 3 Hours.
Design and problem solving focusing on transformation of visual elements into logos, logotypes, information and environmental graphics. May only be taken once for credit. Prerequisite: ART 2353, or permission of the advisor.

ART 3355. ADVANCED TYPOGRAPHY. 3 Hours.
Typographic theory exploring traditional and non-traditional forms, both historical and contemporary typographic achievements. Prerequisite: ART 2354, ART 2355, or permission of the advisor.

ART 3356. INTERACTIVE DESIGN CONCEPTS. 3 Hours.
Guides design students to understand and apply fundamental principles that are required to progress through all interactive design courses in our area. Students will become familiar with key concepts and techniques for web-based typographic systems, information hierarchy, navigation strategies, user connection, and grid applications. This course was formerly titled Web Typography. Prerequisite: ART 2355.

ART 3357. SUSTAINABLE DESIGN. 3 Hours.
An overview of critical environmental issues that affect the contemporary practice of visual communication. Emphasis on ethics, environmental and society responsibility, and creative visual problem solving. Course may include, but is not limited to, lecture, discussion, reading, and creative design exploration. Prerequisite: ART 2354 and ART 2355.

ART 3358. CINEMA PRODUCTION 2. 3 Hours.
Continuation of ART 2358 with emphasis on more advanced concepts, production techniques, film/video history, and aesthetics. May include basic 16mm film production, digital video post-production and studio editing. Students will propose, write, produce and edit a number of short, original works. Prerequisite: ART 2358 or permission from the instructor.

ART 3359. APPLYING AND TEACHING ART CURRICULA. 3 Hours.
This course provides art education students with an overview of teaching in the K-12 art classroom through further exploration in curriculum and instructional methods as well as observation in the DFW area public schools. Students are provided opportunities to observe various work situations, to reflect on their own education, and to examine teaching practices within the arts. Emphasis is placed on both 2D and 3D studio issues. Students are expected to develop professional skills in observation and written and oral communication. The material in this course serves to establish a foundation for building professional awareness and a normative philosophy of art education. Prerequisite: ART 3323.

ART 3360. BLACK AND WHITE PHOTOGRAPHY. 3 Hours.
This course introduces students to black and white photography as a means to express ideas and become more aware of the potential of photographic art. Some coursework may be digitally based but the emphasis will be on analog black and white processes. Students will learn how to use various film camera formats, process film, and produce black and white darkroom prints. May be repeated for credit. Prerequisite: ART 2360 (or equivalent), or permission of instructor.

ART 3361. SITUATIONAL LIGHTING. 3 Hours.
This course is a skills based class that will explore augmenting and improving existing light at photographic locations. Prerequisite:ART 2360 or permission of instructor.

ART 3362. MOTION GRAPHICS AND ANIMATION. 3 Hours.
This course will introduce motion graphics and animation techniques using traditional and computer forms. Theoretical and conceptual approaches to motion graphics design and techniques will be explored using international examples. Students will complete several animation projects with increasing complexity during the semester. Prerequisite: ART 2358 or permission from the instructor.

ART 3363. CLAY. 3 Hours.
The various methods of construction, manipulation, and decoration of clay. The integration of form, design, and concept, emphasizing clay as an expressive medium. Prerequisite: ART 1306. For non-art majors, permission of the instructor.

ART 3364. INTERACTIVE STORYTELLING. 3 Hours.
An exploration of interactive principles and narrative structures. Examining and crafting the flow of consequential decision-making with a non-linear story. Prerequisite: Permission from the instructor.

ART 3365. CONCEPT ART. 3 Hours.
The study of ideating environments, characters, and objects through digital painting. These concepts are utilized during the planning phases of complex projects to set the direction of the assets and experiences. Prerequisite: Permission from the instructor.

ART 3366. 2D ANIMATION. 3 Hours.
An overview of two-dimensional computer animation utilizing animation principles, pose-to-pose and straight-ahead techniques, and digital workflows for the purpose of creating believable kinematics. Prerequisite: ART 2331.

ART 3367. 3D ANIMATION. 3 Hours.
An overview of three-dimensional computer animation utilizing 3-D models, textures, rigging, and key frame animation for the purpose of creating believable kinematics. May be repeated for credit. Prerequisite: ART 2330 and ART 2331.

ART 3368. DIGITAL PAINTING. 3 Hours.
This course focuses on digital painting techniques and methods, to expand student vocabulary of painting terms and ideas, and to develop their pictorial, technical and expressive skills. Prerequisite: ART 2371.

ART 3371. INTERMEDIATE PAINTING. 3 Hours.
Continued development of painting techniques, composition and exploration of traditional and contemporary media. Specific problem solving assignments, creative thinking, and idea development will be emphasized. Prerequisite: ART 2308, ART 2371 or permission of the instructor.

ART 3374. PACKAGING & 3D CAD. 3 Hours.
Packaging structure design, materials, performance, testing and sustainability. The curriculum integrates with the Corrugated Prototype Design and CAD Production Lab (CORRPRO). Students use 3D structural design software, a variety of materials, and a computer-aided design (CAD) table to produce significant packaging solutions. Prerequisite: ART 1306 and ART 2353.

ART 3383. MOLDMAKING & CASTING IN CLAY. 3 Hours.
Continuation of ceramic media techniques and forming processes. The introduction of moldmaking, mold forming, slipcasting, tile design, kiln firing, and glaze techniques. Prerequisite: ART 3363 or permission of the instructor.

ART 3384. CINEMATOGRAPHY. 3 Hours.
An intense study of the visual language/style of film imagery through cinematography, lighting, gaffing, gripping, and extensive camerawork. Students will use digital equipment to shoot exercises, light sets and locations, and learn to accurately expose, color correct, and manipulate motion picture film. Students will also learn the proper use of advanced lighting equipment, professional production standards, camera crew responsibilities, and how to interpret a scene through visuals. Students will work in digital video and/or 16mm film format. May be repeated once for credit. Prerequisite: ART 2358 and ART 2360 or permission of instructor.

ART 3386. DIRECTING 1: ACTOR LAB. 3 Hours.
This course is designed to help student directors understand how actors approach their craft and will study the language of acting and various techniques and approaches for casting. Directors and actors will work together in rehearsal and on set to craft a performance for film and develop confidence in the skills necessary for collaboration. Prerequisite: ART 2358 or permission of instructor.

ART 3387. DIRECTED SCREENINGS. 3 Hours.
This course will screen significant films. It will examine the emergence of the film form, the elements of film language and the significance of film form and style. Motion pictures will be screened weekly with commentary or discussion by film faculty in class. This course may be taken only once for credit.

ART 3388. DIRECTING 2: VISUAL STORYTELLING. 3 Hours.
This course will cover the relationship of actor performance to the placement and/or movement of the camera and other cinematic techniques. Students will explore approaches to visual style and distinctly cinematic expression and study specific shot compositions, camera movement and blocking dynamics. Prerequisite: ART 3358 or permission from the instructor.

ART 3389. CONTEMPORARY ART. 3 Hours.
A focus on the period from 1980 to the present, exploring global contemporary art themes, across aesthetics and identity, considering the legacies of minimalism, pop and conceptual art, and practices of performance and activist art. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3390. HISTORY OF GRAPHIC DESIGN. 3 Hours.
A broad overview of the history and evolution of design from prehistory to the present day. Course emphasis is on the cultural and technological contexts that influenced the practice of graphic design in Europe and the United States. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317 and permission of advisor.

ART 3391. HISTORY OF PHOTOGRAPHY. 3 Hours.
The history of still photography from its inception to the present. Emphasis on the conceptual and technical evolution of photography as an artistic medium. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3393. ART AND GENDER. 3 Hours.
Approaches to the interpretation of art from the stance of gender and feminism. Emphasis is placed on the work of significant female artists and on the gendered representations of art. Offered as ART 3393 and GWSS 3393; credit will be granted only once. Fulfills the Social/Cultural Studies requirement. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 3399. DISABILITY AND ART. 3 Hours.
Explores the many connections between disability and art, including both art created by people with disabilities and the wide variety of artistic representations about disability. Examines the purposes of art-making by people with disabilities: for therapeutic reasons, as a means of self-expression, to achieve professional goals, or as an act of activism. Investigates historical depictions of disability in art as well as art's role as a visual voice for the disability rights movement. Offered as DS 3399 and ART 3399; credit will only be granted once. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor or Disability Studies.

ART 4100. SENIOR EXHIBITION. 1 Hour.
Application of professional practices for graduating BFA art majors. Primary concentration is preparation for BFA exhibition/presentation. Prerequisite: ART 4300 or, for Design students, ART 4356.

ART 4101. PORTFOLIO PRESENTATION. 1 Hour.
This course is the capstone of the Bachelor of Arts track. Working with their advisor, students will prepare an artist's talk about their work and deliver this presentation at an advertised public lecture. This course is to be taken in the student's last semester before graduation.

ART 4191. INDEPENDENT STUDY. 1 Hour.
Mature, capable students may be permitted to pursue individual art problems. Problems must be stated in writing, a definite conference schedule arranged, and the paperwork must be approved by both the supervising faculty member and the department chair prior to registration. May be repeated for credit for varied subject matter. Prerequisite: B average in art concentration.

ART 4291. INDEPENDENT STUDY. 2 Hours.
Mature, capable students may be permitted to pursue individual art problems. Problems must be stated in writing, a definite conference schedule arranged, and the paperwork must be approved by both the supervising faculty member and the department chair prior to registration. May be repeated for credit for varied subject matter. Prerequisite: B average in art concentration.

ART 4300. PROFESSIONAL PRACTICES. 3 Hours.
Professional practices for upcoming graduating BFA art majors in studio and media concentration, excluding design students. Exploration of professional capabilities applied to media and studio areas. Emphasis on complex professional skills, knowledge and presentation.

ART 4302. VISUAL CULTURE & CREATIVITY. 3 Hours.
A critical investigation of personal, national, and global identities. Personal and communal narratives surrounding visual culture define and construct meaning in our everyday lives. Visual culture is investigated as a site through which social and cultural definitions, norms and values, and expectations are reinforced, constructed as well as challenged. The goals for this course are to develop students' skills in critical thinking that revolve around artwork, writing, reading, and oral expression and foster an understanding of the pluralistic nature of institutions, society, and culture(s) of the United States and beyond. Prerequisite: 6 credits from the following Art Foundations courses: ART 1305, ART 1306, ART 1307, or ART 2304.

ART 4304. ART AND THE HUMAN CONDITION. 3 Hours.
A seminar offered to students in majors across campus, undergraduate and graduate. Practice in the analysis of visual information and discussion of topics which relate to medical humanities, disability studies, the impact of race and ethnicity, the representation of aging, narrative medicine, and art therapy. Students engage in research and creative projects and present their works to the class. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor, Medical Humanities, or Disability Studies.

ART 4307. SPECIAL TOPICS IN ASIAN ART. 3 Hours.
Special studies seminar dealing with various aspects of the history and development of Asian art, architecture, and archeology. May be repeated for credit. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4308. FINE ART MUSEUMS AND RESEARCH COLLECTIONS. 3 Hours.
Examines current issues and developments in museum practice. This course uses area museums, auction houses, and research collections as a learning resource. This course is supplemented by on-site visits and readings. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4310. TOPICS IN CINEMA STUDY. 3 Hours.
Historical surveys of nonfiction film, experimental cinema, and genres (e.g., the western, the gangster film, science-fiction films), as well as geographical or national movements (e.g., German expressionism, Italian neo-realism, French new wave) and film theory and criticism. The particular subject will change from year to year. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission of the instructor.

ART 4311. SCRIPT TO SCREEN. 3 Hours.
This course for Cinematic Arts majors is a high energy merger of a production class and a short film writing class to both write and produce a film per week during the Summer sessions. Students in this class will have a realistic view of the production consequences of writing for the screen. May be repeated once for credit. Prerequisite: ART 3350 or permission of instructor.

ART 4312. TOPICS IN 19TH CENTURY ART. 3 Hours.
Topics from c.1780 to 1900, such as the analysis of an individual movement, medium, or theme. May be repeated for credit as course content changes. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4313. COLLECTIONS MANAGEMENT. 3 Hours.
This course will examine the history of museum and research collections, long-term care and sustainability of works, and the concerns of ethics and law in relation to acquisition and management of these collections. This course is enriched by guest speakers and on-site visits to area collections. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4314. TOPICS IN 20TH CENTURY ART. 3 Hours.
Topics from c. 1900 to c. 2000, such as analysis of an individual movement, medium, or theme. May be repeated for credit as course content changes. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4315. ASPECTS OF CONTEMPORARY ART. 3 Hours.
Topics from c. 1970 to the present, such as performance and conceptual art, art in and about the natural environment, post-modernism and critical perspectives, art in the social context, and the genres of the 1980s. May be repeated for credit. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4316. COLLECTING ASIA: THE HISTORIOGRAPHY OF COLLECTING ASIAN ART. 3 Hours.
This seminar explores the complicated history of the collecting of Asian art over the past two centuries. From the 19th century European fascination with Japanese woodblock prints to the rush to remove Buddhist artifacts from Central Asia at the turn of the twentieth century, this course examines significant moments in the collecting of Asian art through case studies drawn from major international museums. Students will have the opportunity to work directly with primary source objects and documents as they learn more about the complex lives of museum artwork. Prerequisite: Any two of these three courses: ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4317. ART AND ISLAM. 3 Hours.
This upper level art history course studies Islamic art and architecture from the seventh century to the present, covering arts from the Arabian peninsula, north and west Africa, southern Europe, central Asia, and south Asia. Emphasis may also be given to the cultural and religious aspects that shape Islamic art including sacred architecture, calligraphy, and pilgrimage. Prerequisites:Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4318. ADVANCED DIGITAL IMAGING. 3 Hours.
Advanced level course in computer imaging for art majors. Conceptual as well as expressive problems are introduced to encourage independent and creative problem solving in digital imaging. Emphasis is placed on both manipulation of photo-based media and creation of two-dimensional animation. May be repeated for credit. Prerequisite: ART 3352.

ART 4320. EXPERIMENTAL PHOTOGRAPHIC FORMS AND METHODS. 3 Hours.
Students will explore different approaches to photography that emphasize photographs as objects and/or as projected imagery. Projects may include use of collage, appropriation, installation, found objects, and other techniques. Lectures and discussions will examine experimental uses of photography in historical and contemporary art. Prerequisite: 6 hours to be selected from ART 3333, ART 3360, ART 4359, ART 4360, ART 4363, or ART 4370; or permission of instructor.

ART 4321. EXHIBITION DESIGN. 3 Hours.
An overview of exhibition design techniques and practices using hands-on experiential learning in collaborative and individual exhibition tasks. Students will learn how to conceptualize, design, plan, and prepare exhibits in a variety of styles, including, fine art, historical, contemporary, and satellite. Exhibition design will also be explored in a variety of formats, which may include digital design of exhibitions, exhibition and museum presence on social media platforms, online marketing techniques, and interactive engagement of exhibition audiences through digital and electronic media. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4323. CRITICAL WRITING FOR MUSEUMS AND GALLERIES. 3 Hours.
Explores the critical writing skills and formats most frequently utilized with museum, gallery, and institutional workplaces. An examination of the styles of writing employed within fine art settings and focus on didactics, exhibition reviews, promotional and publication materials, and museum/gallery research analysis. Alongside a variety of skill-building activities, an intensive artifact/artwork investigation resulting in a written component will be created. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4324. MONUMENTS AND LIVING HISTORY. 3 Hours.
Immerses students in broad forms of art historical and museum studies engagement via interactive experiences with "living" history. Students will visit locations of historical and art historical importance and work directly with art historians, artists, reenactors, and specialists who focus on bringing cultural history to life for the public. Includes engagement with Texas-based living historical monuments located in the greater DFW area. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4325. ART DIRECTION. 3 Hours.
An advanced workshop researching, exploring, and applying multi-dimensional cinematic visual design concepts used to render and achieve the look, dynamics, and visual style of cinematic work in service of a director's vision. Prerequisite: ART 2358 and ART 2387; or with permission from the instructor.

ART 4330. 2D GAME CREATION. 3 Hours.
The principles of 2D game design and production as a multidisciplinary field for creating interactive experiences with an emphasis on win-lose scenarios, cognitive flow, and reward-based systems. Prerequisite: ART 3364 or permission from the instructor.

ART 4331. TOPICS IN EARLY MODERN ART. 3 Hours.
An in-depth study of topics in European art from the 14th through the 17th centuries, including cross-cultural exchange. May be repeated for credit as course content changes. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4332. RACE, GENDER, AND DISABILITY IN EARLY MODERN ART. 3 Hours.
An in-depth study of the varied ways in which race, gender, and disability find expression in art from the 14th through 17th centuries. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; and permission from the instructor.

ART 4333. 3D GAME CREATION. 3 Hours.
This course covers the principles of 3D game design and production as a multidisciplinary field, creating an interactive experience with an emphasis on win-lose scenarios, cognitive flow, and reward-based systems. Prerequisite: ART 3367 3D Animation and ART 3364 Interactive Storytelling.

ART 4334. UX/UI FOR DESIGNERS. 3 Hours.
Concentrated study in User Experience Design research and processes as applied to user interfaces and digital products. Students will incorporate the use of recognized industry standards such as Design Thinking (DT) and Human Centered Design (HCD) to deepen their understanding of UX/UI Design principles and processes. Students will create projects showcasing their ability to strategically design user-centric solutions that effectively meet the needs of diverse audiences by bridging the gap between platforms and users. Prerequisite: Art 3356 Interactive Design Concepts.

ART 4339. MOTION DESIGN & KINETIC TYPE. 3 Hours.
Introduces students to effective and engaging communication design using motion graphics, including applications in advertising, broadcast, web/app integration, and social media. The integration of moving design elements and dynamic typography are explored and matched to audio cues following the theories of kinetic composition and aesthetics. Students will study the history of pioneers in the field. Prerequisite: ART 2354 & ART 3356.

ART 4340. ADVANCED KILN FORMED GLASS. 3 Hours.
Continuation of ART 3340. This class focuses on glass kiln forming techniques and concepts including kiln casting, fusing, slumping, and various cold working processes. Emphasis is on using glass as an expressive and creative art media. Prerequisite: ART 3340 or permission of instructor.

ART 4341. ADVANCED SCULPTURE. 3 Hours.
Advanced work in continuation of ART 3341. Students are encouraged to develop a creative style in their own personal direction. A variety of materials and techniques is explored. May be repeated for credit. Prerequisite: ART 3341 or permission of the instructor.

ART 4342. ADVANCED GLASS. 3 Hours.
Continued development of ART 3342 with emphasis on advanced technique, manipulation and form development. Course assignments will emphasize personal creativity and exploration. May be repeated for credit. Prerequisite: ART 3342 or permission of instructor.

ART 4343. ADVANCED CLAY. 3 Hours.
Further development and focus on techniques and personal expression in sculptural, hand-built, and wheel thrown clay forms. Continuation of kiln firing, moldmaking, slipcasting, and glazemaking. May be repeated for credit. Prerequisite: ART 3363 or permission of the instructor.

ART 4345. ADVANCED PRINTMAKING. 3 Hours.
Continued study and development of both conceptual and technical practice of printmaking. Emphasis placed on personal expression of ideas as well as the broader implications of printed images. Explorations and innovations will be encouraged. May be repeated for credit. Prerequisite: ART 1305, ART 1307, and ART 3343 or permission of the instructor.

ART 4346. GRAPHICS: PORTFOLIO PREPARATION. 3 Hours.
This course concentrates on the creation, development, and evaluation of the graphic design portfolio. Course work will include advanced level conceptual assignments and various methods of presentation. Prerequisite: ART 3355 and ART 4355 with grades of B or better, or permission of the instructor.

ART 4347. PUBLICATION DESIGN. 3 Hours.
Philosophy, concepts, and structures of magazine and book design. Prerequisite: ART 2354 and ART 2355.

ART 4348. INFORMATION VISUALIZATION. 3 Hours.
This course is an exploration of the graphic visualization and representation of data driven information sets through the crafting of infographics and varied visual solutions to achieve insights into the cognitive and perceptive complexities of the world around us. Prerequisite: ART 2355.

ART 4349. ADVANCED CINEMA PRODUCTION (ACP): VIDEO ART & NEW GENRES. 3 Hours.
Advanced work involving production, postproduction, and distribution with a special emphasis on experimental and innovative applications. Instruction may include video integrated with performance, installation, audio/sound art, and computer graphics appropriate to the medium. Lectures, readings, and screenings will frame video art within an historical and critical survey of new genres. May be repeated once for credit. Prerequisite: ART 3358 or permission of the instructor.

ART 4350. ADVANCED CINEMA PRODUCTION (ACP): DOCUMENTARY. 3 Hours.
Using film and video as a tool for creative research, students will produce, write, direct and edit original documentaries or nonfiction films/videos under supervision of the instructor. May be repeated once for credit. Prerequisite: ART 3358 or permission of the instructor.

ART 4351. ADVANCED CINEMA PRODUCTION (ACP): COMMERCIAL. 3 Hours.
Commercial and corporate applications of video. Students produce original individual projects integrating concepts and technical skills under supervision of the instructor. May be repeated for credit. Prerequisite: ART 3358 or permission of instructor.

ART 4352. ADVANCED CINEMA PRODUCTION (ACP): FICTION. 3 Hours.
Narrative storytelling film/video techniques. Students write, produce, direct and edit original, short narrative film/video projects under supervision of the instructor. May be repeated once for credit. Prerequisite: ART 2358 or ART 3350 or permission of the instructor.

ART 4353. FOUNDRY. 3 Hours.
This advanced studio class will explore work in sculpture methods specific to casting and related mold making processes. Students will develop expertise in model preparation, silica-based slurry mold processes, and chasing metal castings.

ART 4354. SCREENWRITING 2. 3 Hours.
A continuation of ART 2350 focusing on writing an original (no adaptations), narrative, full-length screenplay through all stages to final draft status primarily focusing on the development of a polished first act. Students study screenplays, view films, conduct actor readings, and complete various other assignments. May be repeated once for credit. Prerequisite: ART 3350 or permission of the instructor.

ART 4355. VISUAL IDENTITY SYSTEMS. 3 Hours.
Creative exploration and application of complex visual communication skills to the development of a visual identity system. Prerequisite: ART 2354 and ART 3354.

ART 4356. PROFESSIONAL PREPARATION. 3 Hours.
Exploration and development of the visual communication portfolio. Course work includes advanced level conceptual assignments. Emphasis on complex professional skills. Capstone course for Design Area BFA students, required during final semester (graduation semester). Prerequisite: ART 4355 and permission of the advisor.

ART 4357. ADVERTISING DESIGN. 3 Hours.
Typography, layout, visualization, and conceptual problem solving as applied to advertising. Prerequisite: ART 3355.

ART 4358. ADVANCED CINEMA PRODUCTION (ACP): EDITING. 3 Hours.
An advanced workshop in video editing and post production. Emphasis will be placed on long form editing, the aesthetics of editing, and editing work flow. May be taken 3 times for credit. Prerequisite:ART 3358 or permission of instructor.

ART 4359. ADVANCED PHOTOGRAPHY. 3 Hours.
This course encourages students to use a variety of photographic processes (black & white, color, non-silver, computer imaging, etc.) with an emphasis on the development of a personal stance. Students will work on individual projects and present work in an environment of critical discussion. May be repeated for credit. Prerequisite: Three hours to be selected from ART 3333, ART 4360, ART 4363, or permission of the instructor.

ART 4360. COLOR PHOTOGRAPHY. 3 Hours.
This course will direct students to an understanding of color photography as a contemporary art medium. Students will utilize various digital photographic techniques including color correction and digital printing. Color theory, use of color as an element in image making, and the psychology of color may be covered. Prerequisite: ART 2360 or permission of the instructor.

ART 4361. CINEMATIC ANIMATION 1. 3 Hours.
Intensive exploration of the art and craft of animated cinema. Through directed productions, screenings, readings, and workshops, students develop experience in a range of processes, compositing techniques, as well as digital and traditional methods. Prerequisite: ART 3362 or permission from the instructor.

ART 4362. CINEMA THESIS PRODUCTION. 3 Hours.
This capstone course is designed to bring together ideas, processes, practices, and theories in the service of the production of a substantial work of cinema. Students will pursue an entire project from conception to completion, combining intensive preproduction, production, and post-production with in-depth instruction on lab work, distribution, and exhibition. Throughout the course, emphasis is placed on instructor, peer, and self-critique. May be repeated for credit. Prerequisite: ART 3358 or permission of the instructor.

ART 4363. STUDIO PHOTOGRAPHY. 3 Hours.
The theory and practice of studio photography. Students will master studio strobe lighting, large format film camera, and digital camera techniques. Prerequisite: ART 2360 or permission from the instructor.

ART 4364. MOBILE APP DESIGN. 3 Hours.
An overview of the development and design process for mobile web applications and portable technologies. Exploration of best practices for mobile app design and brand strategy, user experience, concept development, mobile content strategy, information architecture, interaction/interface design, visual design, and rapid prototyping. No coding is required or expected with this course. Prerequisite: ART 3356.

ART 4365. TECHNOLOGY IN ART EDUCATION. 3 Hours.
This course provides digital media presentation strategies to enhance teacher effectiveness and explores how to incorporate the use of digital media in curriculum development. It also enables students to develop an electronic teaching portfolio to prepare students for job interviews and to showcase both personal and student artwork. Reading assignments, research, hands-on experiences, and in-class discussion provide students with an understanding of technology and its application to an art education classroom. Students will gain a working knowledge of current best practice digital technology, including the internet and video software. Prerequisite: None; however students are highly encouraged to take ART 3323 before, or concurrent with, this course.

ART 4366. WEB DESIGN. 3 Hours.
Concentrated study in the use of design, creation, and strategic planning of websites. Emphasis is placed on creative concepts, information architecture, user experience, and site development. Course work will explore issues of differing perspectives of technology as a tool, a medium, and/or an environment. Prerequisite: ART 3356.

ART 4367. CINEMATIC ANIMATION 2. 3 Hours.
Builds on animation fundamentals while giving students an opportunity to develop and create more ambitious animated projects. In the context of these projects, we will continue to discuss industry production methods, watch contemporary animators' work and examine the role technological changes play in production. May be repeated for credit. Prerequisite: ART 4361 or permission from the instructor.

ART 4368. ADVANCED DARKROOM PHOTOGRAPHY. 3 Hours.
This advanced level course explores the use of medium and large format film cameras, film development, gelatin silver printing techniques, and archival presentation. May be repeated for up to 6 hours credit. Prerequisite: ART 3360.

ART 4370. STAGED ENVIRONMENTS. 3 Hours.
This course concentrates on the conceptualization, development and execution of tableaus designed exclusively for the camera. Lectures, readings and presentations will cover view cameras, studio lighting, set design, scouting locations, using props, and working with models. Prerequisite: ART 2360 or permission of the instructor.

ART 4371. ADVANCED PAINTING. 3 Hours.
Students will be encouraged to develop a personal direction which complements their development as visual thinkers. The student will be required to plan a course outline of conceptual development with the instructor at the beginning of each semester. May be repeated for credit. Student must earn a grade of "B" or above in the course to repeat it. Prerequisite: ART 2308, ART 2371 and a grade of B or above in ART 3371 or permission of the instructor. Transfer students will be required to schedule a portfolio review with the painting instructor to gain permission to enroll in the class.

ART 4373. ADVANCED THREE-DIMENSIONAL STUDIES. 3 Hours.
Class is designed for students to continue the development of advanced three-dimensional work and engage in a cross section of various media. May be repeated for credit. Prerequisite: 12 hours to be selected from ART 3341, ART 3342, ART 3363, ART 4341, ART 4342, ART 4343, ART 4353, or permission of the instructor. Formerly ART 4366. Credit will be granted for both.

ART 4374. ADVANCED CONCEPT ART. 3 Hours.
Advanced topics in character, creature, prop, and environment designs to visualize storytelling of fictional worlds. Students will simulate real-world applications of conceptualized art in preproduction team-based pipelines processes. Prerequisite: ART 3365.

ART 4375. DESIGN TEXAS. 3 Hours.
Visual Communication outreach and problem solving. Classroom operates like a design agency to complete real projects for clients and nonprofits as selected by the instructor. Provides advanced undergraduate students an opportunity to interact with clients on the development and completion of complex communication design problems. Prerequisite: ART 3355 and permission from advisor.

ART 4376. ADVANCED CINEMA PRODUCTION (ACP): SOUND. 3 Hours.
An advanced workshop in sound recording, sound design, and editing. Through lectures, lab, class demonstrations, and projects, students develop skills and knowledge in the technical and artistic aspects of sound techniques for film. May be repeated once for credit. Prerequisite: ART 3358 or permission from the instructor.

ART 4377. ADVANCED CINEMA PRODUCTION (ACP): PRODUCING. 3 Hours.
This course investigates real-world methodologies and best practices used in the art of producing. Topics may include cinematic, episodic, and documentary formats, as well as evolving formats such as VR/AR. Students develop a professional regard for the three vital elements of production: Time, Money, and Labor. With an eye on the intersection of aesthetic, legal, and practical considerations, students take a methodical approach to development and production through distribution and profit participation. May be repeated once for credit. Prerequisite: ART 3358 or permission of the instructor.

ART 4378. TOPICS IN SCREENWRITING. 3 Hours.
This course will focus on specialized areas of screenwriting beyond foundational and developmental content. The content covered may include screenwriting adaptation, non-linear storytelling, and serial/episodic screenwriting. May be repeated for credit as topics change. Prerequisite: ART 3350 or permission from the instructor.

ART 4380. APPLIED INTERACTIVITY. 3 Hours.
Engaging the principles of interaction to study their impact on user experience across a range of situational activities. Exploring applied user interface for the purpose of service learning or speculative design through the development of informative digital experiences. Prerequisite: ART 3367 3D Animation and ART 3364 Interactive Storytelling.

ART 4381. THE MURAL. 3 Hours.
Students are required to complete a variety of mural exercises and projects. This is a hands on art class in which you will develop a visual understanding of history, planning, scaling mediums, materials and documentation of murals. A variety of techniques and materials will be explored and students will be expected to develop a confidence on how to approach this art form. Prerequisite: ART 2371, ART 3371.

ART 4382. ENTREPRENEURSHIP IN THE ARTS. 3 Hours.
Students will apply creativity, imagination, and innovation as they explore opportunities for entrepreneurship in the arts. Prerequisite: Student must have completed 60 credit hours or have the permission of the instructor.

ART 4383. INDEPENDENT CINEMA PRODUCTION. 3 Hours.
Students will produce a major film or video in the genre of their choosing (narrative, documentary, commercial, or animation). Students may elect to work in a variety of media (including 16 mm film, digital video or installation) to produce original works. Students will be individually mentored as their productions move through preparation, shooting and post-production. May be repeated for credit. Prerequisite: ART 3358 or permission of instructor.

ART 4384. ADVANCED CINEMA PRODUCTION (ACP): DIGITAL VISUAL EFFECTS. 3 Hours.
Analysis of the shooting requirements, set and location considerations, and software choices and techniques used for various visual effects treatments. Includes digital compositing and techniques such as matte generation, camera tracking, color correction, roto-scoping, Chroma Key, set extension, and 3D integration. May be repeated once for credit. Prerequisite: ART 2304 and ART 2358, or permission of the instructor.

ART 4390. CONFERENCE COURSE: ART HISTORY. 3 Hours.
Independent study or research in an area of art history agreed upon in advance with the instructor. Written permission and the determination of obligations and objectives are required before registration. May be repeated for credit. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4391. INDEPENDENT STUDY. 3 Hours.
Mature, capable students may be permitted to pursue individual art problems. Problems must be stated in writing, a definite conference schedule arranged, and the paperwork must be approved by both the supervising faculty member and the department chair prior to registration. May be repeated for credit for varied subject matter. Prerequisite: B average in art concentration.

ART 4392. SPECIAL STUDIES. 3 Hours.
Special course work in new or experimental offerings for which there is immediate need and for which special resources are available. May be repeated for credit. Primarily for art majors.

ART 4394. HONORS THESIS/SENIOR PROJECT. 3 Hours.
Required of all students in the University Honors College. During the senior year, the student must complete a thesis or a project under the direction of a faculty member in the major department.

ART 4395. ART INTERNSHIP. 3 Hours.
An opportunity to apply academic training as participant/observer in a professional organization relevant to a major area of concentration. With permission of advisor, internships may be repeated for up to a maximum of nine hours credit. Internships must be arranged with the internship supervisor in the semester prior to enrolling for this course. Prerequisite: permission of the instructor.

ART 4396. SPECIAL STUDIES IN ART HISTORY. 3 Hours.
Subjects of immediate interest in various fields of art history; to complement temporary museum exhibitions and/or faculty research specializations. May be repeated for credit as course content changes. Prerequisite: Any two of the three courses ART 1309, ART 1310, and ART 1317; or permission from the instructor.

ART 4397. ADVANCED CINEMA PRODUCTION (ACP): SPECIAL TOPICS. 3 Hours.
Topics in this course respond to emerging technologies, immediate needs, and specialized processes. May be repeated for credit. Prerequisite: ART 3358 or permission of the instructor.

ART 4695. ART INTERNSHIP. 6 Hours.
An opportunity to apply academic training as participant/observer in a professional organization relevant to a major area of concentration. With permission of advisor, internships may be repeated for up to a maximum of nine hours credit. Internships must be arranged with the internship supervisor in the semester prior to enrolling for this course. Prerequisite: permission of the instructor.

ART 5000. SUPERVISED TEACHING STUDIO ART. 0 Hours.
Training in teaching methods and procedures for studio art classes, including weekly group meetings with the instructor and individual consultations. Prerequisite: graduate standing in studio art, or graduate standing and appointment as a teaching assistant. May be repeated.

ART 5320. ART CRITICISM & THEORY. 3 Hours.
A discussion of placing art within the context of the history of ideas.

ART 5321. CREATIVE STRATEGIES. 3 Hours.
This is a seminar class for graduate students and will focus on exploring research strategies including the collection, interpretation and presentation of visual information. Students will read selected writings by artists, film and video makers, art historians, critics, designers and arts professionals on a weekly basis, contribute to class discussions, and examine their own creative strategies.

ART 5322. ENTREPRENEURSHIP IN ARTS MANAGEMENT AND ARTS BRANDING. 3 Hours.
Entrepreneurship in Arts Management and Arts Branding will offer students the opportunity to create, imagine, develop and implement individualized and collaborative entrepreneurial strategies that will strengthen their potential for success in their careers.

ART 5323. RESEARCH FILM/VIDEO: EAST-WEST CINEMA. 3 Hours.
Study of the cinema production process using significant works representative of important historic and contemporary ideas and movements from East and West.

ART 5330. CRITICAL PERSPECTIVE IN THE VISUAL ARTS & VISUAL COMMUNICATION. 3 Hours.
Seminar course that focuses on graduate student interaction with visiting artists, scholars, curators, critic, designers, and filmmakers.

ART 5340. RESEARCH IN STUDIO INTERMEDIA. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and graduate advisor.

ART 5341. RESEARCH IN SCULPTURE. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5342. RESEARCH IN GLASS. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5343. RESEARCH IN PRINTMAKING. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and graduate advisor.

ART 5347. RESEARCH IN DRAWING. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and graduate advisor.

ART 5355. RESEARCH IN VISUAL COMMUNICATION. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and graduate advisor.

ART 5359. RESEARCH IN PHOTOGRAPHY DIGITAL IMAGING. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and graduate advisor.

ART 5360. TOPICS IN THE HISTORY OF ART & DESIGN. 3 Hours.
Special seminar/topics course focusing on enhancing the art and design knowledge base of MFA candidates in the areas of film/video, visual communication, intermedia-expanded studio, and glass as art.

ART 5363. RESEARCH IN CLAY. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5371. RESEARCH IN PAINTING. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5383. RESEARCH IN FILM/VIDEO: SCREENWRITING. 3 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: Graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5384. RESEARCH IN FILM/VIDEO: CINEMATOGRAPHY. 3 Hours.
Emphasis is given to individual application of technical skills and aesthetic abilities of cinematography to develop students' "creative eye." Prerequisite: Graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5385. RESEARCH FILM/VIDEO: EDITING. 3 Hours.
An advanced workshop in video editing and post production. Emphasis will be placed on diverse editing genres and styles and the aesthetics of editing and post-production workflow. Prerequisite: Graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5386. RESEARCH FILM/VIDEO: SHORT FILM PRODUCTION. 3 Hours.
This course will concentrate on the narrative form with the goal of directing a 3-5-minute original short film exploring dramatic beats and the use of blocking and camera as narrator. The course involves the planning, production, and post-production of short narrative films. Prerequisite: Graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5387. RESEARCH IN FILM/VIDEO: PRE THESIS FILM PRODUCTION I. 3 Hours.
Students will develop scripts or treatment and finish all the major pre-production works and production for pre-thesis films to be edited in pre-thesis Film Production. Prerequisite: Graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5388. RESEARCH FILM/VIDEO: PRE THESIS FILM PRODUCTION II. 3 Hours.
Students will finish all the major post-production works for pre-thesis films. The class will work through a number of topics relating to digital post-production including video editing, sound design, basic compositing, color correction, and exporting final projects for various exhibition platforms with an exploration of the aesthetics and guiding principles behind each area. Prerequisite: Graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5389. RESEARCH FILM/VIDEO: SPECIAL TOPICS TECHNIQUES. 3 Hours.
The class will provide a foundation for the student in learning the art of Producing and Production Management. It will encompass the four phases of film making:development, production, post production and distribution. Prerequisite: permission of instructor.

ART 5390. RESEARCH FILM/VIDEO: SPECIAL TOPICS IN FILM STUDIES. 3 Hours.
Exploration of a specific area of cinema studies, designed to enhance and enrich the traditional production curriculum and provide significant professional research for an ever-changing discipline. Prerequisite: permission of the instructor.

ART 5391. INDEPENDENT STUDY. 3 Hours.
Independent and directed research in the area of Studio Intermedia. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5392. INDEPENDENT STUDY IN VISUAL COMMUNICATION. 3 Hours.
Independent and directed research in the study of Visual Communication.

ART 5393. INDEPENDENT AND DIRECTED RESEARCH IN FILM AND VIDEO. 3 Hours.
Independent and directed research in Film and Video.

ART 5394. INDEPENDENT STUDY IN GLASS. 3 Hours.
Independent and directed research in the study of glass.

ART 5395. INDEPENDENT STUDY IN ART HISTORY AND CRITICISM. 3 Hours.
Independent and directed research in art history and criticism.

ART 5396. SPECIAL TOPICS IN ART HISTORY. 3 Hours.
Subjects of immediate interest in various fields of art history; to compliment faculty research specializations. May be repeated for credit as course content changes. Permission of the instructor required.

ART 5397. MASTER OF FINE ARTS EXHIBITION. 3 Hours.
This course is intended to be the final course in the Master of Fine Arts (M.F.A.) students program of study. Here, students will concentrate their studio activity towards the completion of a body of work to be exhibited, complete the written component of the degree as well as oral examinations. Students must have 30 hours of coursework in the concentration completed in their program of study prior to enrolling for this course.

ART 5640. RESEARCH IN STUDIO INTERMEDIA. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5641. RESEARCH IN SCULPTURE. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5642. RESEARCH IN GLASS. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5643. RESEARCH IN PRINTMAKING. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5647. RESEARCH IN DRAWING. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5655. RESEARCH IN VISUAL COMMUNICATION. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5659. RESEARCH IN PHOTOGRAPHY DIGITAL IMAGING. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5663. RESEARCH IN CLAY. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5671. RESEARCH IN PAINTING. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5683. RESEARCH IN FILM/VIDEO: FILM PRODUCTION. 6 Hours.
Independent and directed research in the student's area of concentration. Studio hours to be arranged. May be repeated for credit. Prerequisite: Graduate standing in studio art and consent of instructor and the graduate advisor.

ART 5697. MASTER OF FINE ARTS EXHIBITION. 6 Hours.
This course is intended to be the final course in the Master of Fine Arts (M.F.A.) student's program of study. Here, students will concentrate their studio activity towards the completion a body of work to be exhibited, complete the written component of the degree as well as oral examinations. Students must have 30 hours of coursework in the concentration completed in their program of study prior to enrolling for this course.

COURSES

AS 1121. FOUNDATION OF THE UNITED STATES AIR FORCE. 1 Hour.
(AS 1121 in the fall and AS 1122 in the spring) AS 100 is a survey course designed to introduce students to the U.S. Air Force and Air Force ROTC. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, and an introduction into communication skills. Leadership Laboratory (AS 1001) complements this course by providing cadets with followership experiences.

AS 1122. FOUNDATION OF THE UNITED STATES AIR FORCE. 1 Hour.
(AS 1121 in the fall and AS 1122 in the spring) AS 100 is a survey course designed to introduce students to the U.S. Air Force and Air Force ROTC. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, and an introduction into communication skills. Leadership Laboratory (AS 1001) complements this course by providing cadets with followership experiences.

AS 1181. LEADERSHIP LABORATORY. 1 Hour.
(LLAB) (Every semester). The AS 100 and AS 200 LLabs include a study of Air Force customs and courtesies, drill and ceremonies, and military commands. The LLAB also includes studying the environment of an Air Force officer and learning about areas of opportunity available to commissioned officers. The AS 300 and AS 400 LLAB consist of activities classified as leadership and management experiences. They involve the planning and controlling of military activities of the cadet corps; and the preparation and presentation of briefings and other oral and written communications. LLAB also include interviews, guidance, and information that will increase the understanding, motivation, and performance of other cadets.

AS 2121. TEAM AND LEADERSHIP FUNDAMENTALS. 1 Hour.
(AS 2121 in the fall and 2122 in the spring): A survey course designed to provide a basic understanding of both leadership and team building fundamentals. In this course, students will apply learned leadership perspectives while completing team building activities and discussing various leadership topics (i.e., conflict management, motivation, ethical decision-making, etc.). Additionally, students will be introduced to, and practice, basic verbal and written communication skills to develop effective thinking, writing, and speaking proficiencies. Students are taught from the beginning that there are many layers to leadership, including aspects that are not typically associated with these topics. Such aspects include listening, self-assessment/self-reflection, being a good follower, and problem solving efficiently. As a whole, this course provides the student with a knowledge level understanding of the general elements of leader development and effective teamwork. Furthermore, students will continue to discuss the importance of the Air Force Core Values with the use of operational examples and historical Air Force leaders. Leadership Laboratory (AS 1001) is mandatory for Air Force ROTC cadets and complements this course by providing cadets with followership experiences.

AS 2122. TEAM AND LEADERSHIP FUNDAMENTALS. 1 Hour.
(AS 2121 in the fall and 2122 in the spring): A survey course designed to provide a basic understanding of both leadership and team building fundamentals. In this course, students will apply learned leadership perspectives while completing team building activities and discussing various leadership topics (i.e., conflict management, motivation, ethical decision-making, etc.). Additionally, students will be introduced to, and practice, basic verbal and written communication skills to develop effective thinking, writing, and speaking proficiencies. Students are taught from the beginning that there are many layers to leadership, including aspects that are not typically associated with these topics. Such aspects include listening, self-assessment/self-reflection, being a good follower, and problem solving efficiently. As a whole, this course provides the student with a knowledge level understanding of the general elements of leader development and effective teamwork. Furthermore, students will continue to discuss the importance of the Air Force Core Values with the use of operational examples and historical Air Force leaders. Leadership Laboratory (AS 1001) is mandatory for Air Force ROTC cadets and complements this course by providing cadets with followership experiences.

AS 3301. LEADERSHIP STUDIES. 3 Hours.
(AS 3301 in the fall and AS 3311 in the spring). AS 300 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required for an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory (AS 1001) complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course.

AS 3311. LEADERSHIP STUDIES. 3 Hours.
(AS 3301 in the fall and AS 3311 in the spring). AS 300 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required for an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory (AS 1001) complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course.

AS 4301. NATIONAL SECURITY AFFAIRS/PREPARATION FOR ACTIVE DUTY. 3 Hours.
(AS 4301 in the fall and 4311 in the spring). AS 400 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills. An additional Leadership Laboratory (AS 1001) complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles of this course.

AS 4311. NATIONAL SECURITY AFFAIRS/PREPARATION FOR ACTIVE DUTY. 3 Hours.
(AS 4301 in the fall and AS 4311 in the spring). AS 400 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills. An additional Leadership Laboratory (AS 1001) complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles of this course.

COURSES

ASDS 5100. INDEPENDENT STUDY. 1 Hour.
This course provides students with the opportunity to develop and execute individualized research projects in collaboration with faculty mentors. Students will engage in hands-on, faculty-guided research across various disciplines, learning to design studies, collect and analyze data, and present their findings effectively. Through a combination of independent work and structured mentorship, students will gain practical experience in research methodologies, critical thinking, and academic writing. The course emphasizes skill development in project management, problem-solving, and interdisciplinary collaboration, preparing students for advanced studies and professional careers. Students will showcase their research in presentations or written reports, contributing to a deeper understanding of their chosen field and fostering meaningful academic connections with faculty members.

ASDS 5301. STATISTICAL THEORY AND APPLICATIONS. 3 Hours.
An introduction to statistical theory and applications using R/SAS software. Topics may include descriptive statistics, numeracy, statistical concepts in estimation and testing, basic principles of design of experiments, analysis of variance, analysis of covariance, and some nonparametric statistical methods. Prerequisite: MATH 3330.

ASDS 5302. PRINCIPLE OF DATA SCIENCE. 3 Hours.
An introduction to the end-to-end process of going from unstructured, messy data to knowledge and actionable insights. Provides a broad overview of what data science means and systems and tools commonly used for data science and illustrates the principles of data science through several case studies, including business, marketing, medical imaging, and biology, among others. Prerequisite: MATH 3330.

ASDS 5303. STATISTICAL AND SCIENTIFIC COMPUTING I. 3 Hours.
Statistical and scientific computing focusing on programming in Python or R. Concepts in statistical computing include Monte Carlo techniques, Jackknife, Bootstrapping, Cross-Validation, and others. Concepts in scientific computing include computational and randomized linear algebra, principal component analysis, and applications. Prerequisite: MATH 3330.

ASDS 5304. APPLIED MULTIVARIATE STATISTICAL ANALYSIS. 3 Hours.
Statistical analysis for data collected in several variables. Topics include sampling from the multivariate normal distribution, multivariate analysis of variance, discriminant analysis, principal components, and factor analysis. Basic knowledge of programming in SAS or R is required. Prerequisite: ASDS 5301, ASDS 5302, ASDS 5303.

ASDS 5305. DEEP LEARNING AND ARTIFICIAL NEURAL NETWORKS. 3 Hours.
Introduction to artificial neural networks and deep learning. Topics include DL basics, history, and introduction to Pytorch; Perceptrons and their inspiration from neuroscience; Gradients, Autograd, designing deep linear systems; Training and testing neural networks, backpropagation, stochastic gradient descent; Applying Optimization and regularization to neural nets; Convolutional Neural Networks (ConvNets/CNNs); Recurrent Neural Networks (RNNs); and Modern Networks and their applications. Prerequisite: ASDS 5301, ASDS 5302, ASDS 5303.

ASDS 5306. APPLIED TIME SERIES ANALYSIS IN DATA ANALYTICS. 3 Hours.
An introduction to the theory and applications of time series modeling with an emphasis on modeling and forecasting using the software. Topics include stationarity and autocorrelation, autoregressive, moving average, ARMA and ARIMA; forecasting and estimation; spectral analysis. Computational implementation in R. Basic programming skills is preferred. Prerequisite: ASDS 5301, ASDS 5302, ASDS 5303.

ASDS 6300. SPECIAL TOPICS. 3 Hours.
Special Topics in Data Science offers students a dynamic learning experience through a series of guest lectures by industry leaders and practitioners. The course explores the latest trends, challenges, and innovations in data science across various industries. Through interactive lectures, case studies, and industry-sponsored projects, students will gain exposure to real-world data science applications, learn how to tackle complex business problems, and understand the tools and technologies shaping the future of the field. The course emphasizes collaboration, critical thinking, and problem-solving while providing students with networking opportunities to connect with professionals in the industry. Prerequisite: ASDS 5301, ASDS 5302, ASDS 5303.

ASDS 6301. ADVANCE REGRESSION ANALYSIS. 3 Hours.
Topics include multiple linear regression, ordinary and generalized least squares, partial and multiple correlation, regression diagnostics, collinearity, model building, and nonlinear regression. The course provides an extended introduction to the computer package widely used for statistical analysis. Basic knowledge of programming is required. Prerequisite: MATH 3330.

ASDS 6302. MACHINE LEARNING WITH APPLICATIONS. 3 Hours.
Topics include but are not limited to supervised learning methods: linear model, generalized linear model, logistic regression, linear discriminant analysis (LDA), quadratic discriminant analysis (QDA), nearest neighbor classifier, support vector machines, tree-based methods (decision tree, random forest, XGBoost), and neural networks; and unsupervised learning methods: clustering, principal component analysis, and independent component analysis. The course provides an extended introduction to tools widely used for statistical machine learning. Basic programming skills are preferred. Prerequisite: MATH 3330.

ASDS 6303. DATA MINING WITH INFORMATION VISUALIZATION. 3 Hours.
Introduction to statistical pattern recognition. The main topics include Bayes decision theory, discriminant functions, maximum likelihood estimation, PCA, LDA, semi-supervised kernel learning, and graph embedding. This course will discuss some applications of data mining in different application fields, such as business, marketing, medical imaging, biology. Prerequisite: MATH 3330.

ASDS 6304. OPTIMIZATION AND BIG DATA ANALYTICS. 3 Hours.
Topics include an introduction to big data analysis, real-world applications of data science, linear system solutions, linear programming, duality theory, convex sets, convex functions, optimality conditions, unconstrained Optimization, constraint optimization, conjugate direction methods, alternating direction method of multipliers, classification/regression models and algorithms, dimensionality reduction for visualization and projects on real data. Prerequisite: ASDS 5301, ASDS 5302, ASDS 5303.

ASDS 6305. STATISTICAL AND SCIENTIFIC COMPUTING II. 3 Hours.
Advanced topics in statistical and scientific computing, emphasizing complex data analysis, such as high-dimensional and functional data. Topics include Expectation-Maximization (EM), Stochastic and Monte Carlo EM, Metropolis-Hastings algorithm, Gibbs sampling, functional principal component analysis, tensors, and tensor decompositions. Prerequisite: ASDS 5301, ASDS 5302, ASDS 5303.

ASDS 6306. INTERNSHIP/CAPSTONE RESEARCH PROJECT. 3 Hours.
The capstone project aims to give students a "hands-on" experience in analyzing interesting datasets with cutting-edge techniques of their interest. While students are encouraged to get feedback and mentoring from faculty, they should work as independently as possible with their teams. Progress will be monitored by completing the following quarterly milestones: (1) Acquisition of dataset, data pre-processing, and clear statement/justification of the proposed analysis. (2) Preliminary results and discussion of the plausibility of the results, (3) Refinement of codes, analysis, and results. (4) Submission of a written 5+ page report including introduction, background, methods, results, discussion, and conclusion. (5) Final oral presentation chaired by an ASDS faculty who read the written report. The project team members are expected to answer project-related questions from faculty and peers satisfactorily. Prerequisite: ASDS 5301, ASDS 5302, ASDS 5303, ASDS 6301, ASDS 6302, ASDS 6303.

COURSES

ASL 1441. BEGINNING AMERICAN SIGN LANGUAGE I. 4 Hours.
Introduction to the basic production (expressive skills) and comprehension (receptive skills) of American Sign Language (ASL). Includes the manual alphabet and numbers, develops conversational ability, introduces Deaf culture, and exposes students to ASL grammar.

ASL 1442. BEGINNING AMERICAN SIGN LANGUAGE II. 4 Hours.
Builds on production (expressive skills) and comprehension (receptive skills) of American Sign Language (ASL) developed in ASL 1441. Includes the manual alphabet and numbers, conversational skills, in-depth discussion of Deaf culture, and continuous exposure to ASL grammar. Prerequisite: ASL 1441, or the equivalent, with a grade of C or better.

ASL 1491. CONFERENCE COURSE. 4 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor.

ASL 2313. INTERMEDIATE AMERICAN SIGN LANGUAGE I. 3 Hours.
Expands on expressive and receptive skills of American Sign Language (ASL) developed in ASL 1442, adding more complex grammatical features, vocabulary, and communicative activities, as well as continued discussion of Deaf culture. Prerequisite: ASL 1442, or the equivalent, with a grade of C or better.

ASL 2314. INTERMEDIATE AMERICAN SIGN LANGUAGE II. 3 Hours.
Expands on the expressive and receptive skills, grammar, and vocabulary of American Sign Language (ASL) developed in ASL 2313, including more complex communicative activities and discussion of the use of culturally significant topics relating to the Deaf Community. This course satisfies the University of Texas at Arlington core curriculum requirement in language, philosophy and culture. Prerequisite: ASL 2313, or the equivalent, with a grade of C or better.

ASL 2391. CONFERENCE COURSE. 3 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor.

ASL 3301. AMERICAN DEAF CULTURE AND COMMUNITY. 3 Hours.
This course provides a multidisciplinary overview of Deaf Culture and C/community, exploring concepts and issues such as language, identity, and cultural norms. Taught in English.

ASL 3315. ADVANCED AMERICAN SIGN LANGUAGE. 3 Hours.
This course expands on the expressive and receptive skills, grammar, and vocabulary of American Sign Language (ASL) developed in ASL 2314, including increasingly complex communicative activities, discussion of culturally significant topics relating to the Deaf Community, and exploring a wide range of ASL nuances. Prerequisite: ASL 2314 with a grade of C or better.

ASL 3333. ASL DEPICTION. 3 Hours.
This course examines the use of ASL classifiers, visual vernacular, mime, gesture, role shifting, eye gaze, non-manual markers, location, embodiment, and performativity to communicate visually. Students will learn to go beyond using conventional vocabulary and better use their bodies and the signing space around them to depict the concepts they convey and stories they tell. Prerequisite: ASL 2313 with a grade of C or better, or concurrent enrollment in ASL 2313.

ASL 4330. LINGUISTICS OF ASL. 3 Hours.
This course explores the linguistic structure and features of American Sign Language (ASL). Students will study the phonology, morphology, syntax, semantics, and pragmatics of ASL. Variation, code-switching, historical change, language contact signing, and related phenomena will also be examined. Prerequisite: ASL 2314 with a grade of C or better.

COURSES

ASTR 1345. INTRODUCTORY ASTRONOMY I. 3 Hours. (TCCN = ASTR 1303)
ASTR 1345 and ASTR 1346 constitute a one-year sequence for any student who is interested in learning his/her place within the astronomical universe. The first semester consists of an essentially descriptive treatment of the apparent motions and properties of members of the Solar System including the Sun, the planets and their moons, comets and rockets, and satellites as well as the mechanics and evolution of the Solar System. The laboratory work includes the use of astronomical telescopes for observation.

ASTR 1346. INTRODUCTORY ASTRONOMY II. 3 Hours. (TCCN = ASTR 1304)
Follows ASTR 1345 and focuses on the science of stars and galaxies. Properties of light are applied to the understanding and classification of stars and to determining their distances. Topics include nuclear reactions, binary stars, variable stars, exploding stars, black holes, and star clusters. The course concludes with the structure of the Milky Way and the role galaxies play in modern cosmological theories. The laboratory work includes telescopic observations.

ASTR 2345. ARCHAEOASTRONOMY. 3 Hours.
This is a one semester course on astronomy and archaeology intertwining with an emphasis on the interesting relationship between ancient constructions and the sky. It provides a better understanding of the ideas of the architects of the past and of their religious and symbolic worlds. Many examples show how ancient astronomy still related to current astronomy in so many ways and events, such as the total lunar eclipse that led to the Athenian defeat at Syracuse, or the relation of the Easter/Passover/Chinese New Year to lunar cycles, or Polynesian sailors who populated the Pacific with the stars as a guide. This course is divided into three sections, the first of which explores the past relations between astronomy and people, power, the afterworld, architecture, and landscape. Secondly, the fundamentals of archeoastronomy are then addressed in detail, with coverage of the celestial coordinates; the apparent motion of the Sun, Moon, stars, and planets; observation of celestial bodies at the horizon; the use of astronomical software in archeoastronomy; and current methods for making and analyzing measurements. The final section reviews what archeoastronomy can now tell us about the nature and purpose of such sites and structures as Stonehenge, the Pyramids of Giza, Chichen Itza, the Campus Martius, and the Valley of the Temples of Agrigento. Prerequisite: high school math.

COURSES

BANA 3308. INTRODUCTION TO BUSINESS ANALYTICS. 3 Hours.
This course introduces students to data mining and business analytics techniques that will enable them to draw actionable insights from data. In addition to tracing the evolution of ideas in Artificial Intelligence (AI), Machine Learning (ML), and Deep Learning (DL), the course provides hands-on exposure to state-of-the-art machine learning algorithms-such as linear, ensemble, and neural network models-that organizations rely on to derive business value. Prerequisite: BSTAT 3321 and INSY 3300.

BANA 3309. DATA VISUALIZATION AND BUSINESS INTELLIGENCE. 3 Hours.
This course introduces students to cutting-edge techniques for visualizing data and creating dashboards to facilitate data-driven decision making. Topics include fundamentals of SQL, preprocessing of data, examining principles and concepts underlying visual characteristics of data, exploring graphs and charts to draw insight from data, assessing the quality of datasets, and performing exploratory analysis. Creating dashboards and storytelling to communicate business insight will also be emphasized. Prerequisite: BSTAT 3321 and INSY 3300.

BANA 4308. ADVANCED DATA SCIENCE. 3 Hours.
This course provides an in-depth understanding of machine learning concepts and algorithms using Python. Students will receive hands-on training on supervised learning algorithms such as KNN, Naïve Bayes, Linear and Logistic Regression, Support Vector Machines, Decision Trees and Ensembles, and Artificial Neural Networks (ANNs). The course will also cover foundations of Natural Language Processing (NLP) and unsupervised learning algorithms such as K-Means, Hierarchical Clustering, and DBSCAN. Prerequisite: BANA 3308 and BANA 3309.

BANA 4311. ETHICAL AND SOCIAL ISSUES IN DATA SCIENCE. 3 Hours.
This course discusses ethical concerns and social issues related to the creation, storage, analysis, use, and dissemination of data arising from business applications of machine learning, artificial intelligence, predictive analytics and data science. Topics include fairness, validity, anonymity, privacy, ownership, human subject research and societal consequences of data analysis and use by business organizations. Prerequisite: BANA 3308.

BANA 4326. CAPSTONE IN BUSINESS ANALYTICS. 3 Hours.
This course covers advanced analytics techniques, such as Natural Language Processing, Deep Learning, and Reinforcement Learning. It also provides students an opportunity to apply their analytics skills to solve a real-world problem and present the efficacy of their solution from a business perspective. Communication and presentation skills will be emphasized. Prerequisite: BANA 4308.

BANA 4331. SEMINAR IN BUSINESS ANALYTICS. 3 Hours.
The course will be taught in a seminar style and will involve readings and discussions on advanced/special topics in Business Analytics. It may be repeated for credit with the consent of the department. Prerequisite: 60 or 90 credit hours and consent of instructor.

BANA 4393. BUSINESS ANALYTICS INTERNSHIP. 3 Hours.
The course will allow students to apply analytics concepts and principles to problems in a real-world setting. The course may be used as an advanced business elective only and will be graded on a pass/fail basis. No credit will be given for previous experience or activities. The course may not be repeated for credit. Prerequisite: Junior standing and consent of department internship advisor.

COURSES

BCMN 2347. BROADCAST WRITING AND REPORTING. 3 Hours. (TCCN = COMM 2339)
Writing non-dramatic scripts for radio and television. Emphasis is on writing for time and under deadline pressure as well as writing in active voice.

BCMN 2357. RADIO PRODUCTION I. 3 Hours. (TCCN = COMM 2303)
The fundamentals of radio broadcasting. The techniques of announcing, interviewing, script writing, programming, types of radio production, audience analysis, and vocational opportunities. Students participate in typical broadcasting activities.

BCMN 2358. VIDEO PRODUCTION. 3 Hours. (TCCN = COMM 1336)
Fundamentals of video production and television broadcasting, including camera operation, video editing, writing, and lighting.

BCMN 2360. INTRODUCTION TO BROADCASTING. 3 Hours. (TCCN = COMM 1335)
A survey of historical and contemporary operations and functions of broadcasting. How radio, television, podcasting, and streaming media operate, including understanding of stations, distribution methods and facilities, regulation and the FCC, networks, advertising agencies, audience ratings, and new technologies.

BCMN 2366. AERIAL VIDEOGRAPHY AND PHOTOGRAPHY. 3 Hours.
Producing aerial photography and videography using drones. Preparation for the Federal Aviation Administration's remote pilot certification process. Prerequisite: 30 hours earned.

BCMN 3319. BROADCAST MANAGEMENT. 3 Hours.
Management procedures, policies, and responsibilities in the successful operation of telecommunication industries. Areas covered are planning, problem-solving, personnel, facilities, government, financial resources, and public service. Prerequisite: A grade of C (2.0/4.0 scale) or better in BCMN 3340.

BCMN 3340. ELECTRONIC NEWS. 3 Hours.
News writing and gathering for radio, television, podcasting and streaming media; studio production and switching practices; use of basic audio and video electronic equipment; editing of news stories for analysis and criticism. Prerequisite: Three hours of Math, COMM 2311 (or concurrent enrollment), and a grade of C or better in the following courses: BCMN 2347, BCMN 2357, BCMN 2358, and BCMN 2360.

BCMN 3350. SPECIALIZED TELEVISION REPORTING. 3 Hours.
Producing and reporting of news information for the television media on specialized topics. Students will participate in news gathering, writing, and shoot packages for television. Prerequisite: A grade of C or better in BCMN 3340.

BCMN 3355. BROADCAST ANNOUNCING. 3 Hours.
Concentrated study of phrasing, timing, voice modulation, pronunciation and articulation. Analysis and interpretation of all types of broadcast copy. Integration of current industry standard announcing and performance into radio, television, podcasting and other digital productions. Prerequisite: COMM 2311 and a grade of C or better in the following courses: BCMN 2347, BCMN 2357, BCMN 2358, BCMN 2360.

BCMN 3360. SPORTS REPORTING. 3 Hours.
Reporting on sports across multiple platforms. Credit will not be given for both BCMN 3360 and JOUR 3360. Prerequisite: COMM 2311 (previously listed as JOUR 1345) and a grade of C or better (2.0/4.0 scale) in both BCMN 2347 and BCMN 2358.

BCMN 3370. MULTIMEDIA PRODUCTION. 3 Hours.
Digital audio and video production applicable to various communication professions. This course is for non-broadcast majors and may not be substituted for BCMN 2357 or BCMN 2358.

BCMN 3380. PODCAST PRODUCTION. 3 Hours.
The fundamentals of podcast production including show design and content, audio-video recording and editing techniques, distribution, market analysis and promotion. Prerequisite: 45 hours earned.

BCMN 4191. MEDIA WORKSHOP. 1 Hour.
Contemporary activities in broadcasting. Topics will vary. May be repeated up to three times. Prerequisite: Permission of the instructor.

BCMN 4192. VIDEO PRODUCTION WORKSHOP. 1 Hour.
Studio production for news, entertainment, and original shows. Can be repeated for credit up to three times. Prerequisite: BCMN 2358.

BCMN 4193. TELEVISION PRODUCTION WORKSHOP. 1 Hour.
Television production for Spanish language audiences. Can be repeated for credit up to three times. Prerequisite: BCMN 2358.

BCMN 4194. AUDIO PRODUCTION WORKSHOP. 1 Hour.
Producing radio and other audio projects. Can be repeated for credit up to three times.

BCMN 4320. CURRENT ISSUES IN TELECOMMUNICATIONS. 3 Hours.
Recent and current literature in radio and television broadcasting, cablecasting, industrial video, satellite distribution, and national and international telecommunications policies. Current problems and possible solutions. Prerequisite: COMM 3315, a grade of C or better in BCMN 3319, and BCMN 3340.

BCMN 4322. CORPORATE VIDEO PRODUCTION. 3 Hours.
Producing video for nonprofit, municipal, and corporate community partners. Includes professional client interaction, project proposals and contracts, team dynamics and leadership, and video distribution guidelines. Prerequisite: COMM 3315 and a grade of C or better in BCMN 3340.

BCMN 4350. ADVANCED TELEVISION REPORTING. 3 Hours.
Production and evaluation of news programs for transmission on electronic media. Students will participate in production of newscasts for airing via broadcast and cable systems. Prerequisite: COMM 3315, a grade of C or better in BCMN 3340.

BCMN 4391. CONFERENCE COURSE. 3 Hours.
Topic assigned on an individual basis, covering individual research or study in the designated areas. May be repeated when topic changes. Prerequisite: 60 or more hours earned and permission of the department.

BCMN 4393. SPECIAL TOPICS. 3 Hours.
Special studies in broadcasting. Topic varies from semester to semester. May be repeated when topics change, for a maximum of six credit hours. Prerequisite: BCMN 3340 and 60 hours earned, and permission of department.

BCMN 4395. PROFESSIONAL INTERNSHIP. 3 Hours.
Individual research in broadcasting while working with business and industry. Individual conference to be arranged. Prerequisite: 60 or more hours earned and permission of department.

COURSES

BCOM 3360. EFFECTIVE BUSINESS COMMUNICATION. 3 Hours.
Principles and practice of effective communication with business organizations. Students will be exposed to theories of persuasion, argumentation and advocacy. Techniques to achieve group compromise and conflict resolution are also emphasized. A business professionalism lab is required. The grade for this course requires the completion of both the lecture component and the professionalism lab. Prerequisite: 30 credit hours.

BCOM 4380. ADVANCED COMMUNICATIONS FOR BUSINESS. 3 Hours.
Students develop written and oral communication skills. Multiple individual professional writing projects will be produced and critiqued. Grammar, sentence structure, and word choice in the business setting will be developed. Students will deliver multiple oral presentations and learn their strategy, techniques, and tips for succinct communications. Non-verbal communication will be reviewed. Prerequisite: BCOM 3360.

BCOM 5175. BUSINESS COMMUNICATIONS. 1 Hour.
Course focuses on effective oral and written communication skills for business leaders. Discusses advanced techniques for improved business writing and presentation skills. Also stresses presentation media and computer graphics for reports and presentations.

BCOM 5375. ADVANCED BUSINESS COMMUNICATION THEORY & PRACTICE. 3 Hours.
Examines theories of effective oral and written communication for managers, including conflict resolution, emotional intelligence, and others. Discusses techniques for improved research, report writing and presentation. Integrates presentation media and computer graphics for reports and presentations.

COURSES

BE 1000. UNDERGRADUATE RESEARCH. 0 Hours.
Freshman level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

BE 1105. MEDICAL APPLICATIONS OF ENGINEERING. 1 Hour.
Introduction to basic biology and engineering problems associated with living systems and health care delivery. Examples will be used to illustrate how basic concepts and tools of science & engineering can be brought to bear in understanding, mimicking and utilizing biological processes.

BE 1325. INTRODUCTION TO BIOENGINEERING. 3 Hours.
Topics include introduction to basic engineering principles and quantitative methods, their applications in analyzing and solving problems in biology and medicine. Also includes new trends in the development of bioengineering and biotechnology.

BE 2000. UNDERGRADUATE RESEARCH. 0 Hours.
Sophomore level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

BE 2300. SPECIAL TOPICS IN BIOENGINEERING. 3 Hours.
A study of selected topics in Bioengineering. May be repeated when topics vary.

BE 2310. ENGINEERING APPROACHES TO SOLVING CLINICAL CHALLENGES. 3 Hours.
In this sophomore course, students will apply engineering principles to find solutions to current clinical problems presented to the class. As small groups, students will work as teams to design a process or system to meet the desired needs of the given clinical challenges based on the necessary constraints. As a final project presentation, students will use what they have learned to identify a new clinical challenge and work to define a meaningful set of manufacturing, fiscal, safety, ethical, and health-related constraints associated with the problem. Students will be highly encouraged to identify solutions to these newly derived clinical problems and to integrate this clinical challenge as part of their future senior design project. Prerequisite: C or better in BE 1105, BE 1325, MATH 2425, CHEM 1442, and BE 2315 or consent of BE undergraduate advisor.

BE 2315. INTRODUCTORY COMPUTATIONAL TOOLS FOR BIOENGINEERS. 3 Hours.
Students learn programming concepts (variable, array, command, logics, do-loop, etc.) through the use of SolidWorks, MatLab, and Image J, etc. Students learn to use these computational tools by working on problems and exercises of biological, physiological relevance and clinical applications. Prerequisite: A course grade of C or better in BE 1325, and MATH 1426 or consent of BE undergraduate advisor.

BE 3000. UNDERGRADUATE RESEARCH. 0 Hours.
Junior level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum 3 times.

BE 3101. SEMINAR IN BIOENGINEERING. 1 Hour.
University and guest lecturers speak on topics of current research interest in the field of bioengineering. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3180. INTRODUCTION TO MEDICAL DEVICE REGULATORY REQUIREMENTS AND QUALITY STANDARDS. 1 Hour.
Topics include introduction to fundamentals of regulatory requirements for medical devices, broadly defined as mechanical and electronic equipment or tissue-implantable constructs. Familiarization with national and international regulatory agencies, and presentation of the processes of securing regulatory approvals for medical devices. Emphasis will be on the U.S. Food and Drug Administration, but examples from other regulatory agencies will also be presented. The course also introduces students to the U.S. National Institute of Standards and Technology as well as various professional engineering societies that provide quality standards for bioengineering design. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3191. DIRECTED RESEARCH IN BIOENGINEERING. 1 Hour.
Student participates in a research project under the individual instruction of a faculty supervisor. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor and the instructor.

BE 3195. INTERNSHIP IN BIOENGINEERING. 1 Hour.
Students receive training in a bioengineering company or a hospital to gain firsthand industrial or clinical engineering experience. The company or hospital assign projects and a faculty member monitors the student's progress. Prerequisite: Completion of at least 70 undergraduate credit hours in BE and good standing in the undergraduate program. Permission of Undergraduate Academic Advisor.

BE 3280. INTRODUCTION TO MEDICAL DEVICE REGULATORY REQUIREMENTS & QUALITY STANDARDS. 2 Hours.
Topics include introduction to fundamentals of regulatory requirements for medical devices, broadly defined as mechanical and electronic equipment or tissue-implantable constructs. Familiarization with national and international regulatory agencies, and presentation of the processes of securing regulatory approvals for medical devices. Emphasis will be on the U.S. Food and Drug Administration, but examples from other regulatory agencies will also be presented. The course also introduces students to the U.S. National Institute of Standards and Technology as well as various professional engineering societies that provide quality standards for bioengineering design. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3295. INTERNSHIP IN BIOENGINEERING. 2 Hours.
Students receive training in a bioengineering company or a hospital to gain first hand industrial or clinical engineering experience. The company or hospital assigns projects and a faculty member monitors the student's progress. Prerequisite: Completion of at least 70 undergraduate credit hours in BE and good standing in the undergraduate program. Permission of Undergraduate Academic Advisor.

BE 3301. CELL PHYSIOLOGY FOR BIOENGINEERS. 3 Hours.
This course will cover principles of molecular omics (i.e., genomics, transcriptomics, proteomics and synthetic biology); the field of molecular bioengineering and processes involving inducible transcription and chimeric proteins; the composition of cell membranes, ion transport and the application of optogenetics in cell physiology regulation; the way cells communicate and integrate signals and translate them in intracellular metabolic cascades through the understanding of phosphoproteomics, energy metabolism, metabolomics, cellular motility, and molecular motors; the processes involved in cell proliferation, abnormal cell division dysregulation in cancer, and nanotechnology techniques for tumor treatment. Preferred background: basic understanding of general biology and general chemistry. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3310. BIOMECHANICS AND FLUID FLOW WITH COMPUTATIONAL LABORATORY. 3 Hours.
Following an introduction to the basics of solid, fluid mechanics, student learn the fundamental behavior of various biological materials, flow properties of blood, viscoelastic properties of cells, tissue matrix, as well as their roles in human physiology at normal and disease states. Examples also include the design aspects of medical prosthetic devices. The course will cover biomechanics across a wide range of scales from organism, organ, tissue, cell and to protein levels. Students learn computational modeling to formulate and solve bioengineering problems. Preferred background: basic understanding of general physics, general biology and basic calculus. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3317. LINEAR SYSTEMS IN BIOENGINEERING. 3 Hours.
Time-domain transient analysis, convolution, Laplace Transforms, Fourier Series, Transforms and their applications, transfer functions, signal flow diagrams, Bode plots, stability criteria, sampling, filter designs, and Discrete-time signals and systems. Examples with applications in bioengineering will be emphasized. Preferred background: basic understanding of general physics, general biology and basic calculus. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3320. BIOMEDICAL SIGNAL ACQUISITION AND ANALYSIS. 3 Hours.
This course introduces basic technical skills for the acquisition and analysis of biomedical signals in living systems. Students will explore the principles of sensors, signal transformation, and simple signal processing with physiological signal applications. The course also includes hands-on programming in computer-based data acquisition platforms, focusing on sensor integration for experimental data collection, processing, and analysis. Key topics include error analysis, repeatability, resolution, and the interpretation of data from living systems, emphasizing clinical applications. Prerequisite: A grade of C or better in MATH 2326, BE 2315, and PHYS 1444 (PHYS 1444 may be taken concurrently) or consent of the BE undergraduate advisor.

BE 3325. FLUORESCENCE MICROSCOPY. 3 Hours.
Introduction to the anatomy of fluorescence microscopy and the physical principles of its operation; confocal and multi-photon microscopy; molecular imaging applications based on Forster Resonance Energy Transfer (FRET), Fluorescence Lifetime Imaging (FLIM), Fluorescence Correlation Spectroscopy (FCS), Fluorescence Recovery After Photobleaching (FRAP) and Total Internal Reflection Fluorescence (TIRF) Microscopy. Preferred background: basic understanding of general physics, general chemistry, general biology and basic calculus. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3327. TISSUE OPTICS. 3 Hours.
Introduction to the science and technology behind tissue optical imaging systems and their design requirements for different clinical applications; diffuse optical tomography; fluorescence tomography; bioluminescence tomography; multi-modality imaging. Preferred background: basic understanding of general physics, general chemistry, general biology and basic calculus. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3343. MATLAB AND APPLICATIONS FOR BIOENGINEERS. 3 Hours.
This course consists of two parts: the first part teaches students how to use MATLAB for engineering computation, quantitative analysis, scientific plotting/graphing presentation, and numerical modeling in solving real-world problems. After enabling students to generate arrays, files, functions, and to write MATLAB programs, the course will focus on using MATLAB for bioengineering applications, including 2D and 3D graphing for biological images, data processing for time-varying signals, and 2D Fourier transform for medical image processing. A variety of examples often encountered in the biological, biomedical engineering field will be used as class demonstration, presentation and project assignments. Preferred background: basic programming skills. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3344. BIOINSTRUMENTATION. 3 Hours.
Fundamental principles of bioinstrumentation, including operational amplifiers and instrumentation amplifiers; measurements of biopotentials; signals and noise in biological systems; mechanical transducers; resistive, inductive, capacitive transducers; measurement of temperature, blood pressure and flow; electrical safety. Prerequisite: C or better in EE 2440 or CSE 2440; accepted in BE Professional Program or consent of the BE undergraduate advisor.

BE 3346. MEDICAL IMAGING. 3 Hours.
This course introduces basic medical imaging modalities, including X-ray Computed Tomography (CT), Nuclear Medicine Imaging (PET and SPECT), Magnetic Resonance Imaging (MRI), and image-guided interventions. Through this course, the students will learn fundamental knowledge on how medical images are obtained and how they can be used for diagnosis, therapy, and surgery. Preferred background: basic understanding of general physics, general biology and basic calculus. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3352. DIGITAL PROCESSING OF BIOLOGICAL SIGNALS. 3 Hours.
Fundamental techniques for extraction of useful information from signals acquired from biological systems. Topics include time and frequency domain analysis, cross correlation, spectrum analysis, and convolution. Design of finite impulse response (FIR) and infinite impulse response (IIR) filters for processing biological signals are described. Examples include cardiac, respiratory, and biomechanical movements. Preferred background: basic understanding of general physics and differential equations. Prerequisite: Accepted into the BE Professional Program and BE 3317 (or equivalent course) or consent of the BE undergraduate advisor.

BE 3367. CELL CULTURE AND BIOMATERIAL LABORATORY. 3 Hours.
This course will cover common techniques used in cell culture including aseptic techniques, culture media preparation, cell culture/subculture, cell counting, cell freezing, as well as transfection techniques. The course will also include synthesis of biodegradable polymeric nanoparticles for drug delivery and study of the drug releasing profile. Preferred background: satisfactory completion of BE 3380 (may be taken concurrently). Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3380. HUMAN PHYSIOLOGY IN BE. 3 Hours.
An introduction to human physiology emphasizing biomedical engineering related topics. The course focuses on understanding basic function with the relationships on the cellular as well as organ level in both healthy and diseased states. Preferred background: basic understanding of general biology. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 3395. INTERNSHIP IN BIOENGINEERING. 3 Hours.
Students receive training in a bioengineering company or a hospital to gain first hand industrial or clinical engineering experience. The company or hospital assigns projects and a faculty member monitors the student's progress. Prerequisite: Completion of at least 70 undergraduate credit hours in BE and good standing in the undergraduate program. Permission of Undergraduate Academic Advisor.

BE 3415. FUNDAMENTALS OF BIOMOLECULAR ENGINEERING. 4 Hours.
The course will introduce the principles of engineering living systems at the atomic, molecular, and cellular levels. Fundamentals covered in the course will include topics such as chemical bonding and reactions; synthesis, structure and function of carbohydrates, polypeptides, nucleic acids, and lipids; as well as analytical and engineering tools for characterization, design, and production of synthetic biological systems. A laboratory component will provide hands on experience including methods important to synthetic biochemistry, protein engineering, cellular reprogramming, and metabolic engineering. Knowledge of college level general chemistry is required. Prerequisite: C or better in BE 1105, BE 1325, BIOL 1441, CHEM 1442, and MATH 2425, or consent of the BE undergraduate advisor.

BE 4000. UNDERGRADUATE RESEARCH. 0 Hours.
Senior level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

BE 4191. DIRECTED RESEARCH IN BIOENGINEERING. 1 Hour.
Student participates in a research project under the individual instruction of a faculty supervisor.

BE 4291. DIRECTED RESEARCH IN BIOENGINEERING. 2 Hours.
Student participates in a research project under the individual instruction of a faculty supervisor.

BE 4300. SPECIAL TOPICS IN BIOENGINEERING. 3 Hours.
A study of selected topics in Bioengineering. May be repeated when topics vary. Prerequisite: Consent of instructor and undergraduate advisor.

BE 4312. TISSUE BIOMECHANICS AND BIOENGINEERING. 3 Hours.
This course introduces biomechanics as a means to describe mechanical behavior of biological tissues. A comprehensive course, it covers the fundamental concepts, experimental and theoretical approaches of biomechanics, and their applications in modern bioengineering, including mechano signal transduction, pathophysiology, tissue engineering and regeneration, medical implants, surgical intervention. Structural-mechanical properties of specific tissues, such as heart valves, cardiac tissues, blood vessels, tendon/ligament, skeletal muscles, cartilage, and meniscus will be discussed in great details. This course integrates the concepts of biomechanics, the underlying structural and biological mechanisms, illustrates how experimental, analytical and computational methods have been used to address clinical needs in enhancing the quality of health care delivery. Preferred background: satisfactory completion of BE 3380. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4314. BIOMEDICAL IMPLANTS. 3 Hours.
A comprehensive course covers the essential knowledge in biomedical implants. The goal is to provide students with the knowledge and skills to understand the clinical needs, the engineering principles, methodologies used in implant design, the resulting host-implant interaction, and the constraints, limitations on engineering design optimization, as well as the evaluation and assessment of the implant performance and clinical outcomes. Case studies include mechanical, bio-prosthetic and trans-catheter heart valves, vascular grafts, stents, pacemakers, orthopedic implants, dental implants, etc. The course also covers topics on regulatory issues, patent protection, design validation in animal models and clinical trials, IACUC, IRB, Good Manufacture Practice (GMP), and FDA regulations and approvals. Students are expected to be able to apply the learning to solve problems in the rapidly growing field of biomedical engineering. Preferred background: satisfactory completion of BE 3380. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4318. MEDICAL DEVICE PROTOTYPING. 3 Hours.
The course will introduce the laboratory techniques commonly used for designing and prototyping medical devices and implants. The course will also cover the incorporation of tissue bioengineering scaffold into the medical implant design and explore the use of 3D printing technology for medical device prototyping. The design of medical devices and implants will be taught using SolidWorks, one of the most popularly used software for computer-aided 3D modeling. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate adviser.

BE 4324. BIOMEDICAL OPTICS LABORATORY. 3 Hours.
The primary objective of this course is to provide students hands-on experience with fundamental optical techniques and instrumentation used in modern biomedical research and applications. The skills learned will be valuable to anyone who intends to work in an experimental setting that requires working knowledge of optical instrumentation and techniques. The course is divided into ten core lab modules that cover topics ranging from basic optical techniques to advanced imaging and spectroscopy techniques. Preferred background: satisfactory completion of BE 3320. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4325. FUNDAMENTALS OF BIOENGINEERING. 3 Hours.
Topics cover fundamentals of biosensors, bio-signal processing, and bioinstrumentation. An introduction to various imaging modalities such as ultrasound, magnetic resonance, optical tomography, and x-ray radiography is also presented. Other bioengineering topics may be included as time allows or as is appropriate. Preferred background: satisfactory completion of BE 3380. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4326. TISSUE ULTRASOUND-OPTICAL IMAGING. 3 Hours.
This course will introduce the fundamental principles of ultrasound and optical related imaging techniques, such as ultrasonic, tissue optical, and photoacoustic imaging techniques. Some topics related to the new progresses and applications in the related fields will be introduced. Students are expected to know the principles of these imaging techniques, and use mathematical, numerical simulation and experimental methods to understand these technologies and their biomedical applications. Preferred background: satisfactory completion of PHYS 1443, PHYS 1444 and BE 3380. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4329. NEURAL ENGINEERING. 3 Hours.
This course consists of both lecture/discussion and laboratory. Lecture topics include central and peripheral nervous system injury and regeneration, brain/machine interfacing, primary culture of neural cells, neuroinflammatory and neurodegenerative disease. Laboratories include embryonic and neonatal rat derived neuronal culturing, immunostaining and quantitative analysis. Preferred background: satisfactory completion of BE 3367 and BE 3380. Prerequisites: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4330. MEDICAL IMAGE PROCESSING. 3 Hours.
Principles and computational methods in digitally processing medical images are presented. Topics include image reconstruction, two and three dimensional visualization, image registration, quantitative image analysis, image enhancement, and statistical processing methods including Monte Carlo methods. Prerequisites: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4331. BIOPOLYMERS AND BIOCOMPATIBILITY. 3 Hours.
The course introduces fundamental knowledge in biomaterials, structure-property-function relationships of the polymers, and their interactions with the host in-vitro and in-vivo. Specific topics include polymer-based biomaterials, polymer synthesis, property characterization, types of biodegradable polymer, their processes, and the evaluation for biocompatibility and host responses. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4333. NANO BIOMATERIALS AND LIVING-SYSTEMS INTERACTION. 3 Hours.
The course introduces basic and applicable knowledges in nanoparticle design and their applications in biomedicine. Specific topics include basic knowledge of nanomaterials, nano-polymer, nanoparticle design, manufacturing, property characterizations, and their applications in drug delivery, tissue repair, cancer treatment, among others. Through course requirement, students learn the skills in project design, proposal writing, and results presentation. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4337. TRANSPORT PHENOMENA IN BIOMEDICAL ENGINEERING. 3 Hours.
Principles of momentum, mass and heat transfer; description of blood flow, trans-capillary, interstitial, lymphatic fluid transport and pulmonary gas exchange. Applications in the design of blood oxygenator, dialysis devices, and strategies in drug delivery, hyperthermia treatment. Preferred background: basic understanding of general physics, biology and calculus, and successful completion of BE 3380. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4345. BIOSENSORS. 3 Hours.
The course will cover major classes of bio-sensing technologies currently used in practice and the emerging ones that are currently being evaluated. The basic operating principle behind bio-sensing technologies will be explained and its implementation in medical devices will be discussed. Explanation of biosensor operation will involve understanding the mechanism of bio-signal transduction (bio-parameter to biomechanical, electrical, optical or chemical signal), detection method, and their analysis. Methodology for device calibration and data interpretation of physiological parameters will be discussed. The course material will be derived from book chapters and review papers. Course includes hand-on learning experience in laboratory by deconstructing commercially available biosensors and using experimental bio-sensing instruments. Students will be required to design and implement a point-of-care biosensor. Preferred background: satisfactory completion of EE 2440 or CSE 2440. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4350. SENIOR DESIGN PROJECT I. 3 Hours.
First of two courses in design of biomedical systems and processes. Major design project in biomedical engineering, incorporating engineering standards and realistic design constraints. This course prepares students through a major design experience incorporating engineering principles and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, and social consideration. Prerequisite: C or better in BE 3317, BE 3380 and BE 4382; accepted into the BE Professional Program, and consent of the BE undergraduate advisor.

BE 4355. SENIOR DESIGN PROJECT II. 3 Hours.
Second in two courses in design of biomedical systems. Proposals approved in BE 4350 will be completed. Teams will address, resolve limitations in the design and present final results through an oral presentation. Teams are required to submit a final project report with their design notebooks to the course instructors. Prerequisite: C or better in BE 4350.

BE 4360. FUNDAMENTALS OF ULTRASOUND IN BIOENGINEERING. 3 Hours.
This course instructs the students in the physics of ultrasound transducers, their operation, and their biomedical applications. The material includes modeling of the interaction of acoustic waves with various types of tissue and cells. Mathematical methods for analyzing the reflected and refracted waves as well as constructing images from the waves will be covered. Prerequisite: Accepted into the BE Professional Program and EE 2440 or CSE 2440, BE 3344, or consent of the BE undergraduate advisor.

BE 4364. TISSUE ENGINEERING. 3 Hours.
Tissue engineering research continues to make significant progress in the field of regenerative medicine. The advanced course will provide practical knowledge related to the designs, fabrications, and enabling technologies for engineered tissue and organs currently under development for regenerative medicine applications. The lecture content will also cover patent development, clinical trial design, and FDA regulation of tissue engineering devices and products required for the commercialization of these products. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4365. TISSUE ENGINEERING LABORATORY. 3 Hours.
Each student will be given the opportunity to perform the techniques commonly used in tissue engineering and biomaterial research. These techniques are culture media preparation, cell culture/subculture, degradable scaffold preparation, scaffold modification, histological sections and staining, and cell imaging analyses. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4366. PROCESS CONTROL IN BIOTECHNOLOGY. 3 Hours.
Principles and methods and measurement, data acquisition, and analysis. Application of control theory in biological systems and in biotechnology processes; control of pressure, flow, temperature, and pH. Prerequisite: Accepted into the Professional Program and BE 3317 (or equivalent course) or consent of the BE undergraduate advisor.

BE 4368. AN INTRODUCTION TO TISSUE ENGINEERING AND REGENERATIVE MEDICINE. 3 Hours.
This course introduces the fundamentals of scaffold-based tissue engineering techniques including cellular signaling, ECM bio-scaffolds, polymer scaffolds, cell-material interactions, soft and hard tissue wound healing, and nerve regeneration. Preferred background: satisfactory completion of BE 3380 (may be taken concurrently). Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4372. DRUG DELIVERY SYSTEM. 3 Hours.
This class will introduce students to the concept of drug delivery systems that provide pharmaceutical agents at target tissues, the mechanism of pharmacokinetic regulation, the basics, technology, and applications of drug delivery systems. The emphasis is on understanding the principles of pharmacokinetics and drug delivery systems to improve clinical efficacy as well as to reduce side effects and on realizing the importance of the field, drug delivery. Preferred background: satisfactory completion of BE 3380. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4373. FORMULATION AND CHARACTERIZATION OF DRUG DELIVERY SYSTEMS. 3 Hours.
This class will provide students with hands-on experience in developing drug delivery systems such as hydrogels, liposomes, microparticles and/or nanoparticles that can be loaded with and release pharmaceutical agents to effectively treat various diseases. The emphasis is synthesis, characterization, and pharmacokinetic studies of these drug delivery systems. Preferred background: satisfactory completion of BE 4372. Prerequisite: Accepted into the BE Engineering Professional Program or consent of the BE undergraduate advisor.

BE 4382. LABORATORY PRINCIPLES. 3 Hours.
Introduction to fundamental biomedical engineering laboratory procedures including human studies and animal surgery; includes clinical laboratory projects, data collection, analysis, and interpretation. Preferred background: satisfactory completion of BE 3320 and BE 3380. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4385. STEM CELL TISSUE ENGINEERING. 3 Hours.
Students will gain experience and expertise in stem cell culture and differentiation, and engineering stem cell-based 2D and 3D tissue constructs. Using phenotypic markers and appropriately integrating with biocompatible scaffolds, the engineered tissue constructs will be differentiated to several tissue types and functionally validated. Lectures will cover stem cells, designing scaffolds and multimodal imaging techniques. The final projects may include acquisition of big data images, data mining and development of pattern recognition algorithms. Prerequisite: Accepted into the BE Professional Program and BE 3380, BE 3301, BE 3367, or consent of the undergraduate advisor.

BE 4388. MEDICAL PRODUCT DESIGN AND DEVELOPMENT. 3 Hours.
This course aims to provide, 1) A comprehensive knowledge of biomedical product design and development life cycle, 2) Basic knowledge on developing business plan, securing funding, designing product and process, conducting preclinical and clinical studies, 3) Basic training and classroom exercises on various biomedical product design and development tools, 4) Basic knowledge of FDA regulation and quality control, 5) Basic training on intellectual property and industrial project management. Prerequisite: Accepted into the BE Professional Program or consent of the BE undergraduate advisor.

BE 4390. UNDERGRADUATE RESEARCH PROJECT. 3 Hours.
Student works on an independent, individual research or development project under supervision of faculty instructor. A final project report is required. Prerequisite: Permission from Instructor.

BE 4391. DIRECTED RESEARCH IN BIOENGINEERING. 3 Hours.
Student participates in a research project under the individual instruction of a faculty supervisor.

BE 5101. SEMINAR IN BIOENGINEERING. 1 Hour.
University and guest lecturers speak on topics of current interest in the field of bioengineering.

BE 5191. DIRECTED RESEARCH IN BIOENGINEERING. 1 Hour.
Student participates in a research project under the individual instruction of a faculty supervisor.

BE 5193. MS COMPREHENSIVE EXAMINATION. 1 Hour.
Individual instruction, directed study, consultation, and comprehensive examination over coursework leading to the Thesis-Substitute Master of Science degree in bioengineering. Graded P/F/R. Required of all Thesis-Substitute MS students.

BE 5201. SEMINAR IN BIOENGINEERING. 2 Hours.
University and guest lecturers speak on topics of current research interest in the field of bioengineering. Students are expected to write a report for each topic to summarize the presentation and to offer critiques. Prerequisite: Graduate admission to the BE MS program.

BE 5281. BEST PRACTICES IN TEACHING AND LEARNING. 2 Hours.
Introduction to approaches and activities that can facilitate learning. Students gain insight into specific challenges of teaching, basics of designing a course, role of assessments and evaluations, good presentation skills and comparisons of various engagement levels. Students teach mock lessons and are given feedback.

BE 5291. DIRECTED RESEARCH IN BIOENGINEERING. 2 Hours.
Student participates in a research project under the individual instruction of a faculty supervisor.

BE 5293. MASTERS COMPREHENSIVE EXAMINATION. 2 Hours.
Individual instruction, directed study, consultation, and comprehensive examination over coursework leading to the Master of Science degree in bioengineering. Required of all MS students.

BE 5300. SELECTED TOPICS IN BIOENGINEERING. 3 Hours.
Material may vary from semester to semester. May be repeated for credit if different topics are covered for each registration. Prerequisite: permission of the instructor.

BE 5301. CELL PHYSIOLOGY FOR BIOENGINEERS. 3 Hours.
This course will cover principles of molecular omics (i.e., genomics, transcriptomics, proteomics and synthetic biology). The field of Molecular bioengineering and processes involving inducible transcription and chimeric proteins. The composition of cell membranes, ion transport and the application of optogenetics in cell physiology regulation. The way cells communicate and integrate signals and translated them in intracellular metabolic cascades through the understanding of phosphoproteomics, energy metabolism, metabolomics, cellular motility, and molecular motors. The processes involved in cell proliferation, abnormal cell division dysregulation in cancer, and nanotechnology techniques for tumor treatment. Prerequisite: Graduate Level or Instructor Permission.

BE 5309. HUMAN PHYSIOLOGY IN BIOENGINEERING. 3 Hours.
An introduction to human physiology emphasizing biomedical engineering related topics. The course focuses on understanding basic function with the relationships on the cellular as well as organ level both in healthy and diseased states.

BE 5310. BIOMECHANICS AND FLUID FLOW WITH COMPUTATIONAL LAB. 3 Hours.
Follow an introduction to the basics of solid, fluid mechanics, student learn the fundamental behavior of various biological materials, flow properties of blood, viscoelastic properties of cells, tissue matrix, as well as their roles in human physiology at normal and disease states. Examples also include the design aspects of medical prosthetic devices. The course will cover biomechanics across a wide range of scales from organism, organ, tissue, cell and to protein levels. Students learn computational modeling to formulate and solve bioengineering problems. Prerequisite: Undergraduate solid and fluid mechanics courses or consent of the instructor.

BE 5312. TISSUE BIOMECHANICS AND BIOENGINEERING. 3 Hours.
This course introduces biomechanics as a means to describe mechanical behavior of biological tissues. A comprehensive course, it covers the fundamental concepts, experimental and theoretical approaches of biomechanics, and their applications in modern bioengineering, including mechano signal transduction, pathophysiology, tissue engineering and regeneration, medical implants, surgical intervention. Structural-mechanical properties of specific tissues, such as heart valves, cardiac tissues, blood vessels, tendon/ligament, skeletal muscles, cartilage, and meniscus will be discussed in great details. This course integrates the concepts of biomechanics, the underlying structural and biological mechanisms, illustrates how experimental, analytical and computational methods have been used to address clinical needs in enhancing the quality of health care delivery.

BE 5314. BIOMEDICAL IMPLANTS. 3 Hours.
A comprehensive course covers the essential knowledge in biomedical implants. The goal is to provide students with the knowledge and skills to understand the clinical needs, the engineering principles, methodologies used in implant design, the resulting host-implant interaction, and the constraints, limitations on engineering design optimization, as well as the evaluation and assessment of the implant performance and clinical outcomes. Case studies include mechanical, bio-prosthetic and trans-catheter heart valves, vascular grafts, stents, pacemakers, orthopedic implants, dental implants, etc. The course also covers topics on regulatory issues, patent protection, design validation in animal models and clinical trials, IACUC, IRB, Good Manufacture Practice (GMP), and FDA regulations and approvals. Students are expected to be able to apply the learning to solve problems in the rapidly growing field of biomedical engineering.

BE 5315. FUNDAMENTALS OF BIOMOLECULAR ENGINEERING. 3 Hours.
The course will introduce the principles of engineering living systems at the atomic, molecular, and cellular levels. Fundamentals covered in the course will include topics such as chemical bonding and reactions; synthesis, structure and function of carbohydrates, polypeptides, nucleic acids, and lipids; as well as analytical and engineering tools for characterization, design, and production of synthetic biological systems.

BE 5316. FUNDAMENTAL MATH AND PHYSICS FOR BIOENGINEERING. 3 Hours.
This course introduces the basic physics concepts such as introduction to electromagnetism, Maxwell's equations, computation of Fresnel coefficients, interference and diffraction of light, waveguides and optical fibers, photon counting statistics, and Beer-Lambert law. It also covers basic mathematical concepts such as curvilinear coordinates, vector calculus, Stokes theorem and solving differential equations with initial conditions and the diffusion equation.

BE 5318. MEDICAL DEVICE PROTOTYPING. 3 Hours.
The course will introduce the laboratory techniques commonly used for designing and prototyping medical devices and implants. The course will also cover the incorporation of tissue bioengineering scaffold into the medical implant design and explore the use of 3D printing technology for medical device prototyping. The design of medical devices and implants will be taught using SolidWorks, one of the most popularly used software for computer-aided 3D modeling.

BE 5323. INTRODUCTION TO BIOPHOTONICS. 3 Hours.
Introduction to properties of light, light-cell/tissue interactions, optical techniques, and optical instrumentation, in the context of biophotonic medical applications. Topics that will be covered include fundamental properties of optical wave fields, basic properties and characterization of laser sources and detectors used in modern biomedicine, interferometry, linear and nonlinear light-tissue interactions exploited for biomedical imaging and sensing applications, and spectroscopy.

BE 5324. BIOMEDICAL OPTICS LABORATORY. 3 Hours.
The primary objective of the Biomedical Optics Laboratory course is to provide students hands-on experience with fundamental optical techniques and instrumentation used in modern biomedical research and applications. The skills learned will be valuable to anyone who intends to work in an experimental setting that requires working knowledge of optical instrumentation and techniques. The course is divided into ten core lab modules that cover topics ranging from basic optical techniques to advanced imaging and spectroscopy techniques.

BE 5325. FLUORESCENCE MICROSCOPY. 3 Hours.
Introduction to the anatomy of a fluorescence microscope and the physical principles of its operation. Confocal and multi-photon microscopy. Molecular imaging applications based on Forster Resonance Energy Transfer (FRET), Fluorescence Lifetime Imaging (FLIM), Fluorescence Correlation Spectroscopy (FCS), Fluorescence Recovery After Photobleaching (FRAP) and Total Internal Reflection Fluorescence (TIRF) Microscopy.

BE 5326. TISSUE ULTRASOUND OPTICAL IMAGING. 3 Hours.
This course will introduce the fundamental principles of ultrasound and optical related imaging techniques, such as ultrasound, tissue optical, photo-acoustic and ultrasound-modulated optical imaging techniques. Lectures, laboratories, simulations, and paper presentations and discussion will be adopted in this course. Some topics related to the new progresses and applications in the related fields will be introduced. Prerequisite: Graduate level or instructor permission.

BE 5327. TISSUE OPTICS. 3 Hours.
Introduction to the science and technology behind tissue optical imaging systems and their design requirements for different clinical applications. Diffuse optical tomography, fluorescence tomography, bioluminescence tomography, multi-modality imaging.

BE 5329. NEURAL ENGINEERING. 3 Hours.
This course consists of both lecture/discussion and laboratory. Lecture topics include central and peripheral nervous system injury and regeneration, brain/machine interfacing, primary culture of neural cells, neuroinflammatory and neurodegenerative disease. Laboratories include embryonic and neonatal rat derived neuronal culturing, immunostaining and quantitative analysis.

BE 5331. POLYMERS AND BIOCOMPATIBILITY. 3 Hours.
The course introduces fundamental knowledge in biomaterials, structure-property-function relationships of the polymers, and their interactions with the host in-vitro and in-vivo. Specific topics include polymer-based biomaterials, polymer synthesis, property characterization, types of biodegradable polymer, their processes, and the evaluation for biocompatibility and host responses.

BE 5333. NANO BIOMATERIALS AND LIVING-SYSTEMS INTERACTIONS. 3 Hours.
The course introduces basic and applicable knowledges in nanoparticle design and their applications in biomedicine. Specific topics include basic knowledge of nanomaterials, nano-polymer, nanoparticle design, manufacturing, property characterizations, and their applications in drug delivery, tissue repair, cancer treatment, among others. Through course requirement, students learn the skills in project design, proposal writing, and results presentation.

BE 5335. BIOLOGICAL MATERIALS, MECHANICS, & PROCESSES. 3 Hours.
Typical functional behavior of various biological materials, flow properties of blood, bioviscoelastic fluids and solids, mass transfer in cardiovascular and pulmonary systems.

BE 5337. TRANSPORT PHENOMENA IN BIOMEDICAL ENGINEERING. 3 Hours.
Principles of momentum, mass and heat transfer; description of blood flow, trans-capillary, interstitial, lymphatic fluid transport and pulmonary gas exchange. Applications in the design of blood oxygenator, dialysis devices, and strategies in drug delivery, hyperthermia treatment. Prerequisite: undergraduate courses in CE 2312 Statics/Dynamics, MAE 2314 Fluid Mechanics I or CE 3305 and MAE 3310 Thermodynamics I or CHEM 3321.

BE 5340. FINITE ELEMENT APPLICATIONS IN BIOENGINEERING. 3 Hours.
The course describes the fundamental principles of the finite element method and various numerical modeling techniques. Topics include variational and Galerkin formulations, linear and Hermitian elements, accuracy and convergence. Applications in biological systems and to the design of prosthetic devices are emphasized. Topic areas include linear elasticity, fluid dynamics, heat transfer, and mass transport processes.

BE 5343. IMAGE PROCESSING WITH MATLAB: APPLICATIONS IN MEDICINE AND BIOLOGY. 3 Hours.
This course focuses on introduction to image processing for applications in medicine and biology. After a review of how to use MATLAB arrays, files, functions, and to write MATLAB programs for quantitative computation and graphing, students will learn the fundamental tools in image processing, image analysis, and two-dimensional Fourier transform, using MATLAB functions available in the textbook. Topics also include image segmentation. Real-world research-based examples will be presented, and discussed in the course. With hands-on exercises, students will learn the basic skills, knowledge on MATLAB usage and the problem-solving techniques required for medical image processing.

BE 5344. BIOINSTRUMENTATION I. 3 Hours.
Fundamental principles of bioinstrumentation, including operational amplifiers and instrumentation amplifiers; measurements of biopotentials; signals and noise in biological systems; mechanical transducers; resistive, inductive, capacitive transducers; measurement of temperature, blood pressure and flow; electrical safety.

BE 5345. BIOSENSOR. 3 Hours.
The course will cover major classes of bio-sensing technologies currently used in practice and the emerging ones that are currently being evaluated. The basic operating principle behind bio-sensing technologies will be explained and its implementation in medical devices will be discussed. Explanation of biosensor operation will involve understanding the mechanism of bio-signal transduction (bio-parameter to biomechanical, electrical, optical or chemical signal), detection method, and their analysis. Methodology for device calibration and data interpretation of physiological parameters will be discussed. The course material will be derived from book chapters and review papers. Course includes hand-on learning experience in laboratory by deconstructing commercially available biosensors and using experimental bio-sensing instruments. Students will be required to design and implement a point-of-care biosensor. Prerequisite: Undergraduate instrumentation courses or consent of the instructor.

BE 5346. MEDICAL IMAGING. 3 Hours.
This course introduces basic medical imaging modalities, including X-ray Computed Tomography (CT), Nuclear Medicine Imaging (PET and SPECT), Magnetic Resonance Imaging (MRI), and image-guided interventions. Through this course, the students will learn fundamental knowledge on how medical images are obtained and how they can be used for diagnosis, therapy, and surgery.

BE 5347. PRINCIPLES OF FUNCTIONAL MAGNETIC RESONANCE IMAGING. 3 Hours.
This course introduces basic principles of Magnetic Resonance Imaging (MRI) and functional MRI (fMRI) for brain functional imaging. After taking this course, the students will gain basic knowledge on how functional brain images are obtained from MRI and fMRI as well as how they can be used for diagnosis, therapy, and surgery. The emphasis in this course is on fMRI . This course will include lecture and some laboratory exercises involving actual fMRI measurement data.

BE 5350. MODELING AND CONTROL OF BIOLOGICAL SYSTEMS. 3 Hours.
Introduction to fundamental methods of modeling, analysis and control of biological systems. Linear system modeling, state space modeling, stability analysis, basic identification techniques. Examples from cardiopulmonary, visual, and motor control systems. Prerequisite: an undergraduate course in linear systems, control theory, or consent of the instructor.

BE 5352. DIGITAL PROCESSING OF BIOLOGICAL SIGNALS. 3 Hours.
Fundamental techniques for extraction of useful information from signals acquired from biological systems. Topics include time and frequency domain analysis, cross correlation, spectrum analysis, and convolution. Design of FIR and IIR filters for processing biological signals are described. Examples include cardiac, respiratory, and biomechanical movements. Prerequisite: an undergraduate engineering course in signals and systems analysis or consent of the instructor.

BE 5360. DESIGN AND APPLICATION OF ARTIFICIAL ORGANS. 3 Hours.
Fundamental principles of fluid mechanics, mass transfer and chemical reaction in engineered biological systems. Simple solutions are developed for the design of artificial ventricular assist devices, total artificial hearts, lungs and kidneys.

BE 5361. BIOMATERIALS AND BLOOD COMPATIBILITY. 3 Hours.
This course is an introduction to polymer structure and fabrication methods. Blood and tissue interactions with materials, and methods to improve the biocompatibility of materials are discussed.

BE 5364. TISSUE ENGINEERING. 3 Hours.
Tissue engineering research continues to make significant progress in the field of regenerative medicine. The advanced course will provide practical knowledge related to the designs, fabrications, and enabling technologies for engineered tissue and organs currently under development for regenerative medicine applications. The lecture content will also cover patent development, clinical trial design, and FDA regulation of tissue engineering devices and products required for the commercialization of these products.

BE 5365. TISSUE ENGINEERING LAB. 3 Hours.
Each student will be given the opportunity to perform the techniques commonly used in tissue engineering and biomaterial research. These techniques are culture media preparation, cell culture/subculture, degradable scaffold preparation, scaffold modification, histological sections and staining, and cell imaging analyses.

BE 5366. PROCESS CONTROL IN BIOTECHNOLOGY. 3 Hours.
Principles and methods of measurement, data acquisition and analysis. Application of control theory in biological systems and in biotechnology processes; control of pressure, flow, temperature, and pH. Prerequisite: an undergraduate course in control theory or consent of the instructor.

BE 5370. BIOMATERIAL - LIVING SYSTEMS INTERACTION. 3 Hours.
This course describes current developments in molecular structure and organization at synthetic material interfaces with tissues and the subsequent influences on cells and cell membranes. It is designed to lay the groundwork for an improved understanding of events at the biomaterial-living system interface.

BE 5372. DRUG DELIVERY SYSTEM. 3 Hours.
This class will introduce students to the concept of drug delivery systems that provide pharmaceutical agents at target tissues, the mechanism of pharmacokinetic regulation, the basics, technology, and applications of drug delivery systems. The emphasis is on understanding the principles of pharmacokinetics and drug delivery systems to improve clinical efficacy as well as to reduce side effects and on realizing the importance of the field, drug delivery.

BE 5373. FORMULATION AND CHARACTERIZATION OF DRUG DELIVERY SYSTEMS. 3 Hours.
This class will provide students with hands-on experience in developing drug delivery systems such as hydrogels, liposomes, microparticles and/or nanoparticles that can be loaded with and release pharmaceutical agents to effectively treat various diseases. The emphasis is synthesis, characterization, and pharmacokinetic studies of these drug delivery systems.

BE 5382. LABORATORY PRINCIPLES. 3 Hours.
Introduction to fundamental biomedical engineering laboratory procedures including human studies and animal surgery; includes clinical laboratory projects; data collection, analysis, and interpretation. Prerequisite: permission of the instructor.

BE 5385. STEM CELL TISSUE ENGINEERING. 3 Hours.
Students will gain experience and expertise in stem cell culture and differentiation, and engineering stem cell-based 2D and 3D tissue constructs. Using phenotypic markers and appropriately integrating with biocompatible scaffolds, the engineered tissue constructs will be differentiated to several tissue types and functionally validated. Lectures will cover stem cells, designing scaffolds and multimodal imaging techniques. The final projects may include acquisition of big data images, data mining and development of pattern recognition algorithms.

BE 5386. MEDICAL PRODUCT DESIGN CONTROL AND RISK MANAGEMENT. 3 Hours.
This course presents a thorough description of the design control for medical device development, starting with documenting the product requirements and concluding with design verification and validation that the design output meets the design meets product specifications and user needs. The role and scope of standard operating procedures (SOP) and representative content of an SOP are described. The students are introduced to elements of design history file and documentation.

BE 5387. MEDICAL DEVICE PROTOTYPE DEVELOPMENT. 3 Hours.
Students in this course are grouped in small teams to practice the design and development of a medical device that strictly adheres to the needed controls for regulatory affair approval of the product. The teams will be provided with a typical medical device manufacturer's standard operating procedure (SOP) and will be asked to apply that to their design. The teams demonstrate their understanding and implementation of design input, history file documentation, verification, and validation.

BE 5388. MEDICAL PRODUCT DESIGN AND DEVELOPMENT. 3 Hours.
This course aims to provide 1) A comprehensive knowledge of biomedical product design and development life cycle, 2) Basic knowledge on developing business plan, securing funding, designing product and process, conducting preclinical and clinical studies, 3) Basic training and classroom exercises on various biomedical product design and development tools, 4) Basic knowledge of FDA regulation and quality control, 5) Basic training on intellectual property and industrial project management.

BE 5390. RESEARCH PROJECT. 3 Hours.
Taken by students enrolled in the non-thesis option for the MS degree. Individual instruction in research and/or instrumentation development and evaluation conducted under supervision of the instructor. A final report required. Prerequisite: Permission of the instructor.

BE 5391. DIRECTED RESEARCH IN BIOENGINEERING. 3 Hours.
Student participates in a research project under the individual instruction of a faculty supervisor.

BE 5395. INTERNSHIP IN BIOENGINEERING. 3 Hours.
Students receive training in a Bioengineering company or a hospital to gain firsthand industrial or clinical engineering experience. The company or hospital assigns projects, and a faculty member monitors the student's progress. Prerequisite: Completion of at least 9 graduate credit hours in BE with good standing in the graduate program. International students need to complete at least 2 full semesters and comply with OIE/CPT rules to enroll. Prerequisite: Completion of at least 9 graduate credit hours in BE with good standing in the graduate program. Permission of Graduate Academic Advisor.

BE 5398. THESIS. 3 Hours.
Prerequisite: graduate standing in biomedical engineering.

BE 5691. DIRECTED RESEARCH IN BIOENGINEERING. 6 Hours.
Student participates in a research project under the individual instruction of a faculty supervisor.

BE 5698. THESIS. 6 Hours.
Graded P/F/R. Prerequisite: Graduate standing in Biomedical Engineering.

BE 6101. PhD SEMINAR IN BIOENGINEERING. 1 Hour.
University and guest lecturers speak on topics of current research interests in the field of bioengineering. Prerequisite: Graduate admission to BE PhD program.

BE 6102. PhD SEMINAR IN BIOENGINEERING. 1 Hour.
University and guest lecturers speak on topics of current research interests in the field of bioengineering. Prerequisite: Graduate admission to BE PhD program.

BE 6103. PhD SEMINAR IN BIOENGINEERING. 1 Hour.
This course serves as a forum to present recent scientific and technological topics in Bioengineering and as a practical guide to organize and deliver proper and effective scientific oral presentations. Prerequisite: PhD student status.

BE 6194. DOCTORAL DIAGNOSTIC EXAMINATION. 1 Hour.
Individual instruction, directed study, consultation, and diagnostic examination. Required of all doctoral students in the semester when they take any portion of the diagnostic examination.

BE 6195. DOCTORAL COMPREHENSIVE EXAMINATION. 1 Hour.
Individual instruction, directed study, consultation, and comprehensive examination on a detailed prospectus of proposed dissertation research as well as an oral examination. Required of all doctoral students in the semester when they take the comprehensive examination. Prerequisite: BE 6194.

BE 6197. RESEARCH IN BIOENGINEERING. 1 Hour.
Individually approved research projects leading to a doctoral dissertation in the area of biomedical engineering.

BE 6297. RESEARCH IN BIOENGINEERING. 2 Hours.
Individually approved research projects leading to a doctoral dissertation in the area of biomedical engineering.

BE 6395. INTERNSHIP IN BIOENGINEERING. 3 Hours.
Students receive training in a bioengineering company or a hospital to gain firsthand industrial or clinical engineering experience. The company or hospital assigns projects, and a faculty member monitors the student's progress. Prerequisite: Completion of at least 9 graduate credit hours in BE with good standing in the graduate program. International students need to complete at least 2 full semesters and comply with OIE/CPT rules to enroll. Prerequisite: Completion of at least 9 graduate credit hours in BE and good standing in the graduate program.

BE 6397. RESEARCH IN BIOENGINEERING. 3 Hours.
Individually approved research projects leading to a doctoral dissertation in the area of bioengineering.

BE 6399. DISSERTATION. 3 Hours.
Preparation and submission of a doctoral dissertation in an area of bioengineering. Graded R/F only. Prerequisite: Admission to candidacy for the Ph.D. in Biomedical Engineering.

BE 6499. DISSERTATION. 4 Hours.
Preparation and submission of a doctoral dissertation in an area of bioengineering. This course is only to be taken by students preparing a dissertation for submission that is supervised primarily by a University of Texas Southwestern Medical School faculty member and must be taken concurrently with a 5-hour dissertation course at that institution. To satisfy requirement that a P be awarded in a 9-hour dissertation course in their final semester of enrollment, a student must be concurrently enrolled in this course and the 5-hour dissertation course at the University of Texas Southwestern Medical School and receive a P in both courses at the end of that semester. If a P is not awarded in both classes, the two classes must be repeated until P grades are concurrently awarded.

BE 6695. INTERNSHIP IN BIOENGINEERING. 6 Hours.
Students receive training in a bioengineering company or a hospital to gain firsthand industrial or clinical engineering experience. The company or hospital assigns projects, and a faculty member monitors the student's progress. Prerequisite: Completion of at least 9 graduate credit hours in BE with good standing in the graduate program. International students need to complete at least 2 full semesters and comply with OIE/CPT rules to enroll. Prerequisite: Completion of at least 9 graduate credit hours in BE and good standing in the graduate program.

BE 6697. RESEARCH IN BIOENGINEERING. 6 Hours.
Individually approved research projects leading to a doctoral dissertation in the area of bioengineering.

BE 6699. DISSERTATION. 6 Hours.
Preparation and submission of a doctoral dissertation in an area of bioengineering. Graded R/F only. Prerequisite: Admission to candidacy for the Ph.D. in Biomedical Engineering.

BE 6995. INTERNSHIP IN BIOENGINEERING. 9 Hours.
Students receive training in a bioengineering company or a hospital to gain firsthand industrial or clinical engineering experience. The company or hospital assigns projects, and a faculty member monitors the student's progress. Prerequisite: Completion of at least 9 graduate credit hours in BE with good standing in the graduate program. International students need to complete at least 2 full semesters and comply with OIE/CPT rules to enroll. Prerequisite: Completion of at least 9 graduate credit hours in BE and good standing in the graduate program.

BE 6997. RESEARCH IN BIOENGINEERING. 9 Hours.
Individually approved research projects leading to a doctoral dissertation in the area of bioengineering.

BE 6999. DISSERTATION. 9 Hours.
Preparation and submission of a doctoral dissertation in an area of bioengineering. Graded P/R/F. Prerequisite: admission to candidacy for the Ph.D. in Biomedical Engineering.

BE 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

BEEP 3381. INTRODUCTION TO SPECIAL LANGUAGE PROGRAMS. 3 Hours.
Legal foundations and historical development of bilingual education, dual language, and special language programs will be introduced. Various models of bilingual education and English as a Second Language will be examined. An overview of special education, gifted and talented, and compensatory education legislation and its impact on the implementation of special language programs will be examined.

BEEP 4302. IMPLEMENTATION OF EC-6 DUAL LANGUAGE CURRICULUM MODELS. 3 Hours.
This course addresses programmatic, cultural, academic and linguistic considerations for the creation, implementation and maintenance of dual language curriculum models in EC-6 settings. In the course students will explore and implement various research-based teaching methods and strategies used in effective programs. It will also cover key components of dual language teaching and learning, including curriculum alignment (e.g., horizontal, vertical, spiral), language separation, and parent collaboration. Prerequisite: BEEP 4305.

BEEP 4305. BILITERACY DEVELOPMENT IN DUAL LANGUAGE PROGRAMS. 3 Hours.
Analysis of the structure of English and Spanish including phonology, morphology, syntax, semantics, lexicon, and pragmatics. Topics also include language interference and cross-linguistic transfer to promote biliteracy.

BEEP 4306. FAMILY LITERACY AND SECOND LANGUAGE ACQUISITION. 3 Hours.
Examines the relationships among family literacy, second-language acquisition, and literacy development in children. The course provides opportunities for students to explore a variety of home-school literacy programs designed to facilitate the development of literacy skills in parents and support reading and writing at home. Specific focus on theories regarding the relationship between first and second language acquisition and early education. Prerequisite: BEEP 3381.

BEEP 4311. MATH IN DUAL LANGUAGE SETTINGS. 3 Hours.
Integration of mathematic concepts in relation to the cognitive and linguistic development of English learners (ELs). Analysis of the State curriculum for mathematics in K-6. Design and implementation of instruction in dual language settings. Field experience required. Prerequisite: BEEP 3381.

BEEP 4312. SCIENCE AND HEALTH EDUCATION IN DUAL LANGUAGE SETTINGS. 3 Hours.
Integration of science and health concepts in relation to the cognitive and linguistic development of English learners (ELs). Analysis of the State curriculum for health and science in K-6. Design and implementation of instruction in dual language settings. Field experience required.

BEEP 4314. CREATIVE ARTS AND SOCIAL STUDIES IN DUAL LANGUAGE SETTINGS. 3 Hours.
Integration of visual arts, music, and social studies with a focus on instructional processes and skills for increasing children's understanding and appreciation of aesthetics. Implementation of the Texas Curriculum in Social Studies and Art Education in EC-6 dual-language classrooms; field experience required.

BEEP 4319. ASSESSMENT OF CULTURALLY AND LINGUISTICALLY DIVERSE STUDENTS IN EC-6 SETTINGS. 3 Hours.
Study of formal and informal assessment instruments and techniques for assessing the language development and literacy of English Learners(ELs) in EC-6 classrooms. Also, focus on diagnosing literacy learning strengths and needs.

BEEP 4366. SPANISH FOR TEACHERS IN DUAL LANGUAGE PROGRAMS: AN IMMERSION APPROACH. 3 Hours.
Development of Spanish proficiency for bilingual education teacher candidates through an immersion approach. Emphasis on concepts, functions and the scenarios used in the Spanish proficiency examination required for bilingual education teacher candidates.

BEEP 4382. LITERACY INSTRUCTION IN SPANISH FOR THE BILINGUAL CLASSROOM. 3 Hours.
Focuses on the development of literacy for bilingual children. Specific emphasis will be placed on the rationale, methods, and materials for literacy instruction in Spanish. The successful transition from first-language literacy instruction to literacy instruction in English will also be addressed. The course will be delivered in Spanish and students will be exposed to content and techniques to master the oral and written components of the Spanish language proficiency test required to become certified in bilingual education. Prerequisite: BEEP 4305, BEEP 4302.

BEEP 4384. LITERACY METHODS FOR ESL/BILINGUAL CLASSROOMS. 3 Hours.
The rationale and implementation of various instructional methods for English learners (ELs) will be discussed. Examination of language instruction for students at different stages of development. Sheltered English instruction for the teaching of content areas will also be presented. Students will be assigned to a special language program to examine methods of instruction and modifications for language minority children. Prerequisite: BEEP 3381, BEEP 4306.

BEEP 4385. SHELTERED ENGLISH INSTRUCTION. 3 Hours.
Analysis of the linguistic, cognitive, academic and cultural considerations required to provide meaningful and developmentally appropriate content area instruction to English language learners (ELLs) in PK-6. Prerequisite: BEEP 3381.

BEEP 4687. CLINICAL TEACHING IN EC-6 BILINGUAL/ESL CLASSROOMS. 6 Hours.
Full-time supervised and directed clinical teaching in EC-6 bilingual and ESL classrooms. Clinical teaching must immediately follow the field experience semester. Prerequisites: BEEP 4311, BEEP 4312, and BEEP 4314.

BEEP 5315. CLINICAL TEACHING. 3 Hours.
Clinical teaching in candidate's certification area(s). This semester-long experience will help candidates apply theory and research to practice.

BEEP 5318. FOUNDATIONS IN BILINGUAL EDUCATION. 3 Hours.
Analyzes the development of bilingual education in the United States. Introduces bilingual education program models and discusses research findings on their effectiveness.

BEEP 5321. ESL METHODS FOR EC-6 LEARNERS. 3 Hours.
Compares first and second-language acquisition processes. Identifies effective teaching practices to meet the needs of English learners (ELs). Analyzes elements from Spanish that can affect the acquisition of literacy in English. Offered as BEEP 5321 and LIST 5361. Credit will only be counted towards one program.

BEEP 5361. LANGUAGE LEARNING: EDUCATIONAL PERSPECTIVES PRACTICUM II. 3 Hours.
The practicum provides opportunities to apply effective instructional practices in teaching ESL students. Deals with the relationship between first and second language acquisition and literacy, dialect, linguistics, culture; nature and definition of language; overview of linguistic science and language with pedagogical applications.

BEEP 5362. LITERACY INSTRUCTION IN ESL/BILINGUAL SETTINGS. 3 Hours.
This course bridges theory to practice, stressing how the relationship between first and additional language acquisition and development can inform teaching ESL/bilingual students. Provides opportunities to apply effective instructional practices in teaching students to foster development in speaking, listening, reading, and writing within a framework of cultural understanding.

BEEP 5363. LITERACY DEVELOPMENT IN ENGLISH AND SPANISH. 3 Hours.
Focuses on the development of literacy in bilingual students with specific emphasis on the rationale, methods, and materials for literacy instruction in the student's home language. Attention to evaluating and supplementing first-language literacy materials and supporting the successful transition from first-language literacy instruction to literacy instruction in English.

BEEP 5364. LITERACY INSTRUCTION IN SPANISH IN THE CONTENT AREAS. 3 Hours.
Focuses on methods and materials for teaching content-area subjects in the student's home language. Additional focus on supporting the transition from home-language instruction to English-language instruction.

BEEP 5365. ORGANIZATION & ADMINISTRATION OF DUAL LANGUAGE PROGRAMS. 3 Hours.
Analysis of the research background and implementation of various models of dual language instruction. Insight of the process, data collection, and reporting requirements of the state and federal special populations legislation. This course requires an internship with the office of Federal Programs and/or the office of Bilingual/ESL Education in local school districts. Prerequisite: BEEP 5318.

BEEP 5366. SPANISH FOR SCHOOL ADMINISTRATORS & TEACHERS. 3 Hours.
Development of Spanish proficiency for teachers and administrators through an immersion approach. Emphasis on concepts and terminology related to education, program administration, community involvement, and communication with Spanish-speaking parents. This course can be repeated.

BEEP 5391. INDEPENDENT RESEARCH. 3 Hours.
Research for course substitution or a topic agreed upon between the student and instructor. May be repeated for credit with permission.

COURSES

BHNR 4330. RESEARCH METHODOLOGY AND PRACTICE. 3 Hours.
Designed for undergraduate students from a variety of disciplines. Goals: to understand the commonalities of research across disciplinary boundaries, to develop research skills. Topics: framing a research question, literature review, introductory statistical skills, organization and presentation of results. Using a computer for bibliographic searches, word processing, and statistical analysis.

BHNR 4393. BUSINESS HONORS INTERNSHIP. 3 Hours.
Supervised practical training in the student's major or concentration in business. May be used as an advanced business elective only and is letter graded. No credit will be given for previous experience or activities. Prerequisites: Honors College student, declared business major with junior standing, and approval of their respective department internship coordinator and Honors College advisor.

BHNR 4394. HONORS THESIS/SENIOR PROJECT. 3 Hours.
Required of all undergraduate Business Administration students in the University Honors College. During the senior year, the student must complete a thesis or project of equivalent difficulty under the direction of a faculty member in the major department.

COURSES

BIOL 1131. BIOLOGY FOUNDATIONS. 1 Hour.
This onboarding course is designed to help you navigate your first year by introducing you to the department, key resources, and an overview of what you'll learn in your biology courses. Through engaging workshops and small-group discussions, you'll meet faculty, learn about research opportunities, and build connections with fellow students. You'll also gain valuable insights into college study skills, lab expectations, and career pathways in biology, setting you up for a confident and successful start in your program.

BIOL 1301. NUTRITION. 3 Hours. (TCCN = BIOL 1322)
This course offers a foundation in nutrition science and explores how food relates to the overall health of an individual. The curriculum includes functions of nutrients, food sources, digestion, absorption, and metabolism. Food labels and nationally established nutrition guidelines are addressed. By understanding classes of nutrients and their respective guidelines, students will gain the skills to make informed dietary choices that promote a healthy lifestyle. May not be used for biology grade point calculation or biology credit toward a degree in biology, microbiology, or medical technology. Credit will be granted in only one department.

BIOL 1333. BIOLOGY FOR NON-SCIENCE MAJORS: CELLS AND DISEASE. 3 Hours. (TCCN = BIOL 1308)
Scientific literacy is crucial for navigating health-related issues in today's society. In this lecture and lab course, non-science majors will learn about the molecules of life, the cell, energy and metabolism, cell division, genetics and inheritance and diseases, such as cancer and diabetes. This course will satisfy the laboratory science requirements for students in the Colleges of Liberal Arts and Business Administration, and in the School of Social Work. Formerly listed as BIOL 1433, credit will not be given for both.

BIOL 1334. BIOLOGY FOR NON-SCIENCE MAJORS: LIFE ON EARTH. 3 Hours. (TCCN = BIOL 1309)
Scientific literacy is crucial for understanding the natural world and our relationship to it. In this lecture and lab course, non-science majors will learn about biologically-based problems facing today's society. Course themes include evolution, antibiotic resistance, genetic diversity, animal and bacterial and plant diversity, ecosystems, ecology and global change. This course will satisfy the laboratory science requirements for students in the Colleges of Liberal Arts and Business Administration, and in the School of Social Work. Formerly listed as BIOL 1434, credit will not be given for both.

BIOL 1345. INTRODUCTION TO CELL BIOLOGY. 3 Hours.
This course focuses on the chemical and molecular basis of life, including metabolism, cell structure and function, and genetics to provide knowledge of these subjects for those pursuing degrees in nursing and health. Note: This course cannot be applied for credit toward a degree in Biology.

BIOL 1441. BIOLOGY I FOR SCIENCE MAJORS: CELL AND MOLECULAR BIOLOGY. 4 Hours. (TCCN = BIOL 1406)
(BIOL 1406) This course focuses on the chemical and molecular basis of life, including metabolism, cell structure and function, and genetics. Laboratory experiments are designed to complement theory presented in lecture. Formerly listed as BIOL 1449; credit will not be given for both.

BIOL 1442. BIOLOGY II FOR SCIENCE MAJORS: ECOLOGY AND EVOLUTION. 4 Hours. (TCCN = BIOL 1407)
Reviews significant aspects of organismal biology and presents current hypotheses concerning the origin and diversification of life on earth. The ecological and behavioral interactions between organisms and their biotic/abiotic environments are considered from an evolutionary perspective. The laboratory will examine evolution, ecology and the diversity of life using hands-on observational and experimental approaches. Prerequisite: BIOL 1441.

BIOL 2317. BASIC CONCEPTS IN HUMAN SEXUALITY. 3 Hours.
The physiological, psychological, and sociological aspects of human sexuality. Offered as BIOL 2317, HEED 2317, PSYC 2317, and GWSS 2317. Credit will be granted for one of these courses only. Students seeking certification in Health Education must enroll in HEED 2317. Students seeking credit toward their science requirement must enroll in BIOL 2317. May not be used for biology grade point calculation or biology credit toward a BS degree in biology, microbiology, medical technology, psychology, or sociology.

BIOL 2444. GENERAL MICROBIOLOGY. 4 Hours. (TCCN = BIOL 2421)
Fundamental principles of microbiology including the structure and function of microbial cells and their activities in nature. Bacteria will be used in the laboratory to provide training and experimental methodology. Formerly listed as BIOL 3444; credit will not be granted for both. Prerequisite: BIOL 1441, CHEM 1441 or CHEM 1341.

BIOL 2457. HUMAN ANATOMY AND PHYSIOLOGY I. 4 Hours. (TCCN = BIOL 2401)
Functional morphology of humans, cellular function, principles of support and movement, and neural control systems. Laboratory exercises involve both anatomical and physiological aspects of principles introduced in the lecture. This class is designed for students in sport activities (EXSA), nursing, and health. Prerequisite: BIOL 1345 or BIOL 1441 or equivalent, or approval of the department. May not be used for biology grade point calculation or biology credit toward a degree in biology or microbiology.

BIOL 2458. HUMAN ANATOMY AND PHYSIOLOGY II. 4 Hours. (TCCN = BIOL 2402)
Functional morphology of humans, maintenance of the human body, and continuity of life. Topics will include the endocrine, cardiovascular, respiratory, digestive, urinary, immune, and reproductive systems. Laboratory exercises explore both anatomical and physiological aspects of principles introduced in the lecture. This class is designed for students in sport activities (EXSA), nursing, and health. Prerequisite: BIOL 2457 or equivalent. May not be used for biology grade point calculation or biology credit toward a degree in biology or microbiology.

BIOL 2460. MICROBIOLOGY FOR NON-SCIENCE MAJORS. 4 Hours. (TCCN = BIOL 2420)
This course covers basic microbiology and immunology and is primarily directed at pre-nursing, pre-allied health, and non-science majors. It includes the nature of microorganisms, microbial diversity, the importance of microorganisms and acellular agents in the biosphere, and their roles in human and animal diseases. Major topics include microorganism structure, growth, physiology, pathogenesis, and biochemistry. Emphasis is on medical microbiology, infectious diseases, and public health. The laboratory component covers essential microbiology laboratory skills including aseptic technique, assessment of antimicrobial agents, microscopy, and staining techniques. This course cannot be applied for credit toward a degree in Biology. Prerequisite: BIOL 1345, or BIOL 1441 or equivalent.

BIOL 3101. CURRENT TOPICS IN BIOLOGY. 1 Hour.
Seminar on significant topics and issues in modern biology. Students will attend seminars on selected topics. Topics will vary each semester. May be repeated once for biology credit.

BIOL 3131. SERVICE LEARNING. 1 Hour.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisite: Permission of the Instructor.

BIOL 3149. COOPERATIVE PROGRAM IN BIOLOGY. 1 Hour.
The purpose of this course is to allow students to earn college credit for relevant field work in the areas of biology and microbiology. Students must apply for the program and be cleared for registration during the semester prior to enrollment.

BIOL 3231. SERVICE LEARNING. 2 Hours.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisite: Permission of the Instructor.

BIOL 3249. COOPERATIVE PROGRAM IN BIOLOGY. 2 Hours.
The purpose of this course is to allow students to earn college credit for relevant field work in the areas of biology and microbiology. Students must apply for the program and be cleared for registration during the semester prior to enrollment.

BIOL 3300. BIOSTATISTICS. 3 Hours.
Introduction to the collection, description, and analysis of data with statistical methods appropriate for biological sciences. Specific topics covered include but are not limited to: descriptive statistics, frequency distributions, random sampling, probabilities, binomial distribution, normal distribution theory and calculations, confidence intervals, t-tests (independent sample and paired designs), Chi-square tests (one-way and two-way analysis), analysis of variance, correlation and linear regression. Prerequisite: BIOL 1441.

BIOL 3301. CELL PHYSIOLOGY. 3 Hours.
An introduction to the basic physical, chemical, and biological principles which govern function in eukaryotic cells, and the relationships between cells and their environments. Prerequisite: BIOL 1441. CHEM 2181 and CHEM 2321 are recommended.

BIOL 3302. UNDERGRADUATE RESEARCH EXPERIENCE. 3 Hours.
In this laboratory course, students will learn core concepts in Biology through an intense research experience. Students will master skills including quantitative data analysis, oral and written communication, and critical thinking. Permission is required to enroll in this course.

BIOL 3303. DRUGS AND BEHAVIOR. 3 Hours.
A survey of the psychoactive agents, their therapeutic uses, and social abuses. Alcohol, nicotine, caffeine, narcotics, hallucinogens, stimulants, and tranquilizers. Offered as BIOL 3303, HEED 3303, and PSYC 3303; credit will be granted only once. May not be used for biology grade point calculation or biology credit toward a B.S. degree in biology, microbiology, or medical technology. Students seeking certification in health education must enroll in HEED 3303.

BIOL 3304. MICROBIAL GENETICS. 3 Hours.
Consideration of the physical, chemical, and functional nature of genetic processes in micro-organisms. Prerequisite: BIOL 2444, or permission of instructor.

BIOL 3306. BACTERIAL PHYSIOLOGY AND ANTIBIOTICS. 3 Hours.
This course will cover the fundamentals of how bacterial cells work, and how antibiotics interfere with essential functions to stop bacterial cells from working. This class is taught largely through reading and discussion of the primary literature, and with active learning and writing assignments. Prerequisite: BIOL 2444.

BIOL 3307. EVOLUTIONARY MEDICINE. 3 Hours.
The application of evolutionary theory to the practice of medicine from an anthropological perspective. Topics include diet/paleodiets, sleep habits, infectious diseases, the developmental origins of health and disease, mental health, women's health and reproduction, and aging/senescence, among others. Offered as BIOL 3307 and ANTH 3307; credit will only be granted in one department.

BIOL 3308. MICROBIAL ECOLOGY AND EVOLUTION. 3 Hours.
The diversity, ecology and evolution of microorganisms in natural systems. Topics will include the role of bacteria and fungi in the functioning of terrestrial ecosystems; microbial biogeography; taxonomic and metabolic diversity; evolutionary diversification; and interactions among microbes and with plant and animal hosts. Prerequisite: BIOL 2444.

BIOL 3310. SELECTED TOPICS IN BIOLOGY. 3 Hours.
Topics in biology not treated in the regular curriculum. Topic, format, and prerequisites to be determined by the instructor. May be repeated for biology elective credit as different topics are offered. Prerequisite: BIOL 1441, BIOL 1442.

BIOL 3311. SELECTED TOPICS IN MICROBIOLOGY. 3 Hours.
Topics in microbiology not treated in the regular curriculum. Topic, format, and prerequisites to be determined by the instructor. May be repeated for microbiology elective credit as different topics are offered. Prerequisite: BIOL 1441, BIOL 2444.

BIOL 3312. IMMUNOLOGY. 3 Hours.
An introduction to the components, properties, and manifestations of the adaptive immune response that occurs in vertebrates. Prerequisite: BIOL 1441, BIOL 2444. CHEM 2181, CHEM 2321 are recommended.

BIOL 3313. HUMAN ADAPTATION AND THE CONCEPT OF RACE. 3 Hours.
The study of modern human biological variation in the context of the history of the concept of race. Detailed historical review explores changing perspectives on variation within our species. Course examines physiological adaptations to environmental stress among a variety of human populations and implications of recent genetic research. Offered as BIOL 3313 and ANTH 3311; credit will only be granted in one department.

BIOL 3314. PRIMATE EVOLUTION AND BEHAVIOR. 3 Hours.
An overview of the Primate Order covering primate origins, evolution, ecology, adaptation, and behavior. Examination of the environmental context within which primates live, how the form of their bodies reflects their activities, and how they relate behaviorally to their environments and to one another. Offered as BIOL 3314 and ANTH 3313; credit will only be granted in one department.

BIOL 3315. GENETICS. 3 Hours.
Principles of molecular and classical genetics. The function and transmission of hereditary material in microorganisms, plants, and animals, including humans. Prerequisite: BIOL 1441.

BIOL 3316. ASTROBIOLOGY I. 3 Hours.
This is an interdisciplinary course between astrophysics, biology and geology. Topics include properties of life, origin and evolution of life on Earth, terrestrial geology and habitability, environmental forcings, extremophiles, mass extinctions, meteorites, searches for life in the solar system. Offered as BIOL 3316, GEOL 3316 and PHYS 3316; credit will be granted only once. Prerequisite: PHYS 1441 & PHYS 1442 or equivalent and PHYS 2315 or PHYS 3315, or permission from instructor. Prerequisites for Biology majors: PHYS 1441 & PHYS 1442 or equivalent.

BIOL 3317. GENOMICS. 3 Hours.
This course presents an integrative approach to genome science, combining elements of genetics, state of the art technologies in genomic analysis. A basic knowledge of genetics and probability concepts is required. Use of the World Wide Web will be an essential part of the course. Prerequisite: BIOL 3315 or permission of instructor.

BIOL 3318. LIMNOLOGY. 3 Hours.
The living and nonliving components of inland waters. An introduction to the geological, physical, and chemical background, and to the major organisms and ecological processes. Prerequisite: BIOL 1441.

BIOL 3319. HUMAN GENETICS. 3 Hours.
This course will enable students to comprehend the basic principles of genetics applied to human inheritance and disease, to interpret the research strategies aimed to identify and study the genes responsible for diverse functions and traits, as well as to assess the consequences of the genetic technologies in our society. Prerequisites: BIOL 1441 and BIOL 3315.

BIOL 3320. BIOLOGY OF TEXAS. 3 Hours.
This course is an introduction to habitat diversity and the number of species found in the state of Texas. Students will learn about the physical, climatological, and human geography of Texas and how that affects animal and plant life within the state. Descriptions of state and federal endangered species listing processes will also be covered. Prerequisite: BIOL 1441 and BIOL 1442.

BIOL 3321. INFECTIOUS DISEASE. 3 Hours.
This course will cover key concepts that relate to the history and background of infectious diseases, as well as the emergence, spread, and control of infectious disease epidemics. Vaccination, antibiotic resistance, and eradication of diseases will also be discussed. Prerequisite: BIOL 3444.

BIOL 3322. BRAIN AND BEHAVIOR. 3 Hours.
An introduction to the anatomical structures and physiological processes that determine behavior. Topics include the acquisition and processing of sensory information, the neural control of movement, and the biological bases of complex behaviors (such as learning, memory, sex, language, and addiction), as well as the basic functioning of the nervous system. Offered as BIOL 3322 and PSYC 3322. Credit will be granted only once. BIOL 3322 prerequisite: BIOL 1441, BIOL 1442. PSYC 3322 prerequisite: BIOL 1441 or PSYC 1315.

BIOL 3323. NEUROBIOLOGY. 3 Hours.
General principles of the function, structure, and organization of the nervous system. Topics include the gross and microscopic anatomy of nervous tissues; physical and chemical basis for action potentials and synaptic transmission; sensory and motor pathways of transduction; molecular, cellular, and systems study of learning and memory; development; and a study of neural diseases and disorders. Prerequisite: BIOL 1441, BIOL 1442.

BIOL 3324. HUMAN ECOLOGY OF FOOD. 3 Hours.
Modern food production and consumption is a complex, interdisciplinary topic directly relevant to global environmental and public health issues. This course will examine our place in the food web from ecological, biogeographical, historical, cultural, and sociopolitical perspectives. Course participants will examine the implications of our everyday decisions as consumers who play a key role in an intricate ecological system. Prerequisite: BIOL 1441 and BIOL 1442.

BIOL 3326. ANIMAL BEHAVIOR. 3 Hours.
A survey of research and theory comparing behavior at various phyletic levels. Offered as BIOL 3326 and PSYC 3326. Credit will be granted for only one of these courses. Prerequisite: BIOL 1441, BIOL 1442.

BIOL 3327. MICROBIAL DIVERSITY. 3 Hours.
This course is an introduction to the great diversity of microbial life. The topic material explores this diversity by considering the great age of bacteria, their evolution, biochemistry, habitat and form. The course of study focuses attention on organisms not commonly encountered in General Microbiology laboratories. Prerequisite: BIOL 3444 Microbiology.

BIOL 3328. ENVIRONMENTAL MICROBIOLOGY. 3 Hours.
An introduction to the principles, methodology, and practical applications and implications of environmental microbiology. Lecture topics include habitat and community approaches to environmental microbiology, measures of microbial populations and activities, interactions among microbial communities, the role of microorganisms in the origin of mineral resources, microorganisms and pollution, and current developments on energy flow through microbial communities. Prerequisite: BIOL 3444.

BIOL 3331. SERVICE LEARNING. 3 Hours.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisite: Permission of the Instructor.

BIOL 3333. GLOBAL CHANGE BIOLOGY. 3 Hours.
This course covers global-scale environmental changes and their consequences for species and ecological communities. We will focus on climate change, habitat loss, and species invasion, with special emphasis on combining physiology, ecology, and evolution to understand past responses and predict future outcomes. Prerequisite: BIOL 1442.

BIOL 3339. INTRODUCTION TO EVOLUTION. 3 Hours.
The goals of this course are: to introduce students to the process of evolution, the patterns that result, and the way that evolutionary history has shaped the diversity of organisms on Earth; to explore how evolutionary biologists formulate and test hypotheses; to investigate applications of evolutionary biology to mainstream medical research; and to investigate current controversies in evolutionary biology. Prerequisites: BIOL 1441 and BIOL 3315 (or equivalent), or permission of instructor.

BIOL 3340. BIOINFORMATICS. 3 Hours.
This course is an applied introduction to bioinformatics and computational genomics. The course is geared toward the student with a biology background and limited programming experience. The course provides an entrance to commonly used programming/scripting languages and an introduction to numerous aspects of modern genomic data analyses (e.g. identification of coding and regulatory features in novel sequences, expression analysis, and comparative/phylogenetic analyses). Prerequisite: BIOL 1442 and BIOL 3315, or permission of instructor.

BIOL 3342. DEVELOPMENTAL BIOLOGY IN HEALTH AND DISEASE. 3 Hours.
An introduction to fundamental developmental events that form complex organisms with an emphasis on human health and disease. Prerequisites: BIOL 1441 and 1442. BIOL 3301 is recommended.

BIOL 3349. COOPERATIVE PROGRAM IN BIOLOGY. 3 Hours.
The purpose of this course is to allow students to earn college credit for relevant field work in the areas of biology and microbiology. Students must apply for the program and be cleared for registration during the semester prior to enrollment.

BIOL 3352. INTRODUCTION TO FORENSIC LAB SCIENCE. 3 Hours.
An introduction to the various disciplines of Forensic Science including DNA analysis, drug analysis, and firearms basics. Laboratory consists of hands-on investigation of mock crime scenes, fingerprint enhancement methods, and biological analysis of fluids. Prerequisite: BIOL 1441, BIOL 1442, CHEM 1441.

BIOL 3353. FUNDAMENTAL MEDICAL MYCOLOGY. 3 Hours.
Medical mycology deals with those infections in humans, and animals resulting from pathogenic fungi. As a separate discipline, the concepts, methods, diagnosis, and treatment of fungal diseases of humans are specific. Fundamental Medical Mycology balances clinical and laboratory knowledge to provide students with in-depth coverage of the most common fungal diseases and its etiologic agents from both the laboratory and clinical perspective. Prerequisite: BIOL 2444.

BIOL 3355. TOXICOLOGY. 3 Hours.
An introduction to the general principles of toxicology with an emphasis on certain classes of toxic agents, their sources and toxic effects, as well as their environmental fates. Pollution of various media (air, water and soil) and the differences between them will be discussed. Prerequisite: BIOL 1441, BIOL 1442, CHEM 1441 and CHEM 1442.

BIOL 3356. ENVIRONMENTAL SYSTEMS, BIOLOGICAL ASPECTS. 3 Hours.
Biological components of environmental systems. Population dynamics, species interactions, community structure, biodiversity, bioenergetics, nutrient cycling and human impacts are reviewed. Prerequisite: BIOL 1441, BIOL 1442.

BIOL 3358. ASTROBIOLOGY II. 3 Hours.
This is an interdisciplinary course between astrophysics, biology and geology. Topics include basic properties of life, habitability of Earth, studies of possible life regarding Mars, Europa & Titan, space missions, exoplanets and exomoons, stellar habitable zones, multistellar systems, exoEarths, biomarkers, SETI, Fermi paradox, Drake equation, cosmology. Offered as BIOL 3358, GEOL 3358, and PHYS 3358; credit will be granted only once. Prerequisite: PHYS 1441 & PHYS 1442 or equivalent and PHYS 2315 or PHYS 3315, or permission from instructor. Prerequisites for Biology majors: PHYS 1441 & PHYS 1442 or equivalent. Note that Astrobiology I is strongly recommended to students to be taken prior to Astrobiology II, but is not a prerequisite.

BIOL 3359. MEDICAL MOLECULAR BIOLOGY. 3 Hours.
This course is an introduction to modern molecular biology and human diseases. This course will use medical diseases, class projects, and problem sets to explore and learn modern molecular biology. The molecular mechanisms and underpinnings for several human diseases will be covered. Topics may include, gene regulation, the dynamic genome and how to rewrite it, modern cloning schemes, synthetic biology, and drug design. BIOL 3315 or BIOL 2444 are recommended, but not required. Prerequisite: BIOL 1441.

BIOL 3409. PALEOANTHROPOLOGY. 4 Hours.
Paleoanthropology: an exploration of fossil evidence for human origins and human evolution. Course focuses on the evolution of humans and our close relatives, from our origins as a distinct lineage to "anatomically modern" Homo sapiens, including the relationship between biological and cultural/behavioral evolution. Offered as BIOL 3409 and ANTH 3409; credit will be granted only once.

BIOL 3410. SELECTED TOPICS IN BIOLOGY. 4 Hours.
Topics in biology not treated in the regular curriculum. Topic, format, and prerequisites to be determined by the instructor. May include lab, service learning or any other experiential learning module. May be repeated for biology elective credit as different topics are offered. Prerequisite: BIOL 1441 or BIOL 1442.

BIOL 3420. GENETICS METHODS LAB. 4 Hours.
This course combines computational and experimental approaches to study genome composition, evolution, and disease. Students will learn contemporary laboratory techniques while exploring transposable elements as tools for genetic analysis. Topics include genetic variation, Mendelian genetics, gene regulation, and gene-directed therapy. Prerequisite: BIOL 3315.

BIOL 3427. PLANT SCIENCE. 4 Hours.
A survey of plant science including the importance of plants to people and the human side of botany: the structure, reproduction, physiology, and classification of plants. The laboratory includes the study of structure, function, reproduction, and classification of plants. Replaces BIOL 3327 and BIOL 3183. Credit cannot be given for BIOL 3427 and BIOL 3327 and 3183. Prerequisite: BIOL 1441, BIOL 1442 or equivalent.

BIOL 3442. HUMAN PHYSIOLOGY. 4 Hours.
A comparative study of vertebrate function. The general principles of physiological mechanisms on the cellular, tissue, organ, and organismal levels will be examined. Laboratory studies will complement lecture material and will stress experimental design, data analysis, and the understanding of critical research in physiology. Prerequisite: BIOL 1441, BIOL 1442.

BIOL 3445. METHODS IN MOLECULAR MICROBIOLOGY. 4 Hours.
An overview of different techniques used during manipulation of microorganisms. It will allow students to gain an historical perspective of techniques used in microbiology as well as learn state of the art molecular characterization of microorganisms and their genetic manipulation. Introduces biochemical, physiological, and molecular biology methods to assess community diversity and microbial activity in a variety of ecosystems. Bacterial growth and survival, population biology, and microbial interactions will also be discussed. Prerequisite: BIOL 1441 and BIOL 3444.

BIOL 3446. HUMAN ANATOMY. 4 Hours.
Study of the gross functional anatomy of the human body. Students will participate in laboratory exercises designed to familiarize them with human anatomical structures and their functions. Use of eponyms for anatomical terms will be minimized. Prerequisite: BIOL 1441, BIOL 1442 or 8 hours of Bioltran.

BIOL 3454. GENERAL ZOOLOGY. 4 Hours.
An overview of animal life including the diversity and evolution of major animal phyla, reproduction, development and aspects of physiological function. The laboratory examines form, function and phyletic relationships in a wide variety of animal types. Prerequisite: BIOL 1441, BIOL 1442, or equivalent, or permission of instructor.

BIOL 3457. GENERAL ECOLOGY. 4 Hours.
An examination of the theoretical and experimental aspects of the relationship between the biological and physical environments (organisms, food, space, and time) at the individual, population, community, and ecosystem levels. Prerequisite: BIOL 1441, BIOL 1442.

BIOL 4089. RESEARCH IN BIOLOGY. 0 Hours.
Research problems on an individual basis, conducted under the direction of a member of the biology faculty. Prerequisite: written permission of the supervising instructor prior to registration. This is a non-credit course. Prerequisite: Written permission of the supervising instructor prior to registration.

BIOL 4101. CAREER READINESS CAPSTONE. 1 Hour.
This is a career-readiness capstone course for students approaching graduation. Students will build a professional portfolio to be used towards post graduate prospects such as a scientific industry jobs or application to a graduate program.

BIOL 4179. RESEARCH AND DIRECTED STUDY. 1 Hour.
Research or independent study by individual students in biology under the supervision of a biology faculty member. Topics must be approved by the supervising faculty member. Prerequisite: BIOL 1441, BIOL 1442, and permission of instructor.

BIOL 4189. RESEARCH IN BIOLOGY. 1 Hour.
Research problems on an individual basis, conducted under the direction of a member of the biology faculty. A limit of two hours per semester is imposed and only a total of three hours may be counted toward degree requirements. These courses are offered only on a pass/fail basis. Prerequisite:written permission of the supervising instructor prior to registration.

BIOL 4279. RESEARCH AND DIRECTED STUDY. 2 Hours.
Research or independent study by individual students in biology under the supervision of a biology faculty member. Topics must be approved by the supervising faculty member. Prerequisite: BIOL 1441, BIOL 1442, and permission of instructor.

BIOL 4289. RESEARCH IN BIOLOGY. 2 Hours.
Research problems on an individual basis, conducted under the direction of a member of the biology faculty. A limit of two hours per semester is imposed and only a total of three hours may be counted toward degree requirements. These courses are offered only on a pass/fail basis. Prerequisite:written permission of the supervising instructor prior to registration.

BIOL 4303. MICROBIOMES: HEALTH AND THE ENVIRONMENT. 3 Hours.
The development, interactions, and change of polymicrobial communities in both humans and the environment with implications in health, nutrition, disease, research, ecology and agriculture. Prerequisite: BIOL 2444.

BIOL 4307. MOLECULAR EVOLUTION. 3 Hours.
This course focuses on understanding how genes and genomes evolve at the molecular level. Molecular biology provides the data while population genetics provides the theoretical framework. Prerequisite: BIOL 3315, BIOL 3339.

BIOL 4309. NEUROPHARMACOLOGY. 3 Hours.
A survey of how drugs affect the nervous system. General topics will include cellular and molecular foundations of neuropharmacology, receptors and modulation of neural signaling. The specific role of neurotransmitter systems (i.e. acetylcholine, dopamine, norepinephrine, serotonin, and opiate) will be explored. Offered as BIOL 4309 and PSYC 4309; credit will be granted only once. Prerequisite: one or more of the following courses or permission of instructor: BIOL 1441 or PSYC 3322/BIOL 3322 or BIOL 3301.

BIOL 4311. HISTOLOGY. 3 Hours.
Histology is a branch of biological science concerned with structure and function of the organism on a cellular level. The objective in this class is to provide students with the skills and knowledge needed to identify and describe tissues and organs in the microscopic images based on the characteristic morphologies of cells and arrangement of tissues. Students will learn about basic histological techniques used in slide preparation, four basic tissue types and types of tissue, followed by the survey of microscopic images of all organ systems. This course bridges the "whole body" disciplines of anatomy and physiology and cell-level sciences such as cell physiology and genomics. It will help students understand how the differential expression of the genome leads to different cell morphology that in turn leads to different functions. Prerequisite: BIOL 1441, BIOL 1442.

BIOL 4312. INTRODUCTION TO VIROLOGY. 3 Hours.
The nature, reproduction, and host cell interactions of viruses and virus-like agents of bacteria, animals, and plants. Prerequisite: BIOL 2444.

BIOL 4315. HORMONES AND BEHAVIOR. 3 Hours.
A study of the interaction between hormones and behavior. Specific topics covered include; examination of the hormonal influences on sex determination, reproductive behaviors, parental behavior, dominance and aggression, responses to stressful stimuli, homeostasis, and learning and memory. This course uses a comparative approach and draws examples of neuroendocrine function from throughout the animal kingdom including fish, birds, reptiles, and mammals (including humans). Offered as PSYC 4315 and BIOL 4315. Credit will be granted only once. Prerequisite: PSYC 3322/ BIOL 3322 or BIOL 1441 or BIOL 3301.

BIOL 4316. GROWTH, DEVELOPMENT, AND EVOLUTION. 3 Hours.
A survey of topics at the nexus of modern human biological research in growth and development and the evolutionary record of hominid subadults. Offered as BIOL 4316 and ANTH 4315; credit will be granted only in one department. Prerequisite is only required for students registering for ANTH 4315. Prerequisite: ANTH 2307 or permission of the instructor.

BIOL 4317. BACTERIAL PATHOGENESIS. 3 Hours.
Host-pathogen relationships in microbial diseases. Topics include bacterium-host interactions; pathogens and pathogenic factors; techniques in pathogenesis research; molecular mechanisms of pathogenesis by major bacterial pathogens; antimicrobial compounds and resistance to antibiotics; and discussion of human genomics and susceptibility to infections. Prerequisites: BIOL 3312, BIOL 2444.

BIOL 4321. ADVANCED PROBLEM SOLVING IN BIOLOGY. 3 Hours.
This course will focus on crucial techniques needed to solve application-based questions in biology. Students will develop and practice reading comprehension, problem solving, critical thinking, and reasoning skills while deepening their understanding of core biological concepts, including cell and molecular biology; biochemistry; anatomy and physiology; and behavior. The goal of this course is to improve students' critical reasoning skills to prepare them for problem-based exams. BIOL 3442 is recommended. Prerequisite: BIOL 1442, BIOL 3301, BIOL 3315.

BIOL 4327. BEHAVIORAL GENETICS. 3 Hours.
Genetic influences on behavioral phenotypes. Research strategies, quantitative methods, and pharmacogenetic approaches to the brain; sociality and altruism; the personality, emotionality and intelligence; psychopathology; chromosomal abnormalities; forensic implications of genetic counseling. Offered as BIOL 4327 and PSYC 4327; credit will be granted only once. Students seeking credit toward the science requirement must enroll in BIOL 4327. Prerequisite: PSYC 1315 or BIOL 1441.

BIOL 4329. NEURAL ENGINEERING. 3 Hours.
This course consists of both lecture/discussion and laboratory. Lecture topics include central and peripheral nervous system injury and regeneration, brain/machine interfacing, primary culture of neural cells, neuroinflammatory and neurodegenerative disease. Laboratories include embryonic and neonatal rat derived neuronal culturing, immunostaining and quantitative analysis. Prerequisites: BIOL 3301, CSE 1310, CHEM 2322, and MATH 3319.

BIOL 4332. POLYMERS IN BIOMEDICAL ENGINEERING. 3 Hours.
This is a foundation course in polymeric biomaterial design, synthesis, characterization, and processing. The topics include design, surface-engineering, functionalization, characterization, as well as micro- and nano-fabrication of polymeric biomaterials. The biomedical applications of the polymeric biomaterials and their interaction with cell/tissue is discussed. Prerequisite: BIOL 3301, CSE 1310, CHEM 2322 and MATH 3319.

BIOL 4333. NANOBIOMATERIALS. 3 Hours.
Synthesis, fabrication, characterization, and biomedical applications of nanobiomaterials. Topics include synthetic nanobiomaterials, biological nanobiomaterials (DNA nanomaterials, protein and peptide nanomaterials, etc.), biofunctionalization of nanobiomaterials, use of nanobiomaterials in tissue engineering, drug delivery, gene delivery. Prerequisites: BIOL 3301, CSE 1310, CHEM 2322, and MATH 3319.

BIOL 4343. RESEARCH METHODS - UTEACH. 3 Hours.
The purpose of this course is to present UTeach students with the tools scientists use to solve scientific problems. These tools enable scientists to develop new knowledge and insights, the most important of which are eventually presented in textbooks and taught in more conventional science classes. These tools include: design of experiments to answer scientific questions; use of statistics to interpret experimental results and deal with sampling errors; mathematical modeling of scientific phenomena; finding and reading articles in the current scientific literature; applying scientific arguments in matters of social importance; writing scientific papers; reviewing scientific papers; oral presentation of scientific work; use of probes and computers to gather and analyze data; ethical treatment of human subjects; laboratory safety. Research Methods is primarily a laboratory course, and most of these topics are developed in connection with 4 independent inquiries UTeach students design and carry out. Written inquiries will be evaluated as examples of scientific writing. Prerequisite: SCIE 1201 or SCIE 1334 or concurrent enrollment; junior or senior standing.

BIOL 4345. MICROBIAL PHYSIOLOGY. 3 Hours.
This course considers the anatomy and physiology of the bacterial cell in detail. Lecture topics consider the molecular architecture of cell walls, membranes and organelles, synthesis of wall material and membranes, insertion of proteins into membranes and regulation of biosynthetic systems at the whole cell level. Prerequisite: BIOL 1441 and BIOL 3444. CHEM 4311 recommended.

BIOL 4350. CONSERVATION BIOLOGY. 3 Hours.
Introduction to theory and practice of conservation biology, with emphasis on applications of modern quantitative and genetic techniques to preservation of organisms and habitats. Topics include identification and prioritization of units for protection; conservation genetics; preserve design; public policy issues; and case studies. Prerequisite: BIOL 3315 or equivalent (Genetics), or permission of the instructor.

BIOL 4352. FORENSIC BIOLOGY. 3 Hours.
A comprehensive review of biological principles, applied to forensic science, including sample recovery and handling, analytical techniques, profile matching/exclusion, reporting, and testimony. Prerequisite: BIOL 3315; statistics course recommended; or permission of instructor.

BIOL 4355. METHODS IN FORENSIC BIOLOGY. 3 Hours.
Analysis of typical biological evidentiary samples including extraction of DNA, quantitation, amplification and electrophoresis of examples. Instrumentation utilized includes thermal cyclers and ABI 377 genetic analyzer. Prerequisite: BIOL 4352 or concurrent enrollment.

BIOL 4357. HEALTH PSYCHOLOGY. 3 Hours.
This course provides a broad introduction to health psychology and its interface with the medical world. The course provides a balanced presentation of the important issues in the field, as well as specific content topics that are especially relevant today to better understand health and illness. Offered as BIOL 4357, HEED 4357, and PSYC 4357. Students seeking science requirement credit must enroll in BIOL 4357; students seeking Certification in Health must enroll in HEED 4357. Prerequisite: PSYC 1315 or BIOL 1333 or BIOL 1441 or BIOL 2457; junior standing recommended.

BIOL 4365. TISSUE ENGINEERING LAB. 3 Hours.
Each student will be given the opportunity to perform the techniques commonly used in tissue engineering and biomaterial research. These techniques are culture media preparation, cell culture/subculture, degradable scaffold preparation, scaffold modification, histological sections and staining, and cell imaging analyses. Prerequisites: BIOL 3301, CSE 1310, CHEM 2322, and MATH 3319.

BIOL 4379. RESEARCH AND DIRECTED STUDY. 3 Hours.
Research or independent study by individual students in biology under the supervision of a biology faculty member. Topics must be approved by the supervising faculty member. Prerequisite: BIOL 1441, BIOL 1442, and permission of instructor.

BIOL 4388. INSTRUCTIONAL TECHNIQUES IN BIOLOGY. 3 Hours.
Students will participate in laboratory instruction and student recitation sessions under the supervision of a faculty member. A maximum of 3 hours can be applied to the major for biology or microbiology credit. Enrollment by departmental permission only. A maximum of 6 hours credit from this class will be used to calculate a student's grade point average. Students on probation or who have not qualified for major status may not enroll in this course.

BIOL 4389. RESEARCH IN BIOLOGY. 3 Hours.
Research problems on an individual basis, conducted under the direction of a member of the biology faculty. A limit of two hours per semester is imposed and only a total of three hours may be counted toward degree requirements. These courses are offered only on a pass/fail basis. Prerequisite: written permission of the supervising instructor prior to registration.

BIOL 4390. INSTRUCTIONAL TECHNIQUES IN MICROBIOLOGY. 3 Hours.
Students will participate in laboratory instruction and laboratory preparation under the supervision of the lab coordinator. A maximum of 3 hours can be applied to the major for biology or microbiology credit. Enrollment by departmental permission only. A maximum of 6 hours credit from this class will be used to calculate a student's grade point average. Students on probation or who have not qualified for major status may not enroll in this course.

BIOL 4392. INSTRUCTIONAL TECHNIQUES IN MICROBIOLOGY LEADER. 3 Hours.
Students will take on a leadership role in laboratory instruction and preparation under the supervision of the lab coordinator. Students will strengthen their skill set and gain experience in a supervisory role. A maximum of 3 hours can be applied to the major for biology or microbiology credit. Enrollment by departmental permission only. A maximum of 6 hours credit from this class will be used to calculate a student's grade point average. Students on probation or who have not qualified for major status may not enroll in this course.

BIOL 4393. HONORS SENIOR PROJECT IN BIOLOGY. 3 Hours.
A topic will be selected after consultation with a supervising professor and will involve both original research and writing a formal report. The work will be evaluated by a faculty honors committee. Completion of this course will satisfy the thesis requirement for the Honors College described elsewhere in this catalog.

BIOL 4395. FORENSICS-EL PA. 3 Hours.

BIOL 4406. HUMAN OSTEOLOGY. 4 Hours.
Detailed examination of human skeletal morphology. Topics include form and function of all skeletal elements in the human body, differentiation of each bone, left and right side identification, identification or fragmented remains, and muscle attachments and articulations. Content useful in forensic anthropology, archaeology, and hominid paleontology. Offered as BIOL 4406 and ANTH 4406; credit will be granted only in one department.

BIOL 4421. ADVANCED TOPICS IN NEUROSCIENCE. 4 Hours.
This course will cover current topics in Neuroscience using an interactive, participatory format that includes a lecture portion and a laboratory section. The course will focus on specific content topics that are especially relevant today to better understand and use advanced concepts in Neuroscience research. Completion of this course is essential for students who are interested in pursuing a career in Neuroscience research. Offered as BIOL 4421 or PSYC 4421. Credit will be granted only once. Junior standing recommended. Prerequisite: C or better in BIOL 3322 or PSYC 3322.

BIOL 4440. LABORATORY METHODS IN BACTERIAL PATHOGENESIS. 4 Hours.
This course is intended to expose students to research techniques for studying bacterial pathogens. Students will use molecular and classical techniques to isolate, identify, and characterize bacteria and their response to stimuli. Techniques will range from polymerase chain reaction (PCR), gene sequencing, sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE) and Immunofluorescence Microscopy. Prerequisites: BIOL 3312, BIOL 3444, BIOL 4317, or permission of instructor.

BIOL 4441. ADVANCED MICROBIOLOGY LAB. 4 Hours.
An overview of advanced microbiology techniques used in microbial genetics and physiology. It will allow students not only to gain an advanced and applicable perspective of techniques used in microbiology, but also to learn current state-of-the-art molecular techniques for genetic manipulation and physiological characterization of microorganisms. Included are molecular, physiological, and biochemical methods as well as metagenomics approaches and basic analysis of sequencing data for studying microbiomes. Enrollment requirements: BIOL 1441, General Microbiology (BIOL 2444), and Microbial Genetics (BIOL 3304). Prerequisite: BIOL 1441, BIOL 2444, BIOL 3304.

BIOL 4459. BIOARCHAEOLOGY. 4 Hours.
The study of human remains in archaeological contexts in order to reconstruct individual identity, life history, and past population characteristics. No formal prerequisites, but familiarity with the human skeleton is helpful. Lab component is required. Offered as BIOL 4459 and ANTH 4459; credit will be granted only in one department.

BIOL 4460. ZOOARCHAEOLOGY. 4 Hours.
The study of faunal remains from archaeological contexts to understand past human economic strategies and ecological circumstances. Topics include skeletal and taxonomic identification, taphonomic processes, mortality profiles, biometric analyses, and human behavioral ecology. Lab component is required. Offered as BIOL 4460 and ANTH 4460; credit will be granted only once.

BIOL 5101. SPECIAL TOPICS IN BIOLOGY. 1 Hour.
Seminar on significant biological research. May be repeated for credit. Prerequisite: consent of the instructor.

BIOL 5102. PROFESSIONAL DEVELOPMENT. 1 Hour.
This course will provide senior graduate students with important information regarding various aspects of their professional development including job searching, interviewing, stress and time management, and professional ethics.

BIOL 5193. RESEARCH IN BIOLOGY. 1 Hour.
Conference course in which the student undertakes intensive investigation of topics under the supervision of a staff member. Prerequisite: consent of the instructor. Graded P/F/R.

BIOL 5291. INDIVIDUAL PROBLEMS IN BIOLOGY. 2 Hours.
Individual research projects supervised by a faculty member. Prerequisite: consent of the instructor.

BIOL 5293. RESEARCH. 2 Hours.

BIOL 5301. LABORATORY ROTATION. 3 Hours.
This course is an elective designed to enable students to choose a major advisor and laboratory. Rotations among two or three faculty laboratories will familiarize students with faculty research interests, sharpen individual research skills, and expose students to different study systems, instruments, and research methods. May only be taken once for credit by MS students; may be repeated for credit once by Ph.D. students.

BIOL 5302. MICROBIAL GENETICS. 3 Hours.
Consideration of the nature, expression and regulation of the genetic processes in micro-organisms.

BIOL 5303. MICROBIOMES: HEALTH AND THE ENVIRONMENT. 3 Hours.
The development, interactions, and change of polymicrobial communities in both humans and the environment with implications in health, nutrition, disease, research, ecology and agriculture.

BIOL 5304. VIROLOGY. 3 Hours.
The nature, reproduction and host-cell interactions of viruses and animals. Emphasizes molecular aspects of viral replication and the molecular basis of pathogenesis. Prerequisite: consent of the instructor.

BIOL 5307. NEUROBIOLOGY. 3 Hours.
General principles of the function, structure, and organization of the nervous system. Topics include the gross and microscopic anatomy of nervous tissues; physical and chemical basis for action potentials and synaptic transmission; sensory and motor pathways of transduction; molecular, cellular, and systems study of learning and memory; development; and a study of neural diseases and disorders.

BIOL 5309. IMMUNOLOGY. 3 Hours.
This course is designed to acquaint students with the cellular processes involved in the generation of an immune response. It will provide students with detailed knowledge of the cells and organs of the immune system, their organization and diversity and their specialized functions at different anatomical locations. The importance of immune cell receptors and cytokines in cellular interactions and co-ordination of immunological mechanisms is also emphasized.

BIOL 5310. SELECTED TOPICS IN BIOLOGY. 3 Hours.
Topics may vary depending on the needs and interests of the students. May be repeated for credit. Prerequisite: consent of the student's thesis committee and the current course instructor.

BIOL 5311. EVOLUTION. 3 Hours.
Study of the origin of living systems and the mechanism of their evolution.

BIOL 5312. ADVANCED GENETICS. 3 Hours.
Mechanisms of transmission and function of genetic material. Covers fundamental concepts in transmission genetics including: genotype/phenotype relationships; inheritance; linkage; genome organization; and gene expression. Experimental and quantitative approaches to genetic analyses are emphasized. Prerequisite: consent of the instructor.

BIOL 5314. BIOMETRY. 3 Hours.
An examination of statistical methods and procedures in relation to the design of biological experiments and the analysis of their results. Prerequisite: consent of the instructor.

BIOL 5315. COMMUNITY ECOLOGY. 3 Hours.
An investigation of the effects of interspecific interactions on the distribution and abundance of organisms. Prerequisite: consent of the instructor.

BIOL 5317. BACTERIAL PATHOGENESIS. 3 Hours.
Host-pathogen relationships in microbial diseases. Topics include bacterium-host interactions, pathogens and pathogenic factors: techniques in pathogenesis research: molecular mechanisms of pathogenesis by major bacterial pathogens; antimicrobial compounds and resistance to antibiotics; and discussion of human genomics and susceptibility to infections.

BIOL 5319. HUMAN GENETICS. 3 Hours.
This course will enable students to comprehend the basic principles of genetics applied to human inheritance and disease, to interpret the research strategies aimed to identify and study the genes responsible for diverse functions and traits, as well as to assess the consequences of the genetic technologies in our society.

BIOL 5321. ADVANCED PROBLEM SOLVING IN BIOLOGY. 3 Hours.
This course will focus on crucial techniques needed to solve application-based questions in biology. Students will develop and practice reading comprehension, problem solving, critical thinking, and reasoning skills while deepening their understanding of core biological concepts, including cell and molecular biology; biochemistry; anatomy and physiology; and behavior. The goal of this course is to improve students' critical reasoning skills to prepare them for problem-based exams. BIOL 3442 is recommended. Prerequisite: BIOL 1442, BIOL 3301, BIOL 3315.

BIOL 5325. PLANT ECOLOGY. 3 Hours.
An introduction to plant ecology including physiological, population, community and ecosystem ecology.

BIOL 5335. ESSENTIALS OF GENOMICS. 3 Hours.
An integrative approach to genome science, combining elements of genetics, statistics and bioinformatics. Current technologies used in genomics analysis will be presented.

BIOL 5336. MOLECULAR EVOLUTION. 3 Hours.
An exploration of how genes and genomes evolve at the molecular level. The presentation uses the theoretical framework provided by population genetics to analyze molecular biology data.

BIOL 5340. BIOINFORMATICS. 3 Hours.
This course is an applied introduction to bioinformatics and computational genomics. The course is geared toward the student with a biology background and limited programming experience. The course provides an entrance to commonly used programming/scripting languages and an introduction to numerous aspects of modern genomic data analyses (e.g. identification of coding and regulatory features in novel sequences, expression analysis, and comparative/phylogenetic analyses).

BIOL 5341. HISTOLOGY. 3 Hours.
Histology is a branch of biological science concerned with structure and function of the organism on a cellular level. The objective in this class is to provide students with the skills and knowledge needed to identify and describe tissues and organs in the microscopic images based on the characteristic morphologies of cells and arrangement of tissues. Students will learn about basic histological techniques used in slide preparation, four basic tissue types and types of tissue, followed by the survey of microscopic images of all organ systems.

BIOL 5342. DEVELOPMENTAL BIOLOGY IN HEALTH AND DISEASE. 3 Hours.
An introduction to fundamental developmental events that form complex organisms with an emphasis on human health and disease.

BIOL 5349. COOPERATIVE PROGRAM IN BIOLOGY. 3 Hours.
The purpose of this course is to allow students to earn credit for relevant field work in the areas of biology and microbiology. Students must apply for the program and be cleared for registration during the semester prior to enrollment.

BIOL 5350. CONSERVATION BIOLOGY. 3 Hours.
Theory and practice of conservation biology, with emphasis on applications of modern quantitative and molecular genetic techniques to preservation of organisms and habitats. Includes: identification and prioritization of units for protection; conservation genetics; preserve design; public policy; and current case studies. Prerequisites: BIOL 3315 or equivalent or consent of the instructor.

BIOL 5351. ENVIRONMENTAL MICROBIOLOGY. 3 Hours.
Principles, methodology, and practical applications of environmental microbiology. Topics include: habitat and community approaches to environmental microbiology; measures of microbial populations and activities; interactions among microbial communities; role of microorganisms in the origin of mineral resources and pollution and energy flow through microbial communities. Prerequisite: BIOL 3444 or equivalent or consent of the instructor.

BIOL 5353. FUNDAMENTAL MEDICAL MYCOLOGY. 3 Hours.
Medical mycology deals with those infections in humans, and animals resulting from pathogenic fungi. As a separate discipline, the concepts, methods, diagnosis, and treatment of fungal diseases of humans are specific. Fundamental Medical Mycology balances clinical and laboratory knowledge to provide students with in-depth coverage of the most common fungal diseases and its etiologic agents from both the laboratory and clinical perspective.

BIOL 5354. LIMNOLOGY. 3 Hours.
The study of biotic and abiotic components of inland waters. Prerequisite: consent of the instructor.

BIOL 5355. TOXICOLOGY. 3 Hours.
An introduction to the general principles of toxicology with an emphasis on certain classes of toxic agents, their sources and toxic effects, as well as their environmental fates. Pollution of various media (air, water and soil) and the differences between them will be discussed.

BIOL 5359. MEDICAL MOLECULAR BIOLOGY. 3 Hours.
This course is an introduction to modern molecular biology and human diseases. This course will use medical diseases, class projects, and problem sets to explore and learn modern molecular biology. The molecular mechanisms and underpinnings for several human diseases will be covered. Topics may include, gene regulation, the dynamic genome and how to rewrite it, modern cloning schemes, synthetic biology, and drug design.

BIOL 5366. ADVANCED ORGANISMAL PHYSIOLOGY. 3 Hours.
In this course, the fundamentals of the structure (anatomy) and function (physiology) of "higher" plants and animals are discussed. Cellular, tissue, organ, and organismal levels will be the focus. General topics will include energy acquisition, distribution of nutrients, fluid transport, gas exchange, defense, sensing and responding to the environment, and reproduction. An understanding of basic biological concepts is expected.

BIOL 5370. THESIS RESEARCH IN CELL BIOLOGY. 3 Hours.
Faculty supervised thesis research.

BIOL 5371. THESIS RESEARCH IN ECOLOGY AND EVOLUTION. 3 Hours.
Faculty supervised thesis research.

BIOL 5372. THESIS RESEARCH IN BIOINFORMATICS. 3 Hours.
Faculty supervised thesis research.

BIOL 5373. THESIS RESEARCH IN MICROBIOLOGY. 3 Hours.
Faculty supervised thesis research.

BIOL 5374. THESIS RESEARCH IN GENETICS AND GENOMICS. 3 Hours.
Faculty supervised thesis research.

BIOL 5391. INDIVIDUAL PROBLEMS IN BIOLOGY. 3 Hours.
Individual research projects supervised by a faculty member. Prerequisite: consent of the instructor.

BIOL 5392. MASTER'S NON-THESIS CAPSTONE. 3 Hours.
The Master of Science in Biology Non-Thesis (MSNT) capstone course creates opportunities for students to integrate, reflect on, and apply what they have learned in their coursework. Students also practice professional competencies including communication, teamwork, critical thinking, research, problem-solving, and analytical thinking. This course satisfies the capstone requirement for the MS in Biology (non-thesis) degree.

BIOL 5393. RESEARCH IN BIOLOGY. 3 Hours.
Conference course in which the student undertakes intensive investigation of topics under the supervision of a staff member. Prerequisite: consent of the instructor. Graded P/F/R.

BIOL 5398. THESIS. 3 Hours.
Graded R/F only. Prerequisite: consent of faculty.

BIOL 5420. GENETICS METHODS LAB. 4 Hours.
This course combines computational and experimental approaches to study genome composition, evolution, and disease. Students will learn contemporary laboratory techniques while exploring transposable elements as tools for genetic analysis. Topics include genetic variation, Mendelian genetics, gene regulation, and gene-directed therapy.

BIOL 5421. METHODS IN MOLECULAR MICROBIOLOGY. 4 Hours.
This course will provide an overview of different techniques used during manipulation of microorganisms. It will allow students to gain a historical perspective of techniques used in microbiology (Winogradsky column, Koch solid agar plating) as well as learn state of the art molecular characterization of microorganisms and their genetic manipulation. This course introduces current biochemical, physiological and molecular biology methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

BIOL 5440. LABORATORY METHODS IN BACTERIAL PATHOGENESIS. 4 Hours.
This course is intended to expose students to research techniques for studying bacterial pathogens. Students will use molecular and classical techniques to isolate, identify and characterize bacteria and their response to stimuli. Techniques will range from PCR, Gene Sequencing, SDS_PAGE and Immunofluorescence Microscopy. Prerequisite: BIOL 3312, BIOL 3444, BIOL 4317.

BIOL 5493. RESEARCH. 4 Hours.

BIOL 5593. RESEARCH. 5 Hours.

BIOL 5693. RESEARCH IN BIOLOGY. 6 Hours.
Conference course in which the student undertakes intensive investigation of topics under the supervision of a staff member. Prerequisite: consent of the instructor. Graded P/F/R.

BIOL 5698. THESIS. 6 Hours.
Graded P/F/R. Prerequisite: consent of faculty.

BIOL 5998. THESIS. 9 Hours.
Graded P/F/R. Prerequisite: consent of faculty.

BIOL 6101. GRADUATE DEVELOPMENT. 1 Hour.
An introduction to graduate school for incoming students. Students will learn basic science communication skills (oral presentation, abstract writing etc.), an overview of university infrastructure, and an introduction to grant management.

BIOL 6102. RESPONSIBLE CONDUCT IN RESEARCH. 1 Hour.
An overview of bioethics and responsible conduct in research according to standards set by the National Institutes of Health and the National Science Foundation. This includes establishing conflicts of interest, mentor and trainee proper practices, data acquisition and management, and proper practices as an author when publishing.

BIOL 6103. CAREER DEVELOPMENT. 1 Hour.
Students will learn valuable skills when applying for academic and non-academic jobs. This includes CV preparation, interview skills, presenting a job seminar, and resources for searching jobs.

BIOL 6191. ADVANCED RESEARCH. 1 Hour.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6291. ADVANCED RESEARCH. 2 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6301. ESSENTIAL TOPICS IN GENOMICS. 3 Hours.
This course will explore diverse aspects of genome biology, including the evolutionary principles that influence how genomes change through time, genome structure, and genome function. Emphasis will be given on how genome technology influences the way we do modern biology and how genomics influences the world around us.

BIOL 6302. MICROBIOLOGY, MOLECULAR AND CELLULAR BIOLOGY. 3 Hours.
Using model microorganisms, this course will investigate their (1)Physiology, biochemistry, and genetics, (2)The hosts innate and adaptive immune responses, (3)The molecular basis for virulence and pathogenesis and (4)The ecological and economic impact of microbial pathogens including epidemics and pandemics.

BIOL 6303. ECOLOGICAL AND EVOLUTIONARY ANALYSIS. 3 Hours.
Analysis-based/applied course with instruction on advanced statistical approaches. Topics to be covered include Poisson and Binomial Error Distribution, mixed effect models, phylogenetic comparative methods, structural equation modeling, power analysis, Bayesian analysis, study/sampling design, and generating publication-ready figures.

BIOL 6310. SELECTED TOPICS IN BIOLOGY FOR PhD STUDENTS. 3 Hours.
Topics may vary depending on the needs and interests of the students. May be repeated for credit. This course is specific to students in the PhD program.

BIOL 6391. ADVANCED RESEARCH. 3 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6399. DISSERTATION. 3 Hours.
BIOL 6399 and BIOL 6699 graded R/F only; BIOL 6999 graded P/F/R. Prerequisite: admission to candidacy for the degree Doctor of Philosophy in Quantitative Biology.

BIOL 6491. ADVANCED RESEARCH. 4 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6591. ADVANCED RESEARCH. 5 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6691. ADVANCED RESEARCH. 6 Hours.
Faculty supervised individual research. May be repeated for credit. Graded P/F/R.

BIOL 6699. DISSERTATION. 6 Hours.
BIOL 6399 and BIOL 6699 graded R/F only; BIOL 6999 graded P/F/R. Prerequisite: admission to candidacy for the degree Doctor of Philosophy in Quantitative Biology.

BIOL 6999. DISSERTATION. 9 Hours.
BIOL 6399 and BIOL 6699 graded R/F only; BIOL 6999 graded P/F/R. Prerequisite: admission to candidacy for the degree Doctor of Philosophy in Quantitative Biology.

BIOL 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

BLAW 3310. LEGAL AND ETHICAL ENVIRONMENT OF BUSINESS. 3 Hours.
The basic structure and processes of the legal system are reviewed followed by coverage of key common law areas and major regulatory rules that impact business. The focus is on a working knowledge of the law that has the greatest impact on business today and the social and ethical issues that may be related to legal issues. Prerequisite: 30 credit hours.

BLAW 3311. LAW I. 3 Hours.
The law relevant to business transactions of large and small business firms and individuals. The history and development of our legal system, (e.g. increased government regulation of business) reviewed to help the student understand political and social influences on law. Topics covered include common law and Uniform Commercial Code, and contractual relationships (contracts, assignments, commercial papers, sales, and bailments). Prerequisite: 30 credit hours.

BLAW 3312. LAW II. 3 Hours.
The law of property (real and personal), business associations (agency, partnership, corporation, bankruptcy), wills and trusts. Prerequisite: 30 credit hours.

BLAW 3314. REAL ESTATE LAW. 3 Hours.
Development of real estate law and the legal constraints within which real estate decisions are made. Prerequisite: 60 credit hours.

BLAW 4310. BASIC INTERNATIONAL LAW FOR BUSINESS. 3 Hours.
The basic principles of law related to international transactions and relations as may be applicable to business dealings. Laws related to persons and property in the foreign environment. Prerequisite: 60 credit hours.

BLAW 4332. BUSINESS LAW FOR ACCOUNTANTS. 3 Hours.
This course provides the basic legal principles of business organizations and operations, with coverage including the law of contracts (both common law and the law of sales of goods), commercial paper, property (including bailments, documents of title, patents and copyrights), employment law, agency, business organizations, selected topics of government regulation of business (securities regulation, antitrust, and bankruptcy), money laundering, suretyship and creditors' rights, the Dodd-Frank Act of 2010, the Sarbanes-Oxley Act of 2002, and CPA professional responsibility and liability. Prerequisite: 60 Credit hours completed.

BLAW 5330. LEGAL ENVIRONMENT OF BUSINESS. 3 Hours.
The basic structure and processes of the legal system are reviewed followed by coverage of key common law areas and major regulatory rules that impact business. The focus is on a working knowledge of the law that has the greatest impact on business today and the social and ethical issues that may be related to legal issues.

BLAW 5331. LAW OF INTERNATIONAL BUSINESS. 3 Hours.
General principles of law applicable to international business including case law, statutory law, treaties, administrative law, and international agreements.

BLAW 5332. BUSINESS LAW FOR ACCOUNTANTS. 3 Hours.
This course provides the basic legal principles of business organizations and operations, with coverage including the law of contracts (both common law and the law of sales of goods), commercial paper, property (including bailments, documents of title, patents and copyrights), employment law, agency, business organizations, selected topics of government regulation of business (securities regulation, antitrust, and bankruptcy), money laundering, suretyship and creditors' rights, the Dodd-Frank Act of 2010, the Sarbanes-Oxley Act of 2002, and CPA professional responsibility and liability.

BLAW 5392. SELECTED TOPICS IN BUSINESS LAW. 3 Hours.
In-depth study of selected topics in business law. May be repeated when topics vary. Prerequisite: consent of instructor.

COURSES

BSAD 6182. INDEPENDENT STUDIES IN BUSINESS ADMINISTRATION. 1 Hour.
This independent study course is centered on the application of content related to teaching in higher education settings. Students will be expected to design a lesson, present a lecture, and arrange for a final feedback report following an observed teaching demonstration. The focus will be on reflective teaching, sound lesson design, and receiving feedback towards improved teaching practice in higher education.

BSAD 6310. FOUNDATIONS OF SCIENTIFIC INQUIRY. 3 Hours.
The evolution of the modern corporation is briefly addressed. The core topics include the structure of explanation, the structure of scientific laws, theory building, philosophy of science and relativistic/post-relativistic philosophies of science.

BSAD 6311. EXPERIMENTAL DESIGN AND RESEARCH METHODS. 3 Hours.
In-depth coverage of selected topics in the design of research; topics include philosophy of science, theory of measurement, complex experimental and quasi-experimental designs.

BSAD 6312. REGRESSION. 3 Hours.
The theoretical and practical aspects of regression analysis. Topics include simple and multiple linear regression, the matrix formulation of regression models, regression diagnostics and remedial measures, collinearity and ridge regression, normal correlation models, and non-linear least squares, time series including ARIMA models are covered. Practical applications of statistical software packages are emphasized.

BSAD 6313. ANOVA. 3 Hours.
Experimental design and data analysis, especially as related to business and economic research. Topics include completely randomized designs, complete and incomplete blocks, nested designs, estimation and testing of fixed, random and mixed effects, sampling, nonparametric statistics and analysis of variance.

BSAD 6314. MULTIVARIATE STATISTICS. 3 Hours.
Topics include commonly applied multivariate methods such as multiple analysis of variance, factor analytic methods, discriminant analysis, logistic regression, canonical correlations, profile analysis, cluster analysis, and repeated measures. The use available computer packages to conduct data analysis will be stressed.

BSAD 6315. TIME SERIES. 3 Hours.
Univariate and multivariate time series; analysis of economic and financial data; out-of-sample forecasting using computer software. Autoregressive-moving average models, vector autoregression, unit roots, co-integration, ARCH and GARCH.

BSAD 6316. FINANCIAL ECONOMETRICS. 3 Hours.
In-depth study of the econometric tools and techniques used in empirical finance research. Course emphasizes data extraction and analysis of common finance databases, as well as the theoretical basis for current empirical finance techniques and methods.

BSAD 6317. APPLIED BUSINESS & ECONOMICS DATA ANALYSIS I. 3 Hours.
The course develops an understanding of basic statistical and econometric techniques. Participants exploit real data and computational power to uncover patterns/trends and examine relationships. There is a focus on conceptual frameworks and the application of techniques to data sets in various fields. Participants learn how to use statistical packages such as R, SAS, and STATA to apply the tools to real data. Participants will complete an empirical analysis paper. Prerequisite: BSTAT 5325 or consent of instructor.

BSAD 6318. APPLIED BUSINESS AND ECONOMICS DATA ANALYSIS II. 3 Hours.
The course covers cross-section, panel data, and limited dependent variables methods. Topics may include analysis of natural experiments/differences-in-differences, panel data methods, instrumental variable estimation, simultaneous equation models, sample selection corrections, and limited dependent variable and hierarchical models. Participants learn how to use statistical packages such as R and SAS, to apply these methods to data to examine causal relationships. They build an understanding of appropriate methods for different research design. Participants will complete an empirical research paper. Prerequisite: ECON 5336 or BSAD 6317 or consent of the instructor; cross referenced with ECON 5339.

BSAD 6319. BUSINESS & ECONOMIC FORECASTING. 3 Hours.
This applied course provides students the foundation to analyze business, economic, and financial data to develop forecasts using current statistical and computing tools. Emphasis is on methods that allow students to capture trending and seasonal patterns present in the data and other predictable variations hiding in plain sight, including temporal correlation. Once equipped with appropriate models, including ARIMA methods, students learn how to use the extracted information to project into the future. Critical thinking will be strengthened, as students will select an appropriate forecasting model and demonstrate its efficacy against reasonable alternatives. Prerequisite: ECON 5336 or BSAD 6317 or consent of the instructor.

BSAD 6320. CAUSAL INFERENCE FOR BUSINESS DECISIONS. 3 Hours.
Students learn methods to identify and measure the outcomes of business decisions. In particular, students will learn various issues pertaining to the misattribution of causal effects. The course surveys multiple methods to overcome the misidentification problem. Students will engage in empirical analysis. Prerequisite: ECON 5336 or BSAD 6317 and ECON 5339 or BSAD 6318.

BSAD 6321. FOUNDATIONS OF STRUCTURAL EQUATION MODELING. 3 Hours.
The purpose of this course is to provide a foundation into structural equation modeling (SEM) techniques and issues as well as hands-on training with SEM software. Application of basic techniques such as confirmatory factor analysis (CFA), mediation and moderation in SEM, and multi-group analyses will be covered. Students must have taken a graduate course on regression. Prerequisite: Multivariate.

BSAD 6322. MODELING IN BUSINESS RESEARCH. 3 Hours.
A wide range of modeling techniques such as game theory in economics, discrete choice models in marketing and dynamical stochastic models will be discussed. The course focuses on model development to match mathematical framework and features to the underlying research setting and estimation/model selection techniques. Examples drawing from multiple research disciplines will be used to demonstrate relevant techniques and design principles step by step.

BSAD 6323. DATA ANALYTICS SEMINAR. 3 Hours.
The imperative to harness vast amounts of data has spawned a number of tools and techniques that complement traditional statistical approaches. From a research perspective, these tools and techniques afford new ways of collecting and analyzing data. This seminar will introduce students to contemporary data analytic techniques, including social network analysis, text analysis, machine learning and AI, and their applications in research.

BSAD 6330. NONPARAMETRIC STATISTICS. 3 Hours.
A survey of statistical tools which may be used when the normal assumptions of parametric statistics cannot be made; including procedures for categorical data, methods involving ranks, bootstrapping, and Kolmogorov-Smirnov type techniques. Cross listed with BSTAT 5330. Prerequisite: BSTAT 5325 or equivalent.

BSAD 6392. DOCTORAL RESEARCH AND TEACHING COLLOQUIUM. 3 Hours.
Review of the research process and contemporary developments in the methodology and design of empirical research in the major fields of study represented in the doctoral program. Review of teaching methods for effective classroom instruction. May be repeated for credit.

BSAD 6399. DISSERTATION. 3 Hours.

BSAD 6699. DISSERTATION. 6 Hours.

BSAD 6999. DISSERTATION. 9 Hours.

BSAD 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

BSTAT 2305. INTRODUCTORY STATISTICS FOR BUSINESS ANALYTICS. 3 Hours. (TCCN = BUSI 2305)
Guiding business and economic decision-making with the use of descriptive and inferential statistical techniques. Topics include the collection, description and summarization of business and economic data; probability as a foundation of business intelligence; discrete and continuous random variables, their probability and sampling distributions, and their application in business analytics; estimation and confidence intervals for (and tests of hypotheses regarding) the population mean in business settings; and correlation and linear regression analysis as business decision-making tools. Software is used to conduct analyses throughout the course.

BSTAT 3321. INTERMEDIATE STATISTICS FOR BUSINESS ANALYTICS. 3 Hours.
Informing business and economic decision-making with intermediate-level tools of business analytics. Topics can include the quality and representativeness of data; conditional probability; statistical independence; business applications of discrete and continuous probability distributions at the intermediate level; multiple-population inference; non-parametric methods; and intermediate regression analysis. Both spreadsheet and statistical software are used to conduct analyses throughout the course. Prerequisite: MATH 1308 or BSTAT 2305.

BSTAT 3322. ADVANCED STATISTICS FOR BUSINESS ANALYTICS. 3 Hours.
Advanced statistical methods oriented toward predictive analytics and multivariate methods in business settings. Topics can include experimental design; regression cross-validation; logistic regression; classification and regression trees; cluster analysis; factor analysis and multi-dimensional scaling; and time series analysis and forecasting. Prerequisite: BSTAT 3321.

BSTAT 5301. FOUNDATIONS OF ANALYTICS. 3 Hours.
Introduction to statistical learning for business analytics, designed to prepare graduate students to become competent consumers of data analytics and statistical information that they will encounter in their professional and personal lives. Students should be able to perform basic statistical analyses and to think critically when interpreting statistical results. Topics include data visualization, spreadsheet analytics, descriptive statistics, probability, estimations, hypothesis testing, and simple regression.

BSTAT 5303. QUANTITATIVE ANALYSIS. 3 Hours.
Study of the methods of quantitative analysis used in business administration. Topics include matrix algebra, systems of linear equations, differential and integral calculus, linear programming, classical optimization, and a survey of management science models. Prerequisite: MATH 1315.

BSTAT 5325. ADVANCED METHODS FOR ANALYTICS. 3 Hours.
Advanced statistical learning for business analytics designed to prepare graduate students to become competent producers and consumers of predictive analytics and statistical information and to use evidenced based managerial decision making in their careers. They should be able to recognize the strengths and weaknesses of applicable techniques and when additional expertise is required. Topics include multiple regression, correlation, logistic regression, discriminant analysis, clustering, and classification and regression trees. It is strongly recommended that students who have no recent courses in statistics take BSTAT 5301 prior to BSTAT 5325.

BSTAT 5330. Nonparametric Statistics. 3 Hours.
A survey of statistical tools which may be used when the normal assumptions of parametric statistics cannot be made; including procedures for categorical data, methods involving ranks, bootstrapping, and Kolmogorov-Smirnov type techniques. Cross-listed with BSAD 6330. Prerequisite: BSTAT 5325 or equivalent.

BSTAT 5360. COMPUTATIONAL TECHNIQUES FOR BUSINESS ANALYTICS. 3 Hours.
Computer software is the primary analytical tool for business analytics and modern research methods. Data analysts, statisticians, and researchers need technologies and skills using the computer as a tool for structuring and cleaning data sets, creating validation samples, conducting analyses, fitting models, simulating stochastic systems, model validation, and model presentation. Emphasis is placed on the use of data analytic software. Cross-listed with INSY 5360. Prerequisite: BSTAT 5325 or equivalent.

BSTAT 5392. SELECTED TOPICS IN BUSINESS STATISTICS. 3 Hours.
In-depth study of selected topics in business statistics. May be repeated when topics vary.

BSTAT 5399. GRADUATE BUSINESS ANALYTICS INTERNSHIP. 3 Hours.
Practical training in business statistics. Analysis of theory applied to real life situations. Course counts as an elective and has a pass/fail grade. No credit will be given for previous experience or activities.

BSTAT 6382. INDEPENDENT STUDIES IN BUSINESS STATISTICS. 3 Hours.
Extensive analysis of a business statistics topic.

COURSES

BUSA 2211. BUSINESS DATA LITERACY AND VISUALIZATION. 2 Hours.
This course is designed to introduce business data literacy and business data visualization. The course will cover data fundamentals including both the principles and techniques needed to effectively validate business data, draw insights from business data, and communicate the results. Students will learn the value of visualizations, specific techniques in visualization, and how to best leverage visualization methods to tell engaging business data stories.

BUSA 4344. SAS TOOLS FOR BUSINESS AND ECONOMICS. 3 Hours.
SAS is used by many businesses to generate analysis and reports they rely on to make good decisions. This course teaches students the skills needed to use SAS to clean data, visualize data, conduct basic business and economic analysis, and present that information in business-friendly reports using the tools in SAS for effective communication. Prerequisite: BSTAT 3321.

BUSA 4345. R FOR BUSINESS AND ECONOMIC ANALYSIS. 3 Hours.
This course teaches students how to analyze, visualize, and summarize data analysis using R. It covers the preliminaries of coding, data cleaning and visualization, and report writing using RStudios markdown package. Students will then use the techniques learned in the course to write a modern, data analysis report using contemporary business or economic data. Prerequisite: BSTAT 3321.

BUSA 5322. DATA ANALYTICS WITH PYTHON AND MACHINE LEARNING. 3 Hours.
This course uses Python to give students hands-on experience with web scraping and machine learning. Web scraping gives students the ability to collect data from webpages that would be difficult to acquire otherwise. Machine learning techniques covered in this class include linear regression and classification, trees and tree-based methods such as random forests, neural networks, support vector machines, clustering, and dimension reduction methods. This class will help students learn to use Python in a professional context, and students will add supervised and unsupervised machine learning techniques to their economic analysis toolkit. Prerequisite: ECON 5336 or BSTAT 5325 or consent of instructor.

BUSA 5344. SAS TOOLS FOR BUSINESS AND ECONOMICS. 3 Hours.
SAS is used by many businesses to generate analysis and reports they rely on to make good decisions. This course teaches students the skills needed to use SAS to clean data, visualize data, conduct basic business and economic analysis, and present that information in business-friendly reports using the tools in SAS for effective communication. Prerequisite: BSTAT 3321.

BUSA 5345. R FOR BUSINESS AND ECONOMIC ANALYSIS. 3 Hours.
This course teaches students how to analyze, visualize, and summarize data analysis using R. It covers the preliminaries of coding, data cleaning and visualization, and report writing using RStudios markdown package. Students will use the techniques learned in the course to write a modern, data analysis report using contemporary business or economic data. Prerequisite: BSTAT 3321.

COURSES

CE 1000. FRESHMAN UNDERGRADUATE RESEARCH. 0 Hours.
Freshman level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CE 1105. INTRODUCTION TO CIVIL ENGINEERING. 1 Hour.
Introduction to basic civil engineering practice. There are several writing assignments and an oral presentation. Use of spreadsheet and word processor software in solving civil engineering problems and presenting solutions. Professional engineering licensure and the various specializations within civil engineering are covered.

CE 1252. COMPUTER TOOLS - AUTOCAD. 2 Hours.
Introduction to computer aided design, using AutoCAD. Creation of precise two-and/or three- dimensional engineering drawings and solid models. Prerequisite: Grade of C or better in MATH 1302.

CE 1353. INTRODUCTION TO COMPUTER AIDED DESIGN TOOLS IN CIVIL ENGINEERING. 3 Hours.
An introduction to computer aided design using AutoCAD interface built in Civil 3D. Students will be taught CAD commands, tools, 2D drawing objects, multi-view drawing, layer management, linetypes, object snap, polar tracking, and annotation. Civil 3D concepts and essential functions for creating, designing, and analyzing civil engineering drawings will be covered. Prerequisite: Grade of C or better in MATH 1421 (or concurrent enrollment) or MATH 1426 (or concurrent enrollment).

CE 2000. SOPHOMORE UNDERGRADUATE RESEARCH. 0 Hours.
Sophomore level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CE 2152. COMPUTER TOOLS - MATHCAD. 1 Hour.
Introduction to computer aided mathematics, using Mathcad. Solution of engineering problems involving systems of simultaneous linear and nonlinear equations and elementary calculus, use of the tools for visualization. Prerequisite: Grade of C or better in PHYS 1443.

CE 2153. COMPUTER TOOLS - CIVIL 3D. 1 Hour.
Introduction to civil engineering construction documentation and building information modeling (BIM) using AutoCAD Civil 3D. Prerequisite: Grade of C or better in CE 1252.

CE 2191. PROBLEMS IN CIVIL ENGINEERING. 1 Hour.
Selected problems in civil engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: permission of the chair of the department and sophomore classification in civil engineering.

CE 2221. DYNAMICS. 2 Hours.
Planar and spatial kinematics and kinetics of particles and rigid bodies utilizing Newton's Laws of Motion, the principle of work and energy, and the principle of impulse and momentum; introduction to single degree of freedom vibration. Prerequisite: Grade of C or better in CE 2311; grade of C or better in MATH 2425.

CE 2291. PROBLEMS IN CIVIL ENGINEERING. 2 Hours.
Selected problems in civil engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: permission of the chair of the department and sophomore classification in civil engineering.

CE 2311. STATICS. 3 Hours.
Vector algebra; composition and resolution of forces; equivalence of force couple systems; equilibrium of force systems acting on particles, and force - couple systems acting on rigid bodies, and systems of rigid bodies; internal forces in rigid bodies; shear and moment diagrams; centroids and moments of inertia; frictional forces. Prerequisite: Grade of C or better in PHYS 1443.

CE 2312. STATICS AND DYNAMICS FOR NON-CE MAJORS. 3 Hours.
Principles of forces and force systems, resultants and components of force systems, forces due to friction, condition of equilibrium, forces acting on members of trusses and frame structures, centroids and moments of inertia, review of kinematics and kinetics of particle motion, and two-dimensional motion of rigid bodies. CE 2312 cannot be substituted for CE 2221 and CE 2311. Prerequisite: PHYS 1443 and MATH 2425 or concurrent enrollment.

CE 2313. MECHANICS OF MATERIALS I. 3 Hours.
Concepts of stress and strain; stress-strain relationships. Behavior of members subjected to tension, compression, shear, bending, torsion, and combined loading. Deflections and elastic curves, shear and bending moment diagrams for beams, and column theory. Prerequisite: Grade of C or better in CE 2311; Grade of C or better in MATH 2425.

CE 2331. ENGINEERING MEASUREMENT AND COMPUTER MODELING. 3 Hours.
Principles and theories of physical measurements of spatial quantities; the use of surveying instruments; introduction to engineering using computer modeling programs; and organization and programming for computer solutions. Prerequisite: Grade of C or better in CE 2153.

CE 2391. PROBLEMS IN CIVIL ENGINEERING. 3 Hours.
Selected problems in civil engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the chair of the department.

CE 3000. JUNIOR UNDERGRADUATE RESEARCH. 0 Hours.
Junior level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CE 3131. ENVIRONMENTAL ANALYSIS. 1 Hour.
Laboratory examinations of water, wastewater, and air. Water and air quality parameters and their significance. Sources and types of pollutants and their effects. Prerequisite: Concurrent enrollment in CE 3334 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3142. APPLIED FLUID MECHANICS LAB. 1 Hour.
Fluid flow measurements studied by means of performed laboratory experiments and/or digital computer programming of relevant equations. Prerequisite: Concurrent enrollment in CE 3305 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3143. PROPERTIES AND BEHAVIOR OF SOILS. 1 Hour.
An introduction to determination of civil engineering properties of soil and their behavior, identification, grain size analysis, Atterberg limits, compaction, permeability, consolidation, and shear strength. Also an introduction to sampling of soil materials. Prerequisite: Concurrent enrollment in CE 3343 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3210. CIVIL ENGINEERING COMMUNICATIONS. 2 Hours.
Technical writing, oral communication, professional presentations, and other related topics. Prerequisite: Grade of C or better in COMS 2302 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3253. APPLICATIONS OF COMPUTER-BASED DESIGN PROGRAMS IN CIVIL ENGINEERING. 2 Hours.
Applications of computer-based design programs including AutoCAD Civil 3D in civil engineering projects. Prerequisite: Grade of C or better in CE 2153 and CE 2331, and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3300. INTRODUCTION TO SUSTAINABLE ENGINEERING. 3 Hours.
Introduction to key sustainability concepts and challenges. The engineering design process and consideration of sustainability. Techniques for generating creative and innovative alternative solutions to sustainability problems. Use of life cycle assessment to quantify environmental, economic, and social impacts of various alternatives. Methods to incorporate life cycle assessment into alternatives evaluation. Case study project. Prerequisite: Admission to an Engineering Professional Program or Junior Level Standing.

CE 3301. STOCHASTIC MODELS FOR CIVIL ENGINEERING. 3 Hours.
Basic theory of probability and statistics with practical applications to civil and environmental engineering problems. Emphasis on sampling, distribution functions, tests of significance, and regression modeling. Prerequisite: Grade of C or better in MATH 2425; Permission of the CE Chair or Admission to the CE Professional Program.

CE 3302. TRANSPORTATION ENGINEERING. 3 Hours.
Planning, design, and operation of transportation facilities. Characteristics of vehicle movement; basic geometric design of highways; traffic flow relations in traffic streams; highway capacity; traffic engineering; and procedures for transportation planning. Prerequisite: Grade of C or better in CE 2331; and Grade of C or better in either CE 3301 or IE 3301 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3305. BASIC FLUID MECHANICS. 3 Hours.
Fundamentals of fluid statics, kinematics of fluid flow, fluid energy, fluid forces, similitude, and dimensional analysis. Related to steady flow of incompressible fluids in confined and free surface systems. Prerequisite: Grade of C or better in CE 2311; Grade of C or better in MATH 3319 or concurrent enrollment; Permission of the CE Chair or Admission to the CE Professional Program.

CE 3311. CONSTRUCTION ENGINEERING. 3 Hours.
Principles of construction engineering and the project management process, value engineering, specifications, different construction contracts and delivery methods, estimating and scheduling fundamentals and project control, and management of construction process. Prerequisite: Grade of C or better in IE 2308 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3334. PRINCIPLES OF ENVIRONMENTAL ENGINEERING. 3 Hours.
Physical, chemical, and biological unit operations and processes in an air, water, and land environment. Prerequisites: Grade of C or better in CHEM 1465 or CHEM 1442; Grade of C or better in CE 3305; concurrent enrollment in CE 3131 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3341. STRUCTURAL ANALYSIS. 3 Hours.
Structural analysis/design process, structural forms, and basic structural elements. Analysis of statically determinate structures including beams, trusses, frames, and composite structures, shear and moment diagrams, influence lines, and moving loads. Methods to compute deflections including double integration, moment area, and virtual work. Methods of analysis for statically indeterminate structures including consistent deformation, slope deflection and moment distribution. Use of structural analysis programs. Prerequisite: Grade of C or better in CE 2313 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3342. WATER RESOURCES ENGINEERING. 3 Hours.
Hydrologic cycle, precipitation, evapotranspiration, water budget, rainfall-runoff, hydrograph, reservoir and streamflow routing, groundwater flow, catchment hydrology, probability concepts in design, hydrologic modeling, open channel and pipe network hydraulics, pumps, urban stormwater drainage. Prerequisite: Grade of C or better in CE 3301; grade of C or better in CE 3305; concurrent enrollment in CE 3142 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3343. SOIL MECHANICS. 3 Hours.
An introduction to the significant geophysical and soil science properties and behavior of materials making up the earth's crust as they apply to civil engineering, sources of materials, classification, plasticity, permeability, stress distribution, consolidation, shear strength, and settlement. Also an introduction to basic foundation engineering concepts. Prerequisite: Grade of C or better in CE 2313; concurrent enrollment in CE 3143 and Permission of the CE Chair or Admission to the CE Professional Program.

CE 3361. PROPERTIES & BEHAVIOR OF CIVIL ENGINEERING MATERIALS. 3 Hours.
The nature and properties of materials used in civil engineering such as structural metals, concrete, timber, and bituminous materials. The engineering application and performance of materials are emphasized. Laboratory experimentation is also used to investigate properties and behavior of civil engineering materials. Prerequisite: Grade of C or better in CE 2313; Grade of C or better in CE 3143; Permission of the CE Chair or Admission to the CE Professional Program.

CE 4000. SENIOR UNDERGRADUATE RESEARCH. 0 Hours.
Senior level undergraduate research. Prerequisite: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CE 4191. PROBLEMS IN CIVIL ENGINEERING. 1 Hour.
Selected problems in civil engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: permission of the chair of the department and sophomore standing in civil engineering.

CE 4291. PROBLEMS IN CIVIL ENGINEERING. 2 Hours.
Selected problems in civil engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: permission of the department chairperson and sophomore standing in civil engineering.

CE 4300. ADVANCED TOPICS IN CIVIL ENGINEERING. 3 Hours.
Advanced topics of current interest in any one of the various fields of civil engineering. The subject title to be listed in the class schedule. May be repeated for credit when topic changes. Prerequisite: changes with topic; consent of instructor required and Admission to the CE Professional Program.

CE 4301. ADVANCED TOPICS IN CIVIL ENGINEERING WITH LAB. 3 Hours.
Advanced topics of current interest in any one of the various fields of civil engineering. The subject title to be listed in the class schedule. May be repeated for credit when topic changes. Prerequisite: Changes with topic; Consent of instructor required and Admission to the CE Professional Program.

CE 4302. ADVANCED CONCRETE MATERIALS. 3 Hours.
Providing a practical understanding of design and characterization of advanced concrete materials, this course is intended for graduate and senior undergraduate students who want to advance their knowledge in new concepts of materials in construction. Topics include the study of properties at the nanoscale and how they affect the material's properties at the macro level. Lectures will focus on the advances in the design and technology of cement based materials, with particular emphasis on the evolution of nanotechnology in construction. Prerequisite: Grade of C or better in CE 3361 and admission to the CE Professional Program.

CE 4303. CONSTRUCTION PROJECT ADMINISTRATION. 3 Hours.
Topics in construction management and project administration, such as project delivery system, documentation and specification, electronic project administration, construction safety, risk allocation and liability sharing, changes and extra work, claims and disputes, and project closeout. Credit not granted for CE 4303 and CE 5342. Prerequisite: Grade of C or better in CE 3311 and admission to the CE Professional Program.

CE 4304. CONSTRUCTION CONTRACTS, SPECIFICATIONS, & ADMINISTRATION. 3 Hours.
Types of construction contracts, contractual relationship between general contractor and owner, contractual relationship between general contractor and subcontractors, legal issues in construction administration, insurance, and concepts in value engineering. Reading and evaluating specifications, CSI Master Format. Credit not granted for both CE 4304 and CE 5378. Prerequisite: Grade of C or better in CE 3311 and admission to the CE Professional Program.

CE 4305. TRENCHLESS TECHNOLOGY METHODS. 3 Hours.
Pipeline and utility design, construction and renewal. Topics include pipeline infrastructure structural considerations, planning and construction considerations, pipe materials, and trenchless technologies. Prerequisite: Grade of C or better in CE 3311 and admission to the CE Professional Program.

CE 4306. INFRASTRUCTURE ASSET MANAGEMENT. 3 Hours.
Infrastructure inventory, inspection, and life cycle costs. Topics include pipeline deterioration parameters, asset management technologies, risk assessment, government regulations and case studies. Prerequisite: Grade of C or better in CE 3311 and admission to the CE Professional Program.

CE 4307. CONSTRUCTION SUSTAINABILITY. 3 Hours.
Types of construction contracts, contractual relationship between general contractor and owner, contractual relationship between general contractor and subcontractors, legal issues in construction administration, insurance, and concepts in value engineering. Reading and evaluating specifications, CSI Master Format. Credit not granted for both CE 4307 and CE 5382. Prerequisite: Grade of C or better in CE 3311 and admission to the CE Professional Program.

CE 4308. TEMPORARY STRUCTURES. 3 Hours.
Analysis and design of temporary structures. Topics include loads on temporary structures, shoring, formwork, falsework, scaffolding, bracing, soldier beam and lagging, sheet piling, equipment bridges, and support of existing structures. Prerequisite: Grade of C or better in CE 3341 and CE 3343; Admission to the CE Professional Program.

CE 4309. ADVANCED MATERIALS MECHANICAL TESTING AND CHARACTERIZATION. 3 Hours.
Providing comprehensive understanding of the mechanical property characterization of advanced materials and composites, this course is intended for senior undergraduate and graduate students who want to improve their knowledge in new applications of materials in engineering concepts. Topics include the study and examination of the principles, procedures, and applications of experimental methods for characterizing the deformation and failure behavior of materials at the nano-, micro- and macro- scale. The course consists of lectures and lab sessions. Lectures will focus on an in-depth analysis of the failure of advanced materials with linear/elastic and non-linear behavior, e.g., concrete, engineering metals and alloys, polymers, and advanced ceramics. Laboratory sessions provide hands-on experience on advanced methods for tensile, compression, bending, torsion, multiaxial, indentation, fracture, fatigue, creep, high strain rate and nondestructive testing and evaluation using standards/codes. The course features special sessions focusing on the unique aspects associated with the mechanical property characterization and simulation of advanced composite and nanocomposite materials. Prerequisite: Grade of C or better in CE 3361 and admission to the CE Professional Program.

CE 4310. SYSTEM EVALUATION IN CIVIL ENGINEERING. 3 Hours.
Techniques necessary to perform economic and multi-criteria evaluations of civil engineering projects. These will be used to assess the strengths and weaknesses of different decision-making strategies and analyze contemporary topics and case studies in making civil engineering decisions. Prerequisite: Grade of C or better in IE 2308; Grade of C or better in CE 3301.

CE 4311. URBAN TRANSPORTATION INFRASTRUCTURE PLANNING. 3 Hours.
Urban transportation system design, planning, transportation modeling, economic theory, travel demand and travel estimation techniques. Prerequisite: Grade of C or better in CE 3302 and Admission to the CE Professional Program.

CE 4312. STREET AND HIGHWAY DESIGN. 3 Hours.
The geometric design concepts for urban and rural roadways. Consideration of vehicle and road user characteristics in roadway design, including horizontal and vertical alignments, intersections, interchanges, and roadway cross-section and right-of-way considerations. Prerequisite: Grade of C or better in CE 3302 and Admission to the CE Professional Program.

CE 4313. TRAFFIC ENGINEERING. 3 Hours.
Design and control of fixed-time, actuated, and computer-controlled traffic signals; optimization of traffic flow at intersections; capacity analysis of intersections, legal requirements and traffic studies for installation of traffic control devices; characteristics of signs, signals, and markings; traffic laws. Prerequisite: Grade of C or better in CE 3302 and Admission to the CE Professional Program.

CE 4314. INTRODUCTION TO RAILROAD ENGINEERING. 3 Hours.
Overview of the railroad industry in the United States; structure of track, base, and foundation; drainage, railroad structures (bridges and retaining walls); geometric design; communications and signaling; maintenance. Credit not granted for both CE 4314 and CE 5334. Prerequisite: Grade of C or better in CE 3302 and Admission to the CE Professional Program.

CE 4318. MACHINE LEARNING IN CIVIL ENGINEERING. 3 Hours.
Machine learning is transforming the way we approach problems across all fields of civil and environmental engineering. This course is designed for students across various concentrations to offer a broad perspective on how data science and machine learning can reshape the future of Civil and Environmental engineering. You will learn how machine learning techniques can be applied to analyze and improve a wide range of engineering systems-from smart buildings and geotechnical infrastructure to water resources and transportation networks. Whether working with big data, such as GPS tracking data for traffic flow, satellite images for environmental monitoring, and IoT sensor data in buildings, or small data, such as soil properties for construction site assessment and water distribution system restoration after disasters, machine learning can uncover patterns and insights to improve efficiency, reliability, and resilience of the components or systems. Students will learn how to select and build models for regression, classification, and clustering, and apply them to tackle real-world challenges across various engineering disciplines. Through case studies and practical exercises in Python and Jupyter Notebooks, you will also gain valuable skills in exploratory data analysis, machine learning model construction and validation, and result visualization. Credit not granted for both AREN 4318 and CE 4318. Prerequisite: Grade of A or better in CE 3301 or consent of instructor and admission to the CE Professional Program.

CE 4319. CIVIL ENGINEERING INFORMATICS. 3 Hours.
The course introduces students to computer tools, software systems, and AI/machine learning models for collection, analysis, visualization, and interpretation of civil engineering (CE) data. Students will learn Python programming, and importantly their use in cloud computing systems using state of the science, industry-standard platforms from Microsoft and Google. Students will explore wide-ranging data from all CE disciplines. Topics will generally include: (i) creating automated workflows for collecting data from public sources, (ii) working with databases, (iii) understanding data and metadata file formats and standards, (iv) statistical analysis, (v) time-series and spatial analysis, (vi) integration of various data, (vii) basic machine learning models, (viii) interactive data visualizations, and (ix) running programs and tools in cloud computing systems. Prerequisite: Grade of B or better in CE 3301 and admission to the CE Professional Program.

CE 4320. EARTH STRUCTURES DESIGN. 3 Hours.
Study of the states of stress and analysis/design techniques associated with cuts, fills, and retaining structures. Includes slope stability, conventional and reinforced earth retaining walls, excavation bracing, and sheet pile wharf structures. Prerequisite: Grade of C or better in CE 3343 and Admission to the CE Professional Program.

CE 4321. FOUNDATION ENGINEERING. 3 Hours.
Aspects of design and construction considerations for all types of foundation systems in most soil/rock support conditions, interactions between soils and structures, bearing capacity theories, consolidation, shrink-swell, and settlement. Numerical analyses of design are applied to most of the situations. Prerequisite: Grade of C or better in both CE 3341 and CE 3343 and Admission to the CE Professional Program.

CE 4322. APPLICATIONS WITH GEOSYNTHETICS. 3 Hours.
Definitions and properties of geotextiles, geogrids, geonets, geocomposites and geomembranes; reinforcement design applications in rigid and flexible pavements, foundations, embankments, slopes and retaining walls; drainage and filtration application designs, AASHTO design criteria; construction methods. Prerequisite: Grade of C or better in CE 3343 and Admission to the CE Professional Program.

CE 4323. LANDFILL DESIGN. 3 Hours.
Introduction and types of landfills, landfill site selection, siting and configuration, compacted and geosynthetic clay liners, final cover design, landfill settlement and slope stability, post closure uses of landfills, leachate and gas generation, collection and removal system, bioreactor landfills and future trends. Prerequisite: Grade of C or better in CE 3343 and Admission to the CE Professional Program.

CE 4324. MECHANICS OF MATERIALS II. 3 Hours.
Theories of stress and deformation, stress-strain tensors, stress and strain relationships, stresses due to various loading conditions, theories of failure, energy methods, shear-center, unsymmetrical bending, curved beams, torsion in closed and open cell cross-sections and buckling analysis. Prerequisite: Grade of C or better in CE 2313 and Admission to the CE Professional Program.

CE 4325. FUNDAMENTALS OF FINITE ELEMENT METHOD. 3 Hours.
Stiffness method using basic equations and virtual work; element equations using shape functions for axial, beam, frame, two dimensional elements; stiffness methods for three dimensional structures. Flexibility method; finite elements modeling and optimization of idealized structures. Prerequisite: Grade of C or better in CE 3341 and Admission to the CE Professional Program.

CE 4326. GIS/HYDROLOGIC AND HYDRAULIC MODELING. 3 Hours.
Use of Geographic Information Systems (GIS) and design of GIS-developed hydrologic/hydraulic models commonly applied in the water resources field. The course will have three main areas of emphasis including: principles and operations of ArcGIS, design and implementation of standard hydrologic and hydraulic models, and the linkage of these models to engineering analysis of current water resources problems including flooding, water quality and water supply. Prerequisite: Grade of C or better in CE 3342 and Admission to the CE Professional Program.

CE 4327. SITE REMEDIATION ENGINEERING. 3 Hours.
This course provides practical understanding of the engineering principles and practices associated with the characterization and remediation of contaminated sites. Methods for site characterization and risk assessment will be highlighted while the emphasis will be on remedial action screening processes and technology principles and conceptual design. In-situ and ex-situ treatment processes will be covered, including unit operations, coupled processes, and complete systems within the context of community implementation. Case studies with focus on developing communities will be used and computerized tools for process selection and design will be presented. Prerequisite: Grade of C or better in CE 3334 and Admission to the CE Professional Program.

CE 4328. WATER SYSTEM DESIGN. 3 Hours.
Hydraulic/hydrologic analysis and design of municipal water distribution, stormwater collection, and wastewater collection systems. Prerequisite: Grade of C or better in CE 3342 and Admission to the CE Professional Program.

CE 4330. HYDRAULIC DESIGN. 3 Hours.
Design methods for appurtenances of water conveyance systems under open channel and pressure flow conditions. Prerequisite: Grade of C or better in CE 3342 and Admission to the CE Professional Program.

CE 4332. CONSTRUCTION EQUIPMENT, METHODS, & MANAGEMENT. 3 Hours.
Introduction to the construction industry and the methods, equipment, and management techniques used. Topics include equipment operating characteristics, underground construction, job site safety, and field management. Credit not granted for both CE 4332 and CE 5344. Prerequisite: Grade of C or better in CE 3311 and Admission to the CE Professional Program.

CE 4334. DRONES & ADVANCED CONSTRUCTION TECHNOLOGY. 3 Hours.
A practical course for technologies and their applications used on construction job sites. Topics include drones (also known as sUAS, or small unmanned aircraft systems), robotics, extended reality, artificial intelligence, blockchain, wearables, etc. Practical sessions are included to train students to operate drones for various construction applications. Credit not granted for both CE 4334 and AREN 4334. Prerequisite: Grade of C or better in CE 2331; Grade of C or better in CE 3311; Admission to the CE Professional Program.

CE 4335. GEOTECHNICAL ASPECTS OF CONSTRUCTION. 3 Hours.
Review of engineering geology and soil mechanics; interpretation of geotechnical reports; site preparation; ground improvement; excavation including supports and dewatering; foundations including consideration of deep foundations and expansive soils; tunneling in soils and rock. Prerequisite: Grade of C or better in CE 3343 and admission to the CE Professional Program.

CE 4336. HOT MIX ASPHALT DESIGN & CONSTRUCTION. 3 Hours.
An in-depth study of the properties of constituent materials for asphalt concrete mixtures. Design methods for Hot-Mixes Asphalt (HMA) and Stone Matrix Asphalt (SMA). Theory and practice of asphalt concrete mix for pavements, including specifications and construction methods for hot-mix asphalt and surface treatments. Maintenance and rehabilitation of flexible pavements. Relationships of material engineering properties to pavement design and performance. Prerequisites: Grade of C or better in CE 3361 and Admission to the CE Professional Program.

CE 4337. PORTLAND CEMENT CONCRETE PAVEMENTS. 3 Hours.
Portland cement concrete mix design and production. Paving operations. Saw and seal operations. Subgrade preparation. Base selection. Drainage selection, design and construction. Bonded and unbonded concrete overlays. Whitetopping and Ultra-Thin Whitetopping. Concrete pavement restoration; Quality Assurance and Quality Control in Concrete Pavement Construction. Prerequisite: Grade of C or better in CE 3361 and Admission to the CE Professional Program.

CE 4347. REINFORCED CONCRETE DESIGN. 3 Hours.
An analysis, design and synthesis course for concrete structures, emphasizing strength design method. Topics include strength and serviceability requirements, design of one way slabs, rectangular beams, flanged sections and columns, for strength, shear, bond, bearing, and serviceability. Building codes, American Concrete Institute (ACI) specifications, material specifications, test methods, and recommended practice documents are involved. Prerequisite: Grade of C or better in CE 3341 and admission to the CE Professional Program.

CE 4348. STRUCTURAL DESIGN IN STEEL. 3 Hours.
A design synthesis course for structural steel structures using Allowable Strength Design and Load Resistance Factor Design. Topics include tension members, compression members, flexural members and simple connections. Building codes, American Institute of Steel Construction (AISC) specs, material specs, test methods, and recommended practice documents. Prerequisite: Grade of C or better in CE 3341 and Admission to the CE Professional Program.

CE 4350. INTRODUCTION TO AIR POLLUTION. 3 Hours.
An introduction to the air pollution field, including: pollutant types, sources, effects; atmosphere and basic calculations; emission estimates; Clean Air Act; dispersion modeling; air pollution reduction strategies. Prerequisite: Grade of C or better in CE 3334 and Admission to the CE Professional Program.

CE 4351. PHYSICAL UNIT PROCESSES. 3 Hours.
Principles of unit process modeling using reactor and kinetic theory, and theory and design of mixing, mass transfer, flocculation, sedimentation, filtration, and gas transfer. Prerequisite: Grade of C or better in both CE 3131 and CE 3334 and Admission to the CE Professional Program.

CE 4352. PROFESSIONAL PRACTICE. 3 Hours.
Professional practice issues in the private and public sector are addressed by visiting practitioners. Topics include project management, teamwork, obtaining work, regulatory requirements, specifications, issues in design/build, design alternatives, cost estimation, design and construction drawings, contract and construction law, legal issues, ethics and professionalism, design reports, licensure, lifelong learning, ethical and engineering practice organizations. Learning principles of engineering practice by working as a team is emphasized. Oral and written presentations are required. Prerequisites: Grade of C or better in CE 3210 and CE 3311 and Admission to the CE Professional Program.

CE 4353. WATER CHEMISTRY. 3 Hours.
Principles of water chemistry applied to the theory and design of unit processes including coagulation, precipitation, corrosion, oxidation-reduction, and membrane processes. Prerequisites: Grade of C or better in both CE 3334 and CE 3131 and Admission to the CE Professional Program.

CE 4354. INTRODUCTION TO SOLID WASTE ENGINEERING. 3 Hours.
This course provides an overview of the various aspects of integrated municipal solid waste management (with the exception of landfilling, covered in CE 4323). Topics covered include waste generation, characterization, and collection; source reduction; waste processing; design of facilities for materials recovery (recycling centers) and energy recovery (combustors and anaerobic digesters); life cycle analysis of solid waste management facilities; case study project. Prerequisite: Grade of C or better in CE 3334 and Admission to the CE Professional Program.

CE 4355. DESIGN OF WATER AND WASTEWATER TREATMENT FACILITIES. 3 Hours.
Design of facilities commonly used in water and wastewater treatment plants including pumps, pipelines, channels, flow measurement and control devices, screens, grit removal, mixing, sludge removal, aeration equipment, and chemical feed and storage. Materials of construction, process control interface, and operation and maintenance factors are also discussed. Prerequisite: Grade of C or better in both CE 3334 and CE 3142 and Admission to the CE Professional Program.

CE 4356. ADVANCED STEEL DESIGN. 3 Hours.
Covers torsional design of beams, beams with web holes, composite design of beams, lateral-torsional buckling of beams, plate buckling, column design and behavior, frame stability, bracing requirements for compression members. Prerequisite: CE 4348 and Admission to the CE Professional Program.

CE 4357. INTRODUCTION TO BIOLOGICAL WASTEWATER TREATMENT SYSTEMS. 3 Hours.
Basic understanding of biological processes used in water quality control and to show how theoretical concepts can be applied in a practical design. The course will include a discussion of the theory, design, and operation of biological systems used for water and wastewater treatment. Credit is not granted for both CE 4357 and CE 5325. Prerequisite: Grade of C or better in CE 3334 and CE 3131; Admission to the CE Professional Program.

CE 4358. OPEN CONDUIT SYSTEM. 3 Hours.
Non-pressure conduit and channel flow, surface profiles, steady and gradually varied flow, hydraulic jumps, and specific energy. Prerequisite: Grade of C or better in CE 3342 and Admission to the CE Professional Program.

CE 4360. DESIGN OF STRUCTURAL MASONRY. 3 Hours.
Covers masonry unit types and mortar types, reinforcing and connections. Design of beams, columns, pilasters, and walls. Structural behavior and construction practices. Includes plain and reinforced masonry. Building Codes, Masonry Standards Joint Committee (MSJC) specifications, material specifications, test methods, and recommended practice documents. Prerequisite: Grade of C or better in CE 3341 and Admission to the CE Professional Program.

CE 4361. ADVANCED REINFORCED CONCRETE DESIGN. 3 Hours.
Advanced topics on structural design of concrete structures. Topics include slender columns, shear walls, torsion, deep beams, brackets, retaining walls, strut and tie model for shear torsion, two-way slabs, and shear friction. Building codes, American Concrete Institute (ACI) specifications, material specifications, test methods, and recommended practice documents are involved. Prerequisite: Grade of C or better in CE 4347 and Admission to the CE Professional Program.

CE 4363. FUNDAMENTALS OF PRESTRESSED CONCRETE. 3 Hours.
Introduction to pre-tensioned concrete structures, bonded and unbonded constructions, hardware, stress calculations, section proportioning, flexural design, shear design, prestress losses, deflections, allowable stress, ultimate strength, analysis and design of composite beams, design of prestressed concrete bridges. Both American Concrete Institute (ACI 318 and ACI 319) and American Association of State Highway and Transportation Officials Load and Resistance Factor Design (AASHTO LRFD) provisions will be discussed. Prerequisite: Grade of C or better in CE 4347 and Admission to the CE Professional Program.

CE 4365. STRUCTURAL WOOD DESIGN. 3 Hours.
Covers material grade and properties of wood, design criteria using structural lumber, glue laminated lumber and structural panels. Design of bending and compression members, trusses and diaphragms. Building codes, National Design Specification for Wood Construction (NDS) specifications, material specifications, test methods, and recommended practice documents. Prerequisite: Grade of C or better in CE 3341 and Admission to the CE Professional Program.

CE 4366. FUNDAMENTALS OF FIBER REINFORCED COMPOSITES. 3 Hours.
Introduction to basic analysis, design and manufacture of composite materials for engineered structures. Fiber materials, tapes, cloths, resin system, elastic constants, matrix formulation, theory of failure. The course will also cover an introduction to design with composites, preliminary design, optimization, processing variables, product design. Prerequisite: Grade of C or better in CE 3341 and Admission to the CE Professional Program.

CE 4368. ADVANCED STRUCTURAL ANALYSIS. 3 Hours.
Advanced analysis of indeterminate beams, frames, trusses, arches, and cables. Credit will not be granted for both CE 5351 and CE 4368. Prerequisite: Grade of C or better in CE 3341 and Admission to the CE Professional Program.

CE 4369. LOADS ON STRUCTURES. 3 Hours.
Structural analysis of structures under gravity and lateral loads, emphasizing the logical reasoning process of analysis, synthesis and design. Use of recommended practice documents and commercial structural and mathematical software will assist in providing insight and understanding of load requirements, structural behavior and analysis tools. Prerequisite: Grade of C or better in CE 3341 and Admission to the CE Professional Program.

CE 4383. SENIOR PROJECT. 3 Hours.
Planning, analysis of alternatives, and designs of selected projects that cross various civil engineering disciplines, and include engineering standards and multiple realistic constraints. Application of computer-aided engineering in analysis and design. A final oral presentation and written report that presents pros and cons of alternative solutions, application of engineering standards and multiple realistic constraints are required. A team approach is emphasized. Prerequisite: Grade of C or better in CE 4352; Grade of C or better in CE 4328 or CE 4347; Completion of all required 3000 level courses and Admission to the CE Professional Program.

CE 4391. PROBLEMS IN CIVIL ENGINEERING. 3 Hours.
Selected problems in civil engineering on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the chair of the department.

CE 4393. INDUSTRIAL INTERNSHIP. 3 Hours.
Student to experience industrial internship under supervision of an industrial mentor and internship committee. May not be repeated for credit. Credit not granted for both CE 4393 and CE 4394. Prerequisite: Grade of C or better in CE 3341; Grade of C or better in CE 3342; Admission to the CE Professional Program.

CE 4394. RESEARCH INTERNSHIP. 3 Hours.
Student to experience research internship under supervision of a CE faculty. May not be repeated for credit. Credit not granted for both CE 4393 and CE 4394. Prerequisite: Grade of C or better in CE 3341; Grade of C or better in CE 3342; Admission to the CE Professional Program.

CE 4395. SUSTAINABLE ENGINEERING DESIGN PROJECT. 3 Hours.
Following the engineering design process, students will brainstorm, evaluate, and select among engineering alternatives. Students will evaluate the alternatives based on sustainability criteria, including environmental, economic, and social impacts. Life cycle assessment will be used to quantify environmental and economic impacts of the design alternatives. Students will use a decision-making matrix in selecting among alternatives. Prerequisite: Grade of C or better in CE 3300, Grade of C or better in Societal Context Elective, ECON 2305 or IE 2308 (or concurrent enrollment), Grade of C or better in 6 credit hours of Sustainable Engineering Electives (or concurrent enrollment).

CE 5191. ADVANCED STUDIES IN CIVIL ENGINEERING. 1 Hour.
Individual studies of advanced topics under the supervision of a professor or professors. Prerequisite: consent of instructor.

CE 5300. TOPICS IN CIVIL ENGINEERING. 3 Hours.
Topics of current interest in the field of civil engineering. The subject title is listed in the class schedule and in the student's record. Topics vary. May be repeated for credit when topic changes. Prerequisite: consent of instructor.

CE 5301. TOPICS IN CIVIL ENGINEERING WITH LAB. 3 Hours.
Topics of current interest in the field of civil engineering. The subject title is listed in the class schedule and in the student's record. Topics vary. May be repeated for credit when topic changes. Prerequisite: Consent of instructor.

CE 5302. ADVANCED CONCRETE MATERIALS. 3 Hours.
Providing a practical understanding of design and characterization of advanced concrete materials, this course is intended for graduate and senior undergraduate students who want to advance their knowledge in new concepts of materials in construction. Topics include the study of properties at the nanoscale and how they affect the material's properties at the macro level. Lectures will focus on the advances in the design and technology of cement based materials, with particular emphasis on the evolution of nanotechnology in construction. Prerequisite: CE 3361.

CE 5303. INTRODUCTION TO FINITE ELEMENT. 3 Hours.
Stiffness method using basic equations and virtual work; element equations using shape functions for axial, beam, frame, two dimensional elements; stiffness method for three dimensional structures. Flexibility method; finite element modeling and optimization of idealized structures. Credit not granted for both CE 4325 and CE 5303. Prerequisite: CE 3341.

CE 5304. POST-TENSIONED CONCRETE DESIGN. 3 Hours.
Overview of Post-tensioned Concrete Structures; Allowable Stresses, Ultimate Flexural Strength, and One-Way Shear Design according to ACI 318 and ACI 320; Equivalent Load and Load Balancing Method in Determinate Systems; Equivalent Load, Load Balancing Method, and Secondary Effects in Indeterminate Systems; Idealized and Actual Tendon Layouts in Indeterminate Systems; Post-tensioned Continuous Beams and Intermediate Structures; Post-tensioned One-Way Slabs; Equivalent Frame Method and Computer-Aided Analysis of Equivalent Frames; Post-tensioned Two-Way Slabs; Punching Shear and Design of Headed Shear Stud Reinforcement; Anchorage Zone; Post-tensioned Slabs-on-Ground. Prerequisite: CE 4347.

CE 5305. FIBER REINFORCED COMPOSITE DESIGN. 3 Hours.
Introduction to basic analysis, design and manufacture of composite materials for engineered structures. Fiber materials, tapes, cloths, resin systems, elastic constants, matrix formulation, theory of failure. The course will also cover an introduction to design with composites, preliminary design, optimization, processing variables, product design. Credit not granted for both CE 4366 and CE 5305. Prerequisite: CE 3341.

CE 5306. STRUCTURAL STEEL DESIGN. 3 Hours.
The basic design course for steel structures emphasizing Load Resistant Factor Design Method. Topics include tension members, compression members, flexural members, and simple connections. Building codes, American Institute of Steel Construction (AISC) specifications, material specifications, test methods, and recommended practice documents. Credit not granted for both CE 4348 and CE 5306. Prerequisite: CE 3341.

CE 5307. STRUCTURAL TIMBER DESIGN. 3 Hours.
Covers material grade, properties of wood, design criteria using structural lumber, glue laminated lumber and structural panels. Design of bending and compression members, trusses and shear diaphragms. Building codes, National Design Specifications (NDS) , material specifications, test methods, and recommended practice documents. Credit not granted for both CE 4365 and CE 5307. Prerequisite: CE 3341.

CE 5308. STRUCTURAL MASONRY DESIGN. 3 Hours.
Covers masonry unit type and grades of mortar types, reinforcing and connectors. Design of beams, columns, pilasters, and walls. Structural behavior and construction practices. Includes plain and reinforced masonry. Building codes, Masonry Standard Joint Committee (MSJC) specifications, material specifications, test methods, and recommended practice documents. Credit not granted for both CE 4360 and CE 5308. Prerequisite: CE 3341.

CE 5309. PRESTRESSED CONCRETE. 3 Hours.
Introduction to pre-tensioned concrete structures for bridge and building applications, bonded and unbonded construction, hardware, stress calculations, section proportioning, flexural design, shear design, prestress losses, deflections, allowable stress, ultimate flexural strength design/analysis methods, shear design, analysis and design of composite beams, live load distribution factors for prestressed beams and girders in concrete bridges, compression and tension members. Both American Concrete Institute (ACI 318 and ACI 319) and American Association of State Highway and Transportation Officials Load and Resistance Factor Design (AASHTO LRFD) provisions will be discussed. Credit not granted for both CE 4363 and CE 5309. Prerequisite: CE 4347.

CE 5310. PLASTIC ANALYSIS AND DESIGN OF STRUCTURES. 3 Hours.
Behavior of structural members beyond elastic range; plastic analysis of steel and concrete members and framed structures; stepwise incremental load and mechanism methods; yield/failure mechanisms for various types of frames. Use of nonlinear structural analysis programs and design code provisions. Application to earthquake resistant design. Prerequisite: CE 4347 and CE 4348; or equivalent.

CE 5311. ADVANCED STEEL DESIGN I. 3 Hours.
Covers torsional design of beams, beams with web holes, composite design of beams, lateral-torsional buckling of beams, plate buckling, column design and behavior, frame stability, bracing requirements for compression members. Prerequisite: CE 4348 or CE 5306.

CE 5312. ADVANCED CONCRETE DESIGN I. 3 Hours.
Advanced topics on structural design of concrete structures. Topics include slender columns, shear walls, torsion, deep beams, brackets, retaining walls, strut and tie model for shear torsion, two-way slabs, and shear friction. Building codes, American Concrete Institute (ACI) specifications, material specifications, test methods, and recommended practice documents are involved. Credit not granted for both CE 4361 and CE 5312. Prerequisite: CE 4347.

CE 5313. GEOTECHNICAL ASPECTS OF CONSTRUCTION. 3 Hours.
Review of engineering geology and soil mechanics and teaching of the foundation and underground excavation construction solely to graduate students specializing in construction engineering & management. Topics include interpretation of geotechnical reports, embankment construction, foundations on expansive soils, excavation supports, excavation dewatering, deep foundation construction, tunneling in soft ground as well as in soft/hard rock, and trenchless technology piping. Credit not granted for both CE 4335 and CE 5313. Prerequisite: CE 5378.

CE 5314. ADVANCED STEEL DESIGN II. 3 Hours.
Covers structural design of beam columns and building connections. Rigid frame and multi-story building design issues. Building codes, American Institute of Steel Construction (AISC) specifications, and recommended practice documents. Prerequisite: CE 4348 or CE 5306.

CE 5315. ADVANCED MECHANICS OF MATERIALS. 3 Hours.
Analysis of stresses and strains at a point, stress-strain relationships, stresses due to various leading conditions, theories of failure, energy methods, shear center, unsymmetrical bending, curved beams, torsion in closed and open cell cross-sections, principles of plastic analysis, and buckling analysis. Credit not granted for both CE 4324 and CE 5315. Prerequisite: CE 2313.

CE 5316. MACHINE LEARNING FOR CIVIL ENGINEERING. 3 Hours.
Machine learning is transforming the way we approach problems across all fields of civil and environmental engineering. This course is designed for students across various concentrations to offer a broad perspective on how data science and machine learning can reshape the future of Civil and Environmental engineering. You will learn how machine learning techniques can be applied to analyze and improve a wide range of engineering systems-from smart buildings and geotechnical infrastructure to water resources and transportation networks. Whether working with big data, such as GPS tracking data for traffic flow, satellite images for environmental monitoring, and IoT sensor data in buildings, or small data, such as soil properties for construction site assessment and water distribution system restoration after disasters, machine learning can uncover patterns and insights to improve efficiency, reliability, and resilience of the components or systems. Credit not granted for AREN 4318, CE 4318, and CE 5316. Prerequisite: AREN 3301 or CE 3301.

CE 5317. ENVIRONMENTAL ENGINEERING PROCESS AND ANALYSIS LAB. 3 Hours.
The course meets for 2 hours of lecture and 3 hours of lab each week. Lectures will cover advanced analytical procedures for the analyses of air, liquid, and other wastes, including optical, Chromatographic, electrical, and other instrumental methods of analysis. Lectures will also review the basics of physical/chemical processes. In the laboratory, students will demonstrate and analyze basic reactor types (CSTR, plug flow, and reactors in series) and treatment of contaminants, including gas transfer, adsorption, advanced oxidation processes, and membrane separation.

CE 5318. PHYSICAL-CHEMICAL PROCESSES I. 3 Hours.
Principles of unit process modeling using reactor and kinetic theory, theory and design of mixing, mass transfer, flocculation, sedimentation, filtration and gas transfer. Credit not granted for both CE 4351 and CE 5318. Prerequisite: CE 3131 and CE 3334; or consent of instructor.

CE 5319. PHYSICAL-CHEMICAL PROCESSES II. 3 Hours.
Principles of water chemistry applied to the theory and design of unit processes including coagulation, precipitation, corrosion, oxidation-reduction, and membrane processes. Credit not granted for both CE 4353 and CE 5319 Prerequisite: CE 3131 and CE 3334; or consent of instructor.

CE 5320. TEMPORARY STRUCTURES. 3 Hours.
Analysis and design of temporary structures. Topics include loads on temporary structures, shoring, formwork, falsework, scaffolding, bracing, soldier beam and lagging, sheet piling, equipment bridges, and support of existing structures. Prerequisite: CE 3341 and CE 3343.

CE 5321. ENGINEERING FOR ENVIRONMENTAL SCIENTISTS. 3 Hours.
Fundamental principles of engineering science applicable to the comprehension and design of engineered environmental systems. Includes water and air quality indices; kinetic and reactor theory; mass and energy balances; fluid system theory; and applications of physical, chemical and biological processes in the design of engineered environmental systems. May not be used to satisfy any of the requirements for a graduate degree in Civil Engineering. Prerequisite: PHYS 1441, CHEM 1442, and MATH 2425.

CE 5322. ADVANCED PHYSICAL-CHEMICAL PROCESSES. 3 Hours.
The course represents the fundamentals and applications of various advanced physical and chemical unit operations and processes for controlling drinking water quality. The course will cover 1) general overview on the standard, regulations, and goals of drinking water quality, 2) detailed discussion of the theory, design, and operation of advanced physical and chemical unit processes, including but not limited to, sorption, centrifugation, osmotic pressure, membrane separation, chemical oxidation and advanced oxidation, UV technology, and disinfection, and 3) post treatment issues. Prerequisites: CE 5318.

CE 5323. SUSTAINABLE ENGINEERING. 3 Hours.
Introduction to sustainability concepts and challenges through evaluation of case studies. The engineering design process and consideration of sustainability. Techniques for generating creative and innovative alternative solutions to sustainability problems. Training on Simapro software for life cycle assessment of environmental impacts. Evaluation of economic and social impacts of alternatives and decision-making.

CE 5324. INFRASTRUCTURE DURABILITY & MONITORING. 3 Hours.
Durability and total cost of ownership for infrastructure; the physical, mechanical and chemical characteristics of deterioration and degradation for steel and other metals, Portland cement concrete, and organic materials; practical aspects of identification and remediation; a research literature review related to material durability.

CE 5325. BIOLOGICAL PROCESSES FOR WASTEWATER TREATMENT. 3 Hours.
Biological processes used in water quality control. Includes principles from microbiology and biochemistry applied to suspended and attached growth systems. Prerequisite: CE 5318.

CE 5326. WATER AND WASTEWATER TREATMENT FACILITIES DESIGN. 3 Hours.
Design of facilities commonly used in water and wastewater treatment plants including pumps, pipelines, channels, flow measurement and control devices, screens, grit removal, mixing, sludge removal, aeration equipment, and chemical feed and storage. Materials of construction, process control interface, and operation and maintenance factors are also discussed. Credit not granted for both CE 4355 and CE 5326. Prerequisite: CE 3131, CE 3142, and CE 3334.

CE 5327. ADVANCED PROJECT CONTROL. 3 Hours.
Fundamentals of construction estimating and scheduling, earned value, value engineering, risk allocations, jobsite management, safety and closeout.

CE 5328. FUNDAMENTALS OF AIR POLLUTION. 3 Hours.
An introduction to the air pollution field including: pollutant types, sources, effects; atmosphere and basic calculations; emission estimates; Clean Air Act; dispersion modeling; air pollution reduction strategies. Credit not granted for both CE 4350 and CE 5328. Prerequisite: concurrent enrollment in CE 3334 or CE 5321 or consent of instructor.

CE 5329. CIVIL ENGINEERING INFORMATICS. 3 Hours.
The course introduces students to computer tools, software systems, and AI/machine learning models for collection, analysis, visualization, and interpretation of civil engineering (CE) data. Students will learn Python programming, and importantly their use in cloud computing systems using state of the science, industry-standard platforms from Microsoft and Google. Students will explore wide-ranging data from all CE disciplines. Topics will generally include: (i) creating automated workflows for collecting data from public sources, (ii) working with databases, (iii) understanding data and metadata file formats and standards, (iv) statistical analysis, (v) time-series and spatial analysis, (vi) integration of various data, (vii) basic machine learning models, (viii) interactive data visualizations, and (ix) running programs and tools in cloud computing systems. Credit not granted for both CE 4319 and CE 5329. Prerequisite: CE 2153 & CE 3301.

CE 5330. CHARACTERISTICS OF TRAFFIC. 3 Hours.
The fundamental elements of traffic - the driver, the vehicle, and the roadway - are considered and then extended into studies of streams of traffic flow. Techniques of conducting traffic engineering studies, including methods of measuring speed, volume, and density, are covered along with methods for the determination of capacity on freeways and rural highways (uninterrupted flow facilities). Parking and accident studies are also included. Prerequisite: CE 3302; and CE 3301 or concurrent registration therein.

CE 5331. TRAFFIC ENGINEERING OPERATIONS. 3 Hours.
Methods of traffic regulation and control optimization. Traffic laws, motorist communication by means of traffic control devices, and the design and operation of both fixed time and actuated traffic signals at intersections. Analysis and design techniques for intersections using capacity and level of service concepts. Credit will not be granted for both CE 4313 and CE 5331. Prerequisite: CE 3302; and CE 3301 or concurrent registration therein.

CE 5332. HIGHWAY DESIGN. 3 Hours.
Geometric considerations necessary for the design of city streets, highways, and freeways such as the cross sections, vertical and horizontal alignment, sight distances and stopping distances. Includes the design of maneuver areas, channelization, ramps, intersections, and interchanges. Credit will not be granted for both CE 4312 and CE 5332. Prerequisite: CE 3302.

CE 5333. TRAFFIC CONTROL SYSTEMS. 3 Hours.
Control algorithms and optimization of splits, offsets, and cycle lengths for arterial progression and traffic signals in networks; computer simulation techniques; problem solving with computer simulation and optimization packages; freeway control using ramp meters and dynamic motorist communications. Prerequisite: CE 4313 or CE 5331 or Equivalent or Consent of Instructor.

CE 5334. INTRODUCTION TO RAILROAD ENGINEERING. 3 Hours.
Overview of railroad industry in the United States; structure of track, base, and foundation; drainage; railroad structures (bridges and retaining walls); geometric design; communications and signaling; maintenance. Credit not granted for CE 4314 and CE 5334. Prerequisite: CE 3302.

CE 5335. AIRPORT ENGINEERING. 3 Hours.
Airport master planning, for forecasting air travel demand, airside capacity, passenger terminal design, air traffic control, land access planning and design, landside operations, air cargo facility design. Prerequisite: CE 3302.

CE 5336. PAVEMENT DESIGN. 3 Hours.
Principles and theoretical concepts of rigid and flexible pavements for highways and airfields; effects of traffic loads, natural forces, and material quality; current design practices; and live cycle cost analysis. Prerequisite: CE 3302, CE 3343, and CE 3361.

CE 5337. URBAN TRANSPORTATION PLANNING. 3 Hours.
Theory and application of a comprehensive urban transportation planning methodology. Basic studies of population dynamics, urban growth, land use, forecasting trip generation and distribution, traffic assignment, mode split, evaluation, simulation models, characteristics of mass transit and other non-auto modes, and system design and evaluation. Credit will not be granted for both CE 4311 and CE 5337. Prerequisite: CE 3301 and CE 3302; or consent of instructor.

CE 5338. SYSTEM EVALUATION. 3 Hours.
Techniques necessary to perform economic and multi-criteria evaluations of civil engineering projects. These will be used to assess the strengths and weaknesses of different decision-making strategies and analyze contemporary topics and case studies in making civil engineering decisions. Prerequisite: IE 2308 and CE 3301 or IE 3301 or equivalents, or consent of instructor.

CE 5339. STATISTICS FOR CONSTRUCTION. 3 Hours.
Point estimation, interval estimation, sample size determination, tests of hypothesis, analysis of variance, linear regression, matrix methods for multiple linear regression, polynomial regression, transformations, non-linear regression. Prerequisite: CE 3301.

CE 5340. CONSTRUCTION PROJECT ACQUISITION. 3 Hours.
Fundamentals of acquiring the required goods and services necessary to fulfill the obligations of the construction contract. Service and subcontractor contracts, negotiating tactics and strategies, material pricing; and dispute resolution. The course includes negotiation practice based on typical construction acquisition situations to help prepare the student with experience of negotiating in the real world of construction and business. Prerequisite: consent of instructor.

CE 5341. PAVEMENT EVALUATION, REHABILITATION AND MANAGEMENT SYSTEMS. 3 Hours.
Pavement inventory; condition and structural evaluation techniques; serviceability concepts; deterioration modeling; maintenance vs. rehabilitation vs. reconstruction; economic considerations, selection of project alternatives and life cycle cost analysis. Prerequisite: CE 5336 or equivalent.

CE 5342. CONSTRUCTION PROJECT ADMINISTRATION. 3 Hours.
Topics in construction management and project administration, such as project delivery system, documentation and specification, electronic project administration, construction safety, risk allocation and liability sharing, changes and extra work, claims and disputes, and project closeout. Credit not granted for CE 4303 and CE 5342.

CE 5343. ADVANCED BUILDING INFORMATION MODELING. 3 Hours.
Introduction to current Building Information Modeling (BIM); Discussion of the role of BIM in the Construction Engineering and Management; Revit Architecture, Structure, and MEP; Creating sets, building elements, structural systems, and MEP systems; BIM and clash detection; BIM and Construction Cost Estimating and Scheduling.

CE 5344. CONSTRUCTION METHODS: FIELD OPERATIONS. 3 Hours.
Introduction to the methods, equipment, and management techniques used in the construction industry. Topics include equipment operating characteristics, job site safety, and field management. Credit not granted for CE 4332 and CE 5344.

CE 5345. INFRASTRUCTURE EVALUATION, MAINTENANCE, AND RENEWAL. 3 Hours.
This course is designed for engineers and managers involved in infrastructure development, sustainability, and replacement. Topics include asset management, inspection, evaluation, maintenance, and renewal alternatives for waste collection and water distribution systems, surface and subsurface drainage, pavements, bridges, culverts, buildings, and other structures. Prerequisite: Consent of instructor.

CE 5346. OPEN CHANNEL FLOW. 3 Hours.
Open channel hydraulic principles, flow classification, backwater curves, transitions, obstructions, bends, flood flow computations, and urban watershed applications. Credit not granted for both CE 4358 and CE 5346. Prerequisite: CE 3305 and CE 4328; or consent of instructor.

CE 5347. ADVANCED HYDROLOGY. 3 Hours.
Elements of hydrometeorology, infiltration, soil moisture, hydrographs, rainfall runoff relationships, and effects of these factors with regard to water resources, urban watersheds, flood control, and environmental issues. Prerequisite: CE 3342 and CE 4328 or equivalent.

CE 5348. GROUNDWATER HYDROLOGY. 3 Hours.
Hydrology and hydrogeology of groundwater to include aquifer and vadose properties and measurements, basic flow systems and solutions, well systems, elementary contaminate transport, water quality, recharge, subsidence, flow system analysis, flow nets, and leaky aquifers. Prerequisite: CE 3342 or consent of instructor.

CE 5349. ADVANCED GIS AND HYDROLOGIC AND HYDRAULIC MODELING. 3 Hours.
Use of Geographic Information Systems (GIS) and design of GIS developed hydrologic/hydraulic models commonly applied in the water resources field. The course will have three main areas of emphasis including: principles and operations of ArcGIS, design and implementation of standard hydrologic and hydraulic models, the linkage of these models to engineering analysis of current water resources problems including flooding, water quality and water supply.

CE 5350. RISK MANAGEMENT. 3 Hours.
The risk management process including risk identification, monitoring, and control; integrated quantitative cost and schedule risk analysis.

CE 5351. ADVANCED STRUCTURAL ANALYSIS I. 3 Hours.
Advanced analysis of indeterminate beams, frames, trusses, arches, and cables. Credit will not be given for both CE 5351 and CE 4368. Prerequisite: CE 3341.

CE 5352. REMOTE SENSING-HYDROMETEOROLOGY. 3 Hours.
Atmospheric composition, radiative fluxes, thermodynamics, water vapor, stability, circulation, precipitation processes, fronts, thunderstorms and tropical storms; basics of remote sensing; observing precipitation using weather radar and satellite-borne sensors; prediction of precipitation by numerical weather models. The class will be a combination of lectures and in-class computer-based laboratory exercises. Prerequisite: CE 3342 and CE 4328.

CE 5353. ADVANCED HYDRAULICS. 3 Hours.
Flow resistance, St. Venant equations, solution of St. Venant by finite difference methods, dam break problem, water hammer intro to finite elements to open channel flow. Credit will not be granted for both CE 4330 and CE 5353. Prerequisite: CE 5346 and CE 5347; or consent of instructor.

CE 5354. WATER RESOURCES PLANNING. 3 Hours.
Historical and current water development concepts. Administrative and allocation concerns. General principles and procedures of water resource planning includes regional, multipurpose, economic and systems considerations. Prerequisites: CE 3301, CE 3342, and IE 2308; or consent of instructor.

CE 5355. CONSTRUCTION MATERIALS. 3 Hours.
Principles of construction related to construction regulations and standards, loads, fire safety, acoustics, joints and sealants. Systems of construction involving concrete, steel, wood, masonry, sealants, and soil, and including excavations, below grade construction, formwork, cladding, joints, windows, doors, roofing, and ceilings.

CE 5356. SURFACE WATER QUALITY MODELING. 3 Hours.
Contaminant transport and fate in surface water. Engineering methods assessing surface water and transport for water and sediment quality. Modeling dissolved oxygen, chemicals and waterborne substances. Prerequisite: CE 5346.

CE 5357. HYDROLOGIC TECHNIQUES. 3 Hours.
A study of current hydrologic techniques and methods for the analysis of hydrologic variables necessary in the design of projects such as bridges, culverts, reservoirs. Techniques involve extreme value statistics, model hydrographs, deterministic and stochastic methods for data analysis. Prerequisite: CE 5347 or consent of instructor.

CE 5358. SOLID WASTE ENGINEERING. 3 Hours.
This course provides an overview of the various aspects of integrated municipal solid waste management (with the exception of landfilling, covered in CE 5375). Topics covered include waste generation, characterization, and collection; source reduction; waste processing; design of facilities for materials recovery (recycling centers) and energy recovery (combustors and anaerobic digesters); life cycle analysis of solid waste management facilities; case study project. Credit not granted for both CE 4354 and CE 5358. Prerequisite: CE 3334 or CE 5321 or consent of instructor.

CE 5359. HUMAN INTERACTION IN THE BUILT ENVIRONMENT. 3 Hours.
Understanding human interaction in the built environment is critical for assessing comfort levels and system performance. This course would cover theories of human computer interaction, environmental monitoring, and advanced data analytics. Students would be given a hands-on opportunity to build their own data acquisition system to collect and model human behavior. This course meets the emerging trend in a nexus of computer science and facility management. Credit not granted for both AREN 4343 and CE 5359.

CE 5360. BUILDING SCIENCE II. 3 Hours.
Building science is critical for accessing human comfort and energy efficiency. In this course, students will be able to understand the basic concepts of thermodynamics (heat transfer, energy balance, psychrometric chart) and apply to building engineering (human comfort, building enclosures, HVAC systems). As a term project, students will learn energy simulation tools. There will be additional tasks to learn EnergyPlus for graduate students. Credit not granted for both AREN 4314 and CE 5360. Prerequisite: AREN 3213.

CE 5361. DESIGN AND CONSTRUCTION OF ASPHALT CONCRETE. 3 Hours.
An in-depth study of the properties of constituent materials for asphalt concrete mixtures. Design methods for Hot-Mixes Asphalt (HMA) and Stone Matrix Asphalt (SMA). Theory and practice of asphalt concrete mix for pavements, including specifications and construction methods for hot-mix asphalt and surface treatments. Maintenance and rehabilitation of flexible pavements. Relationships of material engineering properties to pavement design and performance. Credit not granted for both CE 4336 and CE 5361. Prerequisite: CE 3361 or equivalent.

CE 5362. RIGID PAVEMENTS. 3 Hours.
Portland cement concrete mix design and production. Paving operations. Saw and seal operations. Subgrade preparation. Base selection. Drainage selection, design and construction. Bonded and unbonded concrete overlays. Whitetopping and ultra-thin whitetopping. Concrete pavement restoration; quality assurance and quality control in concrete pavement construction. Credit not granted for both CE 4337 and CE 5362. Prerequisite: CE 3361 or equivalent.

CE 5363. CONSTITUTIVE MODELING OF SOILS. 3 Hours.
Fundamental aspects of elasto-plastic behavior of soils along axisymmetric stress paths, shear strength of soils in light of critical state soil mechanics, and constitutive models to predict soil response under saturated conditions, including Cam Clay and modified Cam Clay models. Prerequisite: CE 3343 or consent of instructor.

CE 5364. FOUNDATION ANALYSIS AND DESIGN. 3 Hours.
The design, construction, and performance of footings, rafts, and piles founded on or in sands, clays, silts, stratified soils, and weak rock. Includes the influence of various geologic terrain on selecting foundation type and constructability, in-situ investigations to determine material design parameters, bearing capacity, and settlement of foundations. Credit not granted for both CE 4321 and CE 5364. Prerequisite: CE 3343.

CE 5365. THEORETICAL SOIL MECHANICS. 3 Hours.
Theory of consolidation, magnitude, time rate, pore pressure dissipation with variable construction rate and layered soils. Secondary compression, preconsolidation, and preloading. Shear strength of soil. Critical state soil mechanics, dilation and strain-softening in drained shear, pore pressure response in undrained shear, including static liquefaction. Prerequisite: CE 3343 or consent of instructor.

CE 5366. SOIL DYNAMICS. 3 Hours.
Fundamental aspects of mechanical behavior and characterization of soils and earth structures subjected to dynamic loads, including wave propagation in soils, dynamic soil properties, liquefaction of soils, dynamic bearing capacity of shallow foundations, seismic design of retaining walls, and seismic slope stability. Prerequisites: CE 2221 and CE 3343; or consent of instructor.

CE 5367. DESIGN OF EARTH STRUCTURES. 3 Hours.
Study of the states of stress and analysis techniques associated with cuts, fills, and retaining structures. Includes slope stability, embankment reinforcement, conventional and reinforced earth retaining walls, excavation bracing, and sheet pile wharf structures. Credit not granted for both CE 4320 and CE 5367. Prerequisite: CE 3343 or consent of instructor.

CE 5368. UNSATURATED SOIL MECHANICS. 3 Hours.
Fundamental aspects of the mechanical behavior of unsaturated soils, including stress and volumetric state variables, matrix suction measurements and soil-water characteristic curves, shear-strain-strength and volume change responses, suction-controlled laboratory testing techniques and constitutive modeling. Prerequisite: CE 3343; or consent of instructor.

CE 5369. COMPUTATIONAL GEOTECHNICS. 3 Hours.
Introduction to analytical, finite differences, and finite element modeling, analyses of embankments, earth dams, slopes, excavation support systems including soldier pile and diaphragm walls, shallow and deep foundation systems, and other geostructures using different geotechnical software. Prerequisite: CE 3343 or consent of instructor.

CE 5370. EXPERIMENTAL SOIL MECHANICS. 3 Hours.
Fundamentals of experimental studies of soil behavior, soil properties and their laboratory test methods which include consolidation, direct shear, static triaxial, cyclic triaxial, resonant column, bender elements and other advanced geotechnical laboratory tests, instrumentation and measurement techniques. Prerequisite: CE 3343 or consent of instructor.

CE 5371. SOIL BEHAVIOR. 3 Hours.
Fundamental aspects of soil behavior, bonding, crystal structure, surface characteristics, clay mineralogy, soil-water movement, fabric, effective stress concepts, conduction phenomena, consolidation, and shear strength. Prerequisite: CE 3343 or consent of instructor.

CE 5372. GEOSYNTHETICS. 3 Hours.
Geosynthetics properties and testing, design of geotextiles, geogrids, geonets, and geomembranes for applications in separation, pavement, embankment and retaining wall reinforcement, soil stabilization, filtration, drainage and liquid barrier, construction guidelines and case histories. Credit not granted for both CE 4322 and CE 5372. Prerequisite: CE 3343 or consent of instructor.

CE 5374. GROUND IMPROVEMENT. 3 Hours.
Introduction and types of ground improvement for different problem soils including soft and expansive soils, shallow and deep soil densification, sand drains and wick drains, chemical modification, chemical binders and mechanisms of ground improvement, different types of grouting, deep mixing, stone columns, soil nailing, ground anchors, geosynthetics, MSE walls, reinforced slopes. Prerequisite: CE 3343 or consent of instructor.

CE 5375. GEOTECHNICAL ASPECTS OF LANDFILLS. 3 Hours.
Introduction and types of landfills, landfill site selection, siting and configuration, compacted and geosynthetic clay liners, final cover design, landfill settlement and slope stability, post closure uses of landfills, leachate and gas generation, collection and removal system, bioreactor landfills and future trends. Credit not granted for both CE 4323 and CE 5375. Prerequisite: CE 3343 or consent of instructor.

CE 5377. CONSTRUCTION FINANCE. 3 Hours.
Financial aspects and job costing of a construction project. Includes project management principles, budgets, cost codes, cost-to-complete, and financial reports specific to the management of a construction company and project control.

CE 5378. CONSTRUCTION CONTRACTS, SPECIFICATIONS, & ADMINISTRATION. 3 Hours.
Types of construction contracts, contractual relationship between general contractor and owner, contractual relationship between general contractor and subcontractors, legal issues in construction administration, insurance, and concepts in value engineering. Reading and evaluating specifications, CSI Master Format. Credit not granted for CE 4304 and CE 5378. Prerequisite: Consent of instructor.

CE 5380. MANAGEMENT OF INFRASTRUCTURE ASSETS. 3 Hours.
Overview of an infrastructure management system. Infrastructure asset development and management. Optimization of infrastructure asset procurement and preservation through good data input and the use of economic models, benefit cost studies, and good maintenance and rehabilitation practices to protect assets investments.

CE 5381. ADVANCED MATERIALS MECHANICAL TESTING AND CHARACTERIZATION. 3 Hours.
Providing comprehensive understanding of the mechanical property characterization of advanced engineering materials, this course is intended for graduate students who want to improve their knowledge in new applications of materials in engineering concepts. Topics include the study and examination of the principles, procedures, and applications of experimental methods for characterizing the deformation and failure behavior of advanced materials at the nano-, micro- and macro- scale. The course consists of lectures and lab sessions. Lectures will focus on an in-depth analysis of the failure criteria of advanced materials with linear/elastic and non-linear behavior, i.e, engineering metals and alloys, polymers, and advanced ceramics. Laboratory sessions provide hands-on experience on advanced test methods using standards/codes for tensile, compression, bending, torsion, multiaxial, indentation, fracture, fatigue, creep, high strain rates and nondestructive evaluation. The course features special sessions focusing on the unique aspects associated with mechanical property characterization and simulation of advanced composite and nanocomposite materials. Credit not granted for both CE 4309 and CE 5381. Prerequisite: CE 3361.

CE 5382. CONSTRUCTION SUSTAINABILITY. 3 Hours.
Introduction to International Code Council's 2012 International Building Code and USGBC's LEED® New Construction Guidelines v.3 for constructing sustainable/green buildings. Review of building occupancy categories, construction types, allowable height and area, life safety requirements, rated building assemblies, and egress. Site selection, energy and water efficiency, material reuse and indoor air quality. Credit not granted for CE 4307 and CE 5382.

CE 5383. EXPERIMENTAL STRESS ANALYSIS. 3 Hours.
Introduction to experimental stress-analysis techniques. Theory and application of mechanical strain gages, electrical strain gages, introduction to photoelastic and thermal techniques, and brittle coatings. Prerequisite: CE 2313.

CE 5384. CONCRETE BRIDGE DESIGN AND EVALUATION. 3 Hours.
Analysis, design and evaluation of concrete highway bridges using AASHTO specifications. Analysis and design topics include bridge type selection, preliminary design, AASHTO LRFD bridge design philosophy, design loads, deck design, shear design, barrier design and substructure design. Evaluation topics include bridge inspection, non-destructive evaluation (NDE), load testing and load rating, using the AASHTO procedures. Prerequisite: CE 4363 or CE 5309.

CE 5385. STRUCTURAL DYNAMICS. 3 Hours.
Equation of motion for single degree of freedom systems including: free vibration; harmonic and periodic excitations; arbitrary, step and pulse excitations. Dynamic response of multi degree of freedom systems including: free vibration; computation of vibration properties of structures; damping in structures; modal analysis; and response history analysis. Dynamic analysis of systems with distributed mass. Prerequisite: CE 5303 or concurrent registration.

CE 5386. BUILDING HVAC SYSTEMS & ENERGY SIMULATION. 3 Hours.
This course will introduce the fundamental principles and engineering procedures for basic building science; design of heating, ventilating, and air conditioning (HVAC) systems; system and equipment selection; and duct design and layout. This course will also include energy conservation techniques and computer applications, including building energy modeling.

CE 5387. CONSTRUCTION PRODUCTIVITY. 3 Hours.
Evaluation of construction project management's effectiveness. An investigation of the advanced techniques required for improvement of construction projects including time, cost, quality management, preplanning, field evaluation techniques, time-lapse photograph, safety, human factors, and communications. Prerequisite: CE 5327.

CE 5388. PIPELINE CONSTRUCTION AND TRENCHLESS TECHNOLOGY. 3 Hours.
Pipeline and utility design, construction and renewal. Topics include pipeline infrastructure structural considerations, planning and construction considerations, pipe materials, and trenchless technologies. Credit not granted for both CE 4305 and CE 5388. Prerequisite: graduate standing and consent of instructor.

CE 5389. PIPELINE SYSTEMS ASSET MANAGEMENT. 3 Hours.
Pipeline systems asset management, inventory, inspection, and life cycle costs. Topics include pipeline deterioration parameters, asset management technologies, risk assessment, government regulations, renewal technologies, and case studies. Credit not granted for both CE 4306 and CE 5389. Prerequisite: graduate standing and consent of instructor.

CE 5390. UNSATURATED SOIL MECHANICS II. 3 Hours.
Advanced principles of unsaturated soil behavior in light of critical state based soil mechanics. Topics: Cam-Clay model for saturated soils, Cam-Clay model for unsaturated soils, and calibration/programming of Barcelona Basic Model for unsaturated soils. Prerequisite: CE 5368 or consent of instructor.

CE 5391. ADVANCED STUDIES IN CIVIL ENGINEERING. 3 Hours.
Individual studies of advanced topics under the supervision of a professor or professors. Graded F, P, R. Prerequisite: consent of instructor.

CE 5392. SPECIAL TOPICS IN AIR POLLUTION. 3 Hours.
Sources, transport, fate, characteristics, and control of air contaminants. May be repeated for credit when topics vary. Topics include: Topic 1 - Air Quality Modeling. Mathematical models for predicting air pollutant transport and transformation in the atmosphere, to evaluate health impacts and potential control strategies. The course covers 4 types of air quality models: box models, photochemical grid models (for ozone and particulate matter), Gaussian dispersion models (major emphasis), and receptor models. Use of Gaussian dispersion modeling software. Topic 2 - Air Pollution Control System Design. Design of air pollution control systems for stationary sources, including particle control technologies (cyclones, electrostatic precipitators, fabric filters and wet scrubbers) and gaseous control technologies (incinerators, adsorption systems, absorption systems, biofilters, nitrogen oxide controls, mercury controls, and carbon dioxide controls). Topic 3 - Air Pollution Chemistry and Meteorology. Designed to give students an understanding of how pollutants react and travel in the atmosphere. Chemistry of ground-level ozone formation, ozone layer depletion, acid deposition, fine particle formation, and climate change; meteorological variables impacting pollutant transport in the atmosphere, such as atmospheric stability, turbulence and wind speed. Prerequisite: Graduate standing and consent of instructor.

CE 5393. ENVIRONMENTAL ORGANIC CHEMISTRY. 3 Hours.
Introduction to chemical structures, reactions, and transformations. Disposition of compounds of environmental significance utilizing sorption, bioaccumulation, acid-base reactions, hydrolysis reactions, biodegradation, and biotransformation. Prerequisite: CE 3334 or consent of instructor.

CE 5394. EARTHQUAKE DESIGN OF REINFORCED CONCRETE BUILDINGS. 3 Hours.
Design of earthquake resistant reinforced concrete (RC) building structures. ACI 318, ASCE 7, earthquake loads effects on buildings and related structural damage, properties of concrete and steel beyond the elastic range, development and anchorage, confined concrete, inelastic behavior of RC members under large load reversals, design of RC beams, columns, beam-column joints, special moment frames, coupling beams, special structural walls, and other structural systems. Prerequisite: CE 4347.

CE 5395. MASTER'S PROJECT. 3 Hours.
Non-thesis master's degree candidates with approval to include a project in their program. Graded F, P, R. Prerequisite: consent of instructor and approval of Civil Engineering Graduate Advisor.

CE 5396. SITE REMEDIATION ENGINEERING. 3 Hours.
This course provides practical understanding of the engineering principles and practices associated with the characterization and remediation of contaminated sites. Methods for site characterization and risk assessment will be highlighted while the emphasis will be on remedial action screening processes and technology principles and conceptual design. In-situ and ex-situ treatment processes will be covered, including unit operations, coupled processes, and complete systems within the context of community implementation. Case studies with focus on developing communities will be used and computerized tools for process selection and design will be presented. Prerequisite: CE 3334; or consent of instructor.

CE 5398. THESIS. 3 Hours.
Research and preparation pertaining to the master's thesis. Graded F, P, R.

CE 5695. MASTER'S PROJECT. 6 Hours.
Non-thesis master's degree candidates with approval to include a project in their program. Graded F, P, R. Prerequisite: consent of instructor and approval of Civil Engineering Graduate Advisor.

CE 5698. THESIS. 6 Hours.
Research and preparation pertaining to the master's thesis. Graded F, P, R.

CE 6197. RESEARCH IN CIVIL ENGINEERING. 1 Hour.
Individual supervised research projects. May be repeated for credit. Graded F, P, R. Prerequisite: consent of instructor and approval of Supervising Committee Chair.

CE 6297. RESEARCH IN CIVIL ENGINEERING. 2 Hours.
Individual supervised research projects. May be repeated for credit. Graded F, P, R. Prerequisite: consent of instructor and approval of Supervising Committee Chair.

CE 6300. ADVANCED TOPICS IN CIVIL ENGINEERING. 3 Hours.
Topics of current interest in the field of civil engineering. The subject title is listed in the class schedule and in the student's record. Topics vary. May be repeated for credit when topic changes. Prerequisite: consent of instructor.

CE 6306. PUBLIC TRANSIT PLANNING & OPERATIONS. 3 Hours.
Theory and application of technologies used for transit demand analysis, routing, scheduling, evaluation, crew assignment, maintenance strategies, and management. Land-use impact on public transit policy and operation is also introduced. Prerequisite: CE 4311 or CE 5337 or equivalent.

CE 6308. ANALYTICAL MODELS IN TRANSPORTATION. 3 Hours.
Development and analysis of mathematical models in transportation. Topics include travel demand, trip generation, distribution, mode choice, assignment, plan evaluation, spatial distribution, traffic control and flow models; principles of behavioral, econometric, deterministic, probabilistic, and chaotic simulation models, and their applications. Prerequisite: CE 4311 or CE 5337.

CE 6309. TRAFFIC FLOW THEORY. 3 Hours.
Speed, density relationships of vehicular traffic flow; statistical aspects of traffic events and queuing processes; deterministic models and simulation models of traffic flow behavior; applications of flow theory to traffic problem solutions. Prerequisite: CE 5330 or equivalent.

CE 6311. ADVANCED FOUNDATION DESIGN. 3 Hours.
Subsurface investigations; advanced design of mat foundations, retaining walls, reinforced retaining walls, anchor tiebacks, driven piles, and piers; destructive and nondestructive tests on deep foundations; group piles, laterally loaded piles, and design of foundations in expansive soils. Prerequisite: CE 4321 or CE 5364.

CE 6312. IN-SITU TESTING. 3 Hours.
Site characterization, in-situ testing procedures, and soil property interpretation methods for standard penetration tests, cone penetration tests utilizing friction cone, piezocone, and seismic cone, dilatometer, vane shear, pressure meter, and bore hole shear tests, non-destructive tests for pavement subgrade characterization. Prerequisite: CE 3143 or CE 5370 or consent of instructor.

CE 6313. DESIGN OF EARTH DAMS. 3 Hours.
Introduction to dams and levees, failure and damage analysis, erosion, seepage, filter, drainage design, foundation preparation for problematic subsoil conditions, seepage induced slope stability issues, desiccation crack and erosion control, numerical modeling and case studies, seismic issues. Prerequisite: CE 5367 or consent of instructor.

CE 6314. STORMWATER MODELING. 3 Hours.
Hydrologic modeling methods and issues, urban watershed modeling, methods of system analysis; analysis of hydrologic components as linear and nonlinear systems, watershed response, kinematic wave; and model parameters optimization. Prerequisite: CE 5346 and CE 5347; or consent of instructor.

CE 6315. ADVANCED GEOTECHNICAL MODELING. 3 Hours.
This course covers two numerical simulation methods: discrete element method (DEM) and finite element method (FEM). The four basic elements in DEM: initialization, search, contact models, velocity and displacement calculations will be introduced. This course will use FORTRAN as the coding language. A basic Fortran code will be provided. Students will learn how to make modifications to the basic code for their own applications. A term project will be required that consists of a numerical experiment. Fundamentals of FEM will be introduced including: basic elements, formulation methods, coordinate transformation, and boundary conditions. CAM clay model will be introduced and implemented in ABAQUS as a class exercise. Usage of ABAQUS will be introduced. Applications of FEM including pile soil interaction and simple beam simulation. Prerequisite: Grade of C or better in CE 5363; Grade of C or better in CE 5369; Programming language (FORTRAN, C, or MATLAB); and numerical analyses; or consent of instructor.

CE 6316. SEDIMENT TRANSPORT. 3 Hours.
Sourcing the sediment influx, the settling velocity, Shields critical shear stress, design with critical shear, bedload transport equations, suspended load transport, total transport equation, regime theory as index of stability. Prerequisite: CE 4358 or CE 5346; and CE 5347.

CE 6350. ADVANCED CONCRETE DESIGN II. 3 Hours.
Detailing of connections for ductility demands, modified compression field theory, strut and tie modeling of systems and areas, and design of shear walls and hybrid construction. Behavior of reinforced concrete structures, with emphasis on ductility and detailing. Prerequisite: CE 5312.

CE 6354. REPAIR AND REHABILITATION OF STRUCTURES. 3 Hours.
Causes of distress, evaluation methods for condition, strength, serviceability; repair materials, repair techniques, and quality control methods for repair of concrete. Criteria for rehabilitation; retrofit techniques for change in function, loading, and seismic forces. Prerequisite: CE 5311 and CE 5312.

CE 6355. EARTHQUAKE ENGINEERING. 3 Hours.
Earthquake characteristics; design of structures to resist earthquakes. Characterization of earthquakes for design. Development of design criteria for elastic and inelastic structural response. Seismic performance of various structural systems. Prediction of nonlinear seismic behavior. Basis for code design procedures. Preliminary design of steel and reinforced concrete structures. Evaluation of earthquake vulnerability of existing structures and rehabilitation of seismic deficiencies. Prerequisite: CE 5385.

CE 6356. ENERGY METHODS. 3 Hours.
Principles of mechanics; elastic beams and frames; variational method: curved cantilever beams; Rayleigh Ritz method; special form of Euler equation; differential equation for beam; variation of double integral; first variation of triple integral. Deformable bodies using indicial notation; buckling using energy method; Lagrange and Hamilton Principles; theory and analysis of plates; theory and buckling; and theory of vibration. Prerequisite: CE 5315.

CE 6357. STRUCTURAL STABILITY. 3 Hours.
Buckling of columns; approximate method of analysis for buckling problems; beam columns; structural system stability (buckling of frames); lateral torsional buckling; buckling of plates; and buckling of axially compressed cylindrical shells. Prerequisite: CE 5303 or concurrent registration therein.

CE 6358. THEORY OF ELASTICITY & ADVANCED MECHANICS. 3 Hours.
Introduction to matrices; vector spaces and calculus; tensor algebra, Eigenvalue problems. Solution to discrete systems: steady state problems and propagation problems. Solution of continuous systems: differential formulation; variational method; and weighted residual methods. Solution of linear and nonlinear static equilibrium equations. Theory of deformation; strain displacement relations in orthogonal curvilinear coordinate systems. Theory of stress; differential equation of equilibrium in curvilinear spatial coordinates; three dimensional equations of elasticity; nonlinear constitutive relationship; plane theory of elasticity; and plane elasticity in polar coordinates. Prerequisite: CE 5315 and MATH 3319.

CE 6360. THEORY OF ELASTICITY. 3 Hours.
Introductory mathematical concepts: vector calculus; tensor algebra. Theory of deformation; strain displacement relations in orthogonal curvilinear coordinate systems. Theory of stress; differential equation of equilibrium in curvilinear spatial coordinates; three dimensional equations of elasticity; nonlinear constitutive relationship; plane theory of elasticity; and plane elasticity in polar coordinates. Prerequisite: CE 5315.

CE 6391. ADVANCED PROJECTS IN CIVIL ENGINEERING. 3 Hours.
Projects related to advanced topics in graduate area. Graded F, P, R. Prerequisite: consent of instructor and approval of Civil Engineering Graduate Advisor.

CE 6397. RESEARCH IN CIVIL ENGINEERING. 3 Hours.
Individual supervised research projects. May be repeated for credit. Graded F, P, R. Prerequisite: consent of instructor and approval of Supervising Committee Chair.

CE 6399. DISSERTATION. 3 Hours.
Preparation of a doctoral dissertation in civil engineering. Graded F, R. Prerequisite: admission to candidacy for the Doctor of Philosophy degree.

CE 6697. RESEARCH IN CIVIL ENGINEERING. 6 Hours.
Individual supervised research projects. May be repeated for credit. Graded F, P, R. Prerequisite: consent of instructor and approval of Supervising Committee Chair.

CE 6699. DISSERTATION. 6 Hours.
Preparation of a doctoral dissertation in civil engineering. Graded F, R. Prerequisite: admission to candidacy for the Doctor of Philosophy degree.

CE 6997. RESEARCH IN CIVIL ENGINEERING. 9 Hours.
Individual supervised research projects. May be repeated for credit. Graded F, P, R. Prerequisite: consent of instructor and approval of Supervising Committee Chair.

CE 6999. DISSERTATION. 9 Hours.
Preparation of a doctoral dissertation in civil engineering. Graded F, P, R. Prerequisite: admission to candidacy for the Doctor of Philosophy degree.

CE 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

CHEM 1101. SUCCESS IN CHEMISTRY AND BIOCHEMISTRY. 1 Hour.
A first-year experience course for new students and new transfer students interested in a career in chemistry. Provides the necessary foundation for success in a college environment while balancing personal and work obligations. Orients students to life on campus, demonstrates how to leverage campus resources to achieve career and academic goals, and emphasizes engagement outside the classroom through collaborative and co-curricular opportunities. This course is reserved exclusively for students planning to major in chemistry or biochemistry who are in their first semester at UTA. Fulfills the University requirement for either UNIV 1101 or UNIV 1131.

CHEM 1181. GENERAL CHEMISTRY I LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES. 1 Hour.
General, analytical, and synthetic chemistry concepts will be reinforced through problem- and inquiry-based laboratory activities. The Advanced Chemical Technologies track for majors will introduce research and scientific methods in the context of instructor and student-selected research problems. Hand-on experience in the laboratory will be supplemented with mini-lectures, modules, and web resources to increase student readiness for scientific discovery. Students will also learn about contemporary challenges and advances in chemistry and biochemistry. If a student withdraws from CHEM 1181, the student must also withdraw from CHEM 1341. Prerequisite: Concurrent enrollment in CHEM 1341.

CHEM 1182. GENERAL CHEMISTRY II LABORATORY FOR ADVANCED CHEMICAL TECHNOLOGIES. 1 Hour.
General, analytical, and synthetic chemistry concepts will be reinforced through problem- and inquiry-based laboratory activities. Research and scientific methods will be reinforced through the investigation of student-selected research problems and modules on scientific communication. Increased exposure to state-of-the-art analytical techniques and instruments, as well as synthetic methods will culminate in the preparation of a proposal related to the synthesis of new materials and the analysis of their structure and function. If a student withdraws from CHEM 1182, the student must also withdraw from CHEM 1342. Prerequisite: (CHEM 1341 with a grade of C or better) and (CHEM 1181 with a grade of C or better) and (concurrent enrollment in CHEM 1342).

CHEM 1185. CHEMISTRY FOR ENGINEERS LABORATORY. 1 Hour.
This course is intended to provide laboratory credit in chemistry for engineering-majors who transfer into UT-Arlington with credit in Chemistry for Engineers lecture only. Students may register for this course only with specific approval of a Chemistry advisor. Prerequisite: 3 hours of Chemistry for Engineers lecture. Credit cannot be earned for both CHEM 1465 and CHEM 1185.

CHEM 1188. GENERAL CHEMISTRY I LABORATORY. 1 Hour.
This course is intended to provide laboratory credit in freshman chemistry for students who transfer into UT-Arlington with credit in General Chemistry I lecture only. Experiments include: measurement and scientific equipment use, physical properties, separations, synthesis, qualitative analysis, spectroscopy. Students may register for this course only with specific approval of a Chemistry advisor. Prerequisite: 3 hours of General Chemistry I lecture. Credit cannot be earned for both CHEM 1441 and CHEM 1188.

CHEM 1189. GENERAL CHEMISTRY II LABORATORY. 1 Hour.
This course is intended to provide laboratory credit in freshman chemistry for students who transfer into UT-Arlington with credit for General Chemistry lecture only. Experiments include: thermodynamics, electrochemistry, synthesis, quantitative analysis, spectroscopy, stoichiometry, and acid-base chemistry. Students may register for this course only with specific approval of a Chemistry advisor. Prerequisite: CHEM 1188 and 6 hours of General Chemistry II lecture. Credit cannot be earned for both CHEM 1442 and CHEM 1189.

CHEM 1341. GENERAL CHEMISTRY I. 3 Hours.
This course covers the fundamentals of atomic structure, chemical bonding, the periodic table, nomenclature, kinetic theory, gas laws, chemical equations, and solutions. Only chemistry majors in the Advanced Chemical Technologies program may take this course. When combined with CHEM 1181, this course will satisfy completion of CHEM 1441 for Chemistry, Biochemistry, and Biological Chemistry majors. Prerequisite: (MATH 1302 or MATH 1303 or MATH 1322 or MATH 1323 or MATH 1402 or MATH 1421 or MATH 1426 or ALEKS =/> 61) and (concurrent enrollment in CHEM 1181). ACT program only.

CHEM 1342. GENERAL CHEMISTRY II. 3 Hours.
This course covers study of advanced atomic structure and bonding concepts, acid-base theory, kinetics and equilibria, thermodynamics, electrochemistry, and the chemistry of some elements. Only chemistry majors in the Advanced Chemical Technologies program may take this course. When combined with CHEM 1182, this course will satisfy completion of CHEM 1442 for Chemistry, Biochemistry, and Biological Chemistry majors. Prerequisite: (CHEM 1341 or CHEM 1441 with a grade of C or better) and (CHEM 1181 with a grade of C or better) and (concurrent enrollment in CHEM 1182). ACT program only.

CHEM 1345. CHEMISTRY IN THE WORLD AROUND US. 3 Hours. (TCCN = CHEM 1305)
This course looks at current issues in society and uses chemical principles to understand them. Topics include sustainability, air pollution, the ozone layer, global climate change, fuels, and water. CHEM 1345/1346 cannot be used to fulfill the CHEM 1441/1442/1451/1465 requirement in any degree program.

CHEM 1346. SEX, DRUGS, AND ARTIFICIAL INTELLIGENCE. 3 Hours. (TCCN = CHEM 1307)
The goal of this course is for students to appreciate chemistry in the world around us. This will be accomplished by teaching chemistry concepts in the context of current topics of general interest, including artificial intelligence, polymers/plastics, forensics, psychedelics, and pharmaceutical science. CHEM 1346 cannot be used to fulfill CHEM 1441/1442/1451/1465 requirements in any degree program.

CHEM 1400. INTRODUCTORY CHEMICAL PRINCIPLES. 4 Hours.
Provides a background in fundamental chemical mathematics, in writing and understanding chemical formulas and equations, and in the application of scientific laws to the behavior of matter. Students will learn problem solving skills necessary in general chemistry I by hands-on and interactive approach. This course is designed for the student with little or no previous chemical training who intends to take the CHEM 1441/CHEM 1442 sequence or CHEM 1465 at a later date. CHEM 1400 cannot replace CHEM 1441/CHEM 1442/CHEM 1451/CHEM 1465. Prerequisite: (MATH 1302, MATH 1402, or equivalent) or ALEKS score =/> 61.

CHEM 1441. GENERAL CHEMISTRY I. 4 Hours. (TCCN = CHEM 1411)
The lecture covers the fundamentals of atomic structure, chemical bonding, the periodic table, nomenclature, kinetic theory, gas laws, chemical equations, and solutions. The laboratory introduces the scientific method, experiment design, data collection and analysis, as well as illustrates fundamental principles presented in the lecture. Students who have not had high school chemistry are advised to take an introductory chemistry course first. Prerequisite: MATH 1302 or MATH 1303 or MATH 1322 or MATH 1323 or MATH 1402 or MATH 1421 or MATH 1426 or ALEKS =/> 61 or Student Group CHEM 1441.

CHEM 1442. GENERAL CHEMISTRY II. 4 Hours. (TCCN = CHEM 1412)
Study of advanced atomic structure and bonding concepts, acid-base theory, kinetics and equilibria, thermodynamics, electrochemistry, the chemistry of some elements. The laboratory focuses on experimental design, data collection and analyses as well as chemical syntheses to illustrate fundamental principles presented in the lecture. Prerequisite: CHEM 1441 or equivalent with a grade of C or better or (CHEM 1341 with a grade C or better) or Student Group CHEM 1442.

CHEM 1451. CHEMISTRY FOR HEALTH SCIENCES. 4 Hours. (TCCN = CHEM 1406)
Survey of general, organic, and biochemistry with emphasis on applications to the human body. Measurement, atomic theory and structure, bonding, quantitative relationships in chemical reactions, gases, solutions, electrolytes, organic functional groups and nomenclature, organic reactions, carbohydrates, lipids, proteins, enzymes, metabolism, and nucleic acids. CHEM 1451 cannot count for major credit toward a degree in chemistry. Prerequisite: MATH 1301 or MATH 1302 or MATH 1303 or MATH 1315 or MATH 1316 or MATH 1322 or MATH 1323 or MATH 1324 or MATH 1421 or MATH 1426 or equivalent.

CHEM 1465. CHEMISTRY FOR ENGINEERS. 4 Hours. (TCCN = CHEM 1409)
An introduction to important concepts and principles of chemistry with emphasis on areas considered most relevant in an engineering context. Topics include chemical stoichiometry, bonding, chemical thermodynamics, equilibria, electrochemistry, and kinetics. Engineering students may substitute the eight hour sequence CHEM 1441 and CHEM 1442 for this class, but not either CHEM 1441 or CHEM 1442 alone. Students who complete CHEM 1465 and subsequently change majors to curricula that require both CHEM 1441 and CHEM 1442 may substitute CHEM 1465 for CHEM 1441. Prerequisite: C or better in MATH 1322 or C or better in MATH 1323 or C or better in MATH 1324 or C or better in MATH 1421 (or concurrent enrollment) or MATH 1426 (or concurrent enrollment) or HONR-SC 1426 (or concurrent enrollment) or MATH 2425 (or concurrent enrollment) or HONR-SC 2425 (or concurrent enrollment) or Student Group CHEM 1465.

CHEM 2101. CHEMICAL INFORMATICS I. 1 Hour.
Developing quantitative understanding in chemistry relies heavily on models, from very crude and simple ideas to complex theoretical frameworks. This class aims to introduce students into models and modeling chemical phenomena that develop understanding of chemical processes. Working with observations and data, we develop the art of developing qualitative relations and explore their limitations. The class is delivered as a practical tour with hands-on practice. Good number skills, basic knowledge of coding and handling of computers is required. Prerequisite: (CHEM 1442 with a grade of C or better) and (MATH 1426 with a grade of C or better or Concurrent enrollment in MATH 1426 or Instructor's permission).

CHEM 2180. RESEARCH IN CHEMISTRY. 1 Hour.
Research for undergraduate students supervised by faculty of the department. May be repeated. Graded pass/fail only. Prerequisite: written permission of the instructor. Students may take a maximum of 12 hours credit on a pass/fail basis.

CHEM 2181. ORGANIC CHEMISTRY I LABORATORY. 1 Hour. (TCCN = CHEM 2123)
Experiments which illustrate laboratory techniques, theoretical concepts, and synthesis. Prerequisite: CHEM 1442 with a grade of C or better or ((CHEM 1342 with a grade C or better) and (CHEM 1343 with a grade C or better)) or Student Group CHEM 2181. Corequisite: CHEM 2321. If student withdraws from CHEM 2321 prior to midsemester date, student must also withdraw from CHEM 2181.

CHEM 2182. ORGANIC CHEMISTRY II LABORATORY. 1 Hour. (TCCN = CHEM 2125)
Experiments which will include syntheses, characterization of unknown substances, and use of the chemical literature. Prerequisite: (CHEM 2181 with a grade of C or better) and (CHEM 2321 with a grade of C or better). Corequisite: CHEM 2322. If student withdraws from CHEM 2322 prior to the midsemester date, student must also withdraw from CHEM 2182.

CHEM 2283. SYNTHESIS AND ANALYSIS LABORATORY I. 2 Hours.
Students will perform experiments that build mastery in standard laboratory techniques and illustrate theoretical concepts related to organic synthesis and quantitative analysis methods. Students will continue to develop their mastery of analysis through an introduction to the acquisition and statistical analysis of quantitative and qualitative data, acquired in the context of a series of guided inquiry design and synthesis projects. Syntheses may involve small molecules, polymers, and materials designed to perform specific functions. Students will continue to develop their communication and group work skills by sharing independent data and critical feedback with peers. Additionally, laboratory exercises will involve basic titrimetric, spectrophotometric, and chromatographic methods. Prerequisite: CHEM 1442/CHEM 1342 and CHEM 1182 or equivalent with a grade of C or better. Corequisite: Concurrent enrollment or previous credit in CHEM 2321 and CHEM 2335. Students must remain enrolled in at least one of CHEM 2321 and CHEM 2335 beyond the mid-semester date to remain enrolled in CHEM 2283.

CHEM 2284. SYNTHESIS AND ANALYSIS LABORATORY II. 2 Hours.
Experiments will include syntheses and analysis, characterization of unknown substances, and use of the chemical literature. A focus will be placed on advancing the use of modern chemical technologies for both synthetic and analytical work in a guided inquiry format. Prerequisite: CHEM 2283 and CHEM 2321 with a grade of C or better. Corequisite: CHEM 2322.

CHEM 2285. QUANTITATIVE CHEMISTRY LABORATORY. 2 Hours.
An introduction to computers for the acquisition and statistical analysis of data. Laboratory exercises involving basic titrimetric, spectrophotometric and chromatographic methods. Prerequisite: CHEM 1442 or equivalent with a grade of C or better, and concurrent enrollment/previous credit in CHEM 2335.

CHEM 2321. ORGANIC CHEMISTRY I. 3 Hours. (TCCN = CHEM 2323)
The fundamentals of molecular structure, stereochemistry, and the reactions of aliphatic hydrocarbons. Electronic theory, synthetic methods, and mechanisms. Prerequisite: CHEM 1442 with a grade of C or better or ((CHEM 1342 with a grade C or better) and (CHEM 1182 with a grade C or better)) or Student Group CHEM 2321.

CHEM 2322. ORGANIC CHEMISTRY II. 3 Hours. (TCCN = CHEM 2325)
Organic spectroscopic analysis. The chemistry of aromatic hydrocarbons, alcohols and ethers, aldehydes, ketones, carboxylic acids and derivatives, amines, amino acid, carbohydrates, and other functional groups. Mechanisms and synthesis. Prerequisite: CHEM 2321 with a grade of C or better.

CHEM 2335. QUANTITATIVE CHEMISTRY. 3 Hours.
Basic methods of error analysis, simple and advanced methods for the solution of complex equilibria, fundamentals of titrimetric, spectrophotometric and chromatographic instrumental analysis. Prerequisite: (CHEM 1442 or CHEM 1342 or equivalent) and (MATH 1324 or MATH 1325 or MATH 1421 or MATH 1426 or equivalent or higher) and (CHEM 2285 or CHEM 2283 concurrent enrollment or previous credit).

CHEM 2380. UNDERGRADUATE RESEARCH. 3 Hours.
Research in chemistry supervised by a faculty member of the department. May be repeated. Graded pass/fail only. Prerequisite: written permission of the instructor. Students may take a maximum of 12 hours credit on a pass/fail basis.

CHEM 3101. CHEMICAL INFORMATICS II. 1 Hour.
This course provides a succinct overview of the emerging discipline of Chemical Informatics at the intersection of chemistry, computational science, and information science. Efficient and reliable analysis of chemical analytical data is a great challenge due to the increase in data size, variety and velocity. Attention in this class is drawn to specific opportunities afforded by this new field in accelerating discovery and understanding of cause and effect. The class is delivered as a practical tour with hands-on practice. Good number skills, basic knowledge of coding and handling of computers is required. Prerequisite: (CHEM 2101 with a grade C or better) or (Instructor's permission).

CHEM 3131. CHEMISTRY COMMUNITY SERVICE LEARNING. 1 Hour.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisites: Permission of the Instructor.

CHEM 3175. BIOPHYSICAL CHEMISTRY LABORATORY. 1 Hour.
Introduction to the physical experimental techniques used in quantitative biochemical practice. Prerequisite: CHEM 3315 or concurrent enrollment.

CHEM 3181. PHYSICAL CHEMISTRY I LABORATORY. 1 Hour.
The physical and thermodynamic properties of substances, experimentally determined. Prerequisite: (Grade of C or better in ((CHEM 2284 or CHEM 2285) and CHEM 2335)) and (Grade of C or better in CHEM 3321 or concurrent enrollment).

CHEM 3182. PHYSICAL CHEMISTRY II LABORATORY. 1 Hour.
Experiments in kinetics, equilibria, spectroscopy, and electrochemistry. Modern instrumental techniques. Prerequisite: (Grade C or better in ((CHEM 2284 or CHEM 2285) and CHEM 2335)) and (Grade C or better in CHEM 3322 or concurrent enrollment).

CHEM 3231. CHEMISTRY/BIOCHEMISTRY COMMUNITY SERVICE LEARNING. 2 Hours.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisites: Permission of the Instructor.

CHEM 3307. INTRODUCTION TO POLYMER CHEMISTRY. 3 Hours.
The chemistry and technology of polymeric systems. The chemistry of natural systems such as proteins as well as the synthesis of fibers, films, plastics, and elastomers. Discussion of the characterization of polymers by modern techniques using instrumental analysis is followed by a summary of end-use and processing techniques. Prerequisite: CHEM 2322 with a grade of C or better or permission of instructor.

CHEM 3315. INTRODUCTION TO BIOPHYSICAL CHEMISTRY. 3 Hours.
A basic course introducing the physical principles that govern biological systems and processes, and the methods used for their investigation. Topics include solution thermodynamics, biomolecular interactions, enzyme kinetics, transport processes (diffusion, sedimentation, electrophoresis, viscous flow), and the applications of spectroscopic methods (absorption, emission and scattering of radiation, and the utilization of polarized light). Prerequisite: A grade of C or better in each of the following: CHEM 2335, MATH 2425, and 8 hours of college level physics.

CHEM 3317. INORGANIC CHEMISTRY. 3 Hours.
An overview of descriptive main group chemistry, solid state structures and the energetics of ionic, metallic, and covalent solids, acid-base chemistry and the coordination chemistry of the transition metals. The course is intended to explore and describe the role of inorganic chemistry in other natural sciences with an emphasis on the biological and geological sciences. Important compounds and reactions in industrial chemistry are also covered. Intended for both chemistry and non-chemistry majors. Prerequisite: Grade of C or better in CHEM 2322 or concurrent enrollment.

CHEM 3321. PHYSICAL CHEMISTRY I. 3 Hours.
Thermodynamics, gases, First and Second Law, pure substances, mixtures and solutions, equilibrium; Statistical Thermodynamics; Kinetics, rates, mechanisms, transitions state theory. In this class you will learn to understand the basic principles of Chemistry as the Science of Transformation and Change. We emphasize conceptual understanding and will become skilled in a quantitative description of the phenomena we study. The goal is that at the end of the course every student can outline the basic principles of Thermodynamics, has a sound understanding of ideal and approximate systems, and can apply the tools to engage in self-driven investigations. Prerequisites: CHEM 2335, MATH 2326, both with a grade of C or better and PHYS 1443 and PHYS 1444. MATH 3318 concurrent enrollment recommended.

CHEM 3322. PHYSICAL CHEMISTRY II. 3 Hours.
Quantum theory, introduction, principles. Schrödinger Equation, wavefunction; particle in a box, uncertainty; postulates of quantum mechanics; hydrogen atom, orbitals, structure of multi-electron atoms, atomic spectra and selection rules; molecular structure of diatomic molecules; introduction to molecular spectroscopy; materials and structure: lattices, diffraction methods, properties of solids. In this class you will learn to understand the principles of Quantum Chemistry and how it applies to atoms, molecules, and solids. We emphasize conceptual understanding and will become skilled in quantitative descriptions. The goal is that at the end of the course every student can outline the basic principles of Quantum Chemistry, both qualitatively and quantitatively. Students will obtain a sound understanding of probability, wavefunctions, orbitals, and spectroscopy, and can apply the learned concepts and tools to engage in self-driven investigations. This course is designated as the capstone course. Prerequisite: CHEM 2335, MATH 2326, both with a grade of C or better and PHYS 1443 and PHYS 1444. MATH 3318 concurrent enrollment recommended.

CHEM 3331. CHEMISTRY/BIOCHEMISTRY COMMUNITY SERVICE LEARNING. 3 Hours.
Service learning is a credit-bearing learning experience; therefore, credit is awarded for academic learning and not for service hours. Students engage in classroom activities, assignments, and discussions and in addition, integrate course content and learning outcomes with genuine community needs or issues. Collaborations with the community result in relationship-building and partnerships through intentional, structured service experiences. Students are required to analyze and evaluate these experiences by engaging in reflective activities, such as discussion and journaling. This process of structured service and learning in the community promote a sense of civic responsibility and commitment to others. Students commit to serve weekly time resulting in at least fifteen hours during one semester. This time is agreed upon by student, faculty, and community agency. Prerequisites: Permission of the Instructor.

CHEM 4080. UNDERGRADUATE RESEARCH. 0 Hours.
Research problems on an individual basis, conducted on a selected topic under the direction of a member of the chemistry and biochemistry faculty. May be repeated. This is a non-credit course and cannot be used to meet degree requirements. Prerequisite: Permission of the instructor.

CHEM 4101. SEMINAR IN CHEMISTRY. 1 Hour.
Oral and written communication of chemical information. Seminars will be presented by students on topics from the current chemical literature. A term paper is required. The use of the library for researching the chemical literature will be emphasized. May be repeated for a total of two semester hours of credit. Students must be within 12 credits hours from the degree completion. Departmental permission required.

CHEM 4180. UNDERGRADUATE RESEARCH. 1 Hour.
Research under the direction of a member of the department. No more than six hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: Written permission of the instructor and a minimum grade point average of 2.5.

CHEM 4181. COMPUTATIONAL CHEMISTRY LABORATORY. 1 Hour.
Molecular modeling. Application of various computational techniques to chemical problems, including determination of molecular geometry, conformational analysis, and molecular energetics. Prerequisite: CHEM 3321 or CHEM 3322 with a grade C or better.

CHEM 4191. READINGS IN CHEMISTRY. 1 Hour.
May be repeated for a maximum of six hours credit. Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper. Prerequisite: permission of department chair. Graded pass/fail only.

CHEM 4203. COMPUTATIONAL CHEMISTRY. 2 Hours.
A course emphasizing molecular quantum mechanics. Topics include the basic postulates of quantum mechanics, many electron wave functions, the variation method, and molecular orbital theory at various levels of approximation (Hueckel, Extended Hueckel, semi-empirical, ab initio, etc.). Related methods, such as force-field approaches and molecular dynamics, will be discussed. Prerequisite: CHEM 3322, with a grade of "C" or better.

CHEM 4242. LABORATORY TECHNIQUES IN BIOCHEMISTRY. 2 Hours.
Designed to introduce the student to biochemical laboratory methods; a practical approach to the properties of carbohydrates, proteins, enzymes, and nucleotides. Prerequisite: CHEM 4311, with a grade of "C" or better.

CHEM 4280. UNDERGRADUATE RESEARCH. 2 Hours.
Research under the direction of a member of the department. No more than six hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: Written permission of the instructor and a minimum grade point average of 2.5.

CHEM 4291. READINGS IN CHEMISTRY. 2 Hours.
May be repeated for a maximum of six hours credit. Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper. Prerequisite: permission of department chair. Graded pass/fail only.

CHEM 4311. BIOCHEMISTRY I. 3 Hours.
The chemistry of the sugars, amino acids, proteins, and nucleic acids, followed by an introduction to enzyme chemistry. The major metabolic pathways of the cell, glycolysis, TCA cycle, and pentose phosphate pathway. Auditing of this class is NOT permitted. Prerequisite: CHEM 2322, with a grade of "C" or better.

CHEM 4312. BIOCHEMISTRY II. 3 Hours.
A continuation of CHEM 4311. The breakdown and biosynthesis of fats and the synthesis of carbohydrates, including photosynthesis. Metabolic utilization of proteins and amino acids together with an introduction to protein synthesis. Prerequisite: CHEM 4311, with a grade of "C" or better, or equivalent.

CHEM 4313. METABOLISM AND REGULATION. 3 Hours.
Selected topics in advanced metabolism including biosynthesis of phospholipids, steroids, porphyrins and related molecules, and prostaglandins. Membranes and transport phenomena, regulation of glycogen and glucose metabolism in muscle and lipid metabolism in adipose tissue. Prerequisite: (Concurrent Enrollment to CHEM 4312) or (CHEM 4312 with a grade of C or better).

CHEM 4314. ENZYMOLOGY. 3 Hours.
A comprehensive study of enzymes including structures, reaction mechanisms, regulation, and kinetics. Prerequisite: CHEM 4311 with a grade of C or better.

CHEM 4316. BIOCHEMICAL GENETICS. 3 Hours.
Aspects of the biochemistry of gene expression in prokaryotic and eukaryotic organisms and its regulation, together with genetic manipulations and the methodology of recombinant DNA technology. Prerequisite: (Concurrent enrollment in CHEM 4312) or (CHEM 4312 with a grade of C or better).

CHEM 4318. INORGANIC CHEMISTRY. 3 Hours.
An overview of the chemistry of the transition metals. Topics include symmetry and applications, bonding models, magnetism, synthesis of metal complexes, modern characterization techniques including IR, NMR, and electronic spectroscopy, organometallic compounds, reaction mechanisms, catalysis, and bioinorganic chemistry. Prerequisite: CHEM 2322 with a grade of C or better.

CHEM 4342. SOLID STATE AND MATERIALS CHEMISTRY. 3 Hours.
Chemical synthesis, structure characterization, and properties of solid-state materials. Principles of solid-state synthesis, classical equilibrium approaches, diffusion, and chemical transport, non-equilibrium, and deposition methods; high temperature and high-pressure synthesis; basic characterization techniques using X-rays, electrons, and neutrons; basic structure types and symmetry; optical, electrical, and magnetic properties; examples will relate to materials used for energy harvesting, sensors, catalysis, and other applications. Prerequisite: Grade of C or better in CHEM 3317.

CHEM 4343. RESEARCH METHODS - UTEACH. 3 Hours.
The purpose of this course is to present UTeach students with the tools scientists use to solve scientific problems. These tools enable scientists to develop new knowledge and insights, the most important of which are eventually presented in textbooks and taught in more conventional science classes. These tools include: design of experiments to answer scientific questions; use of statistics to interpret experimental results and deal with sampling errors; mathematical modeling of scientific phenomena; finding and reading articles in the current scientific literature; applying scientific arguments in matters of social importance; writing scientific papers; reviewing scientific papers; oral presentation of scientific work; use of probes and computers to gather and analyze data; ethical treatment of human subjects; laboratory safety. Research Methods is primarily a laboratory course, and most of these topics are developed in connection with four independent inquiries UTeach students design and carry out. Written inquiries will be evaluated as examples of scientific writing. Prerequisite: SCIE 1201 or SCIE 1334 or concurrent enrollment; junior or senior standing.

CHEM 4346. ADVANCED SYNTHETIC METHODS. 3 Hours.
Methods and techniques for the synthesis and characterization of organic, inorganic, and organometallic compounds. Prerequisite: Grade of C or better in CHEM 2182, CHEM 2322, and CHEM 3317 or CHEM 4318.

CHEM 4380. UNDERGRADUATE RESEARCH. 3 Hours.
Research under the direction of a member of the department. No more than six hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: Written permission of the instructor and a minimum grade point average of 2.5.

CHEM 4381. HONORS RESEARCH. 3 Hours.
Research in chemistry under the direction of a member of the department, resulting in a written honors thesis. No more than 6 hours of CHEM 4180, CHEM 4280, CHEM 4380 and CHEM 4381 may be taken for a letter grade. Prerequisite: CHEM 2322, CHEM 2182, and admission to the University Honors College.

CHEM 4385. INSTRUCTIONAL TECHNIQUES IN CHEMISTRY. 3 Hours.
Students participate in undergraduate laboratory instruction or recitation sessions under the supervision of a faculty member. No more than 6 hours of CHEM 4385 may be taken for a letter grade. Enrollment by departmental permission only.

CHEM 4387. UNIVERSITY-INDUSTRY CHEMISTRY COOPERATIVE. 3 Hours.
By special arrangement only. Cooperative study assignment doing chemical research in a local industrial chemical laboratory. Enrollment by departmental permission only. Graded pass/fail only.

CHEM 4391. READINGS IN CHEMISTRY. 3 Hours.
May be repeated for a maximum of six hours credit. Topics arranged on an individual basis. Performance may be assessed by oral exam, written test, or review paper. Prerequisite: permission of department chair. Graded pass/fail only.

CHEM 4392. ADVANCED TOPICS IN CHEMISTRY. 3 Hours.
Topics arranged on an individual basis. May be repeated for credit as the topic varies. Prerequisite: permission of instructor.

CHEM 4461. INSTRUMENTAL ANALYSIS. 4 Hours.
The principles involved in the operation of modern analytical instruments and the laboratory use of such instruments. Students must be within 30 hours of completing their bachelor degrees. Prerequisite: Grades of C or better in (CHEM 2284 or CHEM 2285) and CHEM 2335.

CHEM 5011. SEMINAR IN CHEMISTRY. 0 Hours.
Students will present a talk, prepare a poster, and engage in scientific writing and communication. Includes learning how to prepare, present, and defend an oral presentation. May not be counted for credit toward the degree requirements.

CHEM 5168. QUANTUM CHEMISTRY LABORATORY. 1 Hour.
Molecular modeling. Application of various computational techniques to chemical problems, including determination of molecular geometry, conformational analysis, and molecular energetics. Prerequisite: concurrent enrollment in CHEM 5262.

CHEM 5191. READINGS IN CHEMISTRY. 1 Hour.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5192. RESEARCH IN CHEMISTRY. 1 Hour.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5262. COMPUTATIONAL CHEMISTRY. 2 Hours.
Molecular quantum mechanics. Fundamental principles of quantum mechanics, with a special emphasis on molecular electronic structure theory. Topics covered include molecular mechanics, semi-empirical and ab initio molecular orbital theory, density functional theory, calculation of thermodynamic properties and molecular dynamics. Prerequisite: CHEM 5301 or permission of instructor. concurrent enrollment in CHEM 5168 required.

CHEM 5291. READINGS IN CHEMISTRY. 2 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5292. RESEARCH IN CHEMISTRY. 2 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5300. SELECTED TOPICS IN ADVANCED CHEMISTRY. 3 Hours.
The area may vary (typically analytical, applied, biological, colloid, environmental, inorganic, organic, physical, polymer, materials, theoretical, etc.) and will be announced in advance. More than one area may be covered simultaneously, in parallel courses offered under different section numbers. May be repeated for credit when area or topics vary. Prerequisite: permission of instructor.

CHEM 5321. INTRODUCTION TO ANALYTICAL CHEMISTRY. 3 Hours.
This course provides a broad overview of instrumental techniques, quantitative analysis, and chemical equilibria. It is designed to give a conceptual understanding of the theory, design, use, as well as limits and advantages of modern analytical instrumentation such as spectroscopy, chromatography, and mass spectrometry. Additionally, students will learn the statistics necessary for characterization of instrumental methods and analysis of sample populations and how to perform these analyses using spreadsheet based calculators such as Microsoft Excel. Students will be required to demonstrate proficiency in analytical skills by completing homework assignments (approximately 1 every 2 weeks) and through an open computer portion of their exams. Exams also feature a closed computer, short answer section that tests their grasp of the analytical concepts. Students are also required to submit a term paper and deliver a power point presentation on an analytical topic of their choice outside those covered during the course.

CHEM 5324. ANALYTICAL MASS SPECTROMETRY AND SPECTROSCOPY. 3 Hours.
This course covers modern aspects of atomic and molecular mass spectrometry, as well as spectrochemical analysis. Upon completion of this course, the student will be able to: describe the basic setup and operation of mass spectrometric and spectroscopic instrumentation; interpret spectra from various instruments as a means for qualitative and quantitative analysis; apply basic knowledge of mass spectrometry and spectroscopy for practical problem solving; relate the use of mass spectrometry and spectroscopy to his or her own research interests; and compile, present, and explain modern techniques for analytical research. Written and oral presentations, as well as traditional classroom examinations, homework, and quizzes will be used to assess student performance. Prerequisite: CHEM 4461 or equivalent; or permission of instructor.

CHEM 5325. SEPARATION SCIENCE. 3 Hours.
A comprehensive examination of most areas involving the separation of molecules and ions. Theoretical, practical and historical aspects of: distillation, sublimation, liquid-liquid extraction, sold phase extraction, chromatography, electrophoresis, field flow fractionation, membrane/barrier processes, and crystallization will be considered. Students taking this course must have a good basic background in organic chemistry and physical chemistry.

CHEM 5326. ANALYTICAL CHEMISTRY - CONCEPTS AND IMPLEMENTATION. 3 Hours.
This course familiarizes students with basic electronic design in analytical instrumentation. Familiarization with active and passive components, operational amplifiers, timers, logic gates, and designing analytical instrumentation based on such components, especially in Wet Chemistry. The course covers ionic equilibria and acid-base equilibria and solving complex problems by iterative numerical methods and nonlinear curve fitting using programming in BASIC and MS Excel SolverTM. The course covers present day applications of wet chemical analysis, specific methods and instrumentation, practical aspects of automated liquid phase analytical methods including component availability and cost. A design problem, chosen by lottery, will be given to each student early in the semester. The newly acquired knowledge of chemistry and electronics will be used to design a new instrument and present it. Prerequisite: CHEM 4461 or equivalent undergraduate instrumental analysis course.

CHEM 5327. ANALYTICAL ELECTROCHEMISTRY. 3 Hours.
This course covers modern aspects of electroanalytical chemistry. Upon completion of this course, the student will be able to: understand the concepts of redox potentials and their role in electron transfer, the thermodynamic aspects of electrochemical cells, mass transport in electrochemical systems, and the principles underlying various electroanalytical techniques such as potentiometry, amperometry, coulometry and voltammetry. The instrumental aspects of these techniques will also be addressed, including specialized approaches such as spectroelectrochemistry. The student will be able to relate the use of these analytical techniques to his or her own research needs and interests. Written and oral examinations, as well as traditional classroom examinations, will be used to assess student performance. Prerequisite: CHEM 4461 or equivalent; or permission of instructor.

CHEM 5328. ANALYTICAL SPECTROSCOPY. 3 Hours.
This course covers many of the methods of spectrochemical analysis used in the analytical laboratory. At the end of this course, students should be able to: explain the fundamental theory of many spectroscopy methods, including atomic spectroscopy, molecular spectroscopy, UV/Vis spectroscopy, molecular luminescence, and infrared spectrometry, among others; describe basic instrumental components; apply basic statistics (e.g., measurement errors, and calibration methods) for data analysis; and understand the fundamental use and applications of spectroscopy methods for basic research and laboratory measurements. Student performance will be evaluated based on homework assignments, exams, quizzes, and presentations. Prerequisite: CHEM 4461 or equivalent, or permission of instructor.

CHEM 5331. ADVANCED BIOCHEMISTRY I. 3 Hours.
1) Learn the vocabulary and conceptually understand at an advanced level the biochemical processes by which cells break down organic molecules and trap some of the released energy in the form of reactive nucleotides; use these reactive nucleotides to drive the synthesis of organic building blocks such as sugars, lipids, amino acids and nucleic acids from simpler molecules that serve as precursors. 2) To learn to critically review primary research articles in biochemistry by reading the assigned material related to proteins, expression and purification, kinetics, and metabolism as they are presented in class. 3) Research Project: To learn to critically review primary research articles in biochemistry by preparing a presenting and NIH R15 proposal/paper on a topic relevant to the topics covered in class. This project will teach students how to design and interpret experiments, thereby contributing to the creation of new knowledge in the fields of biochemistry and biophysics. This project will allow students to become knowledgeable in a specific subfield of biochemistry. 4) Develop an awareness of ethical responsibilities when conducting and reporting research and reviewing the research of others. 5) Understanding of the structures and functions of biological molecules. 6) Understanding of intermediary metabolism and its control. 7) Understanding of molecular genetics. 8) Ability to present concepts in oral, written and visual forms.

CHEM 5332. CELL SIGNALING & HUMAN BIOCHEMISTRY. 3 Hours.
Explores different aspects of signal transduction and different types of signaling pathways including enzyme linked receptors, G-protein signaling, G-protein coupled receptors, cytokine signaling, cyclic AMP based signaling, Calcium signaling, lipid signaling, NO-signaling, hormone signaling, peptide hormones, amino acid based hormones, steroid hormones; immune response and inflammation; cancer cell signaling, hypoxia and angiogenesis, aging; metabolic interrelation, vitamins and mineral, dietary supplements; recent topics in signaling, clinical correlation and health impacts.

CHEM 5333. BIOPHYSICAL METHODS AND SPECTROSCOPY IN BIOCHEMISTRY. 3 Hours.
A) Examination of various biophysical methods that determine enzyme functions: the methods includes purification of enzymes, determination of various kinetic parameters, and choice of methodology. B) Discussion of various spectroscopic approaches that determine the enzyme structures and functions: the approaches includes the modern spectroscopic techniques including fluorescence fluctuation spectroscopy as well as UV spec, fragonomics, surface plasmon resonance, FTIR-spectroscopy, and advanced NMR techniques such as HSQC and NOE.

CHEM 5334. MECHANISMS OF ENZYME ACTIONS. 3 Hours.
A) Exploration of enzyme properties that include enzyme kinetics, allostery, structure and their functions. B) Evaluation of enzyme functions associated with cofactors and regulators and their significance with respect to human health and diseases; evaluation of emerging scientific advances and challenges associated with enzyme actions will also be discoursed throughout lectures, student paper presentation and student written proposal. Prerequisite: A passing grade in the ACS-test in Biochemistry.

CHEM 5335. GENES, GENOMES, AND NUCLEIC ACIDS. 3 Hours.
Concepts of genes and genomes in prokaryotes and eukaryotes. Nucleic acids structures and functions. Detailed mechanisms of prokaryotic and eukaryotic DNA replication and transcription; mRNA processing; Gene regulation, epigenetics and non-coding RNA. Fundamental theory of each topic will be covered with emphasis on current research literature and clinical correlations. Prerequisite: Passing grade in ACS-test in Biochemistry.

CHEM 5336. STRUCTURE & FUNCTION OF PROTEINS, MEMBRANES & CARBOHYDRATES AND FAST KINETICS. 3 Hours.
This is a one-semester course that extends fundamental concepts in chemistry, such as kinetic phenomena and thermodynamics into an exploration of biology. The content includes structure and function of proteins and membranes, and catalysis of biological reactions through: 1) applying equilibrium processes to study biochemical reactions 2) analyzing the kinetic parameters of enzymes that cause disease states as well as exploration of how drugs are used to inhibit enzymes.

CHEM 5337. MEDICINAL CHEMISTRY AND DRUG Discovery. 3 Hours.
This course will provide students with an understanding of the history of the modern drug discovery process, drugs and drug ionization states, biological targets, lead molecule discovery and optimization, cell signaling and metabolism, the investigation of structure activity relationships, translation with preclinical models, intellectual property and commercialization, and the regulatory process from target/lead discovery to clinical use. History and introduction to Discovery; Foundations: predicting structural ionization states using concepts from pH/pKa/acids and bases/buffers; Biological Targets: Enzymes, Receptors, Oligonucleotides; Drug-Target Structures and Interactions, Lead identification and optimization, Structure Activity Relationships: Computational Approaches (ligand based; structure based); Cell signaling and Metabolism, cardiovascular diseases, diabetes, obesity, neurological disorders, and cancer; and current therapies; Translation and intellectual property; FDA regulations and clinical trials. To enroll students must have completed or be concurrently enrolled in CHEM 4311 or receive special permission of the instructor. Prerequisite: CHEM 4311 or permission of the instructor.

CHEM 5341. INORGANIC CHEMISTRY. 3 Hours.
Structures, bonding, and properties of main group and transition element compounds including: symmetry, coordination chemistry, reaction mechanisms, organometallic chemistry, and modern characterization techniques. Prerequisite: CHEM 4318 or permission of instructor.

CHEM 5342. SOLID STATE CHEMISTRY. 3 Hours.
Chemical synthesis and characterization methods of extended structures. Principles of solid-state synthesis, classical equilibrium approaches, diffusion and chemical transport, non-equilibrium and deposition methods; high temperature and high pressure synthesis; basic characterization techniques using X-rays, electrons, and neutrons; basic structure types and symmetry; optical, electrical and magnetic properties; examples will relate to materials used for energy harvesting, sensors, and catalysis.

CHEM 5344. X-RAY DIFFRACTION, SCATTERING AND ABSORPTION. 3 Hours.
The class will focus on modern applications of X-ray diffraction and absorption techniques in crystal and molecular structure determination. A practical component will address aspects of state of the art methods, including how to solve structures using data collected on powder and single-crystal diffractometers, X-ray photoelectron spectroscopy (XPS), etc.

CHEM 5351. ADVANCED ORGANIC CHEMISTRY I - PHYSICAL ORGANIC CHEMISTRY. 3 Hours.
Bonding, structure, stereochemistry, substituent effects, isotope effects, solvent effects, kinetics, and linear free-energy relationships in determining reaction mechanisms. Acids and bases, orbital symmetry, pericyclic reactions, photochemistry, and nucleophilic substitution reactions. Prerequisites: CHEM 2322 and CHEM 3322 or equivalent.

CHEM 5354. ORGANIC CHEMISTRY II. 3 Hours.
A survey of organic reaction mechanisms including addition and elimination reactions, nucleophilic carbon species, carbonyl reactions, electrophilic substitution reactions, rearrangement reactions, electron deficient species, and free radical reactions. Prerequisite: CHEM 5309 or permission.

CHEM 5355. ADVANCED ORGANIC SYNTHESIS. 3 Hours.
Synthetically important reactions, strategy in organic synthesis using retrosynthetic analysis and mechanistic understanding of reactions, synthons, asymmetric synthesis. Prerequisite: CHEM 5310 or permission of instructor.

CHEM 5356. ADVANCED POLYMER CHEMISTRY. 3 Hours.
Polymer synthesis and reactions including condensation, free-radical, ionic, and coordination polymerizations; principles of polymerization including thermodynamics and kinetic considerations; physical characterizations including determinations of absolute molecular weights, relative molecular weights, morphology, glass transitions, and polymer crystallinity; relationships between macromolecular structure, properties, and uses of polymeric materials. Also offered as MSE 5346. Prerequisite: CHEM 2321 and CHEM 2322 or permission of instructor.

CHEM 5358. DETERMINATION OF MOLECULAR STRUCTURE BY PHYSICAL METHODS. 3 Hours.
The use of modern instrumental techniques to determine structure: infrared, ultraviolet, and magnetic resonance spectroscopy, mass spectrometry, optical rotatory dispersion. Emphasis on interpretation of spectra.

CHEM 5361. INTRODUCTION TO GRADUATE PHYSICAL CHEMISTRY. 3 Hours.
Classical thermodynamics and statistical thermodynamics. Equilibrium and kinetic processes. Reaction dynamics. Principles of quantum chemistry and its application to spectroscopy. Introduction to bonding in molecules and solids.

CHEM 5364. ADVANCED GRADUATE PHYSICAL CHEMISTRY. 3 Hours.
Statistical thermodynamics and its application to kinetics and spectroscopy. Quantum theory, ab initio methods and density functional theory. Advanced spectroscopic methods to investigate bonding in molecules and solids. Prerequisite: CHEM 5301 or permission of the instructor.

CHEM 5365. THERMODYNAMICS OF MATERIALS. 3 Hours.
Applications of thermodynamics to the study of materials, thermodynamic properties of liquid and solid solutions and their relationship to surface and crystalline defects.

CHEM 5366. CHEMICAL KINETICS. 3 Hours.
Experimental and theoretical aspects of chemical reaction kinetics. Classical and modern techniques for mechanistic characterization, methods for approximation, analysis and interpretation. Simple and complex reaction matrices are considered (gas, liquid, solid state). Specific topics include microscopic reversibility, transition state theory, homo/heterogenous catalysis, and quantum/statistical mechanical estimation of rate constants and chemical activation. Relevant examples relating to atmospheric and environmental, biological, organic, and inorganic reactions will be discussed. Prerequisite: CHEM 5301 or by permission from the instructor.

CHEM 5380. ADVANCED LABORATORY RESEARCH TOPICS IN CHEMISTRY. 3 Hours.
This course will provide a pathway for PhD-bound students to identify laboratories with appropriate research goals that align with the students' own goals for their terminal degrees. At the end of CHEM 5380, students and faculty mentors will identify mutually satisfactory research plans for PhD research during the students' remaining tenure within the Department of Chemistry & Biochemistry.

CHEM 5381. ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY I. 3 Hours.
The course will introduce to advanced laboratory techniques used in research laboratories in the Chemistry department. Handling of chemicals, synthesis procedures, characterization methods, data analysis, and safety regulations. Student will engage in reading primary literature and detailed process descriptions. Goal is to prepare students for successful work on their initial research project.

CHEM 5382. ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY II. 3 Hours.
The course will continue to provide up-to-date laboratory techniques used in research laboratories in the Chemistry department. Synthesis procedures, analytical instrumentation, characterization methods, and data analysis. Free literature studies and assignments by instructor will prepare student for research and development. Goal is to support the research progress of students towards their comprehensive exam. Prerequisite: CHEM 5381.

CHEM 5383. ADVANCED LABORATORY TECHNIQUES IN CHEMISTRY III. 3 Hours.
The course will complete exposure to advanced laboratory techniques used in research laboratories in the Chemistry department and will make students ready for developing their own project proposal. Synthesis procedures, analytical instrumentation, characterization methods, and data analysis. Literature studies and explicit writing of scientific notes will prepare students for their comprehensive exam. Prerequisite: CHEM 5381, CHEM 5382.

CHEM 5391. READINGS IN CHEMISTRY. 3 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5392. RESEARCH IN CHEMISTRY. 3 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5398. THESIS. 3 Hours.
Graded R/F only. Prerequisite: permission of instructor.

CHEM 5421. ANALYTICAL INSTRUMENTATION. 4 Hours.
Theory of instrumentation and chemical signal source. Practical experiments utilizing atomic and molecular absorption and emission spectroscopy, chromatographic analysis, and electrochemical techniques.

CHEM 5491. READINGS IN CHEMISTRY. 4 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5492. RESEARCH IN CHEMISTRY. 4 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5591. READINGS IN CHEMISTRY. 5 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5592. RESEARCH IN CHEMISTRY. 5 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5691. READINGS IN CHEMISTRY. 6 Hours.
Conference course which may be repeated for credit, with credit granted according to work performed. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5692. RESEARCH IN CHEMISTRY. 6 Hours.
Conference course with laboratory with credit granted according to work performed. May be repeated for credit. Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5698. THESIS. 6 Hours.
Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 5998. THESIS. 9 Hours.
Graded P/F/R only. Prerequisite: permission of instructor.

CHEM 6004. CHEMISTRY CAREER DEVELOPMENT. 0 Hours.
Every PhD-bound student is required to spend time for professional development outside their UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements, and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of research supervisor and graduate advisor.

CHEM 6011. TOPICS IN GRADUATE RESEARCH. 0 Hours.
Lectures by departmental and university faculty on current chemical research at U.T. Arlington. All graduate students are required to take this course once. May not be counted toward degree requirements. Graded P/F only.

CHEM 6012. ISSUES IN MODERN CHEMICAL RESEARCH. 0 Hours.
Topics to be discussed include the use of the library, maintenance of a research notebook, ethics in research, aspects of technical writing and presentations, and how research is funded. May not be counted toward degree requirements.

CHEM 6104. CHEMISTRY CAREER DEVELOPMENT. 1 Hour.
Every PhD-bound student is required to spend time for professional development outside his UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of research supervisor and graduate advisor.

CHEM 6202. PRINCIPLES OF INDUSTRIAL CHEMISTRY. 2 Hours.
Survey of industrial inorganic and organic chemical processes. Prerequisite: permission of instructor.

CHEM 6203. REGULATORY ASPECTS OF THE CHEMICAL INDUSTRY. 2 Hours.
Survey of chemical toxicology, regulatory aspects involved in the chemical industry, industrial safety, patents and patent law.

CHEM 6304. CHEMISTRY CAREER DEVELOPMENT. 3 Hours.
Every PhD-bound student is required to spend time for professional development outside his UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of the research supervisor and Graduate Advisor.

CHEM 6399. DISSERTATION. 3 Hours.
Graded R/F only. Prerequisite: admission to candidacy for the degree of Ph.D. in Applied Chemistry.

CHEM 6699. DISSERTATION. 6 Hours.
Graded R/F/P/W. Prerequisite: admission to candidacy for the degree of Ph.D. in Applied Chemistry.

CHEM 6904. CHEMISTRY CAREER DEVELOPMENT. 9 Hours.
Every PhD-bound student is required to spend time for professional development outside his UTA laboratory. Possible opportunities include traditional internships in an industrial setting, working at a national laboratory, international exchange programs, extended collaborative visits, teaching engagements and other educational projects outside UTA. The career advancement may consist of one or multiple portions, in total time no less than three and not more than six months. Prerequisite: Permission of Graduate Advisor and research supervisor.

CHEM 6999. DISSERTATION. 9 Hours.
Graded P/F/R only. Prerequisite: admission to candidacy for the degree of Ph.D. in Applied Chemistry.

CHEM 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

CHIN 1441. BEGINNING CHINESE I. 4 Hours. (TCCN = CHIN 1411)
Multimedia immersion in the culture and language of China. Designed to enable students to understand and communicate effectively in Chinese at the beginning level. No prerequisites.

CHIN 1442. BEGINNING CHINESE II. 4 Hours. (TCCN = CHIN 1412)
Continuation of beginning Chinese. Prerequisite: CHIN 1441 with a grade of C or better.

CHIN 1491. CONFERENCE COURSE. 4 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor.

CHIN 2301. LITERATURE IN TRANSLATION. 3 Hours.
The works of major authors and intellectual trends of a given period or periods. May be repeated for credit as topics or periods vary. CHIN 2301 may be taken to fulfill the foreign language requirement. Prerequisite: ENGL 1301 and ENGL 1302.

CHIN 2310. CHINESE CULTURE IN THE WORLD. 3 Hours.
An overview of the cultures of the Chinese-speaking world in a global context, examining cultural products such as food, art, music, popular culture, literature, and/or film. Taught in English.

CHIN 2311. TOPICS IN CHINESE LANGUAGE AND CULTURE FOR STUDY ABROAD. 3 Hours.
This course provides study abroad students with firsthand experience in language and culture in the Chinese-speaking world. Students will engage directly with native speakers, practice language skills in real-world scenarios, and explore the cultural landscapes of China or Taiwan. Through this experience, students will develop linguistic proficiency and cultural awareness that go beyond classroom learning. May be repeated as the topic changes.

CHIN 2313. INTERMEDIATE CHINESE I. 3 Hours. (TCCN = CHIN 2311)
Continued immersion in the culture and language of China. Application of strategies and technology in mastering listening, speaking, reading, and writing at the intermediate level. Prerequisite: CHIN 1442 with a grade of C or better.

CHIN 2314. INTERMEDIATE CHINESE II. 3 Hours. (TCCN = CHIN 2312)
Continuation of intermediate Chinese. Prerequisite: CHIN 2313 with a grade of C or better.

CHIN 2391. CONFERENCE COURSE. 3 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of the instructor.

CHIN 3303. CHINESE CONVERSATION. 3 Hours.
Practice in oral expression with an emphasis on vocabulary building, listening comprehension, and speaking skills. Of special interest to students who wish to improve their skills in pronunciation, comprehension, and oral expression. Credit will not be granted to native speakers of Mandarin Chinese. However, heritage students may register for this course when they pass the Chinese CLEP test administered by the instructor. Prerequisite: CHIN 2314 with a grade of C or better.

CHIN 3304. CHINESE CONVERSATION AND CULTURE II. 3 Hours.
Students continue to develop conversational skills and cultural knowledge through the use of readings, film, and other media. Extensive conversation practice allows students to develop advanced-intermediate level oral skills in a broad range of communicative and cultural contexts. Students learn to express abstract ideas through description, comparison, and narration. Credit will not be granted to native speakers of Mandarin Chinese. Heritage speakers may register for the course with consent of the department. Prerequisite: CHIN 2314 with a grade of C or better.

CHIN 3305. CHINESE READING AND COMPOSITION. 3 Hours.
Analysis of Chinese texts and composition with emphasis on reading comprehension, grammar and vocabulary, and writing techniques. Readings may include newspaper/website articles and short stories, online postings, text messages, comic books, print advertisements, and essays on various topics of Chinese culture. Prerequisite: CHIN 2314 with a grade of C or better.

CHIN 3310. CHINESE LOCALIZATION AND TRANSLATION. 3 Hours.
Introduction to cultural and linguistic issues in the translation of Chinese language texts. Students will explore current technologies used in various real-world translation contexts and how to adapt texts, products, and services to the locale for which they are intended. Prerequisite: CHIN 2314 or the equivalent with a grade of B or better. May not be repeated for credit.

CHIN 3311. CHINESE LOCALIZATION AND TRANSLATION II. 3 Hours.
Continued study of cultural and linguistic issues in the translation of Chinese and English language texts. Systematic development of advanced skills in localization and computer-aided translation and in using TMX/TBX (international standards for translation memory and terminology exchange) tools. Translation practice, individually and in translation teams, with increasingly longer and more specialized texts. Prepares localization and translation specialists for real-world careers in the language-services industry. May not be repeated. Prerequisite: CHIN 3310 with a grade of B or better.

CHIN 3345. INTRODUCTION TO COMPUTER-ASSISTED TRANSLATION. 3 Hours.
Introduction to computer-assisted translation (CAT), machine translation (MT), translation memory (TM) and terminology management tools in modern translation and localization workflows. Prepares students for real-world careers in the language services industry. Exclusively for students pursuing a minor in Localization and Translation-Chinese. CHIN 3310 is strongly recommended before CHIN 3345.

CHIN 3391. CONFERENCE COURSE. 3 Hours.
Independent study; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: Permission of Instructor.

CHIN 3393. CHINESE INTERNSHIP. 3 Hours.
A combination of field-related experience in the business or service sector with an academic component. Coursework may include journal writing, outside readings, reflection papers, and formal presentations. Prerequisite: Permission of Instructor.

CHIN 4334. CONTEMPORARY CHINESE CULTURE. 3 Hours.
Examination of contemporary Chinese culture, with a focus on current events relevant to the Chinese-speaking world. Topics may include: language and culture, literature, film, business culture, and traditions. Students may take the course in English or in Chinese.

CHIN 4335. BUSINESS CHINESE. 3 Hours.
Study of skills and etiquette vital to functioning in business environments using Chinese. Emphasis is placed on Chinese cultural traditions including traditions of Chinese philosophy and major differences in ideological perspectives between the East and West. Business etiquette and terminology for use in business environments are introduced and practiced. Vocabulary and cultural knowledge are reinforced through lecture, translation, peer discussion, readings, and digital media. Taught in English. No prior Chinese language background is required.

CHIN 4336. CLASSICAL CHINESE THOUGHT: THE ART OF WAR BY SUN TZU. 3 Hours.
This course examines the world renowned Chinese classical book The Art of War by Sun Tzu, a highly recommended reading among generals, political strategists, and business leaders worldwide for two millennia. May include textual analysis and discussion of conflict management strategies and their application from ancient to modern times. Students of Chinese can read the material in Chinese. No prior Chinese language background required.

CHIN 4391. CONFERENCE COURSE. 3 Hours.
Independent study in the preparation of a paper or a translation on a research topic; consultation with instructor on a regular basis. May be repeated for credit.

CHIN 4393. CHINESE INTERNSHIP. 3 Hours.
This course is a combination of field-related experience in the business or service sector with an academic component. Coursework may include journal writing in Chinese, outside readings, and formal presentations. Prerequisite: Two CHIN 3000 level courses and permission of the instructor.

COURSES

CLAS 1300. INTRODUCTION TO CLASSICAL MYTHOLOGY. 3 Hours.
Major Greek and Roman myths and their influence, with emphasis on the visual arts from antiquity to the present, including popular films.

CLAS 2105. CLASSICAL STUDIES ABROAD. 1 Hour.
Short-term excursion to sites of importance in the ancient Greco-Roman world. Offered in summer term, Wintermester, or Maymester. May be taken more than once as topic varies.

CLAS 2300. HOLLYWOOD CLASSICS: THE ANCIENT WORLD IN FILM. 3 Hours.
Comparative study of contemporary films set in the ancient world and the literary sources on which they are based, with emphasis on the reception and reshaping of the Classical heritage by filmmakers to reflect the cultural values and interests of contemporary audiences.

CLAS 2303. THE CLASSICAL ROOTS OF ENGLISH VOCABULARY. 3 Hours.
The study of etymology (word origins) focusing on the large stock of English words derived from ancient Greek and Latin prefixes, roots and suffixes. Recommended for students seeking to improve their general vocabulary and reading comprehension, and as preparation for graduate and professional school entrance exams.

CLAS 2305. TOPICS IN CLASSICAL CIVILIZATION. 3 Hours.
Survey of a particular topic in the realm of Classical studies. May include literature, history, mythology, religion, and the visual arts. Can be offered on campus or as a study-abroad course. May be repeated as topic changes.

CLAS 2307. WOMEN IN THE ANCIENT WORLD. 3 Hours.
Exploration of roles and images of women in ancient Greece and Rome, using a variety of primary (ancient) sources: literature, legal and medical texts, visual art, and inscriptions. Offered as CLAS 2307 and GWSS 2307. Credit will be granted only once.

CLAS 3310. INTRODUCTION TO GREEK CIVILIZATION. 3 Hours.
Ancient Greek culture through the death of Alexander the Great (323 B.C.). Topics covered include politics and society, literature, art, philosophy, and religion. Credit may not be received for both CLAS 2310 (as the course was previously numbered) and CLAS 3310.

CLAS 3320. INTRODUCTION TO ROMAN CIVILIZATION. 3 Hours.
Roman life and thought through the second century A.D. A broad cultural survey including politics and society, literature, art, philosophy, religion and law. Credit may not be received for both CLAS 2320 (as the course was previously numbered) and CLAS 3320.

CLAS 3323. TOPICS IN CLASSICAL MYTHOLOGY. 3 Hours.
Advanced study of Greek and/or Roman myths, with emphasis on the cultural context and methods of myth interpretation (anthropological, psychoanalytical, structuralist, etc.). May be repeated for credit with departmental permission.

CLAS 3335. TOPICS IN CLASSICAL STUDIES. 3 Hours.
Studies in the social, political, and cultural development of the ancient Greeks and Romans, including their influence on subsequent societies. May be repeated for credit with departmental permission.

CLAS 4391. CONFERENCE COURSE. 3 Hours.
Independent study in the preparation of a paper on a research topic; consultation with instructor on a regular basis. May be repeated for credit. Prerequisite: consent of the department and completion of or concurrent enrollment in a 3000 level course.

CLAS 4394. SENIOR THESIS/HONORS THESIS. 3 Hours.
A thesis or project completed during the senior year under the direction of a faculty member. Required of all students in the University Honors College.

CLAS 5392. TOPICS IN CLASSICAL STUDIES. 3 Hours.
Studies in the social, political and cultural systems of the ancient Greeks and Romans, including their influence upon subsequent societies. May be repeated for credit as the topic changes.

COURSES

CM 1311. CONSTRUCTION DRAFTING. 3 Hours.
Introduction to computer aided drafting, using AutoCAD.

CM 1331. CONSTRUCTION SURVEYING. 3 Hours.
Introduction to surveying including distance measurement, corrections, leveling, measurement of angles and directions, traverse adjustment, volumes, cross section and area computations, and error theory. Methods and technologies such as Excel, MathCAD, global positioning system and geographic information systems used to manage data in surveying. Emphasis on the use of total stations. Prerequisite: Grade of C or better in CM 1311.

CM 2311. INTRODUCTION TO CONSTRUCTION MANAGEMENT. 3 Hours.
Characteristics of the construction industry; types of construction companies, contracts, people involved in a project, their responsibilities and interrelationships; ethical conduct; evolution of a project; interpreting working drawings; construction bonds; contract documents.

CM 2313. CONSTRUCTION MATERIALS AND METHODS. 3 Hours.
Materials, methods and sequences of the construction process; emphasis on design, specification, purchase and use of concrete, steel, masonry and wood. An understanding of the uses of construction materials. Prerequisite: Grade of C or better in CM 2311.

CM 2315. INTRODUCTION TO MECHANICS FOR CONSTRUCTION. 3 Hours.
Structural behavior in buildings; forces, moments, support reactions; free-body diagrams, equilibrium; internal forces in columns and beams; deflection; buckling. Prerequisite: Grade of C or better in MATH 1303 and PHYS 1441.

CM 2331. CONSTRUCTION DOCUMENTS. 3 Hours.
Introduction to construction documents and applicable software for use in communicating building design intentions to field personnel, including an understanding of how to interpret, explain, quantify and use construction documents to bid, construct and manage construction projects. Prerequisite: Grade of C or better in CM 2311.

CM 2391. PROBLEMS IN CONSTRUCTION MANAGEMENT. 3 Hours.
Selected problems in construction management on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the chair of the department.

CM 3313. CONSTRUCTION ESTIMATING I. 3 Hours.
Systems approach to determining required quantities of construction materials; quantification of various types of foundation systems, structural systems and building envelope systems; excerpts of contract documents from a variety of different building projects and materials; plan reading. Prerequisite: Grade of C or better in MATH 1303 and CM 2331; Permission of the CE Chair or admission to the CM Professional Program.

CM 3315. CONSTRUCTION LAW AND ETHICS. 3 Hours.
Introduction to basic contract and tort issues and their application in the construction industry; delineation of the various types of contracts and remedies available to parties involved in a construction project; additional related topics including bidding, delays, mechanics liens, site conditions, warranties and the Uniform Commercial Code as it relates to the construction industry. Prerequisite: Grade of C or better in CM 2331; Permission of the CE Chair or admission to the CM Professional Program.

CM 3331. MECHANICAL AND ELECTRICAL SYSTEMS. 3 Hours.
Mechanical and electrical systems with a major emphasis on estimating and installation, design and control of the electrical, heating, ventilation and cooling system, site planning and acoustical treatments. Prerequisite: Grade of C or better in PHYS 1442; Permission of the CE Chair or admission to the CM Professional Program.

CM 3333. CONSTRUCTION DESIGN I. 3 Hours.
The principles flexure and shear, deflections, buckling are used to consider design/build construction including building systems, building codes, criteria and selection, economic feasibility, value engineering, customer control, and value-added construction services as well as an introduction to Building Information Modeling BIM. Prerequisite: Grade of C or better in CM 2315; Permission of the CE Chair or admission to the CM Professional Program.

CM 3335. SOILS AND FOUNDATION IN CONSTRUCTION. 3 Hours.
Introduction to soil types found on construction projects; properties and classification of soil, embankment control, dewatering, excavation supports, foundations, piers, and pilings. Prerequisite: Grade of C or better in CM 2315; Permission of the CE Chair or admission to the CM Professional Program.

CM 3337. CONSTRUCTION ADMINISTRATION AND ECONOMICS. 3 Hours.
Project planning, cost controls, and construction related financial documents including: schedule of values, labor and operations cost reports, income statements, balance sheets and construction budgets; emphasis on the development of techniques required to ethically and effectively monitor the financial aspects of a construction project. Prerequisite: Grade of C or better in CM 2331 and MATH 1303; Permission of the CE Chair or admission to the CM Professional Program.

CM 3339. CONSTRUCTION SAFETY. 3 Hours.
Examines the application of OSHA 29CFR 1926 for the construction industry along with applicable state and federal construction safety laws pertaining to construction, altercations, or repair work at a construction site. Prerequisite: Grade of C or better in CM 2331; Permission of the CE Chair or admission to the CM Professional Program.

CM 3341. CONSTRUCTION DESIGN. 3 Hours.
Application of statics and strength of materials for design and construction of concrete, masonry, steel, and timber building structures. Prerequisite: Grade of C or better in CM 2315; Permission of the CE Chair or admission to the CM Professional Program.

CM 4111. CONSTRUCTION MANAGEMENT CAPSTONE I. 1 Hour.
This course is the first in the Construction Management capstone series and provides project definition, project planning, scheduling, and results in a presentation and plan for implementing during Capstone II. Prerequisite: Grade of C or better in CM 3333; Permission of the CE Chair or admission to the CM Professional Program.

CM 4300. ADVANCED TOPICS IN CONSTRUCTION MANAGEMENT. 3 Hours.
Advanced topics of current interest in any one of the various fields of construction management. The subject title to be listed in the class schedule. May be repeated for credit when topic changes. Prerequisite: Admission to the professional program and consent of the department chair.

CM 4301. ADVANCED TOPICS IN CONSTRUCTION MANAGEMENT WITH LAB. 3 Hours.
Advanced topics of current interest in any one of the various fields of construction management. The subject title to be listed in the class schedule. May be repeated for credit when topic changes. Prerequisite: Admission to the professional program and permission of the chair of the department.

CM 4304. CONSTRUCTION CONTRACTS. 3 Hours.
Types of construction contracts, contractual relationship between general contractor and owner, contractual relationship between general contractor and subcontractors, legal issues in construction administration, insurance, and concepts in value engineering. Reading and evaluating specifications, CSI Master Format. Prerequisite: Grade of C or better in CM 3315 and CM 3337; Admission to the CM Professional Program.

CM 4306. BUILDING CONSTRUCTION CONTRACTS. 3 Hours.
Types of construction contracts, contractual relationship between general contractor and owner, contractual relationship between general contractor and subcontractors, legal issues in construction administration, insurance, and concepts in value engineering. Reading and evaluating specifications, CSI Master Format. Prerequisite: Grade of C or better in CM 3315; Grade of C or better in CM 3337; Admission to the CM Professional Program.

CM 4313. CONSTRUCTION DESIGN II. 3 Hours.
Application of statics and strength of materials for construction of steel buildings with computer analysis and design. Prerequisite: Grade of C or better in CM 3333 and Admission to the CM Professional Program.

CM 4315. CONSTRUCTION ESTIMATING II. 3 Hours.
Quantification and pricing of direct field costs and general condition costs from construction documents; the preparation of complete lump sum bid package ready for project execution; utilization of complete set of contract documents required; plan reading. Prerequisite: Grade of C or better in ACCT 2301 and CM 3313 and Admission to the CM Professional Program.

CM 4317. CONSTRUCTION SCHEDULING. 3 Hours.
An introduction to construction project management scheduling covering concepts of project selection and scheduling, utilizing the estimate to predict the schedule, scheduling subcontracting, cost controls, project documentation, construction bonds, insurance, payments and the elements of close out; development of professional communication skills through student prepared multi-media presentations. Prerequisite: Grade of C or better in CM 3313 and Admission to the CM Professional Program.

CM 4331. CONSTRUCTION MANAGEMENT CAPSTONE. 3 Hours.
Utilize information from all previous courses to give an understanding of the construction management profession culminating in a semester project and presentation. A response to an RFP announcement or bid will be prepared for each team project. Prerequisite: Grade of C or better in CM 4315, CM 4317, CM 4351, and CM 4357; Completion of all required 3000 level CM courses; Admission to the CM Professional Program.

CM 4332. CONSTRUCTION FIELD OPERATIONS. 3 Hours.
Introduction to the construction industry and the methods, equipment, and management techniques used. Topics include equipment operating characteristics, underground construction, job site safety, and field management. Prerequisite: Grade of C or better in CM 2313 and CM 3335; Admission to the CM Professional Program.

CM 4334. DRONES & ADVANCED CONSTRUCTION TECHNOLOGY. 3 Hours.
A practical course for technologies and their applications used on construction job sites. Topics include drones (also known as sUAS, or small unmanned aircraft systems), robotics, extended reality, artificial intelligence, blockchain, wearables, etc. Practical sessions are included to train students to operate drones for various construction applications. Prerequisite: Grade of C or better in CM 2311 and admission to the BSCM Professional Program.

CM 4335. GEOTECHNICAL ASPECTS OF CONSTRUCTION. 3 Hours.
Review of engineering geology and soil mechanics; interpretation of geotechnical reports; site preparation; ground improvement; excavation including supports and dewatering; foundations including consideration of deep foundations and expansive soils; tunneling in soils and rock. Prerequisite: Grade of C or better in CM 3335 and admission to the CM Professional Program.

CM 4337. LAND AND SITE DEVELOPMENT. 3 Hours.
Introduction to site planning and its process. This course covers important characteristics of Site Planning involved in a construction project including land features, uses, buildings, regulations, local community cultures, and site analysis and planning. Students will work on developing a site plan for the end of semester project. Prerequisite: Grade of C or better in CM 1331 and CM 3335; Admission to the CM Professional Program.

CM 4351. BUILDING INFORMATION MODELING FOR CONSTRUCTION MANAGEMENT. 3 Hours.
Introduction to techniques used in development and management of Building Information Models. Emphasis on constructability and management. Prerequisite: Grade of C or better in CM 3341 and admission to the CM Professional Program.

CM 4353. RESIDENTIAL AND COMMERCIAL CONSTRUCTION. 3 Hours.
A senior course for students preparing to enter the project management of residential and commercial construction projects, including: aspects of design, bidding/estimating, presentation, value engineering, contracts/negotiation, subcontractor relations, cost controls, management during construction, close out, and post-construction requirements. Prerequisite: Admission to the CM Professional Program.

CM 4357. SUSTAINABLE BUILDING PRACTICE. 3 Hours.
Ethics and application of environmental sustainability practice in building construction. Introduction to U.S. Green Building Council LEED program standards, methods, and procedures as applied to construction documents interpretation and construction. Prerequisite: Admission to the CM Professional Program.

CM 4359. INDUSTRIAL INTERNSHIP I. 3 Hours.
Program provides for a learning experience in a construction management environment appropriate to the undergraduate level of work with a minimum of 150 hours of work. A written report of the experience and a presentation are required. Prerequisite: Permission of instructor and admission to the CM Professional Program.

CM 4360. INDUSTRIAL INTERNSHIP II. 3 Hours.
Student to experience industrial internship under supervision of an industrial mentor and internship instructor. Prerequisite: CM 4359; Admission to the CM Professional Program.

CM 4391. PROBLEMS IN CONSTRUCTION MANAGEMENT. 3 Hours.
Selected problems in construction management on an individual or group basis. Reference material is assigned and progress conferences are held frequently, by arrangement, with a faculty supervisor. Prerequisite: Permission of the chair of the department and admission to the CM Professional Program.

CM 5300. TOPICS IN CONSTRUCTION MANAGEMENT. 3 Hours.
Topics of current interest in the field of construction management. The subject title is listed in the class schedule and in the student's record. Topics vary. May be repeated for credit when topic changes. Prerequisite: Consent of instructor.

CM 5301. TOPICS IN CONSTRUCTION MANAGEMENT WITH LAB. 3 Hours.
Topics of current interest in the field of construction management. The subject title is listed in the class schedule and in the student's record. Topics vary. May be repeated for credit when topic changes. Prerequisite: Consent of instructor.

CM 5313. GEOTECHNICAL ASPECTS OF CONSTRUCTION. 3 Hours.
Review of engineering geology and soil mechanics and teaching of the foundation and underground excavation construction solely to graduate students specializing in construction engineering & management. Topics include interpretation of geotechnical reports, embankment construction, foundations on expansive soils, excavation supports, excavation dewatering, deep foundation construction, tunneling in soft ground as well as in soft/hard rock, and trenchless technology piping. Prerequisite: CM 5378.

CM 5339. STATISTICS FOR CONSTRUCTION. 3 Hours.
Point estimation, interval estimation, sample size determination, tests of hypothesis, analysis of variance, linear regression, matrix methods for multiple linear regression, polynomial regression, transformations, non-linear regression. Prerequisite: Grade of C or better in CE 3301.

CM 5340. CONSTRUCTION PROJECT ACQUISITION. 3 Hours.
Fundamentals of acquiring the required goods and services necessary to fulfill the obligations of the construction contract. Service and subcontractor contracts, negotiating tactics and strategies, material pricing; and dispute resolution. The course includes negotiation practice based on typical construction acquisition situations to help prepare the student with experience of negotiating in the real world of construction and business. Prerequisite: Consent of instructor.

CM 5342. CONSTRUCTION PROJECT ADMINISTRATION. 3 Hours.
Topics in construction management and project administration, such as project delivery system, documentation and specification, electronic project administration, construction safety, risk allocation and liability sharing, changes and extra work, claims and disputes, and project closeout. Credit not granted for CE 4303 and CM 5342.

CM 5343. ADVANCED BUILDING INFORMATION MODELING. 3 Hours.
Introduction to current Building Information Modeling (BIM); Discussion of the role of BIM in Construction Engineering and Management; Revit Architecture, Structure, and MEP; Creating sets, building elements, structural systems, and MEP systems; BIM and clash detection; BIM and Construction Cost Estimating and Scheduling.

CM 5344. CONSTRUCTION METHODS: FIELD OPERATIONS. 3 Hours.
Introduction to the methods, equipment, and management techniques used in the construction industry. Topics include equipment operating characteristics, job site safety, and field management. Credit not granted for CE 4332 and CM 5344.

CM 5345. INFRASTRUCTURE EVALUATION, MAINTENANCE, AND RENEWAL. 3 Hours.
This course is designed for engineers and managers involved in infrastructure development, sustainability, and replacement. Topics include asset management, inspection, evaluation, maintenance, and renewal alternatives for waste collection and water distribution systems, surface and subsurface drainage, pavements, bridges, culverts, buildings, and other structures. Prerequisite: Consent of instructor.

CM 5350. RISK MANAGEMENT. 3 Hours.
The risk management process including risk identification, monitoring, and control; integrated quantitative cost and schedule risk analysis.

CM 5355. CONSTRUCTION MATERIALS. 3 Hours.
Principles of construction related to construction regulations and standards, loads, fire safety, acoustics, joints and sealants. Systems of construction involving concrete, steel, wood, masonry, sealants, and soil, and including excavations, below grade construction, formwork, cladding, joints, windows, doors, roofing, and ceilings.

CM 5377. CONSTRUCTION FINANCE. 3 Hours.
Financial aspects and job costing of a construction project. Includes project management principles, budgets, cost codes, cost-to-complete, and financial reports specific to the management of a construction company and project control.

CM 5378. CONSTRUCTION CONTRACTS, SPECIFICATIONS, & ADMINISTRATION. 3 Hours.
Types of construction contracts, contractual relationship between general contractor and owner, contractual relationship between general contractor and subcontractors, legal issues in construction administration, insurance, and concepts in value engineering. Reading and evaluating specifications, CSI Master Format. Credit not granted for CE 4304 and CM 5378. Prerequisite: Consent of instructor.

CM 5379. CONSTRUCTION COST ESTIMATING. 3 Hours.
Types of estimates, development of unit costs, quantity takeoff, cost estimating using manual methods and computerized cost estimating, budgets, and costs.

CM 5381. PUBLIC PRIVATE PARTNERSHIP FOR INFRASTRUCTURE PROJECTS. 3 Hours.
Public-private partnership (P3) arrangements as an innovative approach to deliver public infrastructure projects. Topics include P3 benefits, limitations, contracting and implementation strategies. Prerequisite: Grade of C or better in CE 3310 or IE 2308, or consent of instructor.

CM 5382. CONSTRUCTION SUSTAINABILITY. 3 Hours.
Introduction to International Code Council's 2012 International Building Code and USGBC's LEED® New Construction Guidelines v.3 for constructing sustainable/green buildings. Review of building occupancy categories, construction types, allowable height and area, life safety requirements, rated building assemblies, and egress. Site selection, energy and water efficiency, material reuse and indoor air quality. Credit not granted for CE 4307 and CM 5382.

CM 5386. CONSTRUCTION PLANNING & SCHEDULING. 3 Hours.
Construction productivity, planning, & scheduling of operations, flow charts, linear programming, critical path method (CPM), program evaluation review techniques (PERT), precedence networks. Computer methods.

CM 5387. CONSTRUCTION PRODUCTIVITY. 3 Hours.
Evaluation of construction project management's effectiveness. An investigation of the advanced techniques required for improvement of construction projects including time, cost, quality management, preplanning, field evaluation techniques, time-lapse photograph, safety, human factors, and communications. Prerequisite: CM 5379.

CM 5388. PIPELINE CONSTRUCTION AND TRENCHLESS TECHNOLOGY. 3 Hours.
Pipeline and utility design, construction and renewal. Topics include pipeline infrastructure structural considerations, planning and construction considerations, pipe materials, and trenchless technologies. Credit not granted for CE 4305 and CE 5388. Prerequisite: Consent of instructor.

CM 5389. PIPELINE SYSTEMS ASSET MANAGEMENT. 3 Hours.
Pipeline systems asset management, inventory, inspection, and life cycle costs. Topics include pipeline deterioration parameters, asset management technologies, risk assessment, government regulations, renewal technologies, and case studies. Credit not granted for CE 4306 and CE 5389. Prerequisite: Consent of instructor.

COURSES

COMM 1300. INTRODUCTION TO COMMUNICATION. 3 Hours. (TCCN = COMM 1307)
Application of communication theories and principles to human communication; from the oral tradition to the printing press, photography, electronic media, and information technology.

COMM 2195. COMMUNICATION CAREER PRACTICUM. 1 Hour.
Individual experience with direct supervision of a communication professional while working with approved profit and non-profit professional organizations. Individual conference should be arranged with supervising professor. See department for course qualifications. May be repeated up to a total of three times. Prerequisite: Department of Communication Majors only and permission of the department. Graded Pass/Fail.

COMM 2311. WRITING FOR MASS MEDIA. 3 Hours. (TCCN = COMM 2311)
Writing techniques in Associated Press style with practice in research and news writing. Credit will not be given for both COMM 2311 and JOUR 1345.

COMM 2313. DIGITAL CULTURE AND MEDIA. 3 Hours.
This course will inform students about how digital culture impacts worldviews. Students will learn how each aspect of the cultural diamond (producer, audience, content, and context) influences the creation, consumption, and interpretation of digital messages.

COMM 2393. SPECIAL TOPICS. 3 Hours.
Special studies in communication. Topic varies from semester to semester. May be repeated when topics change. Prerequisite: Permission of the department.

COMM 3300. COMMUNICATION TECHNOLOGY. 3 Hours.
Grounded on theories of mediated communication, this course examines the adoption and effects of current and emerging communication technologies. The course also examines the implications of technology convergence as well as social, economic, organizational factors that shape the design and use of communication technology. Prerequisite: 30 hours earned.

COMM 3303. COMMUNICATION GRAPHICS. 3 Hours.
History, current practice, principles and trends in typography, imaging, pre-press and production, sheet finishing, bindery, paper and ink, logo design, advertising layout, publication design, and computer layout, design, and publishing. Prerequisite: 30 hours earned.

COMM 3310. COMMUNICATION LAW & ETHICS. 3 Hours.
Study of constitutional, statutory, administrative, and ethical governance of communication and the mass media, including journalism, the Internet, advertising, and film. Rights and responsibilities of citizens, professional communicators, and corporations are addressed. Prerequisite: 60 or more hours earned.

COMM 3315. COMMUNICATION THEORY. 3 Hours.
Study of communication theories; interpersonal, organizational, mass media, and intercultural. This course also satisfies the requirements for UNIV 1101. Prerequisite: 30 hours earned.

COMM 3345. VISUALIZING CULTURE: MEDIA, IDENTITY AND POLITICS IN THE GLOBAL WORLD. 3 Hours.
Introduces students to key concepts in Visual Anthropology. This course highlights the contribution of anthropological methods in theorizing the visual in everyday life for the construction of nationalist, gender, ethnic, and class identities. Readings are drawn from diverse geographical regions. Visual material discussed in class may include ethnographic films, art, graphic novels, comics, illustrated magazines, virtual exhibitions and soap operas. Assignments include a writing and research component, and team-based exercises. Offered as ANTH 3345 and COMM 3345; credit will be granted only in one department.

COMM 3346. DISABILITY IN MASS MEDIA. 3 Hours.
Explores how mass media frames disability and neurodiversity for the general public. Focuses on issues related to disability and mass media representation, including journalism, TV, film, advertising, photography, documentary, video games, and the Internet. Topics may include media models of representation, inspiration porn, disability blogs, accessible media, and disabled mimicry in TV and film, among others. Offered as DS 3346 and COMM 3346; credit will be granted in only one department.

COMM 3350. HEALTH COMMUNICATION. 3 Hours.
Overview of health communication in interpersonal and organizational contexts as well as the role of mediated communication on human behavior and policy. Topics include the patient-provider relationship, mental health and illness, risky behaviors, and the role of media and technology in health communication. Prerequisite: 30 hours earned.

COMM 4191. READINGS IN COMMUNICATION. 1 Hour.
Readings addressing contemporary issues in communication. Proficiency in writing and research skills emphasized. Primarily for Communications majors. Prerequisite: 90 or more hours earned; 12 hours of 3000/4000 level in the department.

COMM 4300. COMMUNICATION RESEARCH. 3 Hours.
Introduction to communication research, design, and methodology. Readings and criticism in interpersonal, public address, and mass communication research; project required. Prerequisite: COMM 3315 and 60 hours earned.

COMM 4305. COMMUNICATION & SOCIETY. 3 Hours.
Readings and analysis of the role of communication in modern society; its impact on contemporary social, cultural, political, health, and intellectual trends. Prerequisite: COMM 3315 and 60 hours earned.

COMM 4306. RACE, GENDER, AND MEDIA. 3 Hours.
Examines issues related to race, gender, and media. Students learn how to think critically about media patterns of representation, ways they become interwoven in media structures, and how the media produce identities. Prerequisite: COMM 3315 and 60 hours earned, or permission of the department.

COMM 4318. MEDIA SALES AND PROMOTION. 3 Hours.
Study of broadcast rating services and terminology used to determine the audience of a particular radio or television operation. Demonstrates the importance of sales skills needed in the media, and the importance of account executives to radio and television stations. Emphasizes positioning media among competitors with respect to promotional and marketing plans designed to build and maintain an audience. Relationship of media ratings to programming and sales. Credit will not be granted for both BCMN 3318 and COMM 4318. Prerequisite: COMM 3315 and 60 hours earned.

COMM 4325. COMMUNICATION HISTORY. 3 Hours.
Evolution and trends in forms of human communication; development of symbols and media technology with attention to their effects on society. Prerequisite: COMM 3315 and 60 hours earned.

COMM 4330. POLITICAL COMMUNICATION. 3 Hours.
Communication theories, principles, and strategies in modern political campaigns and events. Prerequisite: COMM 3315 and 60 hours earned.

COMM 4335. INTERCULTURAL COMMUNICATION. 3 Hours.
Examination of verbal and nonverbal barriers to effective intercultural communication such as ethnocentrism, stereotyping, prejudice, racism, proxemics, kinesics, haptics, and chronemics. Developing effective communication in intercultural contexts. Prerequisite: COMM 3315 and 60 hours earned.

COMM 4340. CORPORATE COMMUNICATION. 3 Hours.
Examines organizational communication strategies with special emphasis on how communication affects corporate constituencies. Corporate image and identity are linked to corporate advertising, press releases, financial communication, internal communication and crisis communication. Prerequisite: COMM 3315 and 60 hours earned.

COMM 4343. COMMUNICATION AND LEADERSHIP AMBASSADORS. 3 Hours.
Study of leadership and persuasion. Students will participate in the Communication Ambassador Program and represent the Department of Communication at on- and off-campus recruitment events. The course focuses on leadership growth, offering hands-on experience in public speaking, event planning and coordination, and digital communication. Prerequisite: 60 hours earned, COMM 3315, and permission of the department.

COMM 4351. FAMILY AND HEALTH COMMUNICATION. 3 Hours.
Examines how the dynamics of family communication contribute to wellness through physical, psychological, and social domains. Investigates how family communication (e.g., parent-child, sibling, romantic, multigenerational, blended) affects our experience with health transitions, contributes to health outcomes, and is central to health promotion behavior. Prerequisite: COMM 3350 and 60 hours earned.

COMM 4352. COMMUNICATION AND HEALTH DISPARITIES. 3 Hours.
Examine health disparities experienced by populations due to factors such as race or ethnicity, gender, education or income, disability, geographic location (e.g., rural or urban), or sexual orientation. Explore issues of health disparities and health equity through the lens of communication. Study the role of communication in fostering health equity. Prerequisite: 60 hours earned.

COMM 4360. EMERGING MEDIA STRATEGY. 3 Hours.
Branding strategy for creating an effective professional presence across multiple communication platforms. Prerequisites: BCMN 2370, PREL 3320, COMM 3303, CTEC 2350, or permission of the Department.

COMM 4391. CONFERENCE COURSE. 3 Hours.
Topic assigned on an individual basis, covering individual research or study in the designated areas. May be repeated when topic changes. Prerequisite: 60 or more hours earned and permission of the department.

COMM 4392. ADVOCACY AND POLITICS. 3 Hours.
An introduction to challenges individuals face when advocating for an issue, an idea, or even themselves. The goal of the course is to help students grasp concepts relevant to their internship experiences as Archer Fellows in Washington D.C. Enrollment is restricted to designated Archer Fellows. Prerequisite: POLS 2311 and POLS 2312.

COMM 4393. COMMUNICATION TOPICS. 3 Hours.
Seminar in interdisciplinary topics. May be repeated when topic changes, for a maximum of nine credit hours. Prerequisite: 60 or more hours earned.

COMM 4394. HON THESIS / SENIOR PROJECT. 3 Hours.
Required of all students in the University Honors College. During the senior year, the student must complete a thesis or a project under the direction of a faculty member in the major department.

COMM 5300. ADVANCED THEORIES IN COMMUNICATION. 3 Hours.
Advanced study of communication theories: interpersonal, organizational, mass media and intercultural.

COMM 5301. SUPERVISED TEACHING. 3 Hours.
Application of theory to the practices of teaching college courses in communication. Students will handle all aspects of the classroom including lecturing, conducting class discussions, issuing assignments, grading and assigning grades under the supervision of the course director. No unit credit will be allowed toward advanced degree.

COMM 5305. COMMUNICATION RESEARCH METHODS. 3 Hours.
Study and application of communication research, design and methodology. Students will apply statistics in communication research and complete a research project/paper.

COMM 5306. QUALITATIVE RESEARCH METHODS. 3 Hours.
Advanced study and application of qualitative communication research, design and methodology. Prerequisite: COMM 5300 and COMM 5305.

COMM 5307. HISTORICAL RESEARCH METHODS IN COMMUNICATION. 3 Hours.
This course provides students with an introduction to historical methods that are relevant to research in communication.

COMM 5310. THEORIES IN PERSUASION. 3 Hours.
A comparison of traditional with contemporary behavioral science theories of persuasive discourse and their supporting research.

COMM 5316. CORPORATION COMMUNICATION STRATEGIES. 3 Hours.
Examines organizational communication strategies with special emphasis on how communication affects corporate constituencies. Corporate image and identity are linked to corporate advertising, press releases, financial communication, internal communication and crisis communication.

COMM 5320. ADVANCED VISUAL COMMUNICATION. 3 Hours.
Theory of visual communication in technical communication. Practice includes conceptualization, development and production.

COMM 5321. ADVANCED INTERNET MARKETING COMMUNICATION. 3 Hours.
Study of the use of information technology to optimize advertising, promotion, public relations and sales functions. Examines an infrastructure of the Internet and how it affects information retrieval, Web design, Web site management and Web site security. Discusses research strategies, usage trends and social implications.

COMM 5323. COMPUTER-MEDIATED COMMUNICATION. 3 Hours.
Study of theoretical and practical issues associated with modern communication technology and computer-mediated communication in interpersonal and organizational communication contexts.

COMM 5332. ADVANCED PROFESSIONAL COMMUNICATION. 3 Hours.
Advanced study of the theory and practice in written and oral presentations with emphasis on the application of communication theory in organizational and technical professions.

COMM 5335. GLOBAL COMMUNICATION. 3 Hours.
Examination of verbal and nonverbal barriers to effective intercultural and international communication. Developing effective communication in advanced study of communication theories: interpersonal, organizational, mass media and intercultural contexts and exploring the definition and impact of global communication.

COMM 5341. MEDIA MANAGEMENT. 3 Hours.
Study of media policy and regulation; media, cultural, and management theories; media economics; accounting and finance; business strategy, management and marketing.

COMM 5345. COMMUNICATION CAMPAIGNS. 3 Hours.
Advanced study of communication theories and research with the goal of developing strategic communication plans, including the selection of the appropriate vehicles and creative tactics. Team project required.

COMM 5346. MEDIA AND PUBLIC POLICY. 3 Hours.
Advanced study of communication theories and research related to understanding the linkage between media, public opinion and public policy. Individual and/or team project required.

COMM 5347. CRISIS COMMUNICATION. 3 Hours.
Advanced study of communication theories related to crisis communication and strategies used to communicate with stakeholders before, during and after crisis situations.

COMM 5349. COMMUNICATION IN VIRTUAL ORGANIZATIONS. 3 Hours.
This course examines the communication processes in virtual organizations. Communication, organizational, and management theories related to virtual organizations will be introduced. Students will learn to critically analyze specific communication issues in virtual organizations, such as organizational trust, knowledge management, communication and knowledge networks, employee relationships, and organizational identification.

COMM 5350. HEALTH COMMUNICATION. 3 Hours.
This course provides an overview of health communication in interpersonal contexts as well as the role of mediated communication on human behavior and policy.

COMM 5351. POLITICAL COMMUNICATION. 3 Hours.
This course emphasizes theoretical perspectives while also exploring, analyzing and evaluating the applied aspects of communication in politics. Students will engage in research according to their own specific interests within communication.

COMM 5352. SOCIAL MEDIA THEORY AND PRACTICE. 3 Hours.
At the intersection of mass and interpersonal communication, social media has reshaped how millions of people experience popular culture, journalism and politics. This course will involve advanced study of networked communication, social implications of these networks and the application of professional techniques for communicating via social media and measuring progress using available platform analytics.

COMM 5353. DIGITAL MEDIA DATA ANALYTICS. 3 Hours.
Study theories and practices related to the collection, analysis, presentation, and interpretation of data for digital communication purposes. Students will work on data analytics and data visualization projects.

COMM 5391. CONFERENCE COURSE. 3 Hours.
Topic assigned on an individual basis, covering individual research or study in the designated areas. Can be taken no more than two times for credit. Prerequisite: permission of the department.

COMM 5392. SEMINAR. 3 Hours.
Special topics. Topic varies from semester to semester. May be repeated when topic changes.

COMM 5398. THESIS. 3 Hours.
Student completion of a research project on a subject of primarily theoretical interest, intended for an academic audience. Prerequisite: satisfactory completion of coursework and consent of thesis advisor.

COMM 5399. GRADUATE COMMUNICATION INTERNSHIP. 3 Hours.
Practical training and experience in the field of communication. Applied communication research project is required. Course counts as an elective and has a pass/fail grade. No credit will be given for current employment, previous experience or activities. Prerequisite: Minimum nine graduate semester hours completed. Subject to departmental approval.

COMM 5698. THESIS. 6 Hours.
Student completion of a research study on a subject of primarily theoretical interest, intended for an academic audience. Prerequisite: satisfactory completion of thesis proposal defense and consent of thesis advisor.

COURSES

COMS 0185. FORENSICS. 1 Hour.
Preparation for and participation in intercollegiate and intersquad forensic activities. Students engage in supervised research, development of debate skills and individual speaking activities. Prerequisite: permission.

COMS 1301. FUNDAMENTALS OF PUBLIC SPEAKING. 3 Hours. (TCCN = SPCH 1315)
Stress on development of the individual's speaking abilities and confidence in a variety of speaking situations.

COMS 1302. VOICE AND DICTION. 3 Hours. (TCCN = SPCH 1342)
Designed to improve the quality of the individual's speech. Enunciation, articulation, pronunciation, and the fundamentals of voice production. The phonetic alphabet as a visual means of teaching auditory differences.

COMS 2302. PROFESSIONAL AND TECHNICAL COMMUNICATION FOR SCIENCE AND ENGINEERING. 3 Hours.
Theory and practice in written and oral presentations with an emphasis on professional and technical communication for science and engineering. Prerequisites: 30 or more hours earned and ENGL 1301 or Student Group.

COMS 2304. GROUP COMMUNICATION PRINCIPLES. 3 Hours. (TCCN = SPCH 2333)
Principles and practice of effective interaction within small groups including meeting planning, agenda setting, conflict management, and decision making.

COMS 2305. BUSINESS AND PROFESSIONAL COMMUNICATION. 3 Hours. (TCCN = SPCH 1321)
Insight into communication skills. Designed to give the student experience in interviewing, business presentations, organizational reports, and the relationship of visual and oral presentations to business.

COMS 3309. ORGANIZATIONAL COMMUNICATION. 3 Hours.
Communication functions within formally structured social systems such as business, government, and education. Emphasis on conceptual schemes for conducting analysis of training programs in organizational communication. Credit will not be given for both COMS 3309 and PCOM 3309. Prerequisite: COMS 2304 with a grade of C or better (2.0/4.0), COMS 1301, and 3 hours of Math.

COMS 3310. GROUP COMMUNICATION THEORY. 3 Hours.
Characteristics of group communication including group function and formation, norms, cohesion, problem solving, leadership, and ethics. Prerequisite: COMS 2304 with a grade of C or better (2.0/4.0) and 3 hours of Math.

COMS 3312. BACKGROUNDS OF PUBLIC ADDRESS. 3 Hours.
Traditional works pertinent to theories of communication. Emphasis on discovering the traditional bases shared by empirical and critical studies of rhetorical communication. Prerequisite: COMS 1301 and COMS 2304 with a grade of C or better (2.0/4.0), or permission of the department.

COMS 3315. COMMUNICATION FOR EDUCATORS. 3 Hours.
Basic concepts, theories, research and processes relevant to formal and informal instructional situations. Units of study will focus on intrapersonal, interpersonal, small group, and presentational communication. Prerequisite: COMS 1301 and COMS 2304 with a grade of C or better (2.0/4.0), or permission of the department.

COMS 3316. COMMUNICATION IN HUMAN RELATIONS. 3 Hours.
The human communication process within social, business, and family contexts. Theories and principles of interpersonal communication. Prerequisites: 45 or more hours earned.

COMS 3320. INTERVIEW PRINCIPLES. 3 Hours.
Theory and practice in interviewing as it relates to information-gathering, questioning, and response analysis in probing, persuasive, employment, and survey interviews; practical and legal application in employment interviews; preparation of resume and cover letter. Prerequisite: One of the following: COMS 1301, COMS 2302, or COMS 2305.

COMS 3321. ORAL INTERPRETATION OF LITERATURE. 3 Hours.
The fundamental principles of oral interpretation and techniques of interpretation. Stresses background research concerning author and type of material. Prerequisite: COMS 1301. A grade of C or better in one of the following courses: COMS 2302, COMS 2304, COMS 2305.

COMS 3323. ORAL INTERPRETATION OF CHILDREN'S LITERATURE. 3 Hours.
Traditional oral interpretation principles and performance techniques as applied to various genres of children's literature. Prerequisite: COMS 1301, a grade of C or better in one of the following courses: COMS 2302, COMS 2304, COMS 2305.

COMS 4300. PERSUASIVE COMMUNICATION. 3 Hours.
Analysis of the means by which persuasive communication affects individuals and society. Extensive reading of theories of techniques of persuasion. Study of the adaptation of motivational appeals, structural strategies, and other persuasive techniques in interpersonal and public contexts. Prerequisite: COMM 3315 and COMS 1301; COMS 2304 with a grade of C or better (2.0/4.0).

COMS 4302. MODERN PUBLIC ADDRESS. 3 Hours.
Analysis of major 20th-century forms of public address and speakers. Application of various models for criticism and public address. Prerequisite: COMM 3315, COMS 1301, and a grade C or better in one of the following courses: COMS 2302, COMS 2304, COMS 2305; or permission of the department.

COMS 4315. PROFESSIONAL PRESENTATIONS. 3 Hours.
The role of internal and external informative and persuasive presentations in organizations. Extensive readings and practice with an emphasis on research, development, organization, and critical evaluation of oral and visual presentations. Credit will not be given for both COMS 4315 and PCOM 4315. Prerequisite: 60 hours complete and a C or better in one of the following courses: COMS 1301, COMS 2302, COMS 2304, or COMS 2305.

COMS 4320. MANAGERIAL COMMUNICATION. 3 Hours.
Analysis of the role of the business manager; readings in research and theory with emphasis on problem-solving and motivation. Credit will not be given for both COMS 4320 and PCOM 4320. Prerequisite: COMM 3315 and COMS 3309 with a grade of C or better (2.0/4.0), or permission of the department.

COMS 4321. READERS THEATRE. 3 Hours.
Readers interpret various kinds of literature for an audience. Analysis and criticism of literature are stressed. Prerequisite: COMM 3315, a grade of C or better (2.0/4.0) in COMS 3321 or COMS 3323, or permission of the department.

COMS 4322. COMMUNICATION TRAINING AND DEVELOPMENT. 3 Hours.
The process of analyzing communication problems and providing training skills for businesses and organizations. Emphasizes practical knowledge of facilitating skill improvement in verbal and nonverbal communication. Prerequisite: 60 hours complete and a C or better in one of the following courses: COMS 1301, COMS 2302, COMS 2304, or COMS 2305.

COMS 4391. CONFERENCE COURSE. 3 Hours.
Topics assigned on an individual basis, covering research or study in the designated areas. May be repeated when topic changes. Prerequisite: 60 or more hours earned and permission of the department.

COMS 4393. COMMUNICATION TOPICS. 3 Hours.
Special studies in speech. Topics will vary from semester to semester. May be repeated once when topics vary. Prerequisite: 60 hours earned, and permission.

COMS 4395. PROFESSIONAL INTERNSHIP. 3 Hours.
Individual research while working with business and industry. Individual conference to be arranged. Graded Pass/Fail. Prerequisite: 60 or more hours earned, and permission.

COURSES

CRCJ 2334. INTRODUCTION TO THE CRIMINAL JUSTICE SYSTEM. 3 Hours. (TCCN = CRIJ 1301)
An overview of the entire criminal justice system; history and development, law enforcement, prosecution and defense, courts and trial processes, and corrections. Formerly CRCJ 3334; credit will not be granted for both CRCJ 3334 and CRCJ 2334.

CRCJ 2335. ETHICS AND THE CRIMINAL JUSTICE SYSTEM. 3 Hours.
An examination of ethical issues confronted by criminal justice personnel and organizations. The course explores the standards and professional responsibilities of criminal justice practitioners, including law enforcement officers, officers of the courts, and juvenile and corrections officials.

CRCJ 2340. CRIMINAL INVESTIGATION. 3 Hours. (TCCN = CRIJ 2314)
Fundamentals of criminal investigation, including theory and history, conduct at crime scenes, sources of information, collection and preservation of evidence, case and trial preparation. Formerly CRCJ 2314; credit will be given for CRCJ 2340 or CRCJ 2314, but not both.

CRCJ 2350. INTRODUCTION TO LAW ENFORCEMENT. 3 Hours.
An overview of the historical and organizational development of police systems. Emphasis is placed on the function and organizational structure of law enforcement agencies and how these agencies interface with other components of the criminal justice system.

CRCJ 3300. THEORETICAL CRIMINOLOGY. 3 Hours.
The methodological and theoretical perspectives of the social and biological sciences as integrated into the criminal justice system. Prerequisite: CRCJ 2334.

CRCJ 3307. INTRODUCTION TO SECURITY SYSTEMS. 3 Hours.
Historical development of private security, its form and practice in modern society. Emphasis on three major divisions within the field: industrial, commercial and governmental security organizations and issues.

CRCJ 3310. PROFESSIONAL WRITING FOR CRCJ MAJORS. 3 Hours.
Designed to develop or enhance skills in varied writing styles used in the study of criminology and criminal justice. Legal, technical, and academic writing requirements are presented with emphasis on purpose, form and content. Specific focus is on technical reports for law enforcement agencies, legal research, field investigations, as well as proper citation and reference style. Open to CRCJ majors or minors only.

CRCJ 3320. CYBERCRIME. 3 Hours.
The course presents a conceptual overview of cybercrime and information security. Topics include: history of cybercrime, cybercrime techniques, cyberterrorism, forensics, and information security fundamentals.

CRCJ 3330. FUNDAMENTALS OF LAW. 3 Hours.
This course introduces students to areas of the law that affect the daily lives of U.S. residents. Emphasis is on fundamental criminal law and constitutional law principles which provide a platform for consideration of important public policy issues concerning crime, discrimination, health care, and immigration.

CRCJ 3336. POLICE MANAGEMENT AND ADMINISTRATION. 3 Hours.
Examines the principles of administration, management, politics and leadership with emphasis on their applicability to police planning, organization, direction, control and personnel management.

CRCJ 3337. ADVANCED CRIMINAL PROCEDURE. 3 Hours.
The processes involved in the criminal justice system; the rules of evidence; the laws of arrest, search and seizure; and the judicial process from offense to conviction.

CRCJ 3338. JUVENILE JUSTICE SYSTEMS. 3 Hours.
Organization, processes, and functions of the juvenile justice system in the United States, its historical antecedents, and contemporary challenges. Consideration also given to sociopolitical factors in juvenile justice decision-making. This course satisfies the requirements for UNIV 1101.

CRCJ 3340. CRIMINAL JUSTICE STATISTICS. 3 Hours.
An introduction to basic concepts and techniques necessary for a preliminary and proficient understanding of criminal justice research. Focus is on analyzing and interpreting research findings including types of data, central tendency, and both descriptive and inferential statistics. Prerequisite: CRCJ 2334 and CRCJ 3350 or equivalent.

CRCJ 3350. INTRODUCTION TO RESEARCH METHODS IN CRIMINOLOGY AND CRIMINAL JUSTICE. 3 Hours.
This course introduces students to the research methodology used in criminological research. Emphasis is on the development of a general understanding of why and how research can be and is conducted in the field of criminology and criminal justice. Other dimensions of research are discussed including the nature of scientific thought, the link between research methods and criminological theory, and the various ethical issues concerning research in the field of criminology.

CRCJ 3370. INTRODUCTION TO FORENSICS. 3 Hours.
This course provides an overview of forensic science. Emphasis is on crime scene investigation, physical evidence, organic and inorganic analysis, forensic toxicology and use of DNA in investigations.

CRCJ 3371. CRIME SCENE INVESTIGATION. 3 Hours.
Provides an in-depth examination of the principles of crime scene investigation. Aspects of forensic crime scene investigation from receiving the call, arriving at the scene, processing of the scene, evidence collection, and safety protocols are examined from scientific, procedural, and legal perspectives. In addition, the tools, techniques, and protocols necessary to perform systematic and thorough crime scene investigation will be presented. Prerequisite: CRCJ 3370.

CRCJ 3380. RACE, CRIME, AND JUSTICE. 3 Hours.
An examination of race in the context of the criminal justice system. Emphasis is on social construction of crime; and the treatment of racial minorities as victims and offenders by law enforcement, courts, and corrections. Offered as CRCJ 3380 and MAS 3380; credit will be granted only once. Offered as AAST 3380 and CRCJ 3380; credit will be granted in only one department. Prerequisite: CRCJ 2334.

CRCJ 3385. WOMEN AND CRIME. 3 Hours.
This course examines criminology and criminal justice issues as they relate specifically to women. The three major areas of coverage include (1) women and girls as victims of crime, (2) women and girls as criminal offenders; and (3) women working in the criminal justice system. Offered as DIVR 3385, CRCJ 3385 and GWSS 3385; credit will be granted only once.

CRCJ 3390. VICTIMOLOGY. 3 Hours.
The relationship between victims of crime and the criminal justice system. Includes an analysis of the characteristics of crime victims, victim reporting and nonreporting patterns, treatment of victims by the various segments of the criminal justice system, victim assistance programs, and the issue of compensation and/or restitution for victims of crime.

CRCJ 3395. DRUG USE AND ABUSE. 3 Hours.
An examination of the description, classification, and analysis of the problem of illegal drug use. Focus is on current drug policies in the United States, and a comparison of worldwide drug policies, and critical analysis of each.

CRCJ 4191. CONFERENCE COURSE. 1 Hour.
Directed individual study; research and study on a topic agreed upon by instructor and student. No more than six hours credit will be granted for conference courses in criminal justice. Prerequisite: permission of the instructor.

CRCJ 4291. CONFERENCE COURSE IN CRIMINAL JUSTICE. 2 Hours.
Directed individual study; research and study on a topic agreed upon by instructor and student. No more than six hours credit will be granted for conference courses in criminal justice. Prerequisite: permission of the instructor.

CRCJ 4301. THE AMERICAN JUDICIAL SYSTEM. 3 Hours.
Federal, state, and local judicial systems, with special emphasis on state trial courts having criminal jurisdiction. Court structure and function, court management, and judicial behavior.

CRCJ 4302. MOCK TRIAL I. 3 Hours.
The purpose of this course is to enhance the student's knowledge of the American adversarial judicial system through in-depth study of trial procedure and evidentiary rules. The primary teaching vehicle is a simulated trial based on the official hypothetical case published by the American Mock Trial Association for the current school year. Cases alternate between criminal and civil cases. The current state of our nation affords us a unique opportunity to explore ways to incorporate digital modalities of jury trials and their impact on our justice system.

CRCJ 4303. MOCK TRIAL II. 3 Hours.
In-depth examination of the structure, functions and operations of U.S. civil and criminal trials, with special attention to modern jury decision making and its impact on the criminal justice process by learning practical skillsets related to the voir dire and trial court process.

CRCJ 4309. PRIVATE SECURITY ADMINISTRATION. 3 Hours.
The essentials of governmental and proprietary security development and program planning; including personnel recruitment and training, developing and conducting security audits, records and information protection, and general applications of modern management techniques to security organization. Prerequisite: CRCJ 3307.

CRCJ 4313. SERIAL KILLERS. 3 Hours.
The main objective of this course is to examine various dimensions of criminology with an emphasis placed on the theoretical explanations, motivations, and behaviors of those who commit serial murder and mass violence. In this course students will be asked to think critically about theories of crime causation, crime typologies, and the victimology.

CRCJ 4315. WHITE-COLLAR AND CORPORATE CRIME. 3 Hours.
This course provides an overview of the structure, extent, cost, and control of white-collar and corporate crimes. Landmark cases and everyday instances will be detailed. Theoretical explanations and policy implications will be discussed.

CRCJ 4325. GANGS. 3 Hours.
An examination of historical and contemporary street and correctional institutional gangs. Addresses the nature and definition of gangs, types and diversity of membership of gangs, theoretical explanations, criminal and deviant behavior, law enforcement responses, intervention and prevention strategies, and public policy issues.

CRCJ 4332. COMMUNITY CORRECTIONS. 3 Hours.
Evaluation of practices, issues, and trends in community corrections. Emphasis is on the de-institutionalization movement, probation, parole, intermediate punishments, and other community alternatives to incarceration.

CRCJ 4333. INSTITUTIONAL CORRECTIONS. 3 Hours.
Examination and evaluation of practices, issues, and trends in institutional corrections. Emphasis is on administration, organization, and effectiveness of incarceration.

CRCJ 4340. FORENSIC DEATH INVESTIGATION. 3 Hours.
An exploration of death investigations including an overview of protocols utilized to investigate a death as well as autopsy perspectives. Focus is on the numerous causes of death and the working relationship of police investigators, death investigators, forensic pathologists, and forensic laboratories. Prerequisite: CRCJ 3370.

CRCJ 4341. FORENSIC EXAMINATION OF IMPRESSION EVIDENCE. 3 Hours.
Explores how impression evidence is formed, how to collect and enhance impression evidence and how to compare this type of evidence. The student will also learn how impression evidence is presented and utilized in a courtroom setting. Prerequisites: CRCJ 3370 and CRCJ 3371 or permission of the instructor.

CRCJ 4342. FORENSIC HAIR AND FIBER IDENTIFICATION. 3 Hours.
Introduces the student to forensic hair and fiber examination by microscopy, including the presentation of the techniques, skills, and limitations of the hair and fiber examiner in a modern crime laboratory setting. Collection techniques utilized at the crime scene and from items of evidence will also be examined. The impact of these techniques on the criminal justice system, in particular the court system, will be explored. Prerequisite: CRCJ 3370 or permission of the instructor.

CRCJ 4343. FORENSIC EXPERT TESTIMONY. 3 Hours.
Survey of the techniques for providing testimony as an expert witness in a court of law, including proper physical appearance, demeanor, qualifications, presentation of evidence, offering opinion, and ethics of providing testimony. Prerequisite: CRCJ 3370.

CRCJ 4344. CRIME ACROSS THE LIFE COURSE. 3 Hours.
This course will introduce students to developmental and life-course criminology, which seeks to understand the development of offending over time. In particular, the class will focus on early precursors to criminal behavior, stability and factors impacting change in criminal behavior, and how genetics and the environment may impact criminal behavior.

CRCJ 4345. CRIME AND THE CRIMINAL JUSTICE SYSTEM IN THE MEDIA. 3 Hours.
An examination of crime and the criminal justice system as depicted in the media; special emphasis on the roles of the media in influencing individual and societal perceptions of, and reactions to, crime and the criminal justice system.

CRCJ 4352. TERRORISM AND MASS VIOLENCE. 3 Hours.
Examination of historic and current trends in civil disruption from domestic/international perspectives. Considers literature and philosophical basis of political terrorism; costs of terrorism; future trends and deterrence by civil or military intervention. Formerly CRCJ 3352; credit will not be granted for both CRCJ 4352 and CRCJ 3352.

CRCJ 4355. ORGANIZED CRIME: NATIONAL AND INTERNATIONAL. 3 Hours.
An examination of organized crime in the United States and internationally, including history, development, ethnic links, impact upon society and the economy, and international cooperation aimed at eradicating the occurrence and proliferation of this form of criminality.

CRCJ 4357. FORENSIC FIREARMS IDENTIFICATION. 3 Hours.
This course introduces students to the field of forensic firearm and tool mark identification. Topics include development, manufacture, evaluation and comparison of firearms, ammunition and tool mark evidence. Students will also acquire an understanding of the firearm examiner's responsibilities as they impact the criminal justice system. Prerequisite: CRCJ 3370.

CRCJ 4365. CAPITAL PUNISHMENT. 3 Hours.
An examination of historic and current trends in capital punishment. Considers the literature and philosophical basis of capital punishment, the costs of capital punishment, and future trends of capital punishment. Provides an in-depth examination of capital punishment from a criminal justice policy perspective.

CRCJ 4380. COMPARATIVE CRIMINAL JUSTICE SYSTEMS. 3 Hours.
An overview of criminal justice systems in other countries. Includes an intensive study and analysis of materials on their law enforcement, judicial, and corrections components; review of comparative studies on a variety of criminal justice topics.

CRCJ 4386. TOPICS IN CORRECTIONS. 3 Hours.
May be repeated for credit as the topics vary, but credit will not be granted for more than 12 semester hours of CRCJ-prefix topics courses without permission of advisor.

CRCJ 4387. TOPICS IN CRIME AND CRIMINOLOGY. 3 Hours.
May be repeated for credit as the topics vary, but credit will not be granted for more than 12 semester hours of CRCJ-prefix topics courses without permission of advisor.

CRCJ 4388. TOPICS IN LAW AND JUDICIAL PROCESSES. 3 Hours.
May be repeated for credit as the topics vary, but credit will not be granted for more than 12 semester hours of CRCJ-prefix topics courses without permission of advisor.

CRCJ 4389. TOPICS IN LAW ENFORCEMENT AND PRIVATE SECURITY. 3 Hours.
May be repeated for credit as the topics vary, but credit will not be granted for more than 12 semester hours of CRCJ-prefix topics courses without permission of advisor.

CRCJ 4390. INTERNSHIP IN CRIMINAL JUSTICE. 3 Hours.
Provides the student with an opportunity to apply academic experience to practical situations by serving for a specified number of hours as participant-observer in a criminal justice agency. May be taken for a total of six semester hours. Internships must be arranged with internship supervisor in the semester prior to enrolling for this course. Prerequisite: permission of the instructor.

CRCJ 4391. CONFERENCE COURSE IN CRIMINAL JUSTICE. 3 Hours.
Directed individual study; research and study on a topic agreed upon by instructor and student. No more than six hours credit will be granted for conference courses in criminal justice. Prerequisite: permission of the instructor.

CRCJ 4394. HONORS THESIS/SENIOR PROJECT. 3 Hours.
Required of all students in the University Honors College. During the senior year, the student must complete a thesis or a project under the direction of a faculty member in the major department.

CRCJ 5196. CONFERENCE COURSE CRJU. 1 Hour.

CRCJ 5301. PROSEMINAR IN CRIMINOLOGY AND CRIMINAL JUSTICE. 3 Hours.
This course is a comprehensive introduction to the discipline, with particular emphasis on the specialties of department faculty, academic research, and writing style. Classic and contemporary literature will be used to examine criminal behavior and the structure, function, operation, and interaction of the criminal justice system components as well as current practices and future trends in criminology and criminal justice.

CRCJ 5309. RESEARCH METHODS IN CRIMINAL JUSTICE. 3 Hours.
Examination of research methodology in criminal justice. Special emphasis on methods and techniques for conducting research in criminal justice, including a review of problems encountered in sampling and survey research, field research, public policy implementation, and program evaluation.

CRCJ 5310. STATISTICS & RESEARCH PRACTICES IN CRIMINAL JUSTICE. 3 Hours.
Advanced methods and techniques of research and research design in criminology and criminal justice. Course will cover pure and applied research and expose students to contemporary methodological and analytical issues. Students will be instructed on the use of existing CRCJ databases as well as the collection of new data and particular aspects of SPSS (Statistical Package for the Social Sciences software) and advanced data analysis. Prerequisite: CRCJ 5309 or equivalent.

CRCJ 5318. CRIMINAL JUSTICE PERSONNEL ADMINISTRATION. 3 Hours.
Personnel administration and management in criminal justice agencies and institutions; analyzes functions of recruitment, selection, hiring, placement, evaluation, dismissal, benefits systems, minority recruitment, training, education, promotion, career development, and retirement.

CRCJ 5319. ISSUES IN POLICING. 3 Hours.
In-depth analysis of historical, current, and future issues in policing and police administration. Emphasis will be placed on the role of police in society, police-citizen relationships, and empirical evaluations of police effectiveness, police behavior, and programs and strategies.

CRCJ 5327. CONSTITUTIONAL ISSUES IN THE CRIMINAL JUSTICE SYSTEM. 3 Hours.
Examination of a variety of legal issues critical to a thorough understanding of the various aspects of the criminal justice system. Special attention is given to contemporary constitutional issues and court decisions and their impact on the criminal justice process.

CRCJ 5332. CORRECTIONAL THEORY AND PRACTICE. 3 Hours.
Examination of social, psychological, political, and historical bases of interventions in the control and disposition of offenders. Emphasis on contemporary policies, practices, and problems in institutional, semi-institutional, and community-based corrections.

CRCJ 5342. ETHICS IN CRIMINAL JUSTICE. 3 Hours.
This course focuses on the ethical decisions and dilemmas encountered in the criminal justice system. Topics covered include criteria for ethical decision making, professional codes of ethics, and ethical and legal dilemmas faced by criminal justice professionals.

CRCJ 5350. THEORETICAL CRIMINOLOGY. 3 Hours.
Explores the etiology of crime, theory development and crime causation. Emphasis is on theoretical perspectives and policy implementation.

CRCJ 5351. TERRORISM AND CRIME. 3 Hours.
This course examines the origins, nature, and operational characteristics of terrorist groups. Students are exposed to topics ranging from the definition of "terrorism" to the unique characteristics of terrorist cells in the United States and abroad. Particular emphasis is on historical and contemporary terrorist attacks against the United States.

CRCJ 5352. WOMEN, CRIME & CRIMINAL JUSTICE. 3 Hours.
A summary of issues related to women as criminal offenders, victims of crime, and professionals in the criminal justice system. The course focuses on crimes women are most likely to commit and/or be processed through the criminal justice system for, the punishment of female offenders, the types of victimizations most often experienced by women, and employment issues unique to women employed in the criminal justice system. While the main emphasis of the course will be on the experiences of women in the U.S., attention will also be given to women on a global scale.

CRCJ 5353. CRIMINAL JUSTICE ORGANIZATIONAL THEORY & MANAGEMENT THOUGHT. 3 Hours.
An examination of organizational theory with specific application to the operation and management of criminal justice agencies. The historical precedents and emergence of contemporary perspectives are presented with their implication for effective functioning of the criminal justice system.

CRCJ 5354. COMPARATIVE CRIMINAL JUSTICE SYSTEMS. 3 Hours.
This course is an overview of crime, criminal behavior, and criminal justice systems throughout the world. This course includes an intensive study and analysis of materials on law enforcement, judicial, and corrections components; a review of comparative studies on a variety of criminal justice topics; and a basic worldwide understanding of philosophies of law and justice. This is a global learning course.

CRCJ 5360. RACE, CRIME JUSTICE & THE LAW. 3 Hours.
This course explores the role of race and ethnicity within the juvenile and criminal justice system. Emphasis is on the social construction of crime, racial and ethnic inequalities, the law and policies/practices that impact blacks and other racial minorities.

CRCJ 5364. CRIME AND THE MEDIA. 3 Hours.
Utilizing a social constructionist perspective, the course examines the mass media's role in engendering and cultivating American society's perception of crime. This course examines factors influencing the social reality of crime, and attempts to deconstruct perceptions of crime-related mass media events.

CRCJ 5366. JUVENILE DELINQUENCY AND JUVENILE CORRECTIONS. 3 Hours.
Correctional modes are discussed and applied to juvenile offenders. Theoretic approaches to causation, modification, and control of delinquent behaviors are presented, and policy implications and limitations are discussed. Historical and contemporary perspectives and approaches are presented in the context of evolving and emerging practices and procedures.

CRCJ 5368. CYBERCRIME AND CYBERSECURITY. 3 Hours.
The main objective of this course is to introduce students to the nature of cybercrime and cybersecurity in the field of criminal justice. Major topics include computing and networking systems, types of cybercrime and cybercriminals, theoretical explanations of cybercriminals, and cybersecurity.

CRCJ 5370. PRACTICUM. 3 Hours.
Professional or pre-professional experience in a criminal justice related agency or institution with the approval and direction of the student's supervising professor; intended for non-thesis option students who do not have professional experience related to criminal justice.

CRCJ 5373. WHITE-COLLAR AND CORPORATE CRIME. 3 Hours.
This course exposes students to the basic concepts associated with incorporation and corporate liability, the definitional complexity of white-collar crime and the idea of crime as a socially constructed phenomenon. The types of behaviors encompassed by the terms "white-collar crime" and "corporate crime", the similarities and differences between white-collar and street-level offenders, and various theoretical explanations for white-collar crime are explored. In addition, the course includes an examination of the physical and economic costs of white-collar crime, landmark cases and issues related to detection, enforcement, and sentencing of white-collar offenders. This course has been offered previously as CRCJ 5393-Special Topics. To be cross-listed with CRCJ 4373. White-Collar and Corporate Crime. Prerequisite: CRCJ 5301.

CRCJ 5380. CRIMINAL JUSTICE SEMINAR. 3 Hours.
Synthesis course for advanced graduate students. Special emphasis on examination of constructs of crime/criminals, justice and systems. Requires individual research in area of particular concern to student.

CRCJ 5381. CRIME & PUBLIC POLICY. 3 Hours.
This course addresses crime and criminal justice policy. Emphasis is on the examination of media and political forces that shape criminal justice responses and policy initiatives. In the context of theoretical paradigms, the impact of race, class, economics, and gender on development of criminal justice public policy is examined.

CRCJ 5382. COMPREHENSIVE ISSUES IN CRIME AND JUSTICE. 3 Hours.
An advanced course covering a broad array of issues related to criminology, crime, and the justice system. This course is designed to review topics related to the comprehensive examination.

CRCJ 5393. TOPICS IN CRIME AND CRIMINOLOGY. 3 Hours.
May be repeated for credit as the topic changes.

CRCJ 5394. TOPICS IN JUSTICE ISSUES. 3 Hours.
May be repeated for credit as the topic changes.

CRCJ 5396. CONFERENCE COURSE IN CRIMINAL JUSTICE. 3 Hours.
Reading and research in a specialized area of criminal justice under the direction of a member of the graduate faculty.

CRCJ 5398. THESIS. 3 Hours.

CRCJ 5698. THESIS. 6 Hours.

COURSES

CSE 1000. FRESHMAN UNDERGRADUATE RESEARCH. 0 Hours.
Freshman level undergraduate research course. Prerequisites: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CSE 1105. INTRODUCTION TO COMPUTER SCIENCE AND ENGINEERING. 1 Hour.
Introduction to engineering concepts, the computer science and engineering disciplines, skills for written communication, and departmental orientation.

CSE 1106. INTRODUCTION TO COMPUTER SCIENCE AND ENGINEERING. 1 Hour.
A practical approach to hands-on computer hardware and software systems in a laboratory environment. Students will be exposed to basic engineering concepts such as simple circuits, digital logic, embedded controllers, computer networking, software design, and Linux operating systems. Prerequisite: C or better in CSE 1310.

CSE 1205. INTRODUCTION TO COMPUTER SCIENCE AND ENGINEERING. 2 Hours.
A practical approach to hands-on computer hardware and software systems in a laboratory environment. Students will be exposed to basic engineering concepts such as simple circuits, digital logic, embedded controllers, computer networking, software design, and Linux operating systems. Some College of Engineering requirements are satisfied by the content of this course. Prerequisite: CSE 1310.

CSE 1301. COMPUTER LITERACY. 3 Hours. (TCCN = COSC 1301)
For those persons having an interest in finding out what a computer is (and is not), the types of problems suited for computers, and how to utilize a computer to solve problems. The organization and characteristics of computers; application of commercial software such as word processors, spreadsheets, database packages, and communications packages.

CSE 1310. INTRODUCTION TO COMPUTERS & PROGRAMMING. 3 Hours. (TCCN = COSC 1320)
An introduction to the computer, to the algorithmic process, and to programming using basic control and data structures, using a procedural language. Prerequisite: C or better in MATH 1302 or MATH 1402 or C or better in (or concurrent enrollment in) a subsequent mathematics course (Math 1421, Math 1426, Math 2425, Math 2326, Math 3330, HONR-SC 1426 or HONR-SC 2425) or a qualifying score on the ALEKS PPL and C or better in UNIV 1131 (or concurrent enrollment) or ENGR 1101 (or concurrent enrollment).

CSE 1311. INTRODUCTION TO PROGRAMMING FOR ENGINEERS. 3 Hours.
An introduction to the computer, to the algorithmic process, and to programming using basic control and data structures. This class is currently using the C language. Prerequisite: C or better in (or concurrent enrollment in) one of the following; (Math 1421, Math 1426, Math 2425, Math 2326, Math 3330, HONR-SC 1426, or HONR-SC 2425).

CSE 1320. INTERMEDIATE PROGRAMMING. 3 Hours.
Programming concepts beyond basic control and data structures. Emphasis is given to data structures including linked-lists and trees as well as modular design consistent with software engineering principles. Prerequisite: C or better in CSE 1310 and C or better in (or concurrent enrollment in) (Math 1421, Math 1426, Math 2425, Math 2326, Math 3330, HONR-SC 1426, or HONR-SC 2425) or a qualifying score on the ALEKS PPL and C or better in UNIV 1131 (or concurrent enrollment) or ENGR 1101 (or concurrent enrollment.).

CSE 1325. OBJECT-ORIENTED PROGRAMMING. 3 Hours.
Object-oriented concepts, class diagrams, collection classes, generics, polymorphism, and reusability. Projects involve extensive programming and include graphical user interfaces and multithreading. Prerequisite: CSE 1320.

CSE 1326. OBJECT-ORIENTED PROGRAMMING IN C++. 3 Hours.
Object-Oriented concepts (abstraction, encapsulation, inheritance, polymorphism) in the context of programming in C++ 11 and later. Projects involve extensive programming in C++. Prerequisite: CSE 1320.

CSE 1392. SPECIAL TOPICS. 3 Hours.
New developments in the field of computer science and engineering. Topic may vary from semester to semester. May be repeated for credit when topic changes. Departmental approval required in advance to use for degree credit. Prerequisite: consent of advisor.

CSE 2000. SOPHOMORE UNDERGRADUATE RESEARCH. 0 Hours.
Sophomore level undergraduate research course. Prerequisites: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CSE 2100. PRACTICAL COMPUTER HARDWARE/SOFTWARE SYSTEMS. 1 Hour.
A practical approach to hands-on computer hardware and software systems in a laboratory environment. Students will be exposed to basic design concepts using off-the-shelf hardware components and to tools that enable the design of complex software systems. Prerequisite: CSE 1320.

CSE 2312. COMPUTER ORGANIZATION & ASSEMBLY LANGUAGE PROGRAMMING. 3 Hours.
Computer organization from the viewpoint of software, including instruction set architectures, memory addressing, integer and floating-point representation and arithmetic, instruction pipelining, cache, memory virtualization, and I/O. The relationship of higher-level programming languages to assembly language and instruction set architecture is also explored. Prerequisite: a C or better in CSE 1320 and a C or better in CSE 1205 or CSE 1106.

CSE 2315. DISCRETE STRUCTURES. 3 Hours.
Propositional and predicate logic, mathematical proof techniques, sets, combinatorics, functions and relations, graphs, and graph algorithms. Prerequisite: C or better in CSE 1310 and C or better in MATH 1426 (or C or better in or concurrent enrollment in MATH 2425).

CSE 2392. SPECIAL TOPICS. 3 Hours.
New developments in the field of computer science and engineering. Topic may vary from semester to semester. May be repeated for credit when topic changes. Departmental approval required in advance to use for degree credit. Prerequisite: consent of advisor.

CSE 2440. CIRCUIT ANALYSIS. 4 Hours.
Basic principles of electrical circuits using resistors, capacitors and inductors. Filter analysis and synthesis using complex algebra. Introduction to operational amplifiers. Time domain and frequency domain analysis and taxonomy of signals. Concurrent laboratory experiments complement lecture topics. Prerequisite: Grade C or better in MATH 2425 and PHYS 1444.

CSE 2441. DIGITAL LOGIC DESIGN I. 4 Hours.
Analysis, design and testing of combinational and sequential logic circuits. Topics include Boolean algebra, logic circuit minimization techniques, synchronous sequential circuit design, algorithmic state machine design, design of arithmetic/logic and control units, and Verilog programming of FPGA devices. Prerequisite: CSE 1320 and CSE 2315.

CSE 3000. JUNIOR UNDERGRADUATE RESEARCH JUNIOR UNDERGRADUATE RESEARCH. 0 Hours.
Junior level undergraduate research course. Prerequisites: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CSE 3302. PROGRAMMING LANGUAGES. 3 Hours.
Introduction, analysis, and evaluation of the important concepts found in a variety of programming languages. Formalisms useful in specifying language syntax and semantics; programming language paradigms such as algorithmic, functional, logic, and object-oriented. Prerequisite: C or better in each of the following: CSE 1325, CSE 2312 and CSE 3318.

CSE 3310. FUNDAMENTALS OF SOFTWARE ENGINEERING. 3 Hours.
Software engineering principles, processes, and techniques; software development approaches focusing on functional analysis and functional design methods. Configuration management, implementation strategies, and testing. Team project. Prerequisite: C or better in each of the following: CSE 1320, CSE 1325 and CSE 2315.

CSE 3311. OBJECT-ORIENTED SOFTWARE ENGINEERING. 3 Hours.
Study of an agile unified methodology and its application to object-oriented software development. Topics include requirements acquisition, use case derivation, modeling and design of interaction behavior and state behavior, introduction to design patterns, derivation of design class diagrams, implementation considerations and deployment. Team project. Prerequisite: C or better in each of the following: CSE 3310 and CSE 3318.

CSE 3313. INTRODUCTION TO SIGNAL PROCESSING. 3 Hours.
Examines models for presentation and processing of digital signals. Sampling theorem, correlation and convolution, time and frequency analysis of linear systems, Fourier transform, Z-transform, design of digital filters structures for discrete time systems. Prerequisite: C or better in each of the following: CSE 3318 and either CSE 3380 or MATH 3330.

CSE 3314. PROFESSIONAL PRACTICES. 3 Hours.
Ethics. Contemporary social aspects and responsibilities of computing in a global, societal context. Lifelong learning goals and resources. Entrepreneurship and intellectual property. Project involving written and oral communication. Prerequisite: C or better in CSE 3318 and COMS 2302.

CSE 3315. THEORETICAL CONCEPTS IN COMPUTER SCIENCE AND ENGINEERING. 3 Hours.
Selected theoretical concepts including regular and context free languages, finite state and pushdown automata, Turing machines, computability, and NP-completeness. Prerequisite: C or better in CSE 2315.

CSE 3318. ALGORITHMS & DATA STRUCTURES. 3 Hours.
Design and analysis of algorithms with an emphasis on data structures. Approaches to analyzing lower bounds on problems and upper bounds on algorithms. Classical algorithm design techniques including algorithms for sorting, searching, and other operations on data structures such as hash tables, trees, graphs, strings, and advanced data structures, dynamic programming and greedy approaches. Prerequisite: CSE 1320 and CSE 2315.

CSE 3320. OPERATING SYSTEMS. 3 Hours.
Functions and components of an operating system, including process synchronization, job scheduling, memory management, file systems protection, and deadlocks. Related system software, such as loaders, linkers, assemblers, and windowing systems. Prerequisite: C or better in CSE 2312.

CSE 3323. ELECTRONICS. 3 Hours.
Design, analysis and testing of electronic circuits. Topics include operational amplifiers, diodes, bipolar-junction transistors (BJTs), and field-effect transistors (FETs) and their applications. Concurrent laboratory experiments complement lecture topics. Prerequisite: C or better in CSE 2440.

CSE 3330. DATABASE SYSTEMS AND FILE STRUCTURES. 3 Hours.
Database system architecture; file structures for databases, including indexing hashing, and B+-trees; the relational model and algebra; the SQL database language; Entity-Relationship data modeling; functional dependencies and basic normalization. Prerequisite: C or better in each of the following: CSE 1325 and CSE 3318.

CSE 3340. INTRODUCTION TO HUMAN COMPUTER INTERACTION. 3 Hours.
Introduction to the interdisciplinary field of Human-Computer Interaction. Studio-based course that bridges cognitive science, ethnography, and anthropology to provide a profound understand of user experience, while concurrently fostering frontend development skills in software, hardware, and wireless communication for the crafting of state-of-the-art user interfaces. Emphasizing a human-centered design ethos, the course encourages the design of interfaces that are not only functional but also meaningful and critically reflective. Prerequisite: C or better in CSE 3318, and C or better in CSE 3310.

CSE 3341. DIGITAL LOGIC DESIGN II. 3 Hours.
Hierarchical organization, design, simulation, implementation, and testing of digital systems. Industrial standard computer-aided design tools including hardware description languages (HDLs), field-programmable gate arrays (FPGAs), and other prototyping hardware and software will be employed. Design of arithmetic and other algorithmic processes will be covered. A term project will be required. Prerequisite: C or better in CSE 2441.

CSE 3380. LINEAR ALGEBRA FOR CSE. 3 Hours.
Solving systems of equations, matrix algebra, determinants, vector spaces, orthogonality and least squares, with applications to computer science. Prerequisite: C or better in CSE 2315.

CSE 3392. SPECIAL TOPICS. 3 Hours.
New developments in the field of computer science and engineering. Topic may vary from semester to semester. May be repeated for credit when topic changes. Departmental approval required in advance to use for degree credit. Prerequisite: consent of advisor.

CSE 3442. EMBEDDED SYSTEMS I. 4 Hours.
Design of microcontroller-based systems, including microprocessor programming, component and system architectures, memory interfacing, asynchronous and synchronous serial interfaces, timer-based peripherals, analog to digital (A/D) and digital to analog (D/A) converters, and typical applications. Prerequisite: C or better in each of the following: CSE 2312, CSE 2440 and CSE 2441.

CSE 4000. SENIOR UNDERGRADUATE RESEARCH SENIOR UNDERGRADUATE RESEARCH. 0 Hours.
Senior level undergraduate research course. Prerequisites: Departmental good standing and permission of instructor. May be taken a maximum of 3 times.

CSE 4191. INDIVIDUAL PROJECTS. 1 Hour.
Special problems in computer science and engineering on an individual basis. Topics may change from semester to semester. May be repeated for credit. Departmental approval must be obtained in advance for degree credit. Prerequisite: consent of instructor and department chairperson.

CSE 4303. COMPUTER GRAPHICS. 3 Hours.
Theory and practice for the visual representation of data by computers including display devices, output primitives, planes and curved surfaces, two- and three-dimensional transformations, parallel and perspective viewing, removal of hidden lines and surfaces, illumination models, ray tracing, radiosity, color models, and computer animation. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following: CSE 3318, and either CSE 3380 or MATH 3330.

CSE 4304. GAME DESIGN AND DEVELOPMENT. 3 Hours.
Fundamentals of what it takes to create a game that is simultaneously economically attractive enough to produce as well as being fun to play. The former characteristic is objective, though often tricky to bound adequately while the latter is subjective, though easily demonstrated. This is a team-based class; each team conceives, designs, and develops a complete game through a series of exercises that build upon each other and using freely available tools. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3380 or MATH 3330.

CSE 4305. COMPILERS FOR ALGORITHMIC LANGUAGES. 3 Hours.
Review of programming language structures, translation, and storage allocation. Theory and practice of compilers and issues in compiler construction including parsing, intermediate code generation, local optimization problems such as register allocation, data-flow analysis, and global optimization. Prerequisite: Admitted into an Engineering Professional Program. C or better in the following: CSE 3302 and CSE 3315.

CSE 4308. ARTIFICIAL INTELLIGENCE. 3 Hours.
An introduction to the field of artificial intelligence studying basic techniques such as heuristic search, deduction, learning, problem solving, knowledge representation, uncertainty reasoning and symbolic programming languages such as LISP. Application areas may include intelligent agents, data mining, natural language, machine vision, planning and expert systems. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following: CSE 3318 and (IE 3301 or MATH 3313).

CSE 4309. FUNDAMENTALS OF MACHINE LEARNING. 3 Hours.
This course offers an introduction to machine learning. Topics include naive Bayes classifiers, linear regression, linear classifiers, neural networks and backpropagation, kernel methods, decision trees, feature selection, clustering, and reinforcement learning. A strong programming background is assumed, as well as familiarity with linear algebra (vector and matrix operations), and knowledge of basic probability theory and statistics. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following: CSE 3318, MATH 2326 or consent of instructor, IE 3301 or MATH 3313, and CSE 3380 or MATH 3330.

CSE 4310. FUNDAMENTALS OF COMPUTER VISION. 3 Hours.
This course introduces students to basic concepts and techniques in computer vision. The topics covered include morphological operations, connected component analysis, image filters, edge detection, feature extraction, object detection, object recognition, tracking, gesture recognition, image formation and camera models, calibration, and stereo vision. A strong programming background is assumed, as well as familiarity with linear algebra (vector and matrix operations), and knowledge of basic probability theory and statistics. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following: CSE 3318, IE 3301 or MATH 3313, and CSE 3380 or MATH 3330.

CSE 4311. NEURAL NETWORKS AND DEEP LEARNING. 3 Hours.
This course offers an introduction to neural networks and deep learning. Topics include perceptrons, single-layer neural networks, multi-layer neural networks, Tensorflow and Keras, convolutional neural networks, transfer learning, deep learning methods for object recognition and object detection in images, and sequential learning models for analyzing text. Auto-encoders and generative adversarial networks will be covered to some extent. A strong programming and algorithmic background is assumed, as well as familiarity with linear algebra (vector and matrix operations). Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3380 or MATH 3330, and C or better in IE 3301 or MATH 3313.

CSE 4314. PROFESSIONAL PRACTICES. 3 Hours.
Ethics. Contemporary social aspects and responsibilities of computing in a global, societal context. Lifelong learning goals and resources. Entrepreneurship and intellectual property. Project involving written and oral communication. Prerequisite: Admitted into an Engineering Professional Program. C or better in COMS 2302.

CSE 4316. COMPUTER SYSTEM DESIGN PROJECT I. 3 Hours.
Analysis and design of an industry-type project that involves hardware and software components to meet desired needs within realistic constraints and standards. The project is to be completed in CSE 4317 the following semester. Multidisciplinary teams of CSE 4316 students are required to develop, review, and present problem definition, project planning, requirements formulation, and design specification. Prerequisites: Admitted into a CSE Professional Program. For academic plan CS__CS or SE__SE, C or better in CSE 3310 and CSE 3320, and C or better in CSE 3314 (or concurrently). For academic plan CSE_CP, C or better in CSE 3320 and CSE 3442, and C or better in CSE 3314 (or concurrently).

CSE 4317. COMPUTER SYSTEM DESIGN PROJECT II. 3 Hours.
Implementation, integration, quality assurance through peer review and testing, and deployment of the project designed in CSE 4316; oral presentation, documentation and project demonstration. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 4316 and continuation with the same team.

CSE 4321. SOFTWARE TESTING & MAINTENANCE. 3 Hours.
Study of software quality assurance, software testing, and software maintenance processes, methods and techniques including formal review techniques, software verification, validation, and testing, types of software maintenance, maintenance activities, and regression testing. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3310.

CSE 4322. SOFTWARE PROJECT MANAGEMENT. 3 Hours.
Introduction to software project management. Issues include effort estimation and costing, project planning and scheduling, option analysis, software quality assurance, and formal technical reviews. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3310.

CSE 4323. QUANTITATIVE COMPUTER ARCHITECTURE. 3 Hours.
Pipelined processors, parallel processors including shared and distributed memory, multicore, Very Long Instruction Word (VLIW) and graphics processors, memory and cache design, computer peripherals, and computer clusters. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3320.

CSE 4331. DATABASE IMPLEMENTATION AND THEORY. 3 Hours.
Review of the relational model and algebra; relational calculus; relational database design theory; advanced data modeling concepts; object-oriented and object-relational databases; database system implementation techniques, including concurrency control, recovery, atomic commitment, and query processing and optimization, database security; introduction to advanced concepts, such as active, deductive, spatial, temporal, multimedia and distributed databases. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3330.

CSE 4333. CLOUD COMPUTING FUNDAMENTALS AND APPLICATIONS. 3 Hours.
Cloud Computing has transformed the IT industry by opening the possibility for infinite or at least highly elastic scalability in the delivery of enterprise applications and software as a service (SaaS). Cloud computing is a method of computing where a shared group of resources such as file storage, web servers, data processing services, and applications are accessed via a public internet connection or a private VPN and/or direct network connection. Cloud computing gives mature enterprises and new start-ups the option to deploy their applications to systems of infinite computational power with practically no initial capital investment and with modest operating costs proportional to the actual use. Examples of cloud computing services include Amazon Web Services, Microsoft Azure, Google Cloud Platform, and IBM Softlayer. This course introduces students to the fundamental and design concepts of writing software applications for the cloud. This course will discuss tools required by an application programmer in building, deploying, and maintaining cloud applications. A combination of lectures and lab activities will expose students to the programming interface utilized in developing cloud applications. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3330, and C or better in CSE 3320.

CSE 4334. DATA MINING. 3 Hours.
Automatic discovery of patterns and knowledge from large data repositories, including databases, data warehouses, Web, document collections, and transactions. Basic topics of data mining including data preprocessing, data warehousing and online analytical processing (OLAP), data cube, frequent pattern and association rule mining, correlation analysis, classification and prediction and clustering, as well as advanced topics covering the techniques and applications of data mining on Web and text documents. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following: IE 3301 (or MATH 3313). Co-requisite: CSE 3330.

CSE 4340. FUNDAMENTALS OF WIRELESS NETWORKS. 3 Hours.
Fundamentals of wireless networks, radio spectrum, coding and modulation, multiple access techniques, antennas, noise and interference, channels, demodulation and decoding, error rates and capacity, link budgets, medium access control, rate adaption, and wireless LAN/PAN, ad-hoc, and sensor networks. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 4344 or CSE 4352 or consent of instructor.

CSE 4342. EMBEDDED SYSTEMS II. 3 Hours.
Advanced course in design of microcontroller-based systems. Emphasis is on the application of microcontrollers to real-time problems. Topics include the study of the differences in bare metal and embedded Linux implementations, simple Linux character device drivers, bootloader design, watchdog and supervision concepts, and developing applications such as PID controllers. Course includes significant laboratory content and a project with extensive hardware and software requirements. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following: CSE 3323, CSE 3442, and CSE 3313.

CSE 4344. COMPUTER NETWORK ORGANIZATION. 3 Hours.
Design and analysis of computer networks. Emphasis on the OSI architecture but discusses other schemes (e.g., ARPAnet). Data link control, local networks, protocols/architectures, network access protocols, transport protocols, internetworking, and ISDN. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3320.

CSE 4345. COMPUTATIONAL METHODS. 3 Hours.
Introduction to numerical methods for solving problems in computer science and computer engineering. Topics include computer arithmetic, linear and nonlinear equations, eigenvalue problems, least squares, optimization, interpolation, and simulation. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following IE 3301 or MATH 3313, CSE 3318, and either CSE 3380 or MATH 3330.

CSE 4351. PARALLEL PROCESSING. 3 Hours.
Theory and practice of parallel processing, including characterization of parallel processors, models for memory, algorithms, and interprocess synchronization. Issues in parallelizing serial computations, efficiency and speedup analysis. Programming exercises using one or more concurrent programming languages, on one of more parallel computers. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3320.

CSE 4352. IOT AND NETWORKING. 3 Hours.
Study of protocol stacks and layers, implementation of an Ethernet protocol stack, and design of a basic low-latency, small footprint IoT protocol on bare metal embedded devices and embedded Linux systems. Course includes multiple projects with hardware construction and extensive software and integration requirements. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3442.

CSE 4354. REAL-TIME OPERATING SYSTEMS. 3 Hours.
Implementation of a real-time operating system with cooperative and preemption context switching, priority scheduling, semaphores, message queues, and inter-process communications on bare metal microcontrollers. Course includes multiple projects with hardware construction and rigorous software requirements. Prerequisite: Admitted into an Engineering Professional Program. C or better in both CSE 3320 and CSE 3442.

CSE 4355. ELECTROMECHANICAL SYSTEMS AND SENSORS. 3 Hours.
Applications of electronics and microcontrollers to the control of electromechanical systems. Topics include driving brushless motors (including stepper motors), brushed permanent magnet motors, and other mechanical actuators; the use of the sensors including IMU,LIDAR, RADAR, GPS, capacitive/inductive sensing, laser distance, thermocouples, strain, pressure, optical encoders, and Hall devices; and control applications. Course includes significant laboratory content and a project with extensive hardware and software requirements. Prerequisite: Admitted into an Engineering Professional Program. C or better in both CSE 3323 and CSE 3442.

CSE 4356. SYSTEM ON CHIP (SOC) DESIGN. 3 Hours.
Design of FPGA-based system on chip solutions, including processor subsystems, FPGA fabric, processor to FPGA bridges, and Linux device drivers. Course includes a project with extensive software requirements. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3442.

CSE 4358. MICROPROCESSOR SYSTEMS. 3 Hours.
Asynchronous and synchronous memory interfacing and timing, design and implementation of DMA controllers and SDRAM controllers. Course includes a project with significant system design. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3442.

CSE 4360. AUTONOMOUS ROBOT DESIGN AND PROGRAMMING. 3 Hours.
An introduction to robotics and the design and programming of autonomous robot systems. Topics include basic kinematics, dynamics, and control, as well as sensors, knowledge representation, and programming techniques. Course work includes individual and group projects involving the building and programming of simulated and real robots. Prerequisite: Admitted into an Engineering Professional Program. C or better in each of the following: CSE 3318, CSE 3320 and CSE 3380 (or MATH 3330).

CSE 4361. SOFTWARE DESIGN PATTERNS. 3 Hours.
In-depth study of software design patterns including description of patterns, design principles and techniques used by patterns as well as application of patterns to solving practical design problems. Team project. Prerequisites: Admitted into an Engineering Professional Program. C or better in CSE 3311.

CSE 4372. RISC PROCESSOR DESIGN. 3 Hours.
Design of a RISC processor, based on RISC V and custom instruction set architectures with implementation on an FPGA target for test and verification. Course includes a project with extensive software requirements. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3442.

CSE 4373. GENERAL PURPOSE GPU PROGRAMMING. 3 Hours.
Study of general purpose computation on a GPU. Topics include GPU architectures, stream processing, and programming languages such as OpenCL and CUDA that realize data-parallel, high-throughput compute kernels on GPU architectures. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3320.

CSE 4376. DIGITAL COMMUNICATION SYSTEMS. 3 Hours.
Study of digital communication systems including source and channel coding, digital modulation techniques, inter-symbol interference, and multi-channel combining and multiple-access methods. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3313.

CSE 4377. WIRELESS COMMUNICATION SYSTEMS. 3 Hours.
Study of wireless systems including modulation, amplification, linearization techniques, filtering, antennas, propagation, reception, and demodulation. Topics include software defined radio design, link budget, and interference analysis. Course includes significant laboratory content. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3313 and CSE 3442.

CSE 4378. INTRODUCTION TO UNMANNED VEHICLE SYSTEMS. 3 Hours.
Introduction to UVS (Unmanned Vehicle Systems) such as UAS (Unmanned Aircraft Systems), UGS (Unmanned Ground System) and UMS (Unmanned Maritime System), their history, missions, capabilities, types, configurations, subsystems, and the disciplines needed for UVS development and operation. UVS missions could include student competitions sponsored by various technical organizations. This course is team-taught by engineering faculty. Prerequisite: Admission to a professional engineering or science program.

CSE 4379. UNMANNED VEHICLE SYSTEM DEVELOPMENT. 3 Hours.
Introduction to the technologies needed to create an UVS (Unmanned Vehicle System). Integration of these technologies (embodied as a set of sensors, actuators, computing and mobility platform sub-systems) into a functioning UVS through team work. UVS could be designed to compete in a student competition sponsored by various technical organizations or to support a specific mission or function defined by the instructors. This course is team-taught by engineering faculty. Prerequisite: B or better in CSE 4378 and admission to the UVS certificate program.

CSE 4380. INFORMATION SECURITY. 3 Hours.
Hands-on introduction to the basics of security. Includes system security, buffer overflows, a high-level overview of cryptography, firewalls and intrusion detection/prevention, malware, penetration testing, forensics, and system administration. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3320.

CSE 4381. INFORMATION SECURITY II. 3 Hours.
Deeper study of the fundamentals of security, including symmetric key cryptography, public key cryptography, cryptographic protocols, malware design, network attacks and defenses, data security, privacy, and wireless security. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3320 and C or better in CSE 4344 (or concurrently).

CSE 4382. SECURE PROGRAMMING. 3 Hours.
This course is an introduction to methods of secure software design and development. Students will learn about the major security problems found in software today. Using this knowledge, they will work in teams to find these bugs in software, fix the bugs, and design software so that it has fewer security problems. Static analysis tools will be a core part of the class, but students will also be exposed to black box testing tools. Topics will include input validation, buffer overflow prevention, error handling, web application issues, and XML. Prerequisite: Admitted into an Engineering Professional Program. C or better in CSE 3320.

CSE 4391. INDIVIDUAL PROJECTS. 3 Hours.
Special problems in computer science and engineering on an individual basis. Topics may change from semester to semester. May be repeated for credit. Departmental approval must be obtained in advance for degree credit. Prerequisite: consent of instructor and department chairperson.

CSE 4392. SPECIAL TOPICS. 3 Hours.
New developments in the field of computer science and engineering. Topic may vary from semester to semester. May be repeated for credit when topic changes. Departmental approval required in advance to use for degree credit. Prerequisite: consent of instructor.

CSE 5191. INDIVIDUAL STUDY IN COMPUTER SCIENCE. 1 Hour.
Topics dealing with special problems in Computer Science on an individual instruction basis. May be repeated for credit.

CSE 5192. INDIVIDUAL STUDY IN COMPUTER SCIENCE. 1 Hour.
Topics dealing with special problems in Computer Science on an individual instruction basis. May be repeated for credit.

CSE 5194. ORIENTATION SEMINAR. 1 Hour.
Presentation of computer science research by CSE faculty, students, and invited speakers. Preparation of program of work.

CSE 5300. FOUNDATION OF COMPUTING. 3 Hours.
Basics of programming, data structures, and algorithms. Introduction to databases and operating systems. Basics of discrete structures and computability. Course is used for the Master's in Data Science degree program and certificate programs for non-CSE majors. It cannot be taken for credit towards any CSE degree.

CSE 5301. DATA ANALYSIS & MODELING TECHNIQUES. 3 Hours.
Concepts and techniques for performing experiments and analyzing their results. Topics cover fundamental statistics, probability and data-representation concepts, interference through hypothesis testing, information theory, queuing models, and selected topics such as capacity planning and bottleneck analysis, clustering and classification, and hidden Markov models with computer science applications as examples.

CSE 5305. FOUNDATIONS OF GRADUATE LEVEL STUDIES IN COMPUTER SCIENCE. 3 Hours.
This course serves as a leveling course for Computer Science and Software Engineering Master's Degree students who need reinforcement of fundamental concepts. Topics include, but are not limited to, computer architecture and organization, analysis of algorithms, data structures, operating systems, discrete structures, automata theory and grammars.

CSE 5306. DISTRIBUTED SYSTEMS. 3 Hours.
Issues and challenges in distributed systems, including: communication, distributed processes, naming and name services, synchronization, consistency and replication, transactions, fault tolerance and recovery, security, distributed objects, and distributed file systems.

CSE 5307. PROGRAMMING LANGUAGE CONCEPTS. 3 Hours.
Study and evaluation of concepts in programming language for modern computer systems. Programming projects are selected from string-based, symbolic, algorithmic, and object-oriented languages.

CSE 5311. DESIGN AND ANALYSIS OF ALGORITHMS. 3 Hours.
Techniques for analyzing upper bounds for algorithms and lower bounds for problems. Problem areas include: sorting, data structures, graphs, dynamic programming, combinatorial algorithms, introduction to parallel models.

CSE 5314. COMPUTATIONAL COMPLEXITY. 3 Hours.
Sequential and parallel complexity classes (e.g., NP-complete and P-complete) and representative problems in languages, logic and graphs. Reduction techniques. Approximate solutions. Complexity hierarchies.

CSE 5315. NUMERICAL METHODS. 3 Hours.
Selected topics from the theory and practice of using automatic digital computers for approximating arithmetic operations, approximating functions, solving systems of linear and non-linear equations, and solving ordinary and partial differential equations.

CSE 5316. MODELING, ANALYSIS, AND SIMULATION OF COMPUTER SYSTEMS. 3 Hours.
Mathematical formalism and techniques used for computer system modeling and analysis. Reviews probability, transform theory, coding theory, and Petri nets. Topics may include knowledge based modeling, validation procedures, various simulation techniques for stochastic process and real-time distributed systems.

CSE 5317. DESIGN AND CONSTRUCTION OF COMPILERS. 3 Hours.
Review of programming language structures, translation, and storage allocation. Introduction to context-free grammars and their description. Design and construction of compilers including lexical analysis, parsing and code generation techniques. Error analysis and simple code optimizations will be introduced. Prerequisite: MATH 1426, or equivalent, or permission of advisor.

CSE 5318. APPLIED GRAPH THEORY AND COMBINATORICS. 3 Hours.
Connected and disconnected graphs; trees; graph planarity; Hamiltonian circuits and Euler tours; coloring; flow and graph optimization algorithms, fundamentals of combinatorics; generating functions and recurrence relations; inclusion-exclusion principle; applications in telecommunications; mobile computing, parallel processing and multiprocessor architectures.

CSE 5319. SPECIAL TOPICS IN THEORY & ALGORITHMS. 3 Hours.
May be repeated for credit when topics vary.

CSE 5320. SPECIAL TOPICS IN SOFTWARE ENGINEERING. 3 Hours.
May be repeated for credit when topics vary.

CSE 5321. SOFTWARE TESTING. 3 Hours.
Study of software quality assurance, software testing process, methods, techniques and tools. Topics include formal review techniques, black box testing, white box testing, integration testing, acceptance testing, regression testing, performance testing, stress testing, and testing of object-oriented software.

CSE 5322. SOFTWARE DESIGN PATTERNS. 3 Hours.
Study and application of object-oriented software design patterns to software development and maintenance in the object-oriented paradigm. Prerequisite: CSE 5324 or concurrent enrollment.

CSE 5323. SOFTWARE ENGINEERING PROCESSES. 3 Hours.
Introduces software lifecycle models, process disciplines, project management concepts, and applies them by mastering the Personal Software Process (PSP).

CSE 5324. SOFTWARE ENGINEERING: ANALYSIS, DESIGN, AND TESTING. 3 Hours.
Motivations, principles, and goals of software engineering; technical aspects of software projects, including: review of structured analysis and structured design, emphasis on object-oriented methods of requirements analysis and specification, design, and implementation; software testing concepts; team project.

CSE 5325. SOFTWARE ENGINEERING: MANAGEMENT, MAINTENANCE, AND QUALITY ASSURANCE. 3 Hours.
Issues and principles for software management; managerial and support aspects of software projects, including: processes, estimation techniques, planning and scheduling, risk analysis, metrics, and quality assurance. Other topics include: configuration management, verification and validation, and maintenance; team project.

CSE 5326. REAL-TIME SOFTWARE DESIGN. 3 Hours.
Specification, design, and analysis of real-time systems including real-time logics and decidability of real-time conditions; real-time scheduling approaches, system requirement specification; procedural and object-oriented methods; specialized analysis techniques for distributed and for control applications; team project. Prerequisite: CSE 5324 or concurrent enrollment.

CSE 5327. TELECOMMUNICATIONS SOFTWARE DEVELOPMENT. 3 Hours.
General understanding and classification of telecommunications systems and applications. Issues relating to the analysis, design, implementation, and testing of telecommunications software. Prerequisite: CSE 5324 and CSE 5344.

CSE 5328. SOFTWARE ENGINEERING TEAM PROJECT I. 3 Hours.
Apply the knowledge and skills gained in other software engineering courses to synthesize a solution to a significant and realistic software development team project. Participate in activities including: proposal writing, problem analysis, software requirements specification, project planning, software design, implementation, software quality assurance, software testing, integration, and demonstration. Required for and open only to Master of Software Engineering degree candidates. Prerequisite: one of CSE 5321, CSE 5322, CSE 5325.

CSE 5329. SOFTWARE ENGINEERING TEAM PROJECT II. 3 Hours.
Apply the knowledge and skills gained in other software engineering courses to synthesize a solution to a significant and realistic software development team project. Participate in activities including: proposal writing, problem analysis, software requirements specification, project planning, software design, implementation, software quality assurance, software testing, integration, and demonstration. Required for and open only to Master of Software Engineering degree candidates. Prerequisite: one of CSE 5321, CSE 5322, CSE 5325.

CSE 5330. DATABASE SYSTEMS. 3 Hours.
Database system architecture; management and analysis of files, indexing, hashing, and B+-trees; the relational model and algebra; the SQL database language; database programming techniques, database design using Entry-Relationship, extended E-R, and UML modeling; basics of normalization. Introduction to database security, query processing and transaction management.

CSE 5331. DBMS MODELS AND IMPLEMENTATION TECHNIQUES. 3 Hours.
DBMS system implementation techniques, including query optimization, transaction processing, concurrency control, buffer management and recovery. Object-oriented, object-relational and XML databases. Introduction to advanced database models, such as active, distributed, temporal, spatial and data warehousing.

CSE 5332. DATA SCIENCE. 3 Hours.
This inspirational course follows a data-science-for-all perspective that views data acumen as part of literacy. It aims to instill in students the data acumen, i.e., the basic skills to wrestle with data, to draw insights from data, to make sound decisions responsibly using data, and to effectively communicate about data-driven findings and decisions. Topics include 1) data management: data curation, preparation, model, and querying; 2) data description and visualization: exploratory data analysis, graphics, user interface and user experience design; 3) machine learning and knowledge discovery: supervised learning, unsupervised learning, pattern and knowledge extraction, deep learning, model evaluation and interpretation. Prerequisite: MATH 1301, or MATH 1302, or MATH 1308, or MATH 1426, or equivalent and permission of advisor.

CSE 5333. CLOUD COMPUTING. 3 Hours.
A survey of state of the art cloud computing paradigms: design, implementation, and programming distributed, scalable storage and computational systems. IaaS, PaaS, and SaaS (Infrastructure, Platform and Software as a Service), Hadoop, EC2, S3, and Azure are discussed.

CSE 5334. DATA MINING. 3 Hours.
Preparing data for mining, using preprocessing, data warehouses and OLAP; data mining primitives, languages and system architecture; data mining techniques including association rule mining, classification/prediction and cluster analysis.

CSE 5335. WEB DATA MANAGEMENT. 3 Hours.
This course provides an in depth study of models, languages and techniques for large-scale Web data management in distributed and heterogeneous environments. Topics include: Web programming with an emphasis on Web data management, Web Services, semi-structured data, XML standards, modern Web search engines, web information systems, Web query languages, distributed computing, metadata management with RDF, and Semantic Web.

CSE 5339. SPECIAL TOPICS IN DATABASE SYSTEMS. 3 Hours.
May be repeated for credit when topics vary.

CSE 5342. EMBEDDED SYSTEMS II. 3 Hours.
Advanced course in design of microcontroller-based systems. Emphasis is on the application of microcontrollers to real-time problems. Topics include the study of the differences in bare metal and embedded Linux implementations, simple Linux character device drivers, bootloader design, watchdog and supervision concepts, and developing applications such as PID controllers. Course includes significant laboratory content and a project with extensive hardware and software requirements. Prerequisite: CSE 3323 and CSE 3442, or CSE 5400, or consent of instructor.

CSE 5344. COMPUTER NETWORKS. 3 Hours.
Study of computer network architectures, protocols, and interfaces. The OSI reference model and the Internet architecture will be discussed. Networking techniques such as multiple access, packet/cell switching, and internetworking will be studied. Discussion will also include end-to-end protocols, congestion control, high-speed networking, and network management. Emphasis will be on Internet and ATM. Prerequisite: CSE 3320 or consent of instructor.

CSE 5345. FUNDAMENTALS OF WIRELESS NETWORKS. 3 Hours.
Fundamentals of wireless networks, radio spectrum, coding and modulation, multiple access techniques, antennas, noise and interference, channels, demodulation and decoding, error rates and capacity, link budgets, medium access control, rate adaption, and wireless LAN/PAN, ad-hoc, and sensor networks. Prerequisite: At least one of these courses: CSE 4344, CSE 4352, CSE 5352, or CSE 5344 or consent of instructor.

CSE 5346. NETWORKS II. 3 Hours.
This course provides an in depth study and comparison of the two primary networking paradigms, Internet/broadcast and switched, using two technologies, IPv6 and ATM, as representative examples. The course is implementation-oriented, focusing on issues such as routing, broadcast, multicast, mobility, network configuration, and quality of service. Prerequisite: CSE 5344.

CSE 5347. FUNDAMENTALS OF BLOCKCHAIN & CRYPTOCURRENCY TECHNOLOGIES. 3 Hours.
This course covers the technical concepts underlying blockchains and decentralized cryptocurrency systems, such as Bitcoin and Ethereum, including decentralized ledgers (blockchains), decentralized consensus, smart contracts and zero-knowledge proof systems.

CSE 5348. MULTIMEDIA SYSTEMS. 3 Hours.
Representations and techniques for processing, communicating, and compression of text, audio, graphics, and video in real time. Project integrating these topics. Prerequisite: CSE 3320.

CSE 5349. SPECIAL TOPICS IN NETWORKING. 3 Hours.
May be repeated for credit when topics vary.

CSE 5350. COMPUTER ARCHITECTURE II. 3 Hours.
A study of advanced uniprocessor and basic multiprocessor systems. Topics may include memory management systems, pipelined processors, array and vector processors, and introduction to architecture of multiprocessor systems. Prerequisite: CSE 3322 or consent of instructor.

CSE 5351. PARALLEL PROCESSING. 3 Hours.
Covers the theory and practice of parallel processing. Theoretical topics include: abstract models and algorithms for shared memory computation (PRAM); algorithms for various topologies such as meshes and hypercubes; efficiency and speedup analysis. Problem areas include data structures, numerical methods, graphs, combinatorics. Practical topics include synchronization, routing, scheduling, parallelizing serial computations, programming languages. Includes programming exercises using one or more concurrent programming languages, on one or more parallel computers. Prerequisite: CSE 3320 or consent of instructor.

CSE 5352. IoT AND NETWORKING. 3 Hours.
Study of protocol stacks and layers, implementation of an Ethernet protocol stack, and design of a basic low-latency, small footprint IoT protocol on bare metal embedded devices and embedded Linux systems. Course includes multiple projects with hardware construction and extensive software and integration requirements. Prerequisite: CSE 3442, CSE 5400, or consent of instructor.

CSE 5353. DISTRIBUTED COMPUTING. 3 Hours.
Programming languages, support components, coordination models, and fundamental algorithms for distributed and clustered systems. Prerequisite: CSE 5306.

CSE 5354. REAL-TIME OPERATING SYSTEMS. 3 Hours.
Implementation of a real-time operating system with cooperative and preemption context switching, priority scheduling, semaphores, message queues, and inter-process communications on bare metal microcontrollers. Course includes multiple projects with hardware construction and rigorous software requirements. Prerequisite: CSE 3442, CSE 5400, or consent of instructor.

CSE 5355. ELECTROMECHANICAL SYSTEMS AND SENSORS. 3 Hours.
Applications of electronics and microcontrollers to the control of electromechanical systems. Topics include driving brushless motors (including stepper motors), brushed permanent magnet motors, and other mechanical actuators; the use of the sensors including IMU, LIDAR, RADAR, GPS, capacitive/inductive sensing, laser distance, thermocouples, strain, pressure, optical encoders, and Hall devices; and control applications. Course includes significant laboratory content and a project with extensive hardware and software requirements. Prerequisite: CSE 3323 and one of the following: CSE 3442 or CSE 5400, or consent of instructor.

CSE 5356. SYSTEM ON CHIP (SoC) DESIGN. 3 Hours.
Programming and implementation of FPGA-based system on chip solutions, including processor subsystems, FPGA fabric, processor to FPGA bridges, and device drivers. Prerequisite: CSE 3442, CSE 5400, or consent of instructor.

CSE 5357. ADVANCED DIGITAL LOGIC DESIGN. 3 Hours.
Hierarchical organization, design, simulation, implementation, and testing of digital systems. Industrial standard computer-aided design tools including hardware description languages (HDLs), field-programmable gate arrays (FPGAs), and other prototyping hardware and software will be employed. Design of arithmetic and other algorithmic processes will be covered. A term project will be required. Prerequisite: CSE 3442, CSE 5400, or consent of instructor.

CSE 5358. MICROPROCESSOR SYSTEMS. 3 Hours.
Study of different microprocessor system architectures, design of asynchronous and synchronous memory interfaces, study of advanced bus architectures, analysis of bus timing, implementation of DMA controllers and SDRAM controllers, and study of cache organization and write policies. Prerequisite: CSE 3442 or CSE 5400, or consent of instructor.

CSE 5359. SPECIAL TOPICS IN COMPUTER ENGINEERING. 3 Hours.
May be repeated for credit when topics vary.

CSE 5360. ARTIFICIAL INTELLIGENCE I. 3 Hours.
Introduction to the methods, concepts and applications of artificial intelligence, including knowledge representation, search, theorem proving, planning, natural language processing, and study of AI programming languages. Prerequisite: CSE 3318 and CSE 3315, or consent of instructor.

CSE 5361. ARTIFICIAL INTELLIGENCE II. 3 Hours.
Continuation of artificial intelligence methods and techniques, including uncertainty reasoning, machine learning, perception, and advanced topics in knowledge representation, search and planning. Emphasis on design and implementation of AI solutions. Prerequisite: CSE 5360 or consent of instructor.

CSE 5362. SOCIAL NETWORKS AND SEARCH ENGINES. 3 Hours.
Social networks, Search Engines, Recommendation systems, Question & Answering systems are web-enabled Information Technology main stream. This course covers the foundations of these technology including text/query processing, web content analysis, basic graph theory, random walk, PageRank, power law distribution, random graphs, small world, growth models, and network diffusion. Prerequisite: CSE 5311.

CSE 5364. ROBOTICS. 3 Hours.
An introduction to robotics and the design and programming of autonomous robot systems. Topics include basic kinematics, dynamics, and control, as well as sensors, knowledge representation, and programming techniques. Coursework includes individual and group projects involving the building and programming of simulated and real robots. Prerequisite: CSE 3318 and CSE 3442.

CSE 5365. COMPUTER GRAPHICS. 3 Hours.
Input/output devices and programming techniques suitable for the visual representation of data and images.

CSE 5366. DIGITAL SIGNAL PROCESSING. 3 Hours.
Introduction to principles and applications of digital signal processing. Topics include: analysis of signals and systems, Fourier and Z transforms, digital filter design techniques (FIR and IIR), autoregressive (AR) and autoregressive moving average (ARMA) modeling. Applications to science and engineering include: financial predictions and processing of digital music. Laboratory work includes some programming and use of high quality library routines and packages such as Mathematica, Matlab.

CSE 5367. PATTERN RECOGNITION. 3 Hours.
Principles and various approaches of pattern recognition processes, including Bayesian classification, parametric/non-parametric classifier design, feature extraction for signal representation, and techniques for classification and clustering. Current issues in pattern recognition research will also be examine. Prerequisite: CSE 3318, MATH 3313.

CSE 5368. NEURAL NETWORKS. 3 Hours.
Theoretical principles of neurocomputing. Learning algorithms, information capacity, and mapping properties of feedforward and recurrent networks. Different neural network models will be implemented and their practical applications discussed. Prerequisite: CSE 5301 or consent of instructor.

CSE 5369. SPECIAL TOPICS IN INTELLIGENT SYSTEMS. 3 Hours.
May be repeated for credit when topics vary.

CSE 5370. BIOINFORMATICS. 3 Hours.
Basic biology of genome and common laboratory techniques Overview of discrete probability theory, random variables and processes. Issues in genome mapping, sequencing and analysis: sequence alignments and alignment algorithms; genomic databases and information access; structure and features of DNA sequences. Techniques in contemporary biotechnology, including proteomics and gene expression analysis using microarray chips. Prerequisite: CSE 5311 or consent of instructor.

CSE 5372. RISC PROCESSOR DESIGN. 3 Hours.
Design of a RISC processor, based on RISC V and custom instruction set architectures with implementation on an FPGA target for test and verification. Prerequisite: CSE 3442, CSE 5400, or consent of instructor.

CSE 5373. GENERAL PURPOSE GPU ARCHITECTURE. 3 Hours.
Study of general purpose computation on a GPU. Topics include GPU architectures, stream processing, and programming languages such as OpenCL and CUDA that realize data-parallel, high-throughput compute kernels on GPU architectures. Prerequisite: CSE 3320 or consent of instructor.

CSE 5376. DIGITAL COMMUNICATION SYSTEMS. 3 Hours.
Study of digital communication systems including source and channel coding, digital modulation techniques, inter-symbol interference, and multi-channel combining and multiple-access methods. Prerequisite: CSE 3313, CSE 5366, or consent of instructor.

CSE 5377. WIRELESS COMMUNICATION SYSTEMS. 3 Hours.
Study of wireless systems including modulation, amplification, linearization techniques, filtering, antennas, propagation, reception, and demodulation. Topics include software-defined radio design, link budget, and interference analysis. Course includes significant laboratory content. Prerequisite: CSE 3313, CSE 5366, or consent of instructor.

CSE 5379. SPECIAL TOPICS IN BIOINFORMATICS. 3 Hours.
May be repeated for credit when topics vary.

CSE 5380. INFORMATION SECURITY 1. 3 Hours.
Hands-on introduction to the basics of security. Includes system security, buffer overflows, a high-level overview of cryptography, firewalls and IDS/IPS, malware, penetration testing, forensics, and system administration. Prerequisite: CSE 3320 or consent of instructor.

CSE 5381. INFORMATION SECURITY 2. 3 Hours.
Deeper study of the fundamentals of security, including symmetric key cryptography, public key cryptography, cryptographic protocols, malware design, network attacks and defenses, data security, privacy, and wireless security. Prerequisite: CSE 5380 and CSE 4344 or consent of instructor.

CSE 5382. SECURE PROGRAMMING. 3 Hours.
This course is an introduction to methods of secure software design and development for upper-level undergraduate students and graduate students. Students will learn about the major security problems found in software today. Using this knowledge, they will work in teams to find these bugs in software, fix the bugs, and design software so that it has fewer security problems. Static analysis tools will be a core part of the class, but students will also be exposed to black box testing tools. Topics will include input validation, buffer overflow prevention, error handling, web application issues, and XML.

CSE 5383. INTRODUCTION TO UNMANNED VEHICLE SYSTEMS. 3 Hours.
Introduction to UVS (Unmanned Vehicle Systems) such as UAS (Unmanned Aircraft Systems), UGS (Unmanned Ground System) and UMS (Unmanned Maritime System), their history, missions, capabilities, types, configurations, subsystems, and the disciplines needed for UVS development and operation. UVS missions could include student competitions sponsored by various technical organizations. This course is team-taught by engineering faculty.

CSE 5384. UNMANNED VEHICLE SYSTEM DEVELOPMENT. 3 Hours.
Introduction to the technologies needed to create an UVS (Unmanned Vehicle System). Integration of these technologies (embodied as a set of sensors, actuators, computing and mobility platform sub-systems) into a functioning UVS through team work. UVS could be designed to compete in a student competition sponsored by various technical organizations or to support a specific mission or function defined by the instructors. This course is team-taught by engineering faculty. Prerequisite: B or better in CSE 4378 or CSE 5383 and admission to the UVS certificate program (admission to UVS certificate can be waived by consent of instructor).

CSE 5388. SPECIAL TOPICS IN INFORMATION SECURITY. 3 Hours.
May be repeated for credit when topics vary.

CSE 5389. SPECIAL TOPICS IN MULTIMEDIA, GRAPHICS, & IMAGE PROCESSING. 3 Hours.
May be repeated for credit when topics vary.

CSE 5391. INDIVIDUAL STUDY IN COMPUTER SCIENCE. 3 Hours.
Topics dealing with special problems in Computer Science on an individual instruction basis. May be repeated for credit.

CSE 5392. TOPICS IN COMPUTER SCIENCE. 3 Hours.
May be repeated for credit when the topics vary.

CSE 5393. DIRECTED STUDY IN COMPUTER SCIENCE. 3 Hours.
DIRECTED STUDY IN COMPUTER SCIENCE.

CSE 5394. MASTER'S PROJECT I. 3 Hours.

CSE 5395. MASTER'S PROJECT II. 3 Hours.

CSE 5398. MASTER'S THESIS I. 3 Hours.
Preliminary research effort for the master's thesis, including problem definition and literature search, along with identification of resources, milestones, examining committee members, and external publication venue. Graded F, R.

CSE 5400. FUNDAMENTALS OF EMBEDDED SYSTEMS. 4 Hours.
Review of fundamental topics in embedded system design and programming to prepare students for Computer Engineering courses. Topics include programming in resource-constrained environments, design of embedded controller systems, asynchronous and synchronous serial interfaces, timer-based peripherals, pulse-width modulation, analog to digital (A/D) converters, and typical applications. Course includes significant laboratory content.

CSE 5401. FUNDAMENTALS OF DIGITAL SYSTEMS. 4 Hours.
Review of fundamental topics in digital logic design and computer architecture to prepare students for Computer Engineering graduate courses. Topics include Boolean algebra; number systems and computer codes; combinational and sequential logic circuit design and analysis; simulation and synthesis of logic circuits using hardware description languages; design realization using gates, flip-flops, and programmable logic devices such as field-programmable gate arrays (FPGAs); component and system architectures; and typical applications. Course includes significant laboratory content.

CSE 5698. MASTER'S THESIS II. 6 Hours.
Completion of tasks in support of the thesis defined in Master's Thesis I, including oral defense of the written documents. Prerequisite: CSE 5398. Graded F, R, P.

CSE 6197. RESEARCH IN COMPUTER SCIENCE. 1 Hour.
Individually supervised research projects.

CSE 6297. RESEARCH IN COMPUTER SCIENCE. 2 Hours.
Individually supervised research projects.

CSE 6306. ADVANCED TOPICS IN OPERATING SYSTEMS. 3 Hours.
May be repeated for credit when topics change. Prerequisite: CSE 5306 or consent of instructor.

CSE 6311. ADVANCED COMPUTATIONAL MODELS AND ALGORITHMS. 3 Hours.
This course aims at exploring advanced computation models, theory and advanced algorithm design and analysis techniques that have broad applicability in solving real-life problems in cross-disciplinary areas such as the Internet computing, Web search engines, data mining, bioinformatics, wireless mobile and sensor networks, dynamic resource management, distributed computing, and social networking. Topics include: Theory of NP-completeness; Equivalence of Machine Models; Lower Complexity Bounds; Randomized and Probabilistic Algorithms; Game-theoretic and Information-theoretic Models; Approximation and Optimization Techniques. Prerequisite: CSE 5311 or consent of instructor.

CSE 6314. ADVANCED TOPICS IN THEORETICAL COMPUTER SCIENCE. 3 Hours.
May be repeated for credit when topics change. Prerequisite: CSE 5314 or consent of instructor.

CSE 6319. SPECIAL TOPICS IN ADVANCED THEORY AND ALGORITHMS. 3 Hours.
May be repeated when topics vary.

CSE 6321. ADVANCED AUTOMATION TESTING. 3 Hours.
A detailed investigation of full automation testing of front and back end automation testing techniques and tools. Advanced issues in automation test are studied and applied. Knowledge and skills gained in other software engineering courses are applied to synthesize a full automation testing solution to a significant and realistic software development team project. Prerequisite: CSE 5321 or consent of instructor.

CSE 6323. AGILE SOFTWARE DEVELOPMENT. 3 Hours.
Study of foundations, techniques and tools for agile methodologies in software engineering including agile manifesto and principles such as pair programming, test-first and refactoring. Latest papers in agile methodologies are reviewed and practiced. Prerequisite: CSE 5324 or consent of instructor.

CSE 6324. ADVANCED TOPICS IN SOFTWARE ENGINEERING. 3 Hours.
May be repeated for credit when topics change.

CSE 6329. SPECIAL TOPICS IN ADVANCED SOFTWARE ENGINEERING. 3 Hours.
May be repeated for credit when topics vary. Prerequisite: CSE Graduate Standing.

CSE 6331. ADVANCED TOPICS IN DATABASE SYSTEMS. 3 Hours.
May be repeated for credit when topics change.

CSE 6332. CLOUD COMPUTING & BIG DATA. 3 Hours.
The focus of this course is on data management techniques and tools for storing and analyzing very large volumes of data. Topics include: cloud computing; virtualization; distributed file systems; large data processing using Map-Reduce; data modeling, storage, indexing, and query processing for big data; key-value storage systems, columnar databases, NoSQL systems; big data technologies and tools; large-scale stream processing systems; data analytics frameworks; big data applications, including graph processing, recommendation systems, and machine learning.

CSE 6339. SPECIAL TOPICS IN ADVANCED DATABASE SYSTEMS. 3 Hours.
May be repeated for credit when topics vary.

CSE 6344. ADVANCED TOPICS IN COMMUNICATION NETWORKS. 3 Hours.
May be repeated for credit when topics change. Prerequisite: CSE 5346 or consent of instructor.

CSE 6345. PERVASIVE COMPUTING & COMMUNICATIONS. 3 Hours.
Issues and challenges in pervasive computing environments: interoperability and heterogeneity; location-awareness and mobility; transparency and proactivity; trust, authentication and security, information acquisition and dissemination in mobile and pervasive systems. Contest-aware computing. Ad-hoc, sensor and mobile P2P systems in pervasive computing. Case studies. Prerequisite: Introductory courses in Networks, Algorithms and Operating Systems: e.g., CSE 5344, CSE 5311, and CSE 5306, or consent of instructor.

CSE 6347. ADVANCED WIRELESS NETWORKS & MOBILE COMPUTING. 3 Hours.
Wireless architectures and protocols (e.g., GSM, CDMA); channel assignment and resource allocation; mobility and location management; mobile data management; wireless data networking and multimedia; call admission control and QoS provisioning; cross layer optimization, performance modeling. Prerequisite: CSE 5345 and CSE 5330.

CSE 6348. EMBEDDED SYSTEM NETWORKING. 3 Hours.
Covers application and architecture of wireless sensor networks. Topics include platforms, routing, coverage, MAC, transport layer, data storage, query, and in-network processing. Prerequisite: CSE 5345 or equivalent course.

CSE 6349. SPECIAL TOPICS IN ADVANCED NETWORKING. 3 Hours.
May be repeated for credit when topics vary.

CSE 6350. ADVANCED TOPICS IN COMPUTER ARCHITECTURE. 3 Hours.
May be repeated for credit when topics change. Prerequisite: CSE 5350 and consent of instructor.

CSE 6351. ADVANCED TOPICS IN COMPUTER ENGINEERING. 3 Hours.
May be repeated for credit when topics change. Prerequisite: CSE 4342 or CSE 5342, or consent of instructor.

CSE 6352. FAULT TOLERANT SYSTEMS. 3 Hours.
Topics in reliable and fault-tolerant computing. May be repeated for credit when topics change. Prerequisite: CSE 5350 and consent of instructor.

CSE 6353. COMPUTER ENGINEERING SYSTEM DESIGN. 3 Hours.
Advanced course in design of computer engineering systems in a team environment working to produce a larger system. Emphasis is on building a complete system, including requirements analysis, building and integrating components (hardware and software), and testing. Prerequisite: at least three of the following courses: CSE 5342, CSE 5352, CSE 5354, CSE 5355, CSE 5356, or CSE 5357 or consent of instructor.

CSE 6359. ADVANCED TOPICS IN SYSTEMS & ARCHITECTURE. 3 Hours.
May be repeated for credit when topics vary.

CSE 6362. ADVANCED TOPICS IN ARTIFICIAL INTELLIGENCE. 3 Hours.
May be repeated for credit when the topic changes. Prerequisite: CSE 5361 and consent of instructor.

CSE 6363. MACHINE LEARNING. 3 Hours.
A detailed investigation of current machine learning methods, including statistical, connectionist, and symbolic learning. Presents theoretical results for comparing methods and determining what is learnable. Current issues in machine learning research will also be examined. Prerequisite: CSE 5301 or consent of instructor.

CSE 6364. MACHINE LEARNING. 3 Hours.
A detailed investigation of current machine learning methods, including statistical, connectionist, and symbolic learning. Presents theoretical results for comparing methods and determining what is learnable. Current issues in machine learning research will also be examined. This course is for PhD students only. Prerequisite: CSE 5301 or consent of instructor.

CSE 6366. DIGITAL IMAGE PROCESSING. 3 Hours.
Digitization and coding of images, characterization and representation of digital images in spatial and frequency domains, picture restoration and enhancement, filtering of two-dimensional signals, image reconstruction. Prerequisite: CSE 5366 or consent of instructor.

CSE 6367. COMPUTER VISION. 3 Hours.
Advanced techniques for interpretation, analysis, and classification of digital images. Topics include methods for segmentation, feature extraction, recognition, stereo vision, 3-D modeling, and analysis of time-varying imagery. Also taught as EE 6358. Prerequisite: CSE 5301 or CSE 5360 or EE 5356 or EE 5357, and consent of instructor.

CSE 6368. COMPUTER VISION. 3 Hours.
Advanced techniques for interpretation, analysis, and classification of digital images. Topics include methods for segmentation, feature extraction, recognition, stereo vision, 3-D modeling, and analysis of time-varying imagery. Also taught as EE 6358. This course is for PhD students only. Prerequisite: CSE 5301 or CSE 5360 or EE 5356 or EE 5357, and consent of instructor.

CSE 6369. SPECIAL TOPICS ADVANCED INTELLIGENT SYSTEMS. 3 Hours.
May be repeated for credit when topics vary.

CSE 6379. SPECIAL TOPICS IN ADVANCED BIOINFORMATICS. 3 Hours.
May be repeated for credit when topics vary.

CSE 6388. SPECIAL TOPICS IN ADVANCED INFORMATION SECURITY. 3 Hours.
May be repeated for credit when topics vary.

CSE 6389. SPECIAL TOPICS IN ADVANCED MULTIMEDIA, GRAPHICS, & IMAGE PROCESSING. 3 Hours.
May be repeated for credit when topics vary.

CSE 6392. SPECIAL TOPICS IN ADVANCED COMPUTER SCIENCE. 3 Hours.
May be repeated for credit when the topics vary.

CSE 6397. RESEARCH IN COMPUTER SCIENCE. 3 Hours.
Individually supervised research projects.

CSE 6399. DISSERTATION. 3 Hours.
Preparation of dissertation in computer science or computer science and engineering. Graded F, R.

CSE 6697. RESEARCH IN COMPUTER SCIENCE. 6 Hours.
Individually supervised research projects.

CSE 6699. DISSERTATION. 6 Hours.
Preparation of dissertation in computer science or computer science and engineering. Graded F, R,P,W.

CSE 6997. RESEARCH IN COMPUTER SCIENCE. 9 Hours.
Individually supervised research projects.

CSE 6999. DISSERTATION. 9 Hours.
Preparation of dissertation in computer science or computer science and engineering. Graded P, F, R.

CSE 7399. DOCTORAL DEGREE COMPLETION. 3 Hours.
This course may be taken during the semester in which a student expects to complete all requirements for the doctoral degree and graduate. Enrolling in this course meets minimum enrollment requirements for graduation, for holding fellowships awarded by The Office of Graduate Studies and for full-time GTA or GRA positions. Students should verify that enrollment in this course meets other applicable enrollment requirements. To remain eligible in their final semester of study for grants, loans or other forms of financial aid administered by the Financial Aid Office must enroll in a minimum of 5 hours as required by the Office of Financial Aid. Other funding sources may also require more than 3-hours of enrollment. Additional hours may also be required to meet to requirements set by immigration law or by the policies of the student's degree program. Students should contact the Financial Aid Office, other sources of funding, Office of International Education and/or their graduate advisor to verify enrollment requirements before registering for this course. This course may only be taken twice. Students who do not complete all graduation requirements while enrolled in this course must enroll in a minimum of 6 dissertation hours (6699 or 6999) in their graduation term. Graded P/F/R.

COURSES

CTEC 2350. WEB COMMUNICATION DESIGN AND DEVELOPMENT 1. 3 Hours.
Overview of theoretical principles of communication, organization, human-computer interaction, and user experience research for effective communication over the Internet. This course provides an introduction to essential elements of Web design and development, including using markup and style sheet languages, developing information architecture, and assessing usability.

CTEC 3320. MULTIMODAL COMMUNICATION AND DESIGN. 3 Hours.
Recognizing the important role content plays in shaping user experience (UX), this course focuses on how different communication modalities influence content strategies. Students will learn principles, techniques, and workflows for creating content aligned with these strategies. Through hands-on multimedia projects, students will develop skills in scriptwriting, storyboarding, audio and visual recording, multimedia editing, motion design and animation, and post-production techniques. Prerequisite: COMM 3303.

CTEC 3323. USER EXPERIENCE DESIGN PROCESS. 3 Hours.
Explores user experience (UX) design emphasizing inclusivity, ethics, and social impacts. Students will apply industry best practices in workflow management, project collaboration, and AI tools to craft digital experiences based on interaction design principles and emerging UX trends. Deliverables, including component-based design systems, wireframes, and interactive prototypes, prepare students for professional practice with a focus on designing for positive change. Prerequisite: A grade of C or better (2.0/4.0) in CTEC 2350.

CTEC 3350. WEB COMMUNICATION DESIGN AND DEVELOPMENT 2. 3 Hours.
A continuation of CTEC 2350. This course focuses on creating intuitive, accessible web experiences that enable users to effectively consume and interact with content via HTML, CSS, and JavaScript. Key topics include translating design briefs and visual mockups into functional code, adapting content for different devices, and incorporating interactivity and multimedia elements to enhance user engagement. Prerequisite: CTEC 2350 with a grade of C (2.0/4.0 scale) or better, and 3 hours of Math.

CTEC 4309. INTERNET MARKETING COMMUNICATION. 3 Hours.
Course examines best practices in marketing communication; considers electronic commerce conducted via current communication and information technology. Discussion of theories, research strategies, usage trends, and current development. Prerequisite: COMM 3300, COMM 3315, a grade of C (2.0/4.0) or better in COMM 2311 and one of the following: ADVT 3305, CTEC 3350, PREL 3340, or BCMN 3340.

CTEC 4321. DIGITAL COMMUNICATION MANAGEMENT. 3 Hours.
Study of corporate and organizational communication theories through a user-centered approach. Students will design, analyze, and evaluate the organization and structure of digital communication via the development of Web-based, database-supported interactive applications. Prerequisite: COMM 3315, a grade of C or better (2.0/4.0) in the following: COMM 2311, CTEC 2350, and CTEC 3350.

CTEC 4323. USER EXPERIENCE RESEARCH AND INTERACTION DESIGN PRINCIPLES. 3 Hours.
Study of user experience (UX) research based on the Humanity-Centered Design approach. Students will conduct original research, including interviews, surveys, probes, contextual observations, usability testing, and data analysis. Hands-on projects integrate design principles with research insights, equipping students to conduct comprehensive UX research that guides the creation of user-centric interfaces, preparing them for roles in UX design and research. Prerequisites: COMM 3315 and a grade of C or better (2.0/4.0) in the following: COMM 2311, CTEC 2350, CTEC 3323, CTEC 3350, or, for non-CTEC majors, permission of the department.

CTEC 4350. WEB COMMUNICATION DESIGN AND DEVELOPMENT 3. 3 Hours.
This capstone course of the CTEC sequence reviews and applies theoretical principles of communication, human-computer interaction, user experience research, and information architecture for effective communication over the Internet. The course includes web design, implementation, development and project management. Prerequisites: A grade of C (2.0/4.0) or better in the following courses: CTEC 2350, CTEC 3320, CTEC 3350, CTEC 4309, and either CTEC 4321 or CTEC 4323.

CTEC 4391. CONFERENCE COURSE. 3 Hours.
Topic assigned on an individual basis, covering individual research or study in the designated areas. May be repeated when topic changes. Prerequisite: 60 or more hours earned and permission of the department.

CTEC 4393. SPECIAL TOPICS. 3 Hours.
Special studies in communication technology. Topic varies from semester to semester. May be repeated when topic changes, for a maximum of six credit hours. Prerequisite: 60 or more hours earned and permission.

CTEC 4395. PROFESSIONAL INTERNSHIP. 3 Hours.
Individual research while working with business and industry. Individual conference to be arranged. Prerequisite: 60 or more hours earned and permission.

COURSES

DASC 5191. ADVANCED STUDY IN DATA SCIENCE. 1 Hour.
Individual research projects in Data Science. Prior approval of the DASC Graduate Advisor is required for enrollment. A written report is required. Graded F, I, P.

DASC 5300. FOUNDATION OF COMPUTING. 3 Hours.
Basics of programming, data structures, and algorithms. Introduction operating systems. Basics of discrete structures and computability. Course is used for the Master's in Data Science degree program and certificate programs for non-CSE majors. It cannot be taken for credit towards any CSE degree. Prerequisite: DASC Major.

DASC 5301. DATA SCIENCE. 3 Hours.
This inspirational course follows a data-science-for-all perspective that views data acumen as part of literacy. It aims to instill in students the data acumen, i.e., the basic skills to wrestle with data, to draw insights from data, to make sound decisions responsibly using data, and to effectively communicate about data-driven findings and decisions. Topics include 1) data management: data curation, preparation, model, and querying; 2) data description and visualization: exploratory data analysis; graphics; 3) machine learning and knowledge discovery: supervised learning, unsupervised learning, pattern and knowledge extraction, model evaluation and interpretation. Prerequisite: DASC Major, DASC 5300 (or concurrent enrollment) and DASC 5302 (or concurrent enrollment).

DASC 5302. INTRODUCTION TO PROBABILITY AND STATISTICS. 3 Hours.
Topics include descriptive statistics, set theory, combinatorics, mathematical expectation, probability distributions, confidence interval estimation, analysis of variance, random processes, and design of experiments. Prerequisite: DASC Major.

DASC 5303. DATA SCIENCE PROJECT MANAGEMENT. 3 Hours.
Management and control of multifaceted science and engineering projects. Coordination and interactions between client and various service organizations. Project manager selection. Typical problems associated with various phases of project life cycle. Case studies illustrate theories and concepts. Students will be expected to demonstrate an understanding of communication and collaboration, including workflow, reproducibility, codebase management, collaboration tools, oral and written communication, presentation and storytelling, and team management, as well as ethics, such as understanding bias, fairness, credibility and misinformation, security, privacy, and codes of conduct. Prerequisite: DASC Major, DASC 5300, DASC 5301, DASC 5302.

DASC 5304. MACHINE LEARNING. 3 Hours.
Introduction to methods, concepts, analysis, and applications of modern Machine Learning. Topics include Unsupervised as well as Supervised learning with a central focus on practical and application aspects in the area of Data Science. Prerequisite: DASC MAJOR: DASC 5300, DASC 5301, DASC 5302.

DASC 5305. DATA VISUALIZATION. 3 Hours.
Issues, methods, and tools for data visualization for the effective presentation and analysis of data. Covers techniques for the creation and delivery of compelling visual representations and data-driven stories to enhance the delivery of analysis results, as well as visualization methods to extract meaningful information from data and to select appropriate data science methods. Prerequisite: DASC Major, DASC 5304 (or concurrent enrollment).

DASC 5306. BIG DATA MANAGEMENT. 3 Hours.
Introduction to data management and processing techniques in relational and other databases as well as computing systems. Topics include the relational model, query languages and methods, data management approaches, technologies and software tools with a focus on practical data science applications. Prerequisite: DASC Major, DASC 5300, DASC 5301, DASC 5302.

DASC 5309. DATA SCIENCE CAPSTONE PROJECT. 3 Hours.
Students will design, develop and present a substantial data science project by applying the knowledge and skills acquired from relevant courses. The projects will be drawn from real-world applications and data and might involve collaboration with community partners. Prerequisite: DASC 5300, DASC 5301, DASC 5302, DASC 5304, DASC 5305, DASC 5306.

DASC 5391. DATA SCIENCE APPLICATIONS. 3 Hours.
Individually approved research or industry internship in data science. Prerequisite: DASC 5300, DASC 5301, DASC 5302, DASC 5304, DASC 5305, DASC 5306 and Graduate Advisor approval.

DASC 5392. TOPICS IN DATA SCIENCE. 3 Hours.
May be repeated for credit when the topics vary. Prerequisite: DASC Major, DASC 5300, DASC 5301, DASC 5302 and consent of instructor.

COURSES

DATA 1301. INTRODUCTION TO DATA SCIENCE. 3 Hours.
This course provides an introduction to the field of data science with a high level overview of basic concepts, data types, and techniques while introducing data-informed decision making.

DATA 2301. DATA VISUALIZATION & DATA STORYTELLING. 3 Hours.
In this course, students will learn about the principles and techniques of effective data visualization and communicate data using various tools and techniques. The course will cover a variety of tools and techniques commonly used in data visualization, including data visualization software, data preparation and cleaning, and techniques for creating static and interactive visualizations. Through a combination of lectures, hands-on exercises, and individual and group projects, students will explore the principles of data visualization and gain practical skills in designing and communicating data through visual representations. Topics covered will include data exploration, charting and graphing, dashboard design, data storytelling, and best practices for visualizing data. At the end of this course, students can design and implement effective visualizations for various fields, including STEM, psychology, scientific research, and so many others.

DATA 3311. MATHEMATICS FOR DATA SCIENCE. 3 Hours.
This course covers techniques from linear algebra and probability with an emphasis on how they are used in data science. Working with real data sets will be emphasized, along with basics of Matlab or R programming. Prerequisite: MATH 1426.

DATA 3401. PYTHON FOR DATA SCIENCE 1. 4 Hours.
This is the first of a two course sequence offering the foundations of Python programming in the context of data science. It introduces the full syntax of the Python language as it overviews structured, functional, and object oriented programming methodologies. It also provides a basic conceptual understanding of computing and introduces Unix command-line tools, software employed in data science such as git and Jupyter, and Python libraries such as numpy, matplotlib, and Pandas. Prerequisite: MATH 1426 or concurrent enrollment in MATH 1426.

DATA 3402. PYTHON FOR DATA SCIENCE 2. 4 Hours.
